Award Description*

The Connecticut Department of Public Health Immunization Program is committed to increase the number of Connecticut children and adults vaccinated against vaccine-preventable diseases. CDC is providing Connecticut with more than $2 million worth of rotavirus vaccine as an in-kind allocation. This is equivalent to more than 26,000 doses that will be administered in a two-dose series to more than 13,000 children, aged 2-8 months of age. In addition, the Department will use the ARRA funding award to upgrade and enhance our immunization information system. Immunization information systems (IIS; also called registries) are an important tool for increasing and sustaining high vaccination coverage by consolidating vaccination records of children from multiple providers, generating reminder and recall vaccination notices, and providing official vaccination forms and vaccination coverage assessments. One of the Healthy People 2010 objectives is to increase to 95% the proportion of children aged <6 years who participate in fully operational population-based IIS. We will work with an outside vendor to implement a web-based immunization registry and tracking system to replace our outdated DOS-based registry and to hire contract staff to finish the exis

Quarterly Activities/Project Description*

The Department notified Immunization Providers in July, 2009 that rotavirus vaccine was available to order directly from the Connecticut Immunization Program. The Department's Immunization Program received and verified orders in August, 2009 and submitted them to the third-party administrator, McKesson Corp. McKesson shipped vaccine directly to the Immunization Providers who began vaccinating children in September, 2009. The Department will report on rotavirus vaccine distributed and administered through the CDC VACMAN system on a monthly basis. The purpose of the funds awarded to the Department is to enable Connecticut to replace the Department's outdated, DOS-based immunization registry with a web-based registry and tracking system. This will serve as a tool to increase immunization coverage in children and adults and thus protect them from vaccine-preventable diseases. The Immunization Program has begun development of the information technology requirements for a web-based registry in collaboration with the Connecticut Department of Information Technology. In addition, contractual requirements have been completed to contract with two vendors -- one for temporary data entry workers and the other to build our immunizati
