  - A. Priority Ranking System
  - B. Capacity Assessments
  - C. Projects to be Funded
  - D. Lead Service Line Replacement Projects
  - E. Small System Funding
  - F. Justice40
  - G. Emergency Power Generator Program
  - H. Small Loan Program for Non-Construction Projects
  - I. Federal Subsidy Funds and Disadvantaged Community Assistance Program
  - J. State Subsidy Funds – Public Water System Improvement Program
  - K. Readiness to Proceed
  - L. Project Bypass Procedures
  - M. Other DWSRF Provisions
  - N. Connecticut Plan of Conservation and Development
- V. DWSRF Policies and Requirements
  - A. Letter of Authorization to Award for Eligible Projects
  - B. Project Application Carryovers and Rollovers
  - C. Multi-Year Projects
  - D. Tie-Breaking Procedures
  - E. Pre-Review Policy (Construction Only)
  - F. Reimbursements
  - G. Refinancing Existing Loans
  - H. Withdrawal of Project from Funding Consideration
  - I. Use of Excess Project Funds
  - J. Replacement of Lead Service Lines when Replacing Water Main
- VI. Financial Management
  - A. Rationale for Determining Amounts of Capitalization Grant Intended for Projects and Set-Aside Funds
  - B. Sources and Uses of Funds
  - C. The DWSRF Financing Plan and Issuance of Bonds for Leveraging
  - D. State Matching Requirements
  - E. Federal Cash Draw Proportionality
  - F. Financial Terms of Loans
  - G. Transfer of Capitalization Grant Funds between the DWSRF and CWSRF

- H. Expected Loan Demand
- I. Impact of Program on Long-Term Financial Status of the DWSRF
- VII. Set-Aside Activities
  - A. Base Capitalization Grant
  - B. General Supplemental
  - C. Lead Service Line Replacement
  - D. Emerging Contaminants
- VIII. Audits and Reporting
- IX. Public Outreach and Comment
- X. Attachments
  - A. Sources and Uses for DWSRF Project Funds and Set-Aside Accounts
  - B. Priority Ranking System
  - C. SFY 2023 Comprehensive Project List – Alphabetical Order
  - D. SFY 2023 Comprehensive Project List – By Points
  - E. SFY 2023 Carryover List
  - F. SFY 2023 Base/Supplemental Project Priority List
  - G. SFY 2023 Lead Service Line (LSL) Project Priority List
  - H. SFY 2023 Emerging Contaminant Project Priority List
  - I. Asset Management Plan Checklist
  - J. Fiscal Management Plan Checklist
  - K. Disadvantaged Community Assistance Program

## Acronyms Used in This Document:

ACS	American Community Survey
AIS	American Iron and Steel
AWIA	America's Water Infrastructure Act of 2018
BABA	Build America, Buy America Act
BIL	Bipartisan Infrastructure Law
CAT	Capacity Assessment Tool
CCL	Contaminant Candidate List (EPA)
C&D Plan	Connecticut Conservation and Development Policies Plan
CFR	Code of Federal Regulations
CGS	Connecticut General Statutes
CWF	Clean Water Fund
CWS	Community Water System
CWSRF	Clean Water State Revolving Fund
DCAP	Disadvantaged Community Assistance Program
DEEP	Department of Energy and Environmental Protection (CT)
DPH	Department of Public Health (CT)
DWF	Drinking Water Fund
DWINSA	Drinking Water Infrastructure Needs Survey and Assessment
DWNIMS	Drinking Water National Information Management System
DWS	Drinking Water Section (within DPH)
DWSRF	Drinking Water State Revolving Fund
EPA	Environmental Protection Agency (Federal)
EPGP	Emergency Power Generator Program
ETT	Enforcement Targeting Tool
FFATA	Federal Funding Accountability and Transparency Act
FFY	Federal Fiscal Year (October 1 to September 30)
FR	Federal Register
GAO	Government Accountability Office (federal)
GIS	Geographic Information System
IJA	Infrastructure Investment and Jobs Act
IUP	Intended Use Plan
LCRR	Lead and Copper Rule Revisions
LSL	Lead Service Line
MHI	Median Household Income
MIAO	Made in America Office (part of Office of Management and Budget)
MOU	Memorandum of Understanding
NEIWPC	New England Interstate Water Pollution Control Commission
NEPA	National Environmental Policy Act
NTNC	Non-Transient Non-Community (Public Water System)
OA	Operating Agreement
OMB	Office of Management and Budget (federal)
OPM	Office of Policy and Management (CT)
OTT	Office of the State Treasurer (CT)
PER	Preliminary Engineering Report
PPL	Project Priority List
PRS	Priority Ranking System
PURA	Public Utility Regulatory Authority (within CT DEEP)

**Acronyms Used in This Document (cont.):**

PWS	Public Water System(s)
PWSID	Public Water System Identification Number
PWSS	Public Water System Supervision grant
RCSA	Regulations of Connecticut State Agencies
SBC	State Bond Commission
SDWA	Safe Drinking Water Act
SERP	State Environmental Review Process
SFY	State Fiscal Year (July 1 to June 30)
SLP	Small Loan Program
TNC	Transient Non-Community (Public Water System)
ULO	Unliquidated Obligations
USC	United States Code

The remainder of this page is intentionally blank

## Preamble

The Department of Public Health (DPH) presented a new draft Intended Use Plan (IUP) for State Fiscal Year (SFY) 2023 for the Drinking Water State Revolving Fund (DWSRF) on February 16, 2023. The initial October 18, 2022 Draft SFY 2023 IUP was previously published for public review and comment, with a public hearing held on November 22, 2022. This original draft IUP included the use of the Centers for Disease Control and Prevention's Social Vulnerability Index (SVI) in the Priority Ranking System (PRS) (Attachment B) and the determination of whether a project was qualified for the Disadvantaged Community Assistance Program (DCAP) (Attachment K).

DPH had reviewed its DWSRF program's disadvantaged community definition as recommended by the Environmental Protection Agency's (EPA) BIL implementation memo dated March 8, 2022 in an effort to ensure that BIL funds were helping people most in need. The use of SVI as a potential metric was also noted in the EPA implementation memo on page 43. SVI was a measure that DPH proposed to employ in the October 18, 2022 Draft SFY 2023 IUP to define disadvantaged communities in the Health Equity Disadvantaged Community Assistance Program (HEDCAP). DPH also used SVI within the PRS to rank each project based upon the population directly benefitting from each project. Draft IUP versions incorporating SVI were shared with EPA in August and September 2022. EPA raised no concerns regarding use of SVI at that time.

However, during the formal public comment period for the November 22, 2022 public hearing on the first Draft IUP, the EPA provided a comment concerning the inclusion of race as one of the metrics used in SVI, and its potential violation of Title VI of the Civil Rights Act of 1964.

As a result of EPA's comment, the Department determined it was appropriate to remove the use of SVI in its Draft IUP. Based on the significance of this change to the Department's PRS and DCAP, the Department revised the Draft IUP to address comments received and held a second hearing to provide opportunity for public comment on these changes before finalizing the IUP.

This new SFY 2023 IUP will incorporate a PRS very similar to that which has been used by the DWSRF program for several years and was in the SFY 2022 IUP, with minor changes to incorporate the new funding from the Bipartisan Infrastructure Law (BIL). The DCAP in the new SFY 2023 IUP will incorporate, in lieu of SVI, the use of median household income information from the American Community Survey along with the Connecticut Department of Economic and Community Development's (DECD) "distressed municipality" list, the latter of which has been used since incorporation of the formal DCAP program. Distressed Municipality designation is based on criteria that closely align with the elements of SVI,<sup>1</sup> but do not raise concerns under Title VI or other anti-discrimination laws. DPH believes the DECD criteria are also appropriate in determining whether a project meets affordability criteria established by the DCAP. Detailed information about the PRS and DCAP is included in this new SFY 2023 IUP.

In addition, DPH has taken into consideration the comments and testimony received on the October 18, 2022 Draft SFY 2023 IUP during the public comment period leading up to the November 22, 2022 public hearing in preparing this new SFY 2023 IUP. A Hearing Report on the November 22, 2022 public hearing has been published and provides responses to the testimony that was received including any revisions that were incorporated into this new SFY 2023 IUP.

A public hearing on the February 16, 2023 Draft SFY 2023 IUP was held on March 29, 2023.

<sup>1</sup> SVI criteria referenced in the October 18, 2022 Draft SFY 2023 IUP include: 1) below poverty; 2) unemployed; 3) income; 4) no high school diploma; 5) single-parent household; 6) multi-unit structure; 7) mobile homes; 8) crowding; 9) no vehicle; and 10) group quarter. See pp. 5-6. In determining which municipalities qualify as "distressed municipalities," DECD considers: 1) per capita income; 2) percent of poverty; 3) unemployment rate; 4) change in population; 5) change in employment; 6) change in per capita income; 7) percent of housing stock built before 1939; 8) population with high school degree and higher; and 9) per capita adjusted equalized net grand list. See [Distressed Municipalities \(ct.gov\)](#) web page, link to "Distressed Municipalities Criterion" see also Office of Legislative Research Report "Distressed Municipality Designation" dated January 11, 2023, 2023-R-0017.

**I. INTRODUCTION**

**A. State of Connecticut’s Drinking Water State Revolving Fund including Bipartisan Infrastructure Law Funding**

In 1996, Congress passed amendments to the Safe Drinking Water Act (SDWA) establishing the Drinking Water State Revolving Fund (DWSRF). Section 1452 of the SDWA authorizes the Administrator of the United States Environmental Protection Agency (EPA) to award capitalization grants to states. In the Bipartisan Infrastructure Law (BIL), also known as the “Infrastructure Investment and Jobs Act (IIJA) of 2021”, Congress formally reauthorized the DWSRF’s “base” capitalization grant through Federal Fiscal Year (FFY) 2026. The BIL also appropriated additional national funding for the DWSRF for FFYs 2022-2026 which includes three additional capitalization grants in each of those years. These three new grants along with the base capitalization grant are shown in Table 1 and include the national appropriations and Connecticut’s allotments for each. Connecticut currently receives 1% of the remaining national appropriation funds after funds for EPA administration and other national programs are deducted. The FFY 2022 funds are used to fund projects and for set-aside activities during SFY 2023, as outlined in this Intended Use Plan (IUP).

**Table 1 – FFY 2022 Available Funding**

<b>Capitalization Grant</b>	<b>National Appropriation FFY 2022</b>	<b>Connecticut’s Allotment FFY 2022</b>
Base DWSRF	\$1,126,088,000	\$7,008,000
General Supplemental	\$1,902,000,000	\$17,992,000
Lead Service Line Replacement	\$3,000,000,000	\$28,350,000
Emerging Contaminant	\$800,000,000	\$7,555,000

The BIL places an emphasis on the elimination of lead service lines (LSL) and addressing emerging contaminants, such as perfluoroalkyl and polyfluoroalkyl substances (hereinafter PFAS), in drinking water, in addition to ensuring that disadvantaged communities benefit from this funding. Information on the eligible uses of these funds can be found in Section II. B. A significant portion of this funding must be provided as subsidization for projects that benefit disadvantaged communities in Connecticut. Information on the Disadvantaged Community Assistance Program (DCAP) can be found in Attachment K. Information on the federal subsidy funding can be found in Section IV.I. Changes to the DCAP for SFY 2023 include incorporating census tract level areas within a municipality with Median Household Incomes (MHI) less than the statewide MHI.

The Department of Public Health (DPH) is the primacy agency for Connecticut’s drinking water program and the designated agency authorized to enter into capitalization grant agreements with the EPA, accept capitalization grant awards, and otherwise manage the DWSRF. This IUP will be included with each of our applications for the FFY 2022 capitalization grants identified in Table 1. The SDWA requires that each state annually prepare an IUP to describe how the state intends to use DWSRF program funds to support the overall goals of the DWSRF program and meet the SDWA objectives. The DWSRF program is an essential component of Connecticut’s efforts to protect public health and improve the quality and availability of water to all its citizens. The IUP communicates our plans to stakeholders which include public water systems, municipal leadership, state legislators, the public, EPA, and other state agencies.

The IUP discusses how DPH intends to utilize its allotment of FFY 2022 federal funds as well as other available sources of funds for the DWSRF for SFY 2023. The available funding includes unliquidated obligations (ULO) from previous federal capitalization grants. The IUP details the short-term and long-term goals that the DPH has developed to support the overall objectives of the DWSRF program of ensuring public health protections, complying with the SDWA, ensuring affordable drinking water, and maintaining the long-term financial health of the DWSRF. The IUP also includes all the details related to the goals and objectives associated with the BIL funding. Finally, the IUP describes the criteria, policies, and methods DPH will use to distribute the funds, including the criteria under which the eligible projects were ranked and placed on the Project Priority Lists (PPL) and Comprehensive Project List.

During SFY 2023, the DPH will strive to ensure that funds move expeditiously and responsibly from the time the State of Connecticut is awarded each capitalization grant to the time the funds are awarded to projects. These efforts are instrumental in achieving the requirements of the SDWA.

Connecticut has legislation enabling it to establish and operate a DWSRF program and to apply for and receive federal funds, which is contained in Connecticut General Statutes (CGS) Sections 22a-475 through 22a-483. As the administrator of the DWSRF program for the State of Connecticut, the DPH coordinates our activities with other state agencies, which are the Office of the State Treasurer (OTT), the Department of Energy and Environmental Protection (DEEP), and, within DEEP, the Public Utilities Regulatory Authority (PURA), with the charge of implementing certain aspects of and overseeing the DWSRF program. The DPH, DEEP, OTT, and PURA entered into a DWSRF Interagency Memorandum of Understanding (MOU), which details the roles and responsibilities of each agency. The MOU is an attachment to the Operating Agreement (OA) between the State of Connecticut and the EPA. On November 2, 2022, an updated OA was filed with and signed by EPA which outlines the basic framework and procedures of the DWSRF program that are not expected to change annually.

The DPH is responsible for programmatic and fiscal administration of DWSRF projects and capitalization grant set-aside funds. The DEEP is responsible for administration of the Clean Water Fund (CWF), of which the DWSRF is a sub-account. The PURA is responsible for programmatic and fiscal input for those water companies that it regulates who are requesting DWSRF funding. The OTT is responsible for the fiscal administration of all DWSRF project accounts, oversight of loans, oversight of the leveraging process through bond sales, administration of a DWSRF financial plan, and assessing the financial viability of borrowers.

Figure 1 on page 4 displays the role the IUP plays in the DWSRF funding process.

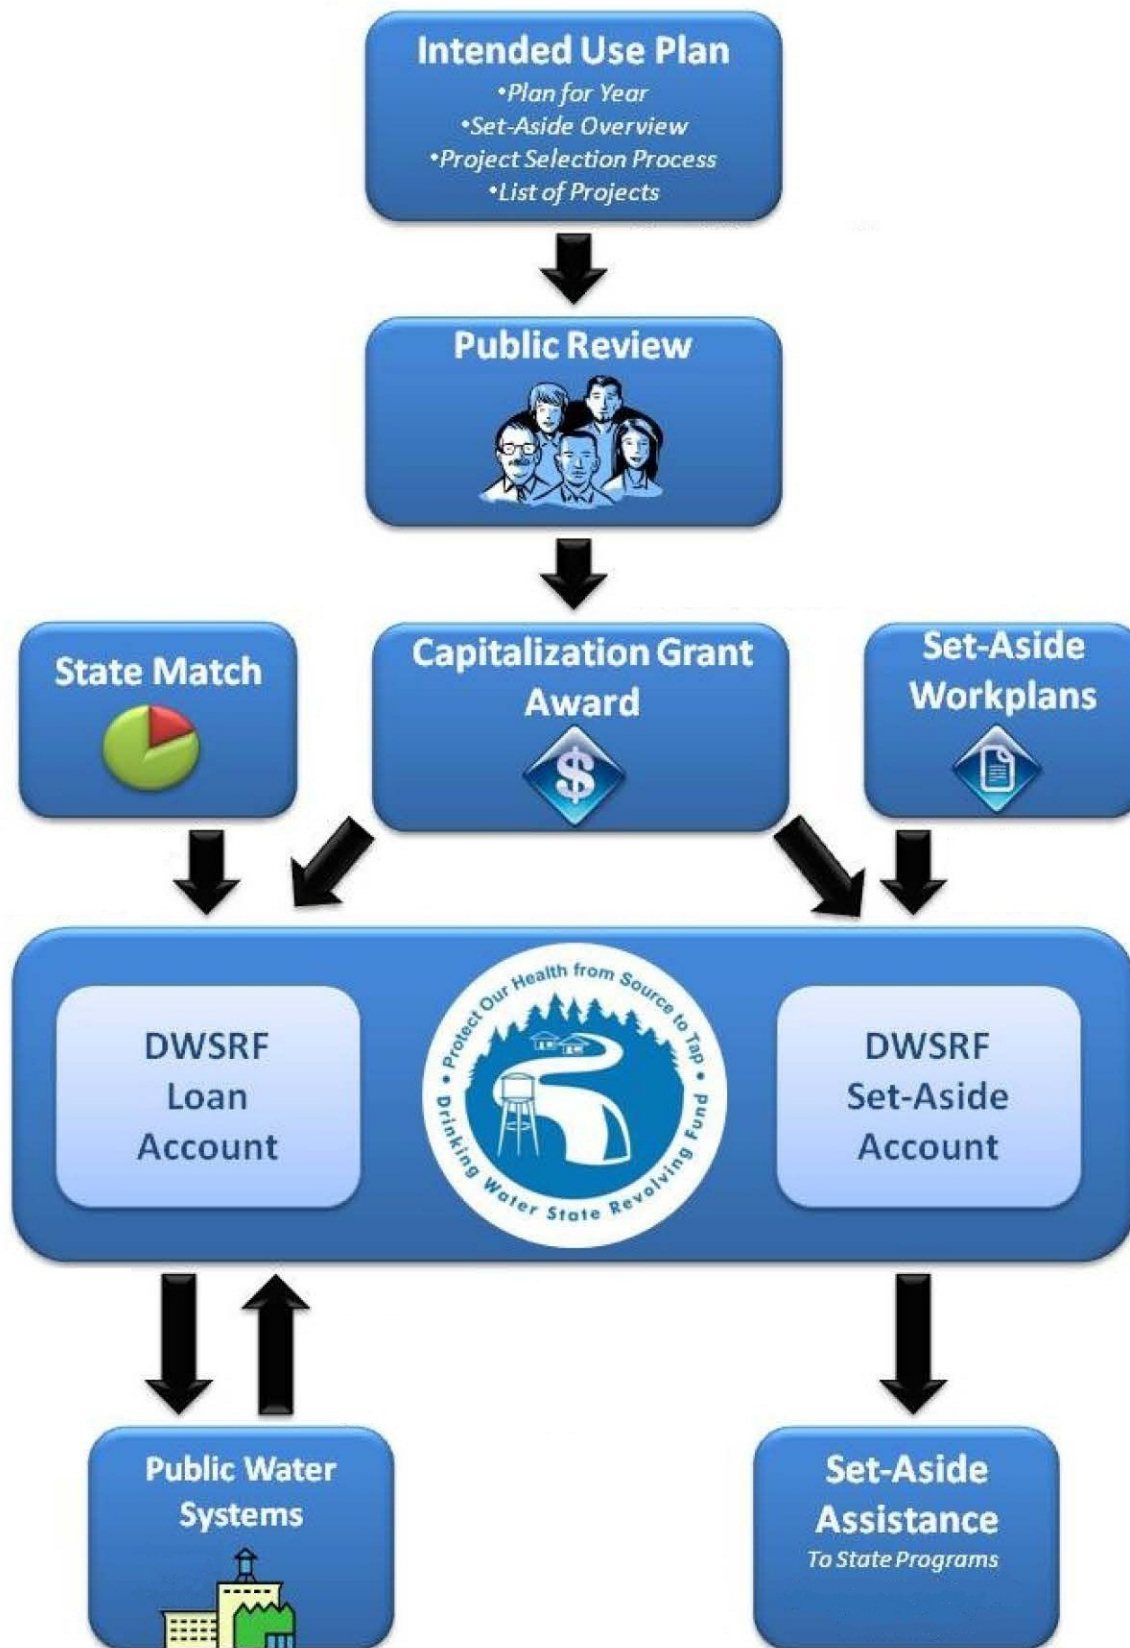

## B. What's New for SFY 2023?

1. **Bipartisan Infrastructure Law (BIL):** The BIL ([Public Law 117-58](#)) was signed by President Biden on November 15, 2021 and appropriated additional drinking water infrastructure funding for the DWSRF for FFYs 2022-2026. This funding includes three new capitalization grants each year during this 5-year period. These three capitalization grants are General Supplemental, Lead Service Line Replacement, and Emerging Contaminant. These are further described in Section II. B.
2. **Build America, Buy America (BABA) Act:** Title IX, Subtitle A, Part I of the BIL put in place the Build America, Buy America Act which expands the preference for domestic materials used in infrastructure projects receiving federal funding. These requirements became effective on May

14, 2022 and apply to all federally funded infrastructure projects, and are further described in Section IV.M.

3. **Disadvantaged Community Assistance Program (DCAP) Changes:** A priority of the BIL is to ensure that disadvantaged communities benefit equitably from this additional funding. The BIL mandates that 49% of funds provided through the General Supplemental and Lead Service Line Replacement capitalization grants must be provided as subsidization to disadvantaged communities. The BIL also requires that not less than 25% of funds provided through the Emerging Contaminant capitalization grant be provided as subsidization to disadvantaged communities or public water systems serving fewer than 25,000 people. Changes to the DCAP have been incorporated to expand upon the communities and areas which may qualify as “disadvantaged” by utilizing Median Household Income (MHI) data from the American Community Survey (ACS). Details on the DCAP can be found in Attachment K. The methods of distributing these subsidy funds to projects that qualify under the DCAP are further detailed in Section IV.I. of this IUP.
4. **DWSRF Priority Ranking System (PRS) Changes:** Changes were made to the PRS to address specific eligibility requirements for the BIL’s Lead Service Line Replacement and Emerging Contaminant capitalization grants. These are further described in section IV.A.

Figure 1 - The DWSRF Funding Process

## II. STRUCTURE OF THE DWSRF

### A. Eligibility for Projects for Planning, Design, and Construction

The DWSRF provides funding assistance for the planning, design, and construction of water infrastructure improvement projects to eligible PWSs, which include all community PWSs and non-profit, non-community PWSs. Projects must meet federal DWSRF eligibility requirements. Eligible projects include:

- Installation or upgrade of facilities to improve the quality of drinking water to comply with the SDWA and State drinking water regulations;
- Rehabilitation of wells or development of eligible sources to replace contaminated sources;
  - • Inventory and removal of drinking water lead service lines;
  - • Addressing emerging contaminants;
- Installation, rehabilitation or replacement of transmission and distribution pipes to improve water pressure to safe levels or to prevent contamination caused by leaks or breaks in the pipes;
- Installation or upgrade of eligible water storage facilities to prevent microbiological contaminants from entering a PWS;
- Interconnecting two or more PWSs;
- Creation of a new community PWS to serve homes with contaminated individual drinking water sources or to consolidate existing systems into a new regional system;
- Routine capital improvement projects for drinking water infrastructure that has exceeded or is nearing the end of its useful service life.

Federal DWSRF regulations specify that funding may not be used for projects that are primarily intended to serve growth. The focus of DWSRF assistance is to ensure safe drinking water for the current PWS's population. Eligible projects may be sized to accommodate for reasonable growth during the expected life of the infrastructure. However, the State of Connecticut will not fund projects intended to serve future growth outside of reasonable expectations and remains vigilant to ensure the limited DWSRF funds available are directed to serve the existing population. Additionally, the DWSRF may not provide assistance to any system that has an Enforcement Targeting Tool (ETT) score of 11 or greater unless DPH determines that the system will return to compliance with such assistance and has an adequate level of technical, managerial and financial capability to maintain compliance.

In November 2019, the EPA issued a class deviation from the federal regulations for projects that are for the purpose of purchasing "water rights". In July 2021, EPA issued a class exception for projects that are for the purpose of rehabilitation of dams and reservoirs. Any such project must meet specific criteria in order to be considered under either the deviation or exception. The EPA may grant deviations or exceptions from federal DWSRF regulations but not from statutory requirements. Other types of projects that may be considered for a deviation on a case-by-case basis are those needed primarily for fire protection.

Assistance provided to a PWS from the DWSRF may be used only for expenditures that will facilitate compliance with SDWA drinking water regulations or otherwise significantly further the public health protection objectives of the SDWA.

## B. Eligibility For Bipartisan Infrastructure Law Funding

The BIL was signed by President Biden on November 15, 2021, and appropriated additional drinking water infrastructure funding for the DWSRF for FFYs 2022-2026. This funding includes three new capitalization grants each year during this 5-year period, in addition to the annual “base” capitalization grant. These additional grants are General Supplemental, Lead Service Line Replacement, and Emerging Contaminant and are described below. All borrowers and projects funded with any of these monies must meet the overall eligibility requirements of the DWSRF. EPA issued [BIL implementation provisions](#) on March 8, 2022.

### 1. General Supplemental

These funds are considered supplemental to the annual “base” capitalization grant and all DWSRF-eligible projects, as described in Section II.A., above, may be funded with monies from this grant.

### 2. Lead Service Line Replacement

Only projects that are for the replacement of a lead service line (LSL) or associated activity directly connected to the identification, planning, design, and replacement of LSLs may be funded with monies from this capitalization grant. This can include the initial inventorying of water service lines within a PWS. However, the eligibility of the physical replacement of a water service line is limited to only those which meet the EPA definition of a “lead service line”: “...a service line made of lead, which connects the water main to the building inlet. A lead service line may be owned by the water system, owned by the property owner, or both. For the purposes of this subpart, a galvanized service line is considered a lead service line if it ever was or is currently downstream of any lead service line or service line of unknown material. If the only lead piping serving the home or building is a lead gooseneck, pigtail, or connector, and it is not a galvanized service line that is considered an LSL the service line is not a lead service line.” EPA has expanded the eligible uses beyond the definition above to also include the replacement of lead goosenecks, pigtails, and connectors as eligible expenses, whether standalone or connected to a LSL. In addition, the entire LSL must be replaced, not just a portion, unless a portion has already been replaced or is concurrently being replaced with another funding source.

The replacement of service lines, or the remaining portion of a service line, which are not considered made of lead as noted above are not eligible to be funded with LSL monies, however, are eligible for funding from the base and supplemental capitalization grants. The requirement to replace the entire LSL as noted above applies to all funding from the DWSRF.

### 3. Emerging Contaminant

Only projects for which the primary purpose is to address an emerging contaminant may be funded with monies from this capitalization grant, with a focus on projects which address PFAS. Projects which address any contaminant which appears on an EPA Contaminant Candidate List (CCL) are eligible, however PFAS projects will be given additional priority consideration versus other eligible emerging contaminants.

If EPA has promulgated a National Primary Drinking Water Regulation (NPDWR) for a contaminant, then a project whose primary purpose is to address that contaminant is not eligible for funding under this capitalization grant. These projects are eligible for funding from the base and

supplemental capitalization grants. However, projects which address PFAS are eligible for Emerging Contaminant funding whether a regulation is developed or not.

In addition to the specific project eligibilities associated with these BIL capitalization grants, there are specific requirements for providing subsidization to certain eligible borrowers and projects. These requirements and the plan for the use of all funds is detailed in Section IV.

### C. Set-Asides

The State of Connecticut will use set-aside funds from each of the 4 capitalization grants to provide additional support to the promotion and implementation of the State's safe drinking water efforts and for activities to assist water systems in developing enhanced capabilities for the future. Each of the set-asides is briefly explained below and additional information may be found in Section VII.

**Administration** - to support administrative and fiscal management of the DWSRF accounts and provide assistance to borrowers in preparing their loan applications and satisfying program requirements

**Small system technical assistance** - for assistance to small systems serving less than 10,000 people through state personnel or agreements with third party assistance providers

**State program management** – for Public Water System Supervision program support and implementation of the Operator Certification program

**Local assistance and other state programs** – for assistance for Capacity Development and for source water protection activities

### III. DWSRF GOALS

The DPH has developed short-term and long-term goals to support the overall goals for the DWSRF program of ensuring public health protection, complying with the SDWA, ensuring affordable drinking water, and maintaining the long-term financial health of the DWSRF. The DPH is committed to continuous program improvement by assuring that program measures are tracked and achieved, fiscal oversight and coordination continues to improve, Connecticut's PWSs are continuously aware of DWSRF opportunities, the DPH's DWSRF program is adequately staffed, and the public drinking water infrastructure needs for the State of Connecticut are adequately addressed, documented and shared with the public to the greatest extent possible.

Maintaining an adequate staffing level has been identified as a critical factor in the success of the DWSRF program, and overall in the assistance and oversight provided to all PWS by the entire DWS.

The DWSRF short-term goals are focused on continued development and implementation of all facets of the DWSRF program, including moving eligible fundable projects through the loan process to ensure that all monies are committed in a timely manner. The short-term goals as indicated below are benchmarks for measuring overall success and effectiveness of the program.

## A. Short-Term Goals

1. Apply for the annual and BIL capitalization grants as soon as possible following notification from EPA Region 1 that applications are being accepted. Upon award, comply with the capitalization grant's terms and conditions.
2. Implement Federal Executive Order 14008 Section 223 (Justice40 initiative) by utilizing a DCAP that ensures disadvantaged communities are benefiting equitably from the DWSRF until release of formal guidance on the Justice40 initiative.
3. Enter into financial assistance agreements with PWSs for projects identified in this IUP with an overall goal of committing all available project funds, including federal subsidy funds, during the IUP period and increasing the pace of the DWSRF program.
4. Continue to implement existing DWSRF elements, including re-evaluation and improvement of the following when necessary:
  - a. Effective and efficient fiscal management of DWSRF funds;
  - b. Routine procedures for entering into project funding agreements with recipients;
  - c. Effective and efficient communications between State agencies for all components of the DWSRF program;
  - d. Improve the efficiency of review of project submittals and execution of funding agreements, where possible;
  - e. Review of the Priority Ranking System (PRS), maintaining an emphasis on ready-to-proceed projects;
  - f. Responsibilities delineated in the DWSRF Interagency MOU;
  - g. Routine procedures for monitoring oversight and contract compliance of DWSRF set-aside projects;
  - h. Procedures for evaluating technical and managerial capacity of DWSRF applicants and sustainability aspects of proposed projects.
5. Input project information into the EPA Office of Water State Revolving Funds DWSRF project and SRF Annual Summary database, including the Drinking Water National Information Management System (DWNIMS) information and continue to monitor program pace to meet or exceed national goals and measures for awarding funds in a timely manner.
6. Maintain a financing plan that secures the perpetuity of the DWSRF and meets loan demand.
7. Provide oversight, tracking, and continued implementation of the DPH's January 2013 Cash Management Plan (CMP), revision of January 2018. The annual CMP Review Report is being prepared for calendar year 2022 and will be submitted to EPA. Continue to work with the DPH Fiscal Unit and EHDW Branch Management to ensure that the CMP is appropriately implemented.
8. Draw down federal capitalization grant funds as quickly as possible (project funds, including federal subsidy funds, and set-asides) to achieve and maintain compliance with EPA's ULO Objectives.
9. Maintain a robust pipeline of projects through frequent interaction with PWSs.

10. Continue to work closely with DWSRF loan applicants to ensure well-coordinated regulatory reviews and loan preparation activities.
11. Continue using a 2-year loan demand planning period to help ensure sufficient DWSRF funds are appropriated in the biennial State of Connecticut capital budget.
12. Continue to allow new project eligibility applications to be submitted at any time during the year and update the Comprehensive Project List with these new projects in a timely manner.
13. Continue to seek ways to make it easier for small systems to access DWSRF funding, including using set-aside funding to hire an engineering consult to assist very small systems with evaluating system needs, applying for DWSRF funding, and other engineering services.
14. Continue to encourage small water systems to apply for funding for all phases of a project, such as: planning, including preparation of asset management plans, preliminary engineering reports, etc.; and design and construction, especially when the project is to correct a compliance concern, consolidate with a larger community PWS, or replace older hydropneumatic tanks.
15. Provide education and technical assistance to PWSs to improve the sustainable infrastructure and asset management programs of PWSs.
16. Continue transitioning into the Loans and Grants Tracking System (LGTS) database that will improve communication between State of Connecticut agencies and information sharing with the EPA for projects funded through the DWSRF program. Following conversion to a web-based platform, continue to customize the LGTS database to improve its performance, efficiency and functionality including the storage of electronic records for DWSRF projects, consolidation of federal reporting efforts and generation of various reports.
17. Utilize the information gathered as part of the 2021 Drinking Water Infrastructure Needs Survey and Assessment (DWINSA) to work with the selected PWSs to submit projects for future DWSRF funding cycles.

## B. Long-Term Goals

The DWSRF long-term goals express strategic principals for guiding the DWSRF program into the future. These long-term goals are:

1. Commit to monitor, track, and continue to maintain and improve the pace of the DWSRF program.
2. Meet or exceed EPA's ULO objectives for ULOs associated with capitalization grant awards received from the EPA.
3. Continue to reach out to State of Connecticut PWSs in an effort to educate and better promote the DWSRF Program, in order to maintain a pipeline of projects that are eligible to receive DWSRF funding.

4. Evaluate the development of a DPH DWSRF strategy to increase communications among PWSs, legislators, local officials, consultants and other stakeholders.
5. Coordinate within the DPH and continue to collaborate with other State agencies where possible and advantageous, to maximize the effectiveness of the program and meet the State of Connecticut's public health, water quality and water adequacy goals.
6. Use set-aside funds to effectively improve the State of Connecticut's aging drinking water infrastructure, drinking water regulatory compliance, the technical, managerial and financial capacity of PWSs and drinking water service to Connecticut's residents. Areas of concern include PWSs' sustainable infrastructure programs, long-term water supply planning, source water protection and small water systems.
7. Continue to improve on documenting the PWS infrastructure needs for the State of Connecticut through on-going participation and support for the EPA's (DWINSA).
8. Offer a long-term low-interest financing program to eligible PWSs to undertake infrastructure improvement projects.
9. Commit to maintaining cash management policies, procedures and records for DWSRF funding.
10. Enhance the LGTS database to provide accessibility to DWSRF borrowers to monitor the status of their loan applications and allow for the submission of required program documents/records.

#### **IV. CRITERIA AND METHOD FOR DISTRIBUTION OF PROJECT FUNDS**

##### **A. Priority Ranking System**

A state's Priority Ranking System (PRS) is required to provide, to the extent practicable, priority to projects that: address the most serious risk to human health; are necessary to ensure compliance with the requirements of the SDWA; and assist systems most in need, on a per household basis, according to State affordability criteria. The DPH has statutory and regulatory jurisdiction over all statewide matters related to the purity and adequacy of drinking water. The DPH considers quantity as important as quality in the protection of public health. The PRS developed by the DPH for its DWSRF program specifies the criteria that the DPH uses to determine the distribution of funds and is found in Attachment B of this IUP. The primary objective of the PRS is to award the highest points to projects that protect public health through improvements designed to address PWS performance in the areas of water quality and water quantity. The DPH is also responsible for the timely distribution of available DWSRF funds and must take into consideration each project's "readiness to proceed" when preparing a PPL.

The PRS was updated for SFY 2023 to address specific eligibility requirements for the BIL's Lead Service Line Replacement and Emerging Contaminant capitalization grants. These changes included:

- providing an explanation of the BIL funding and specific eligibilities for each of the BIL's new capitalization grants

- added a ranking points sub-category for “Emerging Contaminants” under the Water Quality category to include projects for PFAS and any other which addresses a contaminant on one of EPA’s Contaminant Candidate Lists (CCL).
- made Lead Service Line replacements its own ranking point category and increased the points for LSL replacement.
- added an activity for “Other Capital Improvements” to capture eligible projects which may not otherwise qualify for another activity.
- adjusted the tie-breaker language to include DCAP & made adjustment to better prioritize small system projects

The PRS places higher emphasis on projects that will achieve compliance with applicable drinking water quality requirements, while recognizing the importance of projects that will maintain compliance. As part of maintaining compliance, the PRS emphasizes sustainability and acknowledges the inherent value of asset management planning. A PWS’s compliance with both state and federal drinking water quality requirements is closely monitored throughout the project review process. If a PWS has any outstanding significant violations or deficiencies or has received an ETT score of 11 or higher, a PWS must demonstrate a path to return to compliance before any formal commitment of funding is made by the State of Connecticut.

Within the parameters set by the PRS, the DPH intends to exercise considerable flexibility in the types of projects the DWSRF will fund with protection of public health and compliance with SDWA and State drinking water regulations as the predominate concerns. Exclusions for growth and other non-eligible elements, as described in the PRS, stand as limitations on project funding.

## B. Capacity Assessments

The SDWA requires that a PWS applying for a DWSRF loan demonstrate that it has the technical, managerial and financial (TMF) capacity to ensure compliance. If a system does not have adequate TMF capacity, in whole or in part, assistance may only be provided if it will help the system to achieve adequate TMF capacity. The goal of this requirement is to ensure that DWSRF assistance is not used to create or support non-viable systems. DPH has developed and utilizes a capacity assessment tool to analyze the system capacity for small PWSs statewide. Known as the CAT, this tool is used to assess the capacity of small community PWSs. Three-hundred and thirty small community PWSs were initially evaluated using the CAT. These evaluations were provided to the individual PWSs and have been used in a variety of water planning activities. DPH is working on creating a mechanism to update the CAT to incorporate changes in the PWSs’ technical, managerial and financial capacity as issues are addressed. PWSs serving 1,000 or more are required to develop and maintain a Water Supply Plan, which are reviewed and approved by the DPH.

Incentives for PWSs to improve their capacity have been built into the distribution of the required subsidy, as described in Section IV. I. Small PWSs must have or develop asset and fiscal management plans in order to be eligible for federal subsidization. Qualified applicants of all sizes that wish to qualify to receive state subsidy must also have asset and fiscal management plans. The criteria for these plans were developed by referencing EPA guidance. Checklists of required information for each plan were developed and are included as Attachments I and J. The criteria were chosen so that these plans would address all three areas of capacity.

In addition, CGS §19a-37e requires all community PWSs serving at least twenty-five, but not more than one thousand, year-round residents prepare a Fiscal and Asset management Plan no later than January 1, 2021. To help these systems, the DPH renewed its effort to build small system capacity

through training and developed a Fiscal and Asset Management Plan template and associated guidance.

While the DPH intends to fund a wide range of drinking water projects, it will do so only after careful consideration of an applicant's technical, managerial and financial capabilities and readiness to proceed with their project. An assessment of an applicant's overall capacity, including the long-term capacity to operate and maintain the water system and the infrastructure to be funded by the DWSRF, will be conducted before any funding commitment is made.

### **Technical Capacity**

To demonstrate technical capacity, DWSRF applicants must show that their drinking water sources, treatment, distribution, pumping, and storage infrastructure are adequate. Personnel must have the technical knowledge to effectively operate and maintain the system, as well as any additional infrastructure funded by the DWSRF. All community and non-transient non-community PWS are required to have a Certified Operator responsible for the operation of the water system, in accordance with the DPH's operator certification program. As part of reviewing an applicant's technical capacity, the DPH will review the PWS's regulatory compliance records and most recent sanitary survey report to assure that the system is being properly operated and maintained. The PWS must not have outstanding regulatory compliance problems unless the PWS is actively working to correct or resolve those problems. The engineering reports, plans, and specifications for the proposed DWSRF-funded project will be evaluated during the loan application process.

### **Financial Capacity**

To demonstrate financial capacity, the applicant must show that the PWS has sufficient revenues to cover necessary costs to operate and maintain their water system and repay their DWSRF loan. Applicants must also demonstrate credit worthiness and the existence of adequate fiscal controls. The OTT is responsible for reviewing the financial capacity of DWSRF borrowers, including a review of the project budget, annual financial reports, and other pertinent financial information.

### **Managerial Capacity**

To demonstrate managerial capacity, the PWS must have personnel with expertise to manage the entire water system operation. Managerial capacity of a PWS is evaluated during routinely conducted sanitary surveys and when the PWS applies for a DWSRF loan. As part of reviewing a DWSRF applicant's managerial capacity, the DPH will review the PWS's regulatory compliance records and the most recent sanitary survey report to assure that the PWS is being properly operated and maintained.

## **C. Projects Expected to be Funded**

As noted in Section II.B, the BIL established three additional capitalization grants for FFYs 2022-2026, to go along with the annual base capitalization grant. This IUP contains three PPLs identifying which projects are expected to receive funding from 4 capitalization grants:

- Base & Supplemental PPL (Attachment F)
- Lead Service Line PPL (Attachment G)
- Emerging Contaminant PPL (Attachment H)

All PPLs reflect only those eligible projects which have been determined to be ready-to-proceed during SFY 2023. The PPLs for LSL and Emerging Contaminant funding show only those projects which qualify either in whole or in part for those specific funds. The funding line on each reflects the total amount of project fund available from each respective capitalization grant. The base and General Supplemental funding has been combined since the eligibilities for these funds are the same. The Base & Supplemental PPL includes all eligible projects, including those on the LSL and Emerging Contaminant PPLs. If there is not sufficient funding on either of those PPLs, or if a portion of a LSL or emerging contaminant project is not eligible for those specific funds, these projects may still be eligible for Base and Supplemental funding.

Projects on the PPLs are expected to receive funding under this IUP. Funds will also be made available to projects carried forward from a prior IUP, but for which binding commitments (i.e. financial assistance agreements) with the DPH have not yet been executed. These projects are being carried over, in accordance with the procedure described in Section V, and are listed on the Carryover List (Attachment E). These carryover projects went through public comment and ranking during the year in which they appeared on a PPL and are not being re-ranked in this IUP. However, projects eligible for LSL and Emerging Contaminant funding which appear on the Carryover List are also on the PPLs to identify eligibility for BIL funds.

It is the goal of the DPH to fund as many eligible projects as it can with the available DWSRF funding. The projects that are ultimately funded may differ from those outlined on a PPL for various reasons, which include:

- A project on a PPL receives full or partial funding from another source;
- A project on a PPL is bypassed, as described in the PRS and Section IV.L. of this document;
- An applicant is unable to comply with all applicable state and federal program requirements for DWSRF funding;
- An applicant withdraws its DWSRF funding application; or
- A project, or a portion of a project, is determined to be ineligible for DWSRF funds.

The DPH utilized the PRS and project readiness criteria to determine if a project can reasonably be expected to proceed during SFY 2023. The PPLs identify projects, or portions of projects, that can reasonably be expected to proceed during this SFY based on project readiness information provided by the DWSRF applicants and the criteria in Section IV.K. of this IUP.

Funding for new projects is limited to eligible PWSs that submitted DWSRF Eligibility Applications which are included in the annual IUP and any amendments to the IUP made thereafter. This annual IUP includes those Eligibility Applications which were received prior to the initial drafting of the IUP, which was announced in the DPH's SFY 2023 Call for Projects. The DPH received 80 applications totaling approximately \$418.8 million, of which all but one is eligible. All project eligibility applications were reviewed and evaluated to ensure that the proposed projects meet the eligibility criteria and that the applicant is prioritizing projects based on their identified needs and addressing any applicable regulatory compliance concerns. All projects were awarded appropriate points based on the PRS. As in the past, the DPH put a significant emphasis on project readiness in development of the PPLs.

The Comprehensive Project List includes all projects submitted in response to the Call for Projects, projects which are being rolled over, as described in Section V.B., and projects on the Carryover List. Also included are 7 dam projects which will require a deviation from the EPA in order to be

eligible for DWSRF funding. This Comprehensive Project List includes 198 projects for a total of approximately \$922.6 million.

Some applicants have requested funding for planning, design, and construction phases of a project; however, all phases may not necessarily receive funding. Projects which requested funding for multiple phases may appear on the Carryover List or a PPL only for certain phases that have been determined to be ready to proceed. These phases are identified in parenthesis next to the project's name with the corresponding estimated DWSRF funding amounts to complete these phases.

The Comprehensive Project List shows projects in alphabetical order by the town of the PWS (Attachment C). This list of projects is also shown in order of ranking points assigned (Attachment D). From this comprehensive list, three PPLs – Base/Supplemental (Attachment F), Lead Service Line (Attachment G), and Emerging Contaminant (Attachment H) – were developed based on the total amount of funding made available and the expected readiness of a project to proceed. Projects that are determined by the DPH as not ready to proceed during SFY 2023 were not considered in preparing the PPLs regardless of the priority points that the project received or the amount of funding expected to be available. These projects will be maintained on the Comprehensive Project List and will be considered for funding during this SFY if they subsequently become ready to proceed, according to the bypass procedure explained in Section IV.L., or if sufficient funding is available for them.

The PPLs include those projects, or phases of a project, expected to move forward during SFY 2023 ranked by priority points awarded, and for which sufficient funds are expected to be available. The Lead Service Line PPL includes 19 projects/phases of projects totaling approximately \$30 million. The Emerging Contaminant PPL includes 15 projects totaling approximately \$59.8 million. The Base/Supplemental PPL includes 107 projects/phases of projects totaling approximately \$286.5 million, including those projects listed on the LSL and Emerging Contaminant PPLs. Two LSL/Emerging Contaminant projects from the carryover List appear on the respective PPLs. A funding line is provided on the LSL and EC PPLs. The funding line identifies the limitation on funding available from each of those capitalization grants for projects for SFY 2023. Projects appearing above the funding line have been prioritized for funding during SFY 2023. Projects appearing below the funding line may receive funding during SFY 2023 if additional funding becomes available. In such cases, projects below the funding line which are ready to proceed will be offered funding in priority order as they appear on the PPLs. Projects below the funding line on the LSL and EC PPLs are still eligible for Base/Supplemental funds. There is no funding line on the Base/Supplemental PPL.

The DPH reserves the right to make changes to the PPLs, using bypass procedures explained in Section IV.L., to ensure that the available funds are committed in executed funding agreements to the maximum extent possible. Projects on the Comprehensive Project List may also be added to a PPLs if there is a sufficient surplus of funding is available for them and they become ready to proceed during this SFY following the finalization of the annual IUP. Priority in adding a project from the Comprehensive Project List to a PPLs shall be given to the most ready to proceed project regardless of the project's ranking score. Where two or more projects on the Comprehensive Project List become equally ready to proceed, priority for funding shall be given to the project with the highest ranking score, or in the case of the Emerging Contaminant funding, a project which will address PFAS is ranked higher regardless of the points for non-PFAS projects, consistent with the Congressional intent of the BIL to use these funds with a focus on PFAS.

The DPH has and will continue to accept and review Eligibility Applications received after the initial drafting of this IUP. Following publication of the finalized annual IUP, the Comprehensive Project List may be amended periodically to include new projects for which Eligibility Applications were received. Any amendments to the Comprehensive Project List will be posted on the DPH DWS website for a 30-day comment period before being finalized and incorporated as an amendment into the annual IUP.

#### **D. Lead Service Line Replacement Projects**

PWSs requesting DWSRF funding for lead service line (LSL) inventory and replacement projects must follow the EPA Lead and Copper Rule Revisions (LCRR), along with the LSL criteria listed in Section IV.J. of this IUP under the Public Water System Improvement Program, in developing their LSL inventories and replacement plans. The LCRR became effective on December 16, 2021. Applicants should ensure their LSL projects align as much as possible with the future LCRR requirements.

#### **E. Small System Funding**

The SDWA Amendments of 1996 require that, to the extent there are a sufficient number of eligible project applications, not less than 15% of the available funding be dedicated to small PWSs, which are PWSs that regularly serve less than or equal to a population of 10,000. In cases where an applicant owns more than one community PWS, the applicant's population will be determined on the combined population of all of its individually owned PWSs.

The Carryover List and Base/Supplemental PPL do achieve the EPA goal of dedicating at least 15% of the available DWSRF funding, or approximately \$46.4 million, to small PWSs. The Carryover List includes 8 projects totaling approximately \$15.1 million. The Base & Supplemental PPL includes applications for 26 eligible small PWS projects, totaling approximately \$48 million in estimated eligible project costs.

The DPH continues to try to streamline and improve the funding process for small PWSs to make it easier for them to obtain DWSRF funding.

#### **F. Justice40**

Federal Executive Order 14008 Section 223 (January 27, 2021) establishes a goal of directing 40% of the benefits from federal investments to disadvantaged communities. Guidance has not yet been published for the implementation of this directive. Once available, this guidance will be evaluated, and a determination made as to its impact on projects.

#### **G. Emergency Power Generator Program**

The EPGP was established due to the potential for widespread and prolonged power outages caused by severe weather or other incidents which would impair a public water system's ability to provide safe and adequate drinking water. The DWSRF Program will continue to offer subsidized loans for the purchase and installation of emergency power generators costing less than \$100,000 to operate critical drinking water infrastructure during these events.

The DPH has streamlined procurement procedures for projects costing less than \$100,000 in an effort to make it easier for small PWSs to proceed through the DWSRF process. These back-up power system projects are ranked along with all other projects in accordance with the PRS.

#### H. Small Loan Program for Non-Construction Projects

The SLP was established as an extension of the EPGP to allow the streamlined procurement procedures to be used for other non-construction projects costing less than \$100,000. This program is only available for the purchase and installation of equipment, or the replacement of equipment, installed within an existing facility that does not involve the construction, alteration or repair (including painting or decorating) of that facility. These projects are ranked along with all other projects in accordance with the PRS. Typical projects that would be eligible to receive a loan under the SLP would include:

- Replacement of pumps or motors;
- Installation or replacement of diaphragm pressure tanks;
- Installation of water treatment equipment or modifications to existing water treatment systems for regulatory compliance (filters, chemical feed systems, etc.);
- Minor incidental plumbing and electrical work (including SCADA) required only to accommodate the installed or replaced equipment.

Low cost projects that would include new buildings, building additions, building alterations or heavy equipment operators for site work would be considered construction projects and would not be appropriate for consideration under this Small Loan Program. These projects may be still submitted for funding consideration but must follow the full procurement requirements of the DWSRF.

#### I. Federal Subsidy Funds and Disadvantaged Community Assistance Program

The DPH has the statutory authority to provide subsidization in the form of grants, principal forgiveness, negative interest rates, or any combination thereof under CGS Section 22a-477(s)(2)(F). All federal subsidization that the DPH is authorized to provide to loan recipients from the DPH's federal capitalization grant will be provided in the form of loan principal forgiveness. The following subsections describe the federal subsidization funding that will be available for drinking water projects during SFY 2023. A chart detailing the various levels of subsidy is provided below in subsection 3.

The SDWA §1452 (d), which was amended by Section 2015(c) of the America's Water Infrastructure Act (AWIA), requires DPH to develop and implement a formal Disadvantaged Community Assistance Program (DCAP) within the DWSRF. The DCAP is provided as Attachment K to this annual IUP and establishes the criteria under which a PWS would qualify for additional subsidization under this program. To increase the amount of financial assistance going to disadvantaged communities, the DWSRF has revised its criteria for dispersing subsidy to projects that impact these communities. The DPH has historically used the Department of Economic and Community Development's (DECD) Distressed Municipality List as the main criteria for identifying disadvantaged communities in the DCAP. However, exclusive use of this list would discount some of the state's most disadvantaged residents. Therefore, the use of MHI has been added as additional criteria for identifying disadvantaged communities in the DCAP. Specific details on how this data will be used and how projects will be determined to qualify is explained within the DCAP in Attachment K.

Median Household Income (MHI) is a key indicator when identifying affordability criteria in a community. The EPA considers MHI as a critical metric to represent the income of a community in a geographical area as determined by the American Community Survey (ACS). In addition, several other SRF programs implement percentage of MHI as an indicator for their DCAP including several other New England states.

A key priority of BIL is to ensure that disadvantaged communities benefit equitably from the BIL funding. Disadvantaged communities can include those with environmental justice concerns that often include low-income people. DPH has determined that communities with an MHI less than the State's MHI should be used as criteria for identifying disadvantaged communities that meet the DCAP. This direct indicator of the financial status in the community is in line with guidance provided by EPA for the use of the BIL funding.

The Comprehensive List identifies projects which serve disadvantaged communities and meet the qualifications for the DCAP based upon review of the eligibility applications, as explained in Attachment K. Projects which are providing benefit to a DECD distressed municipality are qualified as disadvantaged. Projects not providing benefit to a DECD distressed municipality were evaluated using available project and PWS information, and the applicable census tract MHI data. All projects which have been determined to qualify as disadvantaged are identified as such on the Comprehensive List. A small number of projects did not supply sufficient information to make a determination and will need further evaluation of MHI to determine DCAP qualification.

### **1. Federal Subsidy Funds – General Projects**

The federal DWSRF appropriation for FFY 2022 requires that 14% of the capitalization grant amount be used by the State of Connecticut to provide additional subsidization to eligible recipients in the form of grants, principal forgiveness, or negative interest loans, or any combination thereof. The DPH is therefore required to provide \$981,120 in subsidization to satisfy this requirement.

The DPH will use 14% of the capitalization grant to subsidize drinking water projects contained on the PPL as outlined below.

- a) Small PWSs (those serving a population of 10,000 or under) and PWSs with more than one system, but whose largest system serves 10,000 or under, will be eligible to receive a subsidy of up to 25% of each fixed contract cost associated with the project, not to exceed a total of \$1,000,000 per project. Small PWSs which serve less than 1,000 people must have an Asset Management Plan in place, or agree to prepare and implement such a plan, as part of their DWSRF financial assistance agreement to qualify for subsidization. Such small PWSs that receive subsidy will also be required to prepare and implement Fiscal Management Plans in the future. On or after January 1, 2021, small systems will be required to have a Fiscal and Asset Management Plan, pursuant to CGS 19a-37e. Refer to Section IV.B. of this IUP for more information. To assist small PWS with preparing an Asset Management Plan or Fiscal Management Plan, or both, checklists of required information for each plan were developed and are included as Attachments G and H. Each checklist includes references to EPA guidance documents.
- b) Large PWSs (those not meeting the criteria of a small PWS detailed in Section IV.E) will be eligible to receive a subsidy of up to 10% of each fixed contract cost associated with their project, not to exceed a total of \$750,000 per project.

Large PWS will be eligible to receive up to 25% of each fixed contract cost associated with the project, not to exceed a total of \$1,000,000 per project, if their project:

- (i) Includes full replacement of lead service lines, is a water main replacement or rehabilitation project that includes the full replacement of lead service lines, or is a lead service line inventory project; or
- (ii) Includes the consolidation of one or more small community water systems; or
- (iii) Includes an extension of water service to existing residential property owners served by private wells that have impaired water quality as a result of manmade or natural groundwater pollution, or an insufficient quantity of water from their private wells to meet their daily domestic household needs. In such cases, adequate proof of impaired water quality or quantity must be provided for these impacted properties and it must be demonstrated that the extension of water service is the most cost effective form of remediation.

Table 2 identifies the subsidy for projects categories by maximum percentage and amount for projects which do not qualify under the DCAP, nor the LSL or EC grant. These subsidy funds are also available to projects which qualify under the DCAP and LSL and EC grants, should those funds be exhausted.

**Table 2 – General Projects (i.e. Non-DCAP) Subsidization Chart**

Project Category	Non-DCAP %	Non-DCAP Max
EPGP or SLP	25%	\$25,000
Small (≤10,000) – All Other Projects	25%	\$1,000,000
Large – All Other Projects	10%	\$750,000
Large – Consolidation/Extension/Lead Service Lines	25%	\$1,000,000

**2. Federal Subsidy Funds – Disadvantaged Community Assistance Program**

AWIA required states to provide no less than 6% and no more than 35% of the base capitalization grant funding to disadvantaged communities. The BIL increased the minimum to 12% beginning with FFY 2022. This provision is required only to the extent that the DPH receives a sufficient number of DWSRF funding applications from eligible PWSs that qualify as a disadvantaged community to meet the 12% minimum requirement. The DPH intends to make 35% of the FFY 2022 capitalization grant, or approximately \$2,452,800, available to subsidize projects during SFY 2023 that qualify under the DCAP. In addition, the General Supplemental capitalization grant from the BIL requires that the DPH utilize 49% of the grant to subsidize loans to communities that meet the state’s DCAP. The total amount of subsidy available for SFY 2023 from the General Supplemental capitalization grant is approximately \$8,816,080. In total the amount of subsidy available to projects that qualify under these sections is \$11,268,880. The DPH intends to distribute these subsidization funds as described below:

- a) Qualifying small PWSs (those serving a population of 10,000 or under) and PWSs with more than one system, but whose largest system serves 10,000 or under, will be eligible to receive a subsidy of up to 50%, not to exceed a total of \$2,000,000 of each fixed contract cost that directly impacts a community that meets the conditions outlined in the DCAP.

- b) Qualifying large PWSs (those not meeting the criteria of a small PWS detailed in Section IV.E.) will be eligible to receive a subsidy of up to 50%, not to exceed a total of \$1,500,000 of each fixed contract cost that directly impacts a community that meets the conditions outlined in the DCAP.
- c) Qualifying large PWSs in which their project includes one of the following will be eligible to receive a subsidy of up to 50%, not to exceed a total of \$2,000,000 of each fixed contract cost that directly impacts a community that meets the conditions outlined in the DCAP.
  - (i) Includes full replacement of lead service lines, is a water main replacement or rehabilitation project that includes the full replacement of lead service lines, or is a lead service line inventory project; or
  - (ii) Includes the consolidation of one or more small community water systems; or
  - (iii) Includes an extension of water service to existing residential property owners served by private wells that have impaired water quality as a result of manmade or natural groundwater pollution, or an insufficient quantity of water from their private wells to meet their daily domestic household needs. In such cases, adequate proof of impaired water quality or quantity must be provided for these impacted properties and it must be demonstrated that the extension of water service is the most cost-effective form of remediation.

Table 3 identifies the subsidy for various projects categories by maximum percentage and amount for projects which qualify under the DCAP, but not the LSL or EC grant. If the LSL or EC subsidy funds have been exhausted, qualifying DCAP projects can receive subsidy under this subsection, to the extent funds are available. If DCAP subsidy funds under this subsection are exhausted, all projects are eligible to receive subsidy under subsection IV.I.1 “Federal Subsidy Funds – General Projects,” to the extent that funds are available and under the terms of that subsection.

**Table 3 – DCAP Subsidization Chart**

Project Category	DCAP %	DCAP Max
EPGP or SLP	50%	\$50,000
Small (≤10,000) – All Other Projects	50%	\$2,000,000
Large – All Other Projects	50%	\$1,500,000
Large – Consolidation/Extension/Lead Service Lines	50%	\$2,000,000

**3. Federal Subsidy Funds – Lead Service Line Capitalization Grant**

The Lead Service Line Replacement Capitalization grant from the BIL requires that States provide 49% of funding allocated to the DWSRF programs as additional subsidization for eligible DWSRF assistance recipients for project types that meet the state’s DCAP. The DPH is therefore required to provide \$13,891,500 in subsidization to satisfy this requirement.

The DPH will use 49% of the Lead Service Line Replacement capitalization grant to subsidize drinking water projects as outlined below.

- a) Qualifying public water systems for which their project is for the replacement of lead service lines to the PWS’s customers, is a lead service line inventory project, or replaces lead connections such as lead goosenecks, will be eligible to receive up to 75%, not to exceed a total of \$5,000,000, of each fixed contract cost that directly impacts a community that meets the conditions outlined in the DCAP. The total amount of subsidy that the project is eligible to receive under this section cannot exceed \$5,000,000.

If the project is for a water main replacement or rehabilitation project and includes the replacement of lead service lines, only the cost of the expected lead service line replacement is eligible for the calculation of subsidy under this capitalization grant. The costs for the water main work and non-lead service line replacement will be calculated under the appropriate subsection for which the PWS and remainder of the project qualifies.

Table 4 identifies the subsidy by maximum percentage and amount for projects which qualify under the LSL capitalization grant. If these subsidy funds have been exhausted, qualifying DCAP projects can receive subsidy under subsection IV.I.2 “Federal Subsidy Funds - Disadvantaged Community Assistance Program,” to the extent funds are available and under the terms of that subsection, or under subsection IV.I.1 “Federal Subsidy Funds – General Projects,” to the extent that funds are available and under the terms of that subsection.

**Table 4 – Lead Service Line Capitalization Grant Subsidization Chart**

Project Category	LSL DCAP %	LSL DCAP Max
Lead Service Line	75%	\$5,000,000

**4. Federal Subsidy Funds – Emerging Contaminant Capitalization Grant**

The Emerging Contaminants capitalization grant from the BIL requires that States provide all funds not utilized for set-aside tasks as subsidization to projects. At least 25% of these funds must be provided to eligible DWSRF assistance recipients for project types that meet the state’s DCAP or public water systems serving fewer than 25,000 persons. The DPH is therefore required to provide \$6,278,450 in subsidization to satisfy this requirement.

The DPH will use 100% of the project funds under Emerging Contaminant capitalization grant to subsidize drinking water projects contained as outlined below.

- a) Qualifying small PWSs (those serving a population of less than 25,000) and PWSs with more than one system, but whose largest system serves less than 25,000, will be eligible to receive a subsidy of up to 50%, not to exceed a total of \$3,000,000 of each fixed contract cost that directly impacts a community that meets the conditions outlined in the DCAP. Projects that address PFAS will be eligible to receive a subsidy of up to 100%, not to exceed a total of \$3,000,000 for of each fixed contract cost that directly impacts a community that meets the conditions outlined in the DCAP.
- b) Qualifying large PWSs (those not meeting the criteria of a small PWS detailed in Section IV.E.) will be eligible to receive a subsidy of up to 50%, not to exceed a total of \$2,000,000 of each fixed contract cost that directly impacts a community that meets the conditions outlined in the DCAP. Projects that address PFAS will be eligible to receive a subsidy of up to

100%, not to exceed a total of \$2,000,000 for of each fixed contract cost that directly impacts a community that meets the conditions outlined in the DCAP.

If the project includes elements beyond those necessary to address PFAS or an emerging contaminant, only the cost of the work necessary for PFAS or the emerging contaminant is eligible for the calculation of subsidy under this capitalization grant. Any subsidy for the remaining project costs will be calculated under the appropriate subsection for which the PWS and remainder of the project qualifies.

Table 5 identifies the subsidy for various project categories by maximum percentage and amount for projects which qualify under the Emerging Contaminant capitalization grant. If the EC subsidy funds have been exhausted, qualifying DCAP projects can receive subsidy under subsection IV.I.2 “Federal Subsidy Funds - Disadvantaged Community Assistance Program,” to the extent funds are available and under the terms of that subsection. Non-DCAP projects can receive subsidy under subsection IV.I.1 “Federal Subsidy Funds – General Projects,” to the extent that funds are available and under the terms of that subsection.

**Table 5 – Emerging Contaminant Capitalization Grant Subsidization Chart**

Subsidy Category	Non-DCAP %	Non-DCAP Max	DCAP %	DCAP Max
Small (<25,000) - Emerging Contaminant	25%	\$1,500,000	50%	\$3,000,000
Small (<25,000) - PFAS	50%	\$1,500,000	100%	\$3,000,000
Large - Emerging Contaminant	10%	\$750,000	50%	\$2,000,000
Large - PFAS	50%	\$1,000,000	100%	\$2,000,000

**5. Calculation and Distribution of Federal Subsidy Funds**

The federal subsidization amount that any project receives shall be calculated as a percentage of the eligible contract costs (professional service and/or construction) that will be receiving DWSRF funding for the project. Tables 2 through 5 above identify the subsidy for various project categories by maximum percentage and amount.

Federal subsidy will be reserved for contracts on a first-come, first-served basis, as determined by the date an eligible contract is authorized to be executed by the DPH Commissioner, until all the available federal subsidy funding is accounted for. Due to the limited availability of federal subsidy funds, there is no guarantee every contract that is eligible for subsidy will receive subsidy. In cases where two or more eligible contracts are ready to be authorized by the DPH Commissioner on or about the same time, and there is insufficient remaining subsidy to provide to all those contracts, the DPH reserves the right to give subsidization preference to contracts based on the following tiered approach:

- a. Projects where all of the project qualifies under the DCAP.
- b. Projects where a portion of the project qualifies under the DCAP.
- c. The percentage of total system population served by the project; the project serving a higher percentage of the overall system population will be given preference.

- d. The size of the population served by the project; the project with the larger population served will be given preference.
- e. The size of the total population served by the system applicant; the system with the larger population will be given preference.

The EPA's expectation is that the required federal subsidy funding that is available for SFY 2023 will be committed in an executed financial assistance agreement in a timely manner. Applicants that are eligible for subsidy and have projects that involve multiple contracts should plan accordingly.

The actual amount of subsidization a project receives will be determined at the time the financial assistance agreement for each qualifying individual project is drafted and may differ from the percentages and amounts outlined above. The DWS may reevaluate subsidization levels based on the available project cost and readiness information, if necessary. Projects which are eligible to receive federal subsidization are identified on the Comprehensive Project List. Any single PWS cannot receive more than 50% of the available federal subsidy under this IUP.

## 6. Prior Years' Federal Subsidization

EPA Region 1 requested that the status of prior years' federal subsidization be addressed by the DPH in the IUP for the FFY 2022 capitalization grant. The State of Connecticut has met the requirements for FFYs 2010 through 2016. The status of the commitment and disbursement for the FFYs, 2017 through 2021 grants are individually identified below, along with a table summarizing the amounts (Table 6). The actual projects and individual subsidy amounts as of June 30, 2022, were identified in the 2022 Annual Report, along with the status of meeting the disbursement requirement.

### FFY 2017

The required subsidization has been committed and disbursed for FFY 2017 as of October 31, 2022.

### FFY 2018

The required subsidization has been committed for FFY 2018. As of October 31, 2022, \$2,221,400 has been committed and \$2,151,214 has been disbursed under executed funding agreements. It is expected that the required disbursement will be achieved by May 31, 2023.

### FFY 2019

The required subsidization has not yet been committed for FFY 2019. As of October 31, 2022, \$933,796 has been committed and \$522,431 has been disbursed under executed funding agreements. The funding agreements that will commit the required funds are pending, with the goal for them to be executed by June 30, 2023, and complete all disbursements by December 31, 2024.

### FFY 2019 DCAP

The maximum available DCAP subsidization has been committed and the minimum disbursement amount for FFY 2019 DCAP has been met. As of October 31, 2022, \$3,851,400 of the federal DCAP subsidy has been committed and \$2,509,128 has been disbursed under executed funding agreements. It is expected that the disbursements will be completed by October 31, 2024.

### FFY 2020

The required subsidization has not yet been committed for FFY 2020. As of October 31, 2022, none of the federal subsidy has been committed under executed funding agreements. The funding

agreements that will commit the required funds are pending, with the goal for them to be executed by June 30, 2023, and complete all disbursements by June 30, 2025.

**FFY 2020 DCAP**

The minimum required DCAP subsidization has been committed and disbursed for FFY 2020. As of October 31, 2022, \$1,507,058 of the federal DCAP subsidy has been committed and \$995,709 disbursed under executed funding agreements. The maximum amount of available subsidy is intended to be committed. The funding agreements that will commit the remaining funds are pending, with the goal to complete the disbursements by January 31, 2025.

**FFY 2021**

The required subsidization has not yet been committed for FFY 2021. As of October 31, 2022, none of the federal subsidy has been committed under executed funding agreements. The funding agreements that will commit the required funds are pending, with the goal for them to be executed by June 30, 2023 and complete all disbursements by December 31, 2025.

**FFY 2021 DCAP**

The minimum required DCAP subsidization has not been committed for FFY 2021. As of October 31, 2022, none of the federal DCAP subsidy has been committed under executed funding agreements. The maximum amount of available subsidy is intended to be committed. The funding agreements that will commit the remaining funds are pending, with the goal for them to be executed by June 30, 2023 and complete the minimum disbursements by December 31, 2024, and all disbursements by December 31, 2025.

Table 6 summarizes the federal subsidies from previous years’ capitalization grants.

**Table 6 – Summary of Prior Years’ Federal Subsidy**

Cap Grant FFY	Minimum Amount of Federal Subsidy to Disburse	Maximum Amount of Federal Subsidy to Disburse	Total Federal Subsidy Amount Committed as of October 31, 2022	Additional Federal Subsidy Expected to be Committed	Federal Subsidy Amount Disbursed as of October 31, 2022	Remaining Federal Subsidy Amount Expected to be Disbursed	Estimated Month for Committal of Minimum Subsidy	Estimated Month for Disbursement of Minimum Federal Subsidy	Estimated Month for Full Disbursement of Federal Subsidy
2010	\$4,071,900	N/A	\$4,723,405	\$0	\$4,723,405	\$0	Achieved	Achieved	Achieved
2011	\$2,825,400	N/A	\$2,990,646	\$0	\$2,990,646	\$0	Achieved	Achieved	Achieved

**J. State Grant-in-Aid Funds – Public Water System Improvement Program**

On May 22, 2014, [Public Act 14-98](#) (PA 14-98) was signed into law, which under Section 46 provides the State Bond Commission (SBC) the power to authorize bonds up to an aggregate of \$50 million to be used by the DPH to implement a public water system improvement program. On June 4, 2016, [Special Session PA 16-4](#) was signed into law, which reduced the amount to \$20 million. This \$20 million was obligated to and utilized for drinking water projects in southeastern Connecticut in prior SFYs. Public Act 20-1, signed into law on March 12, 2020, authorized an additional \$24 million for this program. This PWS Improvement Program, which is codified in CGS 22a-483f, provides grants-in-aid, in the form of loan principal forgiveness, to certain eligible PWSs for DWSRF projects. A project which is eligible for any subsidy from the DWSRF must execute a loan for any remaining amount of principal in order to receive the grants-in-aid.

Eligibility criteria for the supplemental grants-in-aid under CGS 22a-483f includes the same eligibility criteria for DWSRF loans with the following exceptions, which are explicitly contained within CGS 22a-483f. Public Act 19-194 amended this statute to allow public service companies, as defined in Section 16-1 of the CGS, to be eligible for these grants-in-aid, effective October 1, 2019.

- A for-profit company that is not a public service company **is not** eligible for grants-in-aid.
- Grants-in-aid may only be provided to eligible PWSs for eligible drinking water projects for which a DWSRF project funding agreement is executed after July 1, 2014.

CGS 22a-483f also requires eligible PWSs to submit a Fiscal and Asset Management Plan with their DWSRF application. The DPH has prepared Asset and Fiscal Management Plan Checklists (Attachments I and J respectively) to assist borrowers in preparing these plans if they need to.

Eligible PWSs that serve 10,000 or fewer persons may receive up to 50% grant-in-aid for project costs that qualify for funding through the DWSRF. Eligible PWSs that serve more than 10,000 persons may receive up to 30% grant-in aid for project costs that qualify for funding through the DWSRF. If a project includes one PWS serving 10,000 or fewer and one PWS which serves greater than 10,000 persons, the determination of maximum subsidy percentage will be based upon the specific benefits of the project to each PWS and reviewed on a case-by-case basis. The benefits and necessity of all aspects of the project for each PWS must be clearly explained and included in any Preliminary Engineering Report (PER) or similar engineering report.

These limited state grant-in-aid funds will be used to further the public health goals for the State of Connecticut through the regionalization of public drinking water and reduction of public exposure to harmful contaminants in drinking water. DPH intends to use these grant-in-aid funds to subsidize community PWS consolidation projects, interconnection projects, projects that address emerging contaminants or lead service line replacements that meet the criteria as outlined below:

**1. Consolidation Projects**

- Project will result in the consolidation of one or more community PWSs, or one or more public schools that are PWSs, by another community PWS that has the technical, financial and managerial capacity to serve them;
- A legally binding consolidation agreement must be in place between the affected PWSs prior to the commitment of grant-in-aid funding in a DWSRF financial assistance agreement;
- The project is consistent with a Water Utility Coordinating Committee Coordinated Water System Plan (pursuant to CGS 25-33h) and an Individual Water Supply Plan (pursuant to CGS 25-32d), both approved by the Commissioner of DPH;
- The project is consistent with the State or local Plan of Conservation and Development;
- The project is not intended primarily for future growth consistent with existing DWSRF EPA requirements;
- The absorbed PWS and the community PWS which absorbed it are eligible to receive grants-in-aid for each system's respective portion of the project as outlined below:
  - A PWS that will be absorbed will be eligible for:
    - the water main extension;
    - improvements to their existing drinking water infrastructure that the water main extension will connect to, if those improvements are necessary to achieve long-term drinking water infrastructure sustainability, and that are identified in a PER that has been approved by the DPH, including but not limited to:
      - improvement or replacement of water distribution system components (water mains, pumping facilities, storage tanks);
      - the decommissioning or demolition of infrastructure that will be obsolete after the project is completed (must be part of the DWSRF-funded project);
      - improvement or replacement of drinking water sources (well).
  - The community PWS that will absorb the other PWS will be eligible for:
    - any infrastructure upgrades directly related to providing the capacity to consolidate that are identified in a PER that has been approved by the DPH, including but not limited to:
      - the water main extension;
      - increased storage capacity;
      - increased distribution system capacity;
      - increased water treatment plant capacity and/or optimized water treatment plant performance;
      - new or upgraded drinking water sources of supply.

## **2. Interconnection Projects**

- Project will result in the interconnection of two (or more) community PWSs, all of whom will remain regulated by the DPH upon completion of the project, and the following criteria are met:
  - One or more of the interconnected PWSs does not have a sufficient margin of safety in water supply to support their existing customer demands over a 20 year planning period, the other system(s) has an adequate margin of safety over the same 20 year planning period to supply the deficit demands and the project is identified as the recommended alternative in a PER that has been approved by the DPH; or
  - One or more of the interconnected PWSs does not have the ability to maintain customer service with the loss of their largest drinking water source out of service for a prolonged period and the project is identified as the recommended alternative in a PER that has been approved by the DPH; or
  - The project is consistent with, or specifically identified within, a statewide drinking water resiliency plan recognized and accepted by the DPH; or

- The project is consistent with a Water Utility Coordinating Committee Coordinated Water System Plan (pursuant to CGS 25-33h) and Individual Water Supply Plan (pursuant to CGS 25-32d), both approved by the Commissioner of DPH; and
  - The project is consistent with the State or local Plan(s) of Conversation and Development; and
  - The project is not intended primarily for future growth consistent with existing EPA requirements for the DWSRF.
- A legally binding interconnection agreement must be executed between the affected community PWSs and a Sale of Excess Water permit from the DPH must be obtained prior to the commitment of grant-in-aid funding in a DWSRF financial assistance agreement.

### **3. Emerging Contaminants**

- The primary purpose of the project is to proactively address the elimination, reduction or treatment of unregulated contaminants that have been determined by the DPH Commissioner to present an unacceptable public health risk, or are listed in the EPA's Unregulated Contaminant Monitoring Rule;
- The grants-in-aid funding may be used for the planning, design or construction phase of the project;
- The grants-in-aid funding may be used to cover the necessary cost to successfully interconnect/consolidate public water systems that have elevated levels of these emerging contaminants with a distribution main owned by a municipality.

### **4. Lead Service Line Replacements**

- The primary purpose of the project is to replace lead service lines to the PWS's customers to reduce harmful exposure to lead in their drinking water;
- The replacement of each lead service line must result in the complete removal of all lead components from the water main on the street to the customer's water meter or other connection point to the customer's premise plumbing;
- Upon project completion the PWS shall retain and furnish the DPH with a list of all customer addresses where lead service lines were replaced and a list of all consumer addresses that refused to allow their lead service line to be replaced.
- To the extent that information is available, the percentage of children with elevated blood lead levels residing in homes should be taken into consideration when prioritizing the areas of LSL replacement.

The \$24 million authorized by Public Act 20-1 for SFY 2021 was approved by the SBC for the construction phase of LSL replacement projects in disadvantaged communities that are ready to proceed. These grant funds will be used to eliminate any cost share for customers in these disadvantaged areas that may not be able to afford their LSL replacement on their own with an initial focus on areas where children have had elevated blood lead levels. The DPH also intends to seek authorization for additional allocations of funding in future SFYs for LSL replacement projects in an attempt to completely eliminate LSLs in Connecticut.

Qualifying public water systems in which their project is for the replacement of lead service lines to the PWS's customers, or replaces lead connections such as lead goosenecks, will be eligible to receive up to 30% or 50% of each fixed contract cost as state grant-in-aid, depending on the population served by the PWS as noted above.

Certain PWSs may be eligible to receive both Federal and State subsidies for a particular project; however, the combined amount of subsidy cannot exceed 75% of the project costs.

Should any additional funding be made available, or if the above projects do not utilize all of the allocated funding, any additional or remaining funds are expected to be distributed on a first come, first served basis to other eligible projects. The DPH intends to seek legislative approval for additional funding for this program.

#### **K. Readiness-To-Proceed**

Only those elements (planning, design, construction) of eligible projects that are expected to result in executed contracts and DWSRF loan agreements within SFY 2023 are considered for inclusion on a PPL. Elements of eligible projects that are not expected to result in executed contracts and DWSRF loan agreements may be eligible to receive DWSRF funding in a future SFY as explained in the rollover procedure in Section V.B. The PPLs were generated based on the readiness of one or more elements of a project to proceed to a loan agreement during this SFY, and its number of priority points.

The DPH has developed objective readiness criteria that are used to determine those elements of projects for which a funding agreement can reasonably be expected to be executed during this SFY. This readiness determination process is necessary to ensure that available DWSRF funds will be obligated in a timely fashion. The factors in these criteria are:

- Local funding resolutions and any other necessary approvals have been identified and will be secured;
- Required local permits or approvals have been identified and will be secured;
- Required State permits or approvals have been identified and will be secured;
- Project is generally consistent with the State of Connecticut Plan of Conservation and Development
- (For Planning/Design Projects) professional services qualification-based selection process is followed and will be completed, with the exception of actual award of the contract, pending DPH authorization to award the contract;
- (For Planning/Design Projects) Consultant is scheduled to be under contract during the current SFY;
- (For Construction Projects) Status of final design;
- (For Construction Projects) Status of bid specifications;
- (For Construction Projects) All necessary sites, easements and rights-of-way have been identified and will be secured;
- (For Construction Projects) Construction is scheduled to begin during the current SFY.

The information that the DPH uses to make a determination on project readiness is based on updated project schedules received from applicants in response to requests from the DPH. If for some reason a project is not ready to proceed in a timely fashion, the DPH may bypass that project and select the next highest-ranked project that is ready-to-proceed for funding based on that PWS's ability to initiate the project during the current SFY.

#### **L. Project Bypass Procedures**

##### **Bypass for Readiness-to-Proceed, etc.**

The DPH utilizes procedures to bypass projects that are not progressing at a rate that will ensure the timely execution of a loan agreement and distribution of available DWSRF funds. Funds

previously designated for a bypassed project will be made available to another project or may be used for cost increases on other projects previously approved.

If for some reason a project on a PPL is not progressing in a timely fashion, the DPH may bypass that project upon approval of the Commissioner's Office pursuant to RCSA Sec. 22a-482-1 (c)(5)(A). A project will also be bypassed if the applicant has withdrawn its DWSRF application. This bypass process is necessary to help ensure that available DWSRF funds will be disbursed in a timely fashion.

### **Emergency Bypass**

The DPH Commissioner has the authority to make a project loan or loans with respect to an eligible drinking water project without regard to the priority list of eligible drinking water projects if an emergency exists, including, but not limited to, an unanticipated infrastructure failure, a contamination of water or a shortage of water which requires that the eligible drinking water project be immediately undertaken to protect the public health and safety. In such cases there may be a need to bypass projects on a PPL.

### **M. Other DWSRF Provisions**

#### **Davis-Bacon Prevailing Wage Requirements**

Safe Drinking Water Act under §1452(a)(5) imparts federal prevailing wage requirements on projects funded by the DWSRF. The requirements of this section apply to any construction project carried out in whole or in part with assistance made available by the DWSRF and requires compliance with federal labor laws regarding prevailing wages, hours of work, and rates of pay. These requirements are collectively known as the Davis-Bacon Act.

#### **Federal Cross-Cutting Authorities, Equivalency Projects, and Environmental Reviews**

A number of Federal laws, executive orders and government-wide policies apply by their own terms to projects and activities receiving federal financial assistance, regardless of whether the statute authorizing the assistance makes them applicable (cross-cutters). All projects for which the DPH provides DWSRF assistance in amounts up to the amounts of the capitalization grant deposited into the DWSRF (i.e. equivalency) are required to comply with these requirements. The DPH is responsible for ensuring that DWSRF assistance recipients comply with the requirements of cross-cutters, including initiating any required consultations with state or federal agencies responsible for individual cross-cutters.

The DPH is required to identify projects that will be used to satisfy federal equivalency requirements. The DPH has elected to impose federal equivalency requirements to all projects and activities for which the DPH provides DWSRF assistance. There are only two exceptions to this. One is for federal Disadvantage Business Enterprise (DBE) requirements, which the DPH will only apply to PWS infrastructure projects costing \$100,000 or more and DPH will only report to EPA on DBE compliance in an amount equivalent to the federal capitalization grant. The second is for BABA requirements, which the DPH will at a minimum apply in an amount equivalent to the respective capitalization grant project funds.

All PWS infrastructure projects funded by the DWSRF are reviewed under a State Environmental Review Process (SERP) administered by the DPH and considered by the EPA to be equivalent to a National Environmental Policy Act (NEPA) review.

For the purposes of satisfying capitalization grant reporting requirements under the Federal Financial Accountability and Transparency Act (FFATA), the DPH will only report on DWSRF projects in an equivalent amount of each capitalization grant as requested by EPA. A list of projects that may be used to satisfy the FFATA reporting and equivalency requirements is shown in Table 7. The actual projects reported under FFATA will be stated in the DWSRF annual report. Any contracts over \$25,000 utilizing set-aside funds will also be reported under FFATA.

**Table 7 - SFY 2023 Potential Projects to be Used for FFATA Reporting**

Project #	PWS ID	PWS	Town of PWS	Project Name	Amount Requested
<b>BIL Lead Service Lines funding</b>					
SFY 23-45	CT0590011	Groton Utilities	Groton	Lead Service Lines Replacement (Planning)	\$396,000

SFY 22-13	CT0640011	Metropolitan District Commission	Hartford	Hartford Hospital Area Water Main Replacement Hartford	\$6,600,000

**Use of American Iron and Steel & Build America, Buy America**

On January 17, 2014, federal Public Law 113-76 was enacted, which added a new federal Use of American Iron and Steel (AIS) requirement in Section 436. Subsequent annual appropriations have continued this requirement. The AWIA requires that DWSRF assistance recipients use iron and steel products produced in the United States for the construction, alteration, maintenance or repair of a public water system or treatment works if the project is funded through an assistance agreement executed through the end of FFY 2023 (September 30, 2023), as stated in SDWA §1452(a)(4). The BIL has eliminated the end date and made this requirement permanent. The EPA has issued guidance on the implementation of this provision and has a [State Revolving Fund American Iron and Steel Requirement website](#). The DPH also has a [Use of American Iron and Steel](#) webpage to assist DWSRF applicants in understanding and complying with AIS requirements.

The Build America, Buy America Act (BABA) was included in Title IX, Subtitle A, Part I of the BIL. The BIL expanded domestic sourcing requirements with the inclusion of BABA. Starting on May 14, 2022, all steel, iron, manufactured products, non-ferrous metals, plastic and polymer-based products (including polyvinylchloride, composite building materials, and polymers used in fiber optic cables), glass (including optic glass), lumber, and drywall used in infrastructure projects for

federal financial assistance programs must be produced in the United States. [Initial Implementation Guidance](#) was released from the White House's Office of Management and Budget (OMB) Made in American Office (MIAO) on April 18, 2022, and gives some overarching guidance on the BABA and how it will be implemented. Further guidance on [BABA requirements](#) and how those requirements will need to be implemented by state DWSRF programs was issued by EPA on November 3, 2022. In addition, EPA has issued an adjustment period waiver, a small project waiver, and a de minimis waiver of BABA requirements for qualifying projects.

### **Prohibition on Certain Telecom Equipment and Services**

On December 11, 2020, the EPA issued a memo outlining a prohibition on the SRF programs using equivalency funds for the purchase or provision of services from certain manufacturers of telecom equipment. EPA also provided suggested contract language for this prohibition. [Circular Letter #2021-01](#) was issued to all Connecticut DWSRF stakeholder to provide notice of this new requirement. The DWSRF website and pre-bid checklist were updated to include this requirement and the [suggested contract language](#).

### **Federal Single Audit**

Any sub-recipient which receives a total amount of \$750,000 or more from any federal source, including the DWSRF, in a single federal fiscal year is required to conduct a federal single audit according to the Single Audit Act Amendments of 1996. This requirement is included as a term in all project funding agreements except those for EPGP and SLP.

## **N. Connecticut Plan of Conservation and Development**

CGS Section 16a-31(e) requires that whenever a state agency is required by state or federal law to prepare a plan, it shall consider the Plan of Conservation and Development (C&D Plan) in the preparation of such plan. The DPH has considered the C&D Plan in the preparation of this IUP and submitted the IUP to the Secretary of the Office of Policy and Management (OPM) for an advisory report commenting on the extent to which the proposed plan conforms to the C&D Plan.

The advisory report on the IUP's conformance with the C&D Plan is important because CGS Section 16a-31(c) also requires the OPM to advise the SBC prior to the allocation of funding to the DPH for these DWSRF projects. Finally, CGS Section 16a-31(a)(3) requires the DPH to determine the consistency with the C&D Plan of individual actions regarding the acquisition, development, or improvement of real property, it undertakes using state or federal funds, such as the drinking water infrastructure improvement projects contained in the DPH's annual IUP, when those costs are in excess of two hundred thousand dollars.

## **V. DWSRF POLICIES and REQUIREMENTS**

### **A. Letter of Authorization to Award for Eligible Projects**

The DPH may issue a letter authorizing the PWS to award a contract for a project if sufficient information has been submitted. Typically, this letter indicates to the applicant that the materials that they have submitted to the DPH satisfy the rules and regulations for the DWSRF program. Pursuant to the regulations, the applicant must submit a request for authorization to award a contract to the DPH and receive such authorization prior to any contract execution. The applicant

may award the contract(s) subject to conditions set forth in the letter. The authorization letter does not constitute a commitment by the DPH to make a project loan under the DWSRF program.

## **B. Project Application Carryovers and Rollovers**

### **Project Progressing Towards a Loan Agreement (Carryover)**

Funding for a project that has been identified on a PPL in a previous annual IUP may be carried over to the subsequent IUP period if the applicant is actively progressing toward a DWSRF financial assistance agreement. Projects in this category are considered to have already gone through the public hearing process and will not be re-ranked in the subsequent IUP period. Projects meeting this criterion are identified on the Carryover List.

The DPH reserves the right to remove a project from the Carryover List if that project is not progressing due to unforeseen circumstances that occurred after the project was originally placed on the Carryover List. A project so moved is no longer reserved any DWSRF funding.

### **Project on the PPL, but not Progressing Towards a Loan Agreement (Rollover)**

A project that has not been withdrawn, but which is not progressing towards a loan agreement during the IUP period/funding cycle, may be rolled over for consideration in the subsequent IUP period/funding cycle upon request to the DPH by the applicant. Any PWS seeking to rollover a project is required to update its DWSRF application upon request by the DPH. These projects will be ranked with all new applications received for the fiscal year into which the project is being rolled over and in accordance the then-current PRS. Any project that is rolled over must continue to comply with all requirements of the DWSRF program.

## **C. Multi-Year Projects on the Fundable Portion of the Priority List**

The construction of some drinking water projects may take place over multiple years. For such multi-year projects, the DPH reserves the right to require the applicant to break the project into phases. This process will limit the amount of funding reserved for the project on a PPL to the amount of funds the PWS reasonably expects it will need for the phase to be designed and/or constructed during the SFY of the PPL. This allows the timely access to DWSRF funds by other DWSRF applicants that are ready to use them. Subsequent phases of these multi-year projects will automatically be rolled over to the following year's IUP and will retain its assigned ranking points, subject to changes in the "Affordability" criteria. These subsequent phases will not automatically receive DWSRF funding in the next annual IUP period and will be ranked with all new and rolled-over applications received during the IUP period when each subsequent phase is ready-to-proceed.

## **D. Tie-Breaking Procedures**

The total numeric score for a project is determined by summing the points awarded based on the PRS and detailed in the DWSRF Eligibility Application. As outlined in the PRS, a total of 5 factors are taken into consideration when drafting the PPLs. Following the implementation of these factors, in circumstances where more than one project has an equivalent ranking score, the following tiered approach will be implemented to break the tie:

1. Projects that qualify under the DCAP

2. The percentage of total PWS population served by the project; the project serving a higher percentage of the overall PWS population will be given preference.
3. The size of the population served by the project; the project with the larger population served will be given preference.
4. The size of the total population served by the PWS; the PWS with the larger population will be given preference.

If two or more projects remained tied after implementation of tie-breaker #1, then #2 will be applied. If two or more projects remain tied after implementation of tie-breakers #1 & #2, then #3 will be applied. If two or more projects remain tied after implementation of tie-breakers #1, #2 and #3, then #4 will be applied. This tie-breaking method shall apply to projects listed on both the PPL and CPL.

#### E. Pre-Review Policy (Construction Only)

The DWSRF Program operates on a SFY basis from July 1 to June 30, and cannot provide funding prior to the start of a specific SFY for that year's PPLs. The DPH recognizes that the construction season in Connecticut generally begins in the spring and lasts through the end of the calendar year. The DPH has determined that it is not in the best interest of the Program to delay project schedules to begin construction after the start of the SFY for which a project has submitted an Eligibility Application and requested funding, which is several months into the construction season. As a result, certain projects may begin construction before the start of the SFY and remain eligible for DWSRF funding after the start of the SFY. The DWS may provide DWSRF financing for these projects provided that all of the following conditions are met:

- The PWS has submitted a DWSRF Eligibility Application to the DPH
- The project is eligible for DWSRF funding
- The funding agreement will be drafted during the SFY under which the project is listed on the Comprehensive Project List
- The project will not begin and be completed prior to the start of the SFY
- The project is consistent with the statewide C&D Plan
- The DPH has completed its environmental review of the project under the Connecticut Environmental Policy Act or issued a categorical exclusion under NEPA prior to the start of construction
- The project has satisfied all other state and federal DWSRF requirements prior to placing the construction contract out to bid
- The project has received written authorization from the DPH to award a construction contract prior to the execution of the contract
- The project continues to adhere to all state and federal DWSRF requirements during construction
- Sufficient DWSRF funding is available for the project

Before the DWSRF provides financing for such a project, it will be ranked as outlined in this IUP and included on the Comprehensive Project List. Any project that meets the above conditions and elects to start construction prior to the SFY shall understand that:

- The DPH provides no guarantee of DWSRF funding for their project
- The PWS shall be responsible for paying all costs associated with their project and will only be eligible for reimbursement from the DWSRF if:
  - The project is listed on a PPL, or;

- The project is on the Comprehensive Projects List and sufficient excess funding is available, or;
- The project bypasses a higher-ranked project on a PPL, if that higher-ranked project is not sufficiently ready to proceed, per the procedures outlined in Section IV.L of this IUP.
- A DWSRF funding agreement cannot be executed until after the IUP for the SFY is finalized

## F. Reimbursement

The DPH implements the EPA policy on eligibility of reimbursement of incurred costs for approved projects (Eligibility of Reimbursement of Incurred Cost for Approved Projects 64 F.R. 1802 (Jan. 12, 1999)). Consistent with this policy, an eligible PWS must receive written authorization from the DPH prior to commencement of construction in order to be eligible to receive reimbursement at the financial assistance agreement closing for any construction costs incurred prior to the loan closing.

## G. Refinance Existing Loans

### 1. Permanent Debt Obligations

The DWSRF may be used to buy or refinance permanent debt obligations for DWSRF projects, if the DPH determines the refinance is in the best interest of public health. The SDWA and DWSRF regulations only permit use of the DWSRF for refinancing for municipal projects incurring debt and initiating construction after June 30, 1993. Projects will still have to be eligible for DWSRF funding and meet all applicable DWSRF requirements at the time of the DWSRF loan, including an environmental review, and must have received advance written authorization from the DPH prior to the award of any contracts included in the refinancing loan. Private systems are not eligible for refinancing. The project must adhere to all state and federal applicable DWSRF requirements during construction. Consideration for refinance applications of permanent debt obligations will be entertained only after projects addressing public health protection and compliance have been funded.

Such projects will be ranked below any projects that are not for refinance according to the PRS. If it is determined after the initial eligibility review that a project is seeking DWSRF funds solely for refinance, the DPH reserves the right to adjust the ranking accordingly. A refinance project may be able to bypass a higher-ranked project, if that higher-ranked project is not sufficiently ready to proceed, per the procedures outlined in this IUP.

### 2. Interim Debt Obligations

The DWSRF may be used to buy or refinance interim debt obligations that are incurred prior to a project's completion. Such projects are subject to the same requirements associated with the refinancing of permanent loan obligations with the exception that the project will be reviewed by the DPH and ranked according to the PRS and retain the same considerations for DWSRF funding as other projects that receive DWSRF interim loans so long as:

- The DPH receives a DWSRF Eligibility Application in advance of the PWS entering into any interim debt obligations for the project, and;
- The refinancing DWSRF loan is executed within six months of completion of the project, and;
- No permanent loan obligations for the project have been executed.

## H. Withdrawal of Project from Funding Consideration

If a PWS chooses not to pursue funding of a project through the DWSRF or chooses to not go forward with the implementation of a project, the PWS shall be requested to submit a letter to the DPH indicating the withdrawal of the project. The letter should include a statement as to why the project was withdrawn. Upon receipt, the project will be removed from a PPL and Comprehensive Project List, or the Carryover List, as appropriate, and no longer considered for funding. Withdrawal of a project will not preclude a PWS from continuing to pursue funding for other projects or from submitting the same project for consideration during a subsequent DWSRF funding cycle. If a PWS does not submit a letter as requested, the DPH may withdraw the project based on the initial notification.

Projects for which an Eligibility Application was received, and the project is placed on a PPL, but for which the DPH does not receive a Financial Assistance Application by the established deadline, may be bypassed or withdrawn.

The DPH reserves the right to withdraw and remove any project from the Carryover List, a PPL and/or the Comprehensive Project List, if the applicant becomes nonresponsive to the DPH. Any applicant whose project is withdrawn by the DPH for any reason will be notified in writing and required to resubmit a new DWSRF Eligibility Application if they desire to further pursue DWSRF funding for that project.

## I. Use of Excess Project Funds

The amount of funding in a DWSRF loan agreement is generally based upon known fixed costs and may also include a reasonable or adequately justified amount of contingency for unexpected costs that may occur during the project. If a recipient does not utilize all available funds upon completion of the original project, they may submit a request to the DPH to utilize those excess funds for additional work related to the scope and use of the original project. The additional work must enhance or provide additional public health value to the original project. This additional work will be reviewed and required to follow all applicable requirements in the same manner as all projects.

## J. Replacement of Lead Service Lines when Replacing Water Main

During the replacement or rehabilitation of a distribution system water main as part of a DWSRF eligible project, any lead service lines or partial lead service lines that are known to exist or that are encountered during such replacement or rehabilitation must be replaced in order for the water main project to remain eligible for DWSRF funds. This requirement is conditioned on the DWSRF applicant obtaining the consent of the individual property owner to replace the full lead service line. If such consent is obtained, the full lead service line replacement may be undertaken by the DWSRF applicant or individual property owner. If undertaken by the individual property owner, the DWSRF applicant shall verify all lead materials have been removed and that no new lead replacement materials have been installed. When lead service lines are encountered, the DWSRF applicant shall, at a minimum:

1. Provide the individual property owner with information about the risks of lead exposure and information about the applicant's Lead Service Line Replacement Program;
2. Engage in meaningful discussion with the individual property owner about fully removing their lead service line; and

If the property owner does not consent to replacing their lead service line the following additional actions shall be undertaken by the DWSRF applicant:

3. Notify the DPH of the property address of the lead service line and the refusal of the property owner to allow or undertake its replacement;
4. Evaluate the applicant's Lead and Copper Rule sampling site plan, if the lead service line was not previously known to exist, to determine if appropriate changes need to be made based on this information; and
5. Maintain records of items 1-4 above, as appropriate.

The replacement of the service line must result in the complete removal of all lead components from the water main to the water meter or other connection point to the premise plumbing. The replacement of the lead service line is eligible for DWSRF funding if such costs are not covered by the individual property owner; however, funding shall be subject to the availability of DWSRF funds to cover these additional costs.

## **VI. FINANCIAL MANAGEMENT**

### **A. Rationale for Determining Amounts of Capitalization Grant Intended for Project and Set-Aside Funds**

Section 1452 of the SDWA authorizes states to use a portion of the capitalization grant to support various drinking water programs through set-aside funds. The DPH has chosen to take the maximum amount allowable and expects to use these set-aside funds to promote and implement safe drinking water efforts integral to Connecticut's multiple barrier approach to protection of public drinking water supplies and public health. Additionally, the DPH will use these funds to foster greater appreciation of drinking water among the general public and the regulated community. Both of these intended uses address proactive and preventive measures endorsed by Congress in its authorization of the SDWA.

Section VII provides an overview of how the DPH intends to use the funds allocated for each set-aside.

### **B. Sources and Uses of DWSRF Funds**

#### **Sources**

The total DWSRF funding available for direct loans and subsidization to PWSs during SFY 2023 is expected to be approximately \$309,526,886. Attachment A provides a breakdown of the sources of these funds. These sources include the FFY 2022 capitalization grants, carry-over capitalization grant balances from prior FFYs, state matching funds, existing revenue bond authorizations that were not allocated to projects, and program equity funds. This attachment also includes the amount of set-aside funding from the DWSRF capitalization grants.

The breakdown of sources and uses reflects the total amounts projected for the DWSRF project fund and set-aside accounts that will be made available to the DPH upon EPA approval of the DPH's applications for the FFY 2022 capitalization grants.

## Uses

Each set-aside for each grant has distinct uses. Planned set-aside activities have been summarized in Section VII and detailed in individual workplans. In general, they include staffing costs to support the function of each set-aside, necessary equipment and supplies, travel and training to support a skilled and knowledgeable workforce, maintenance costs to sustain information system databases and enhance electronic capabilities, and contractual costs to support technical assistance to public water systems, local health departments and certified operators.

Projects that are currently anticipated to be funded during SFY 2023 include all projects that are being carried forward from the previous IUP on the Carryover List and projects appearing on the PPLs. The Carryover Project List identifies 14 projects for a total of approximately \$25,761,066. The Base/Supplemental PPL identifies 107 projects for a total of \$286,492,044, which includes all projects from the LSL and Emerging Contaminant PPLs, along with 1 LSL and 1 Emerging Contaminant projects shown on the Carryover List. Taking into consideration the two projects which also appear on the Carryover List, the net amount requested on the Base/Supplemental PPL is \$274,425,044. The Comprehensive Project List identifies all eligible projects which are seeking funding, including those on the Carryover List and PPLs, as described in Section IV.C.

The total amount of funding available for all projects during SFY 2023 is anticipated to be approximately \$309.5 million. This is approximately \$9.3 million more in available funding than project costs shown on the Base/Supplemental PPL. These additional funds will be used for unanticipated increases in the cost of projects expected to receive funding, or for additional projects from the Comprehensive Project List that may become ready to proceed in this SFY after the finalization of this IUP.

The ULO balance of capitalization grant funds designated for DWSRF projects is \$12,879,109.67 as of October 31, 2022, not including the FFY 2022 capitalization grant awards. Due to program requirements, all monies provided as federal subsidy must come directly from the federal capitalization grant. As a result, a balance of project ULOs must be maintained in an amount sufficient to make federal subsidy payments for qualifying projects. The ULO set-aside balance is \$1,500,528.76, not including the FFY 2022 capitalization grant awards. EPA has established national objectives for states to fully expend their capitalization grants within two years of their award date and have only two open capitalization grants at any one time.

In 2019, the DPH began to collect fees from Public Water Systems to provide additional support for these programs when capitalization grants and existing state funds could not sustain staffing levels. Original legislation was enacted in Section 676 of Public Act (PA) 17-2 of the June special session of the Connecticut General Assembly, covering the period from July 1, 2018, to June 30, 2019. Changes to this legislation were enacted in Section 75 of Public Act 19-117. Pursuant to PA 19-117, for fiscal years ending June 30, 2019, June 30, 2020, and June 30, 2021, inclusive, each water company that owned a community or non-transient non-community PWS was required to pay to the DPH a safe drinking water primacy assessment to support the DPH's ability to maintain primacy under the SDWA. The Connecticut General Assembly did not extend the fee program beyond June 30, 2021, allowing it to sunset. Although the assessment has not been collected since SFY 2021, staff previously funded by the fee program will continue to be supported by state funds. The DPH will continue to assess funding levels and will propose fees in the future, if necessary.

### C. The DWSRF Financing Plan and Issuance of Bonds for Leveraging

States may choose to issue bonds in conjunction with their federal capitalization grants to provide for more funding within their programs. Leveraging is a useful financing option available to states with a high demand of projects which are ready to proceed for immediate DWSRF funding. Consistent with Connecticut's financing strategy for the CWF, the DWSRF includes leveraging. Since 2001, a total of \$256.1 million in bonds have been issued to fund DWSRF projects. Leveraged financing allows the DWSRF to maximize available project funding by combining revenue bond proceeds, capitalization grants and state match contributions. This in turn provides more loans with favorable terms to more PWS applicants.

Although the 2% loan rate has historically been very attractive to SRF borrowers, in the historically low interest rate environment that existed for most of FY21 and FY22, many borrowers issued refunding bonds and prepaid their SRF loans before maturity for savings. However, in 2022, spurred in part by the federal reserve raising short-term interest rates to address inflationary pressures, interest rates have been increasing which has resulted in a cessation of loan prepayments at this time. After internal discussions and an analysis of the DWSRF program cash flows and projected loan demand, the results show that the SRF may not need to leverage the program over the next several years to fund new loans. This is due to accumulated program equity and borrower loan prepayments received to date on loans paid off before their scheduled maturity. As a result, there has been a decision that the program will utilize loan prepayments and accumulated program equity to originate new project loans. Additionally, a term has been added to new loan agreements that exceed \$100,000 to restrict prepayments from occurring earlier than 10 years from the date of the Project Loan Obligation, which demonstrates active management and a focus on keeping the SRF program cashflows strong. These prepayments and the large equity balance in the DWSRF have had a negative impact to the "pace" of the DWSRF as measured by EPA using annual Connecticut's DWNIMS data. As a result, a shift to program equity rather than bond proceeds for new project loans it is anticipated that there will not be a need to leverage bonds for several years. Once the "pace" of the DWSRF improves to the point where leveraging becomes appropriate the DPH will consult with EPA prior to initiating any new bond sales.

A more detailed financial analysis of the DWSRF program can be found in the DWSRF Annual Reports, available on the OTT's website at:

<https://portal.ct.gov/OTT/Newsroom/Reports/Drinking-Water-Fund-Reports>.

The leveraging process has been successful because it has allowed the State of Connecticut to fund projects that would not normally be funded using capitalization grant funds alone. Without leveraging, the DPH would not be able to fund larger projects like the examples below. The last DWSRF bond issuance occurred in July 2019.

- The \$55 million New Britain Water Treatment project, which was built using \$36.6 million in DWSRF funds. This project, which replaced an antiquated system, provides excellent quality water to its over 90,000 customers, and keeps the water rates relatively low.
- The \$29 million water treatment plant upgrade for the South Norwalk Electric and Water utility was built using \$24.7 million in DWSRF funds to replace an antiquated water treatment plant that was badly in need of upgrades.
- Meriden Water Division secured over \$21 million in DWSRF funds for the design and construction of major improvements to its Broad Brook Water Treatment Plant and Pumping Station to maintain purity and adequacy of water to its 60,000 customers.

- Groton Utilities secured \$54 million for its Water Treatment Plant upgrade. Groton recently completed significant improvements to its plant to address water quality issues. The majority of the existing components were antiquated (originally constructed in 1938), and improvements to the facility were crucial for infrastructure sustainability.
- Norwich Public Utilities has secured over \$21 million for several improvements over the past 5 years, including water treatment plant upgrades to address water quality issues, rehabilitation of transmissions mains, and replacement and upgrades of finished water storage tanks.
- Regional Water Authority has secured over \$33 million for several improvements over the past 5 years, including system-wide meter replacement program, and to rehabilitate or replace aging facilities, such as finished water storage tanks, and sources of water supply.

#### **D. State Matching Requirement**

The required 20% state match for the FFY 2022 capitalization grant is \$1,401,600. In addition, the BIL requires a 10% state match for the FFY 2022 General Supplemental capitalization grant, which is \$1,799,200. These funds are required to be in place prior to drawing down the respective award. The State of Connecticut will have the required state match amounts deposited into the DWSRF prior to the expenditure of any federal FFY 2022 capitalization grant dollars for the respective awards. The state match is provided through the proceeds of state General Obligation Bonds issued prior to 2001 and cash contributions from the state. Since 2007, additional state match has been provided by the contribution of principal and interest payments collected from the State of Connecticut on General Obligation Bonds issued to provide interest subsidy for the CWF and held outside the CWF until payments are received by Connecticut. These funds are no longer needed by the CWF for debt service because of the issuance of lower cost refunding bonds and additional contributions by Connecticut. These payments are held and deposited as cash contributions for the DWSRF state match. As of October 31, 2022, the DWSRF has received and deposited approximately \$64.1 million for the required match since the inception of the program, including those for the FFY 2022 capitalization grants.

#### **E. Federal Cash Draw Proportionality**

The DPH must draw down project funds from the federal capitalization grant award at a proportional rate not to exceed the rate of use for the state matching funds that will be used to secure the grant. The DPH intends to use all of the state match funds prior to drawing down the federal capitalization grant funds. This approach will ensure compliance with the proportionality requirement. EPA recently released a class exception from this rule; however, any active grant would need to be amended for this change to be effective. DPH will not be amending any active grant at this time.

#### **F. Financial Terms of Loans**

Connecticut has instituted a tiered schedule of interest rates for DWSRF loans derived from the market costs of debt financing for the DWSRF program. The tier applicable to a specific project will be based on the financial and legal status of the recipient as well as on the type of project. CGS Sections 22a-475 through 22a-483, inclusive, allows for amortization to begin one year from the project's scheduled completion date and provides a formula, based on Connecticut's prevailing taxable or tax-exempt bond market rates, for setting interest rates. Connecticut may adjust these terms based on the financial viability of the borrower.

CGS Sections 22a-475 through 22a-483, inclusive, also allows Connecticut to offer project loans with reduced interest rates or an extended term, if permitted by Federal law, to eligible PWSs that qualify as disadvantaged communities. AWIA §2015(d) allows states to offer extended loan terms of up to 40 years to PWSs which qualify as such. Attachment K to this IUP provides the details of DPH’s DCAP. An initial amount of \$50 million has been made available under the DCAP for extended terms, subject to the conditions noted under the program.

Within the provisions of CGS Sections 22a-475 through 22a-483, inclusive, Connecticut will consider appropriate financial terms for refinancing and the acquisition of land and sanitary easements on a case-by-case basis. The DPH policy for refinancing is discussed in Section V.

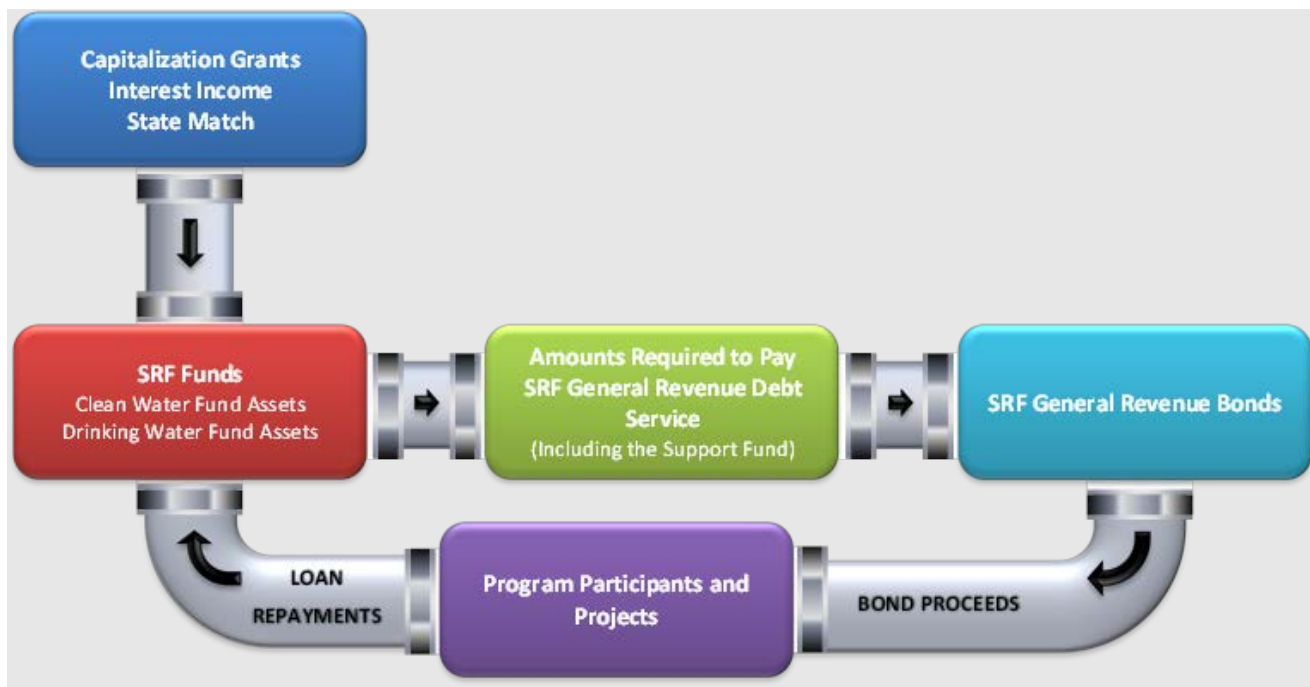

The term of a loan (in years) may not exceed the useful service life of the primary infrastructure component(s) that are being financed through the DWSRF. Maximum loan terms may also be restricted based on the dollar amount of the loan (not including any subsidy) as outlined in Table 8. During SFY 2021, a term was added to new loan agreements greater than \$100,000 which restrict prepayments from occurring earlier than 10 years from the date of the Project Loan Obligation.

**Table 8 – Loan Repayment Terms**

Loan amount	Maximum loan repayment term
up to \$10,000	3 years
\$10,000 - \$25,000	5 years
\$25,000 - \$100,000	10 years
More than \$100,000	20 years

Projects with loans of \$100,000 or less may be treated as reimbursement only. The borrower may be expected to pay their contractors with their own funds as necessary to complete the project. The financing agreement with DPH will allow PWSs to be reimbursed for those eligible expenses once the DPH receives a reimbursement payment request from the PWS along with all of the contractor’s invoicing.

Figure 2 – The Revolving Flow of Funds

**G. Transfer of Capitalization Grant Funds between the DWSRF and CWSRF**

The DPH has not transferred funds between the DWSRF and the CWSRF programs. While such a transfer is permitted under the SDWA, the DPH does not anticipate making such a transfer under the current IUP but reserves the right to do so if necessary. Specific to the BIL funding, transfer of funds is not allowable for the LSL capitalization grant.

**H. Expected Loan Demand**

The amounts of each state’s capitalization grants are determined as a percentage of the national congressional appropriation of DWSRF funding each year. Each state’s percentage is based on the outcome of the DWINSA conducted by the EPA every 4 years. The DWINSA conducted in 2015 identified a \$4,017.7 billion needed investment in Connecticut to maintain its existing drinking water infrastructure over the next 20 years. This was a 12.3% increase from the \$3,578.3 billion estimated need in 2011. Connecticut currently receives 1% of each national appropriation. The next survey was intended to be completed in calendar year 2019 but was delayed to 2021.

The State of Connecticut’s participation in the EPA-sponsored DWINSAs for 1999, 2003, 2007, 2011, and 2015 evidenced that a significant need continues to exist throughout the state for funding capital improvements. The results of these surveys are used by the EPA to determine the percentage of the DWSRF appropriation that each state will receive each year for the 4-year period interval following release of each survey’s report. The results of the 2021 DWINSA are expected to be available during calendar year 2023 and impact individual state allotments starting with FFY 2024.

The 2015 DWINSA assessed the cost and types of drinking water needs throughout the nation for the period January 1, 2015 to December 31, 2034. The results of the survey were used to determine the DWSRF allocation for FFYs 2018 through 2021; due to the delay with the subsequent survey, this has been extended to FFY 2023. The results of the 2015 survey, which were released in April 2018, showed that the State of Connecticut’s estimated need had grown from \$1.394 billion in 2007 and \$3.587 billion in 2011 to \$4.018 billion in 2015. The breakdown was as follows:

Transmission and Distribution	\$2.542 billion
Treatment	\$770.4 million
Storage	\$400.9 million
Source	\$187.6 million
Other	\$116.7 million

As the cost and need for infrastructure projects continue to increase, the demand for low-cost loans will most likely also increase. The availability of federal subsidization since 2009 for DWSRF projects has also increased the demand for loans.

The DPH fully participated in the 2021 DWINSA in the on-going effort to identify the drinking water needs in Connecticut. The AWIA included a new requirement that the DWINSA include an assessment of costs to replace all lead service lines and describe, separately, the costs associated with PWS-owned lines and those to replace any remaining portions, to the extent practicable. The 2021 DWINSA also included an assessment of PWS workforce and use of iron and steel.

**I. Impact of Program on Long-Term Financial Status of the DWSRF**

The main features of the DWSRF program – the PRS, the leveraging plan and the maximization of set-aside monies – will continue to be implemented and managed in a prudent and responsible manner. This will allow the DPH to meet the public health and compliance goals of the DWSRF, while simultaneously preserving the integrity and perpetuity of the DWSRF itself. Loan terms will be attractive, while lending procedures will include safeguards structured to minimize unforeseen losses to the fund. The use of federally-allowed subsidization from the capitalization grants will be managed to ensure that these non-repayment funds enhance the program rather than result in detrimental long term consequences.

The DWSRF also produces numerous opportunities for strengthening water supply mechanisms (i.e., source protection, Public Water System Supervision grant (PWSS) program) that will ultimately result in improvements to safe and adequate supplies of drinking water for Connecticut residents. Additionally, the placement of the DWSRF within the financial structure of Connecticut’s CWF guarantees that the DWSRF will benefit in the long term from the same management and financial planning mechanisms that have marked the success of Connecticut’s CWF Program.

**VII. SET-ASIDE ACTIVITIES**

Taken together, approximately 31% of each DWSRF capitalization grant may be used for set aside activities. The DPH receives funds under four set-asides to support various drinking water and DWSRF program activities. These include the Administration, State Program Management, Small Systems Technical Assistance, and Local Assistance set-aside funds. The amount for each set-aside from the 4 FFY 2022 capitalization grants are shown in Table 9. The set-aside activities for SFY 2023 for each capitalization grant are described below. Prior to requesting disbursement of these funds, the DPH submits work plans to EPA Region 1 with each capitalization grant application,

which provides specific details for use of each set-aside fund. If a workplan modification becomes necessary during the SFY, the DPH shall amend the grant application and seek EPA’s approval. The DPH will satisfy all set-aside reporting requirements as detailed in the capitalization grant award conditions.

**Table 9 – Set-Aside Amounts**

Capitalization Grant	Administrative	Program Management	Small System Technical Assistance	Local Assistance	
				Wellhead Protection	Capacity Development
Base	\$370,320	\$1,408,800	\$237,660	\$350,400	\$700,800
BIL Supplemental	\$719,680	\$1,799,200	\$359,840	\$720,045	\$1,799,200
BIL LSL	\$1,044,000	\$494,832	\$567,000	\$0	\$1,219,723
BIL EC	\$262,200	\$505,500	\$151,100	\$377,750	\$0

**A. Base Capitalization Grant**

The DPH will utilize all four set-asides allowable within this grant and will also exercise its reserved authority to unbank from previous years administrative, program management and small system technical assistance funds to assist in securing additional staffing support.

- The DPH intends to use funds in the Administrative set-aside to support existing staff at DPH and OTT dedicated to administrative and fiscal management of the DWSRF accounts and oversight and tracking of the DPH’s Cash Management Plan, as well as providing assistance to borrowers in preparing their loan applications and satisfying program requirements. Activities include duties as outlined in the DWSRF Interagency Memorandum of Understanding.
- Funding under the Program Management set-aside will be used to support the administration of Connecticut’s Public Water System Supervision (PWSS) program. Staff supported by this fund support both the PWSS and DWSRF programs and include providing direct technical assistance to PWSs regarding the required reporting of water quality and inventory/facility data utilized in Safe Drinking Water Information System and electronic data interchange, legal assistance to the DWS regarding the DWSRF program, maintenance of DWS’s GIS data layers in the Drinking Water Section’s GIS system, Operator Certification and Cross Connection Program tasks, and technical assistance to public water systems, certified operators and laboratories on violations and formal enforcement actions. In addition, these funds will provide assistance to small public water systems and disadvantaged communities with compliance with multiple state programs, including capacity development, asset management and financial planning, lead service line inventorying and sampling, Lead and Copper Rule compliance assistance, plan development, implementation support, and funding application assistance to help small systems apply for DWSRF funds.
- Activities performed under the Small Systems Technical Assistance Set-Aside will include providing technical assistance to small public water system serving a up to 10,000

consumers and the initiation of a contract with a service provider to offer technical assistance to the state's small public water systems. Tasks funded by this set-aside will include conducting sanitary surveys of community, non-transient non-community and transient non-community PWS serving fewer than 10,000 persons (small systems), assessing existing small PWS's technical, financial, and managerial capacity during sanitary surveys, educating and assisting small systems in applying for DWSRF loans for infrastructure projects, and conducting regulatory compliance reviews of engineering plans and specifications for existing small PWS infrastructure improvements, including projects funded under the DWSRF.

- The DPH utilizes the Local Assistance Set-Aside for wellhead protection and capacity development activities. The Wellhead Protection Program will use 5% of the set-aside funds and the Capacity Development Program will use the remaining 10%. Each program is described below.

- Wellhead Protection

Program elements include coordination, management, and regulation of source protection through the proactive enhancement and oversight of existing source protection laws and regulations, integration with water supply planning, education of local land use officials, and involvement with stakeholders on a continuous basis. Efforts funded under this set-aside will include implementation of revised statutes and regulations for source water protection including the provisions of the federal Groundwater Rule, working with local, regional, and state partnerships on Environmental Reviews for projects that could potentially impact drinking water quality, collaborating with stakeholders at the community and state level to implement source water protection concepts and best management practices to enhance drinking water source protection, reviewing and approving/ denying all proposed sources of public water supply, and work with the DWSRF Unit, sister state agencies and local health departments to identify water systems and areas of private wells impacted by emerging contaminants, and provide technical assistance to public water systems and municipalities to evaluate options for the provision of safe drinking water.

- Capacity Development

The DPH will use the Local Assistance set-aside allocation for capacity development initiatives that are consistent with the DWS's EPA-approved Capacity Development Strategy and to help to improve the technical, financial, and managerial capacity of PWSs. The DPH's strategies account for both immediate and long-term sustainability initiatives, including education, technical assistance, enforcement, consolidation, DWSRF assistance, and water system restructuring. These funds will be used primarily to support staff within the DWS that conduct sanitary surveys of community (CWS), non-transient non-community (NTNC) and transient non-community (TNC) public water systems, provide technical assistance to PWSs on violations and deficiencies noted during sanitary surveys, perform technical, financial, and managerial capacity assessments of PWS during sanitary surveys, conduct reviews of water quality and quantity of newly developed drinking water sources and review engineering plans and specifications for new water system designs in accordance with Regulations of Connecticut State Agencies (RCSA) Section 16-262-m and under the authority of RCSA

Section 19-13-B102, and support the DWSRF program by soliciting for DWSRF projects and reviewing project plans and specifications.

## B. General Supplemental Capitalization Grant

The DPH will utilize all four set-asides allowable within this grant. Unbudgeted funds from the Local Assistance - Wellhead Protection set-aside will be placed into project funds due to the inability to bank these funds.

- The DPH intends to use funds in the Administrative set-aside to support staff within DPH's Contracts and Grants Management Section and Fiscal Office and for staff support from the OTT dedicated to administrative and fiscal management of the DWSRF accounts and oversight and tracking of the DPH's Cash Management Plan, as well as providing assistance to borrowers in preparing their loan applications and satisfying program requirements. Activities include duties as outlined in the DWSRF Interagency Memorandum of Understanding.
- Funding under the Program Management set-aside will be used to support the administration of Connecticut's PWSS program. Staff supported by this fund support both the PWSS and DWSRF programs and will provide direct technical assistance to PWSs regarding the required reporting of water quality and inventory/facility data utilized in Safe Drinking Water Information System and electronic data interchange; provide legal assistance to the DWS regarding the DWSRF program, educate and assist public water systems in applying for DWSRF loans for infrastructure projects, conduct regulatory compliance reviews of engineering plans and specifications for existing PWS infrastructure improvements including projects funded under the DWSRF, develop and build a health equity program in the implementation of DWSRF, Safe Drinking Water Act public notice requirements, preservation and protection of high-quality sources of supply and other safe drinking water programs, and develop communication, education, and outreach programs to address disadvantaged populations within the drinking water programs. Funding will also be utilized to build an online interface for the collection of information from PWSs and provide information/interface to the PWSs, laboratories and public, and to continue support for the UConn Memorandum of Agreements for internship programs allowing students to participate in fieldwork and conduct a drinking water project.
- Activities performed under the Small Systems Technical Assistance Set-Aside will include providing technical assistance to small public water systems serving a up to 10,000 consumers and the initiation of a contract with a service provider to offer technical assistance to the state's small public water systems. Funded activities include conducting sanitary surveys of community, non-transient non-community and transient non-community PWS serving fewer than 10,000 persons (small systems), assessing existing small PWS's technical, financial and managerial capacity during sanitary surveys, conducting LSL inventories, educating and assisting small systems in applying for DWSRF loans for infrastructure projects, conducting regulatory compliance reviews of engineering plans and specifications for existing small PWS infrastructure improvements including projects funded under the DWSRF, and providing engineering services to small public water systems to assist with DWSRF-funded projects.
- The DPH utilizes the Local Assistance Set-Aside for wellhead protection and capacity development activities. The Wellhead Protection Program will use 5% of the set-aside funds

and the Capacity Development Program will use the remaining 10%. Funded activities for each program are described below.

- Wellhead Protection

Program elements include coordination, management, and regulation of source protection through the proactive enhancement and oversight of existing source protection laws and regulations, integration with water supply planning, education of local land use officials, and involvement with stakeholders on a continuous basis. Efforts under this set-aside include linking the protection of public water supplies with subsurface sewage disposal system approval, maintenance, training, and repair, policy development and implementation to protect public health where federal and state regulation are currently inadequate or lacking, planning and implementing the priority recommendations from the Connecticut Interagency PFAS Action Plan, and working with the DWSRF Unit, sister state agencies and local health departments to identify water systems and areas of private wells impacted by emerging contaminants, provide technical assistance to public water systems and municipalities to evaluate options for the provision of safe drinking water.

- Capacity Development

The DPH will use the Local Assistance set-aside allocation for capacity development initiatives that are consistent with the DWS's EPA-approved Capacity Development Strategy and to help to improve the technical, financial and managerial capacity of PWSs. The DPH's strategies account for both immediate and long-term sustainability initiatives, including education, technical assistance, enforcement, consolidation, DWSRF assistance, and water system restructuring. These funds will be used primarily to support staff within the DWS that conduct sanitary surveys of community (CWS), non-transient non-community (NTNC) and transient non-community (TNC) public water systems, provide technical assistance and enforcement referral to local health departments for maximum contaminant level violations, source water construction violations and cross-connections identified at NTNC and TNC food service establishments, conduct reviews of water quality and quantity of newly developed drinking water sources and review engineering plans and specifications for new water system designs in accordance with RCSA Section 16-262-m and under the authority of RCSA Section 19-13-B102, and assist with the maintenance of the DWS' Compliance Assistance Database (DWSCAD), which provides support to all DWS Programs to implement drinking water rules, track engineering project reviews, water supply plan reviews, sanitary surveys, DWSRF projects, cross-connection control program requirements, certificate projects, and watershed surveys among other elements.

### C. Lead Service Line Replacement

The DPH will utilize all four set-asides allowable within this Lead Service Line Replacement BIL grant to support the elimination of lead service lines in drinking water. The DPH will exercise its reserved authority to bank funds from the Administrative and Program Management Set-asides to allow the funds to be used in a subsequent year as needed. Unbudgeted funds from the Local Assistance - Wellhead Protection and Capacity Development set-asides will be placed into project funds due to the inability to bank these funds.

- The DPH intends to use funds in the Administrative set-aside to support staff within DPH's Contracts and Grants Management Section and Fiscal Office and for staff support from the OTT as it relates to funds received to address the elimination of lead service lines. Staff will be dedicated to administrative and fiscal management of the DWSRF accounts and oversight and tracking of the DPH's Cash Management Plan, as well as providing assistance to borrowers in preparing their loan applications and satisfying program requirements. Activities include duties as outlined in the DWSRF Interagency Memorandum of Understanding.
- Funding under the Program Management set-aside will be used to provide support for the review and approval of lead service line removal projects and maintenance of the data required to be collected to implement the lead service line removal plans. This work will include supporting the review and approval of lead service line removal projects, maintaining data required to be collected to implement the lead service line removal plans, determining public water system compliance with the lead and copper rule for approximately 1,000 water systems according to their required monitoring schedules, review and trend water quality parameters after the approved Optimal Corrosion Control Treatment (OCCT) project is in operation to ensure that treatment is optimized and operating within specified water quality ranges as approved by DPH, develop communication, education, and outreach programs to address disadvantaged populations within drinking water programs, assist to manage the EPA Lead HUB, manage portions of the Lead & Copper Rule program for disadvantaged communities, and develop a robust program to provide technical assistance to disadvantaged communities, local health departments and public water systems.
- The DPH intends to use funds from the Small Systems Technical Assistance Set-Aside to provide technical assistance to small public water system serving a up to 10,000 consumers for lead service line inventory and removal. Funded activities will include educating and assisting small systems in applying for DWSRF loans for infrastructure projects, working with small public water systems regarding lead service line replacement projects, support the processing of new DWSRF/BIL funding applications and oversight and implementation of small system drinking water infrastructure projects that will receive the available funding, review contract procurement procedures and construction contracts for adherence to State procurement requirements, and provide technical assistance to loan applicants and their consultants on DWSRF and lead service line removal BIL requirements.
- The DPH utilizes the Local Assistance Set-Aside for wellhead protection and capacity development activities. Unbudgeted funds from the Local Assistance - Wellhead Protection Set-aside will be placed into project funds due to the inability to bank these funds. The Capacity Development Program will use the remaining 10% and funding will support initiatives consistent with the DWSs Capacity Development Strategy and will help to improve the technical, financial, and managerial capacity of PWSs as it relates to lead in drinking water, lead inventories, and technical project reviews. Funded activities under the Capacity Development Set-aside will include the review of OCCT Proposals and technical project reviews for lead service line removals and lead and copper action level exceedances, providing technical assistance to public water systems, certified operators, and consultants regarding OCCT proposals and operation of OCCT after installation, conducting final project inspections to ensure that projects were installed in accordance with DPH approvals and standards, and providing technical assistance for small public water systems and disadvantaged communities with compliance with multiple state programs, including

capacity development, asset management and financial planning, lead service line inventorying and sampling, Lead and Copper Rule compliance assistance, plan development, implementation support, and funding application assistance to help small systems apply for DWSRF funds.

#### D. Emerging Contaminants

The DPH will utilize all four set-asides allowable within this Emerging Contaminant BIL grant to address emerging contaminants in drinking water with a focus on PFAS. The DPH will exercise its reserved authority to bank some funds from the Administrative and Program Management Set-asides to allow the funds to be used in a subsequent year as needed. Unbudgeted funds from the Local Assistance - Capacity Development Set-aside will be placed into project funds due to the inability to bank these funds.

- The DPH intends to use funds in the Administrative set-aside to support staff within DPH Fiscal Office as it relates to funds received by CTDPH to address emerging contaminants. Staff will be dedicated to administrative and fiscal management of the DWSRF accounts and oversight and tracking of the DPH's Cash Management Plan, as well as providing assistance to borrowers in preparing their loan applications and satisfying program requirements. Activities include duties as outlined in the DWSRF Interagency Memorandum of Understanding.
- Funding under the Program Management set-aside will be used to support the use of funds to address emerging contaminants in drinking water with a focus on PFAS. This work will include providing support for engineers working on new treatment projects related to emerging contaminants, including granular activated carbon/resin treatment for PFAS removal, analyzing PWS data and determine public water system compliance with safe drinking water act rules and compiling water system data for emerging contaminants, review, organize, and track information that the department will be receiving as part of initiatives related to emerging contaminants that will be funded through the BIL, maintain applicable emerging contaminant information in the safe drinking water information system (SDWIS) database or other applicable database, as required, to track as part of our privacy partnership agreement with EPA, develop Standard Operating Procedures, technical guidance, and web resources to help facilitate and streamline compliance determinations and data gathering/sharing for drinking water infrastructure and emerging contaminants and provide funding support for DPH Laboratory PFAS Testing Equipment maintenance and consumable supplies.
- The DPH intends to use funds from the Small Systems Technical Assistance Set-Aside to provide technical assistance to small public water systems serving a up to 10,000 consumers using the funds to address emerging contaminants in drinking water with a focus on PFAS. Funded activities will include direct technical assistance to small public water systems with emerging contaminants and treatment problems which could lead to a loan application, work with small public water systems regarding emerging contaminant projects, support the processing of new DWSRF/BIL funding applications and oversight and implementation of small system drinking water infrastructure projects that will receive the available funding, perform environmental assessments on emerging contaminant drinking water infrastructure projects, and provide technical assistance to loan applicants and their consultants on DWSRF and emerging contaminant BIL requirements.

- The DPH utilizes the Local Assistance Set-Aside for wellhead protection and capacity development activities. Unbudgeted funds from the Local Assistance- Capacity Development Set-aside will be placed into project funds due to the inability to bank these funds. The DPH will utilize the Wellhead Protection Set-aside 5% to fund activities necessary to address emerging contaminants in drinking water with a focus on PFAS. This will involve working with the DWSRF Unit, sister state agencies and local health departments to identify water systems and areas of private wells impacted by emerging contaminants including PFAS and provide technical assistance to public water systems and municipalities to evaluate options for the provision of safe drinking water. Funded activities from the Wellhead Protection Set-aside will include the review and analysis of results received from DPH-initiated phased testing of public drinking water sources for PFAS, review and assess public water system data from the Environmental Protection Agency's Unregulated Contaminant Monitoring Rule, review water quality data submitted for proposed public drinking water supplies to identify areas that may be impacted by emerging contaminants, develop tracking database and GIS system for emerging contaminant analytical results including results for proposed public drinking water supplies received by the DWS during the approval process, and analyze public water system data to identify referrals to DWSRF program.

## VIII. AUDITS and REPORTING

To ensure transparency and accountability, all program materials are posted on our website at [www.ct.gov/dph/dwsrf](http://www.ct.gov/dph/dwsrf). DWSRF Annual Reports are posted on the OTT website at <https://portal.ct.gov/OTT/Newsroom/Reports/Drinking-Water-Fund-Reports>. Financial audits are conducted annually by the OTT and included with the Annual Report.

DPH enters project and benefits data into the EPA SRF project and Annual Summary database to evaluate the benefits of the State of Connecticut's DWSRF program. Among other parameters, this database will evaluate the number of DWSRF projects that provide public health benefits, including those that achieve compliance with the SDWA, those that maintain compliance with the SDWA and those that are intended to meet future requirements of the SDWA.

Project benefits information is entered into the EPA SRF project database as soon as possible following execution of a funding agreement, preferably within two weeks. Updates to the EPA SRF database following completion of the project and closing of the permanent loan are also made as soon as possible. If a project contains "green" components, DPH reports on the "green" projects and/or "green" portion of projects in this database.

## IX. PUBLIC OUTREACH and COMMENT

The DPH engages in a determined effort to prepare and provide accurate and understandable information on the DWSRF to potential loan applicants and other interested persons. The DWSRF loan applicant pool in Connecticut consists of approximately 723 PWSs. This pool includes of all community PWSs and all public schools that are non-transient non-community PWSs. Outreach to these PWSs, as well as to other interested persons, has and will continue to occur simultaneously with the implementation of the DWSRF program. Outreach is accomplished through posting information on the DWS website, meeting with applicants, sending targeted electronic mailings, distributing program marketing information, and participating in various water-related forums. In addition, engineering staff from the DPH reach out to PWSs during on-site sanitary surveys and encourage them to consider the DWSRF program for their infrastructure financing needs.

In conformance with 40 CFR 35.3555(b), the DPH sought meaningful public review and comment on the Draft SFY 2023 IUP, which includes the PPLs. In addition, RCSA Section 22a-482-1(c)(4) requires that a public hearing be held to allow for the opportunity to comment on the draft PPLs. A Notice of Hearing announcing the availability of the Draft IUP for public review and comment and a public hearing held on March 29, 2023, was formally published in: the Hartford Courant, New Haven Register, Waterbury Republican-American, and Connecticut Post on February 24, 2023; the Norwich Bulletin on February 27, 2023; the New London Day February 28, 2023; The Inquiring News on March 1, 2023; and La Voz Hispana on March 2, 2023. Such notice was also posted on the DPH's website and on the Connecticut Secretary of the State's Public Meeting Calendar. Additionally, the Notice of Hearing and a link to the Draft IUP was sent to all eligible PWSs, which includes all DWSRF applicants with projects appearing on the Comprehensive Project List, along with municipal Chief Elected Officials, local directors of health, and state legislators. Interested persons were invited to attend and provide oral or written testimony at the public hearing or to submit written comments. All testimony provided during the public comment period and the hearing was reviewed and considered by the DPH Commissioner prior to finalizing this IUP.

## **X. ATTACHMENTS**

- A. Sources and Uses of Estimated Amounts of DWSRF Funds
- B. Priority Ranking System
- C. SFY 2023 Comprehensive Project List – Alphabetical Order
- D. SFY 2023 Comprehensive Project List – By Points
- E. SFY 2023 Carryover Project List
- F. SFY 2023 Base/Supplemental Project Priority List
- G. SFY 2023 Lead Service Line Project Priority List
- H. SFY 2023 Emerging Contaminant Project Priority List
- I. Asset Management Plan Checklist
- J. Fiscal Management Plan Checklist
- K. Disadvantaged Community Assistance Program

Sources of Funding	Totals
FFY 2022 Cap grants	
Annual/Base	\$ 7,008,000
BIL Supplemental	\$ 17,992,000
BIL Lead Service Line	\$ 28,350,000
BIL Emerging Contaminant	\$ 7,555,000
<b>Total FFY 2022 Cap Grants</b>	<b>\$ 60,905,000</b>
Other Project Funds	
Carryover Capitalization Grant Funds from FFY21 and prior	\$ 10,545,826
State Matching Funds <sup>1</sup>	\$ 5,401,000
General Revenue Revolving Funds (GRRF)	\$ 108,305,147
State Bond Commission Revenue Bond Allocation	\$ 137,529,963
<b>Total Other Project Funds</b>	<b>\$ 261,781,936</b>
<b>Total Overall Sources</b>	<b>\$ 322,686,936</b>
Uses of Funding	
Set-Asides	
Annual/Base	\$ 3,139,980
BIL Supplemental	\$ 5,397,965
BIL Lead Service Line	\$ 3,325,555
BIL Emerging Contaminant	\$ 1,296,550
<b>Total Set-Aside Uses</b>	<b>\$ 13,160,050</b>
Project Funds	
Amount for projects on the Carryover List	\$ 25,761,066
Amount for projects on the Base/Supplemental PPL which are not also on the Carryover List (includes LSL and EC PPLs) <sup>2</sup>	\$ 274,425,044
<b>Total Project Uses</b>	<b>\$ 300,186,110</b>
<b>Total Overall Uses</b>	<b>\$ 313,346,160</b>
<b>Excess Funds Available for Additional Project Costs <sup>3</sup></b>	<b>\$ 9,340,776</b>

## Footnotes:

1 - Includes matching funds for FFY 2021 & FFY 2022

2 - Includes amount for Lead Service Line & Emerging Contaminant PPLs as all of these projects are also included in the Base/Supplemental PPL

3 - These funds are available for projects with actual costs higher than original estimates and/or for projects appearing on the Comprehensive List, but not on a PPL.

Data as of 10/31/2022

**Connecticut Department of Public Health - Drinking Water Section**  
**Drinking Water State Revolving Fund**  
**Priority Ranking System**  
(Revision 4/28/2023)

**A. Introduction:**

Connecticut General Statute (CGS) Section 22a-478(a) requires the Commissioner of the Department of Public Health (DPH) to establish and maintain a priority list of eligible drinking water projects and to establish a system setting the priority for making loans to eligible public water systems (PWS) under the Drinking Water State Revolving Fund (DWSRF). In establishing such priority list and ranking system the Commissioner shall consider all factors that are deemed relevant including, but not limited to, the following:

1. Public Health and Safety
2. Protection of environmental resources
3. Population affected
4. Risk to human health
5. PWSs most in need on a per household basis according to the applicable state affordability criteria
6. Compliance with the applicable requirements of the federal Safe Drinking Water Act (SDWA)
7. Applicable state and federal regulations
8. Consistency with the plan of conservation and development
9. Consistency with the coordinated water system plan in accordance with subsection (f) of CGS Section 25-33d

The DPH will be receiving additional federal funding from EPA under the DWSRF for Federal Fiscal Years (FFY) 2022 – 2026 as a result of the passage of the Bipartisan Infrastructure Law ([Public Law \(PL\) 117-58](#)) on November 15, 2021. Over this 5 year period the DPH anticipates receiving the following 3 additional EPA grant awards annually:

1. Supplemental Capitalization Grant
2. Lead Service Line Replacement Capitalization Grant
3. Emerging Contaminant Capitalization Grant

The Priority Ranking System described in this document is used to prepare a Project Priority List (PPL), which is included in the annual Intended Use Plan (IUP) associated with DPH's federal capitalization grant application. For the 5 years of the BIL funding, this annual IUP will also include PPLs associated with the BIL funds. The same annual IUP will also be used for the additional 3 capitalization grant applications for BIL funding. In certain years, loan demand may be higher than the amount of DWSRF or BIL funding that is available. These PPLs identify the projects that are expected to receive the available funding during that year. Projects that are not listed on a PPL remain eligible to receive loans if additional funding becomes available or if a PPL project is by-passed by DPH or withdrawn by the applicant.

**B. Eligibility for DWSRF and BIL Loans**

The DWSRF, including the BIL funding, provides PWSs with a long-term low-cost financing alternative to improve and maintain their existing drinking water infrastructure. In order to receive a loan, or a subsidized loan, a borrower and their project must both be deemed eligible for the DWSRF.

## Attachment B

Eligible DWSRF and BIL borrowers include all community public water systems and non-profit non-community public water systems. In addition, these borrowers:

1. Must have adequate technical, financial, and managerial capacity to ensure compliance with the requirements of the SDWA unless the use of the DWSRF will ensure compliance and the owner(s) and/or operator(s) of the systems agree to undertake feasible and appropriate changes in operations to ensure compliance over the long term; and
2. Must not be in significant non-compliance with any national primary drinking water regulation, state drinking water regulation or variance unless;
  - a. their eligible drinking water project will adequately address long-term compliance, or;
  - b. the purpose of the assistance is unrelated to the cause of the significant noncompliance and the systems are on enforcement schedules (for Maximum Contaminant Level (MCL) and treatment technique violations) or have compliance plans (for monitoring and reporting violations) to return to compliance; and
3. Must not be federally owned

### **C. Eligible Projects for Funding from the Base DWSRF Program and BIL Supplemental Capitalization Grant**

The Base DWSRF Program includes older revolving funds as well as new annual funding from DPH's traditional federal DWSRF Capitalization Grant. All projects that are eligible for traditional DWSRF based program funding are also eligible for funding from the BIL's Supplemental Capitalization Grant. Seven categories of projects are eligible to receive DWSRF assistance from these funding sources. These categories and examples of projects within them are:

1. **Treatment** - projects to install or upgrade facilities to improve drinking water quality to comply with SDWA regulations. This category also includes the treatment of emerging contaminants that EPA has included on any of their historic or current Contaminant Candidate Lists. Also included is treatment for other contaminants of concern which DPH or EPA has determined a health risk exists even though the contaminant does not have an established MCL.
2. **Transmission and distribution** - rehabilitation, replacement, or installation of pipes or pump stations to improve water pressure to safe levels or to prevent contamination caused by leaky or broken pipes. This category also includes the complete replacement of service lines to customers of a PWS including lead service lines. This category also includes the installation of new transmission, distribution and service line piping to existing developed properties served by their own individual groundwater wells that have been adversely impacted by groundwater contamination (natural or manmade) or inadequate quantity of water supply for drinking purposes.
3. **Source** - rehabilitation of groundwater wells or development of new groundwater wells to replace contaminated sources or address deficiencies in source capacity
4. **Storage** - installation of new or upgrades to existing finished water storage tanks to prevent microbiological contamination from entering the distribution system or address deficiencies in storage capacity
5. **Consolidation** - interconnecting two or more water systems
6. **Creation of new systems** - construct a new system to serve homes with contaminated individual wells (i.e. private wells) or to consolidate two or more existing PWSs into a new regional water system
7. **Certain Dam and/or Reservoir rehabilitation projects** – these dams and reservoirs must be owned by a public water system and their primary purpose must be for drinking water supply. These

## Attachment B

projects must also qualify for the [Class Exception](#) from 40 CFR 35.3520(e)(1) and (3) issued by EPA on July 14, 2021.

The following projects and costs are **not eligible** for assistance pursuant to the Code of Federal Regulations (CFR) 40 CFR 35.3520:

1. Dams or rehabilitation of dams that do not meet the [Class Exception](#) from 40 CFR 35.3520(e)(1)
2. Water rights, except if the water rights are owned by a system that is being purchased through consolidation as part of a capacity development strategy
3. Reservoirs or rehabilitation of reservoirs that do not meet the [Class Exception](#) from 40 CFR 35.3520(e)(3), except for finished water reservoirs and those reservoirs that are part of the treatment process and are located on the property where the treatment facility is located
4. Projects needed primarily for fire protection
5. Projects needed primarily to serve future growth
6. Projects that have received assistance under the national set-aside for Indian Tribes and Alaska Native Villages pursuant to section 1452(i) of the SDWA
7. Laboratory fees for routine monitoring
8. Operation and maintenance expenses

In addition to these ineligible projects and costs, partial lead service line replacements are also not eligible for assistance (see Sections D and J.8).

The EPA may grant deviations from DWSRF regulations but not from statutory requirements. The CFR authorizes EPA, specifically the Director of the Office of Grants and Debarment, to approve exceptions to EPA program-specific assistance regulations on a class or individual case basis. Items 1-4 in the list above are the only projects for which deviations may be allowed; however, the project must be addressing a public health need along with meeting other criteria as set by EPA. The DPH will consult with EPA, as necessary, to determine if a deviation will be considered for a specific project.

The EPA may choose to issue a class deviation for one or more of these ineligible categories. In these cases, a project must still meet specific criteria and be reviewed by DPH and EPA.

The DWSRF may be used to finance the planning, design, and/or construction phase of an eligible drinking water project.

### **D. Eligible Projects for Funding From the BIL Lead Service Line Replacement Capitalization Grant**

For a project or activity to be eligible for funding under this capitalization grant, it must be otherwise DWSRF eligible (as detailed in Section C.) and be a lead service line replacement (LSLR) project or associated activity directly connected to the identification, planning, design, and replacement of lead service lines. Any project funded under this LSLR Capitalization Grant involving the replacement of a lead service line must replace the entire lead service line, not just a portion, unless a portion has already been replaced or is concurrently being replaced with another funding source.

To define a "lead service line", EPA uses an amended version of the federal [Lead and Copper Rule Revisions](#)' (LCRR) regulatory definition, which is, "...a service line made of lead, which connects the water main to the building inlet. A lead service line may be owned by the water system, owned by the property owner, or both. For the purposes of this subpart, a galvanized service line is considered a lead service line

*if it ever was or is currently downstream of any lead service line or service line of unknown material. If the only lead piping serving the home or building is a lead gooseneck, pigtail, or connector, and it is not a galvanized service line that is considered an LSL the service line is not a lead service line.”* EPA has expanded the eligible uses beyond the definition above to also include the replacement of lead goosenecks, pigtails, and connectors as eligible expenses, whether standalone or connected to a lead service line.

Corrosion control studies, corrosion control infrastructure, and water meters are not eligible under this LSLR Capitalization Grant, but are eligible under the DWSRF base program and BIL Supplemental Capitalization Grant (see Section C.).

### **E. Eligibility for Funding from the BIL Emerging Contaminants Capitalization Grant**

For a project or activity to be eligible for funding under this Emerging Contaminants Capitalization Grant, it must be otherwise DWSRF eligible (see Section C.) and the primary purpose must be to address emerging contaminants in drinking water. Given the clear Congressional intent that these funds focus on projects addressing perfluoroalkyl and polyfluoroalkyl substances (hereinafter PFAS), PFAS projects will be given additional priority consideration versus other eligible emerging contaminants. States, however, have the flexibility to fund projects for any contaminant in any of EPA’s [Contaminant Candidate Lists](#). For example, EPA also encourages states to consider using these funds to address perchlorate as well as contaminants that have higher levels of occurrence or health concerns.

If EPA has promulgated a [National Primary Drinking Water Regulation](#) (NPDWR) for a contaminant, then a project whose primary purpose is to address that contaminant is not eligible for funding under this Emerging Contaminants Capitalization Grant, with the PFAS exception explained below. For example, a project for which the primary purpose is to address arsenic or nitrate in drinking water is not eligible because arsenic and nitrate are regulated under the NPDWRs. It should be noted that these projects may be eligible for funding under the DWSRF Base or BIL Supplemental Capitalization Grant.

EPA expects to [establish a NPDWR for PFOA and PFOS](#). The Agency is also evaluating additional PFAS and groups of PFAS. Given stated Congressional intent of this Emerging Contaminants Capitalization Grant, PFAS-focused projects will be eligible for funding under this capitalization grant regardless of whether EPA has established a NPDWR for that particular PFAS or group of PFAS. More information on PFAS is located here: <https://www.epa.gov/pfas>.

### **F. Call for Projects**

The Call for Projects is held annually, typically on or around the same time each year. For a project to be considered for funding on the PPL in an annual IUP, an Eligibility Application must be received by the date announced by the DPH. This announcement is issued via e-mail to all PWSs that are eligible to receive DWSRF loans, municipal Chief Elected Officials and local Directors of Health, as well as posted on the DPH Drinking Water Section’s (DWS) website. This announcement will be made approximately 60-90 days prior to the due date.

Outside of this annual Call for Projects, Eligibility Applications are accepted at any time and those received after the announced due date will be reviewed as they are received and the IUP updated as explained further in Section H of this document.

## Attachment B

PWSs that desire DWSRF loans must submit a DWSRF Eligibility Application to the DPH in order for that project to be considered for a loan. The DPH reserves the right to issue new solicitations for additional infrastructure projects for DWSRF funding at any time.

### **G. Small System Reserve**

The SDWA requires that, to the extent that there are a sufficient number of eligible project applications, not less than 15% of the available funding shall be dedicated to small systems serving less than or equal to a population of 10,000. The DPH shall use the population it currently has on record at the time a PWS applies for funding to determine if it meets the small system criteria. In cases where an applicant owns more than one community PWS, the applicant's population will be determined based on the population of its largest individually owned community PWS.

### **H. Justice40 Reserve**

Federal Executive Order 14008 Section 223 (January 27, 2021) establishes a goal of directing 40% of the benefits from federal investments to disadvantaged communities. Guidance has not yet been published for the implementation of this directive. Once available, this guidance will be evaluated, and a determination made as to its impact on projects and the ranking criteria.

### **I. Green Project Reserve (GPR)**

Green projects include those that promote green infrastructure and energy or water efficiency, as well as projects that demonstrate new or innovative ways to manage water resources in a sustainable way. To the extent required by Federal law, which may change from year to year, priority may be given to eligible projects where sufficient documentation has demonstrated to the satisfaction of DPH that the project achieves identifiable and substantial benefits that qualify as green project benefits. Specific GPR amounts available each year will be identified in the DPH's IUP.

### **J. Priority Point Assignment**

Connecticut's DWSRF priority ranking system assigns points to each project deemed eligible for funding. In developing the ranking system, the point structure is weighted towards projects that will provide the greatest public health benefits and to PWSs that are most in need of low cost financing. This approach is consistent with the SDWA requirement for States to prioritize the use of funds for projects that:

1. Addresses the most serious risk to human health
2. Are necessary to ensure compliance with the requirements of the SDWA
3. Assist systems most in need according to state affordability criteria

The 10 major point categories are as follows:

1. **Water Quality:** Within this category points are awarded for projects that address water quality regulatory violations or impaired water quality. Supporting evidence of impaired water quality and the need for corrective action shall be provided to support the award of points. This category is divided into six subcategories:
  - a. **Immediate Action:** Water quality violations requiring immediate action include surface water treatment rule violations and acute microbiological and inorganic chemical Maximum Contaminant Level (MCL) violations as well as lead Action Level exceedances. These violations pose health risks which must be brought into compliance expeditiously. High levels of other contaminants in subcategories b. and c. that are determined by DPH to

## Attachment B

present immediate acute health risks may be elevated to subcategory a. and awarded additional priority points based on DPH's determination.

- b. **Non-Acute MCL Violations:** MCL violations for contaminants which have health risk ramifications over extended periods of time include the following subcategories: non-acute inorganic chemical, pesticides, herbicides, PCB's, organic chemicals, disinfection by-products and radioactivity.
  - c. **Emerging Contaminants:** Includes drinking water contaminants, including but not limited to Per-and Polyfluoroalkyl Substances (PFAS), that have been designated by EPA, or otherwise approved by EPA, as an emerging contaminant that is eligible for funding under Division J Title VI of PL 117-58 (otherwise known as the Bipartisan Infrastructure Law) for emerging contaminants in drinking water. This includes contaminants listed on any of the 5 [Contaminant Candidate Lists](#), as explained in Section E.
  - d. **Other Contaminants of Health Concern:** Includes drinking water contaminants for which DPH or EPA has determined a health risk exists even though the contaminant does not have an established MCL but does not qualify as an emerging contaminant in subcategory c. These may include regulated or unregulated contaminants that DPH or EPA has set formal action levels or health advisory limits for prior to establishment of a federal or state MCL. This subcategory also awards points for projects which address proactive steps taken to reduce elevated levels of contaminants that exceed 50% of their established MCL.
  - e. **Physical/EPA Secondary MCLs:** This subcategory allows points for parameters that are primarily deemed aesthetic rather than having significant health ramifications. These contaminants or physical properties of water may make the water unsuitable for drinking rather than posing any significant known health risk. [A contaminant which has a secondary MCL and appears on a CCL is covered under subcategory c and excluded from this item.](#)
  - f. **Private Wells:** Properties that are currently not being served by a PWS yet are experiencing private well contamination which may cause the private well to exceed an MCL contained in RCSA Section 19-13-B101 or exceed a private well [Action Level](#) established by the DPH, can be assigned ranking points, if the project involves the extension of water service to the affected wells and the applicant is eligible to receive a DWSRF loan. Where water main extensions are not feasible, points may be awarded for creation of a new PWS to serve these properties.
2. **Water Supply/Conservation:** Inadequate quantity of water supply has many public health implications. Supply shortages can translate to poor or inadequate pressure which can lead to back siphonage and potential contamination of the water distribution. Even with active cross connection programs, lack of pressure may result in accidental contamination events. Customers of public water systems also need adequate water service for basic sanitation needs within their homes and businesses. Within this category, points are awarded for projects that address inadequate water supply under normal operating conditions. Points are also awarded for proactive improvements that maintain the adequacy of source waters or contribute to the water conservation efforts of public water systems. This category includes:
- a. **Source Water Deficits:** New groundwater well development projects or interconnection projects with other PWSs that are necessary to comply with RCSA Section 19-13-B102(o). This may include demonstration of diminishing safe yield that reveals an imminent threat to maintaining the minimum required margin of safety of 1.15. A recent water audit will be required to be evaluated in the Preliminary Engineering Report.
  - b. **System Capacity Deficits:** Projects that include capacity upgrades to water treatment plants,

pump stations, storage facilities or transmission/distribution piping to comply with RCSA Section 19-13-B102(p). A recent water audit will be required to be evaluated in the Preliminary Engineering Report.

- c. **Source Development:** Projects that include the development of new groundwater sources or the rehabilitation of existing groundwater sources necessary to maintain, augment or replace existing sources that do not qualify for points under sub-category a.
  - d. **Conservation/Water Loss Reduction:** This subcategory recognizes the important role that accurate metering, real-time water use monitoring, pipe replacement/rehabilitation programs and other water loss reduction projects play in a PWS's water conservation efforts. Additional points will be awarded to metering projects that incorporate Advanced Metering Infrastructure (AMI) technology to recognize the additional conservation benefits this technology provides. Also includes projects that involve the timely replacement or rehabilitation of water transmission or distribution system piping to reduce water loss due to leaks in existing piping and also increase flows and pressure to customers.
  - e. **Private Wells:** Projects that involve extending water service to existing residential properties served by private wells that have gone dry or have experienced yield reductions that render the well incapable of sustaining the water supply necessary for basic sanitary needs.
3. **Infrastructure Violations/Deficiencies/Safety Hazards/Failures:** Points are awarded to projects that address infrastructure regulatory violations that are not covered in Category 2. Points are also awarded to projects that correct significant deficiencies under the Ground Water Rule. Other infrastructure deficiencies, safety hazards or failures identified by DPH in a sanitary survey report or documented by the PWS with supporting evidence included in the DWSRF Eligibility Application would be eligible for points in this category. Older [hydropneumatic storage tanks](#) may pose a safety risk as evidenced by a tank explosion in 2015 in North Stonington, CT that completely destroyed a pump station. Tank industry construction standards for these tanks improved in the early 1980's which has eliminated much of this risk with more modern tanks. For this reason, projects for the replacement or elimination of hydropneumatic storage tanks meeting one or more of the following criteria are also included in this category:
- Tanks with age greater than manufacturer's estimated useful service life
  - Tanks recommended for replacement by DWS in a sanitary survey report
  - Tanks recommended for replacement in a professional independent tank inspection report
- Replacement of hydropneumatic storage tanks may include replacement of the existing fixed rate booster pumps with variable frequency drive (VFD) pumps and/or control system including the power supply upgrade.
4. **Consolidation:** Points are awarded to projects that consolidate two or more public water systems through water main interconnection or consecutive system. Small systems can benefit from the economies of scale achieved by being absorbed into, or served by, a larger community water system and, in many cases, benefit through an increased level of technical, financial and managerial (TFM) capacity. Small system to small system consolidations also offer opportunities for these small systems to share resources, increase TFM capacity by restructuring water system management and achieve greater economies of scale.
  5. **Resiliency/Security:** Points within this category are awarded to projects that will increase a PWS's ability to withstand and recover from natural or man-made disasters and includes climate change

adaptation and drought. This category provides points for climate change or asset management planning projects. Points are also awarded to projects that already have, or incorporate, appropriate security elements relative to that project or for stand-alone security projects appropriate for an existing facility such as security fencing, alarms and surveillance cameras. To qualify for climate change or resiliency points, projects will need to be supported by appropriate studies. To receive points, projects must not be inconsistent with State or Federal climate change studies or statewide resiliency planning documents recognized and supported by DPH. Points will also be awarded to projects for stand-by emergency power generator systems (new, replacement, or upgrade to existing) for existing critical facilities that need to be powered during a loss of normal electrical grid power. Additionally, this category provides points to encourage PWS's to invest in asset management and climate change planning if they have not already done so. Planning points will only be awarded for the creation of an initial plan. The DPH anticipates that these plans may result in future infrastructure projects that would qualify for DWSRF funding. Although these planning projects will be ranked independently, they may be combined with another eligible drinking water project into a single DWSRF loan agreement if both projects are included on the PPL and are undertaken simultaneously.

6. **Other Capital Improvements:** Points within this category are awarded for general proactive infrastructure projects that may not qualify for points within categories 1, 2, 3 or 4. These projects help achieve long term infrastructure sustainability so that health risks from infrastructure failure are averted. This category also includes the replacement of internal building piping of buildings owned and served by an eligible PWS that is part of a remediation strategy to address lead or copper levels. This category also includes projects which are eligible but do not fit into another category or activity. Examples of these types of projects can be found in the [EPA Eligibility Handbook](#).
7. **Lead Service Line Inventory and Replacement:** This category is for the inventory and replacement of lead service lines and/or lead goosenecks, pigtails, or connectors to individual customers including any portion located on a customer's private property. A lead service line would include any service line that contains **any** lead piping or meets the state or federal definition of a lead service line. In order to receive DWSRF funding for lead service line replacements, the **entire** service line must be replaced, not just a portion, unless a portion has already been replaced or is concurrently being replaced with another funding source. Partial lead service line replacements will not be funded due to health concerns associated with the possibility of increasing a customer's lead exposure by disturbing the remaining lead-containing piping.
8. **Sustainability/Statewide Planning Recognition:** Points within this category are awarded to eligible projects undertaken by a PWS directly related to an acquisition or transfer of a PWS with inadequate financial, managerial or technical capacity to another PWS as reviewed and ordered pursuant to CGS Section 16-262n & 16-262o. Points are also awarded to eligible projects undertaken by a PWS that actively implements an asset management program and their project is supported by that plan. Additionally, points are awarded for projects that are identified within a statewide or regional water supply planning document under the oversight of DPH including, but not limited to, the Coordinated Water System Plan of a Water Utility Coordinating Committee under CGS Section 25-33h or statewide or regional public drinking water resiliency plans. This category is intended to recognize and support the planning efforts of PWSs to achieve long term sustainability, assist other PWSs in need and support the State's long term planning efforts for public water supply.

9. **Individual Project Planning:** This category awards points to planning projects undertaken by a PWS to address a broadly identified need but some or all of the specific needs are yet to be determined. These needs may include, but are not limited to, additional sources of supply, pumping facilities, storage facilities, and treatment facilities. A project which applies for funding under this category may be eligible for and awarded priority points under other project categories for subsequent phases of funding (e.g. design and/or construction) when the specific needs and project have been determined. The purpose of the planning project must be to address existing or imminent community drinking water infrastructure deficiencies, long-term drinking water infrastructure sustainability concerns or to address community public health concerns due to inadequacy of existing public drinking water infrastructure.
10. **Affordability:** This category awards additional points to projects undertaken by a PWS in a town that has been identified by the Connecticut Department of Economic and Community Development as a “distressed municipality”.

The activities which qualify for points under each category along with the numerical value of points assigned to each activity are detailed in Appendix A.

The DPH reserves the right to determine if project identified in a DWSRF Eligibility Application contains more than one independent project. In such cases, the DPH may split the application into multiple independent applications, request that the applicant resubmit independent Eligibility Applications for each independent activity or request the applicant to submit additional information to support the interrelationship between those activities identified in the original Eligibility Application prior to assignment of a ranking score. This right is exercised to prevent manipulation of the point ranking system by blending independent projects to gain an overall point ranking advantage.

#### **K. Readiness to Proceed**

It is the DPH’s intention, as well as the expectation of EPA, that the DPH will commit the available DWSRF funding each year to projects listed on the PPL. Similarly, it is expected that the committed funds will be disbursed in a timely manner. Accordingly, these commitments (in the form of executed DWSRF loan agreements) are not made until a project is ready to proceed and start spending money on their project.

Regardless of the priority ranking score a project receives, only those phases (planning, design, construction) of eligible projects that can reasonably be expected to result in executed contracts (professional service and/or construction contracts) and DWSRF loan agreements within a specific SFY will be considered for inclusion on that year’s PPL. Any phases not included on a PPL will be included on the Comprehensive Project List (CPL) and remain eligible for future funding. The criteria that DPH uses to assess readiness is included in the DWSRF Eligibility Application and explained in the annual IUP. The DPH may request updated readiness information for a project during development of the PPL if necessary.

#### **L. Project Priority List and Comprehensive Project List**

The State of Connecticut’s capital budget is prepared on a biennial basis and State Fiscal Years run from July 1 through June 30. Annually the DPH will prepare an Intended Use Plan (IUP) that identifies how the State intends to use available DWSRF funds. The IUP will be submitted to the EPA as part of the DPH’s annual capitalization grant application for federal DWSRF funds. The IUP will include a CPL of drinking water projects which have applied for DWSRF loans. The IUP will also identify which projects are

## Attachment B

expected to receive funding during that SFY on a PPL. For the years in which BIL funding is available, the annual IUP will include the use of those funds and be used to support the capitalization grant application for each category of BIL funds.

Following publication of the finalized annual IUP, the CPL may be updated periodically to include new eligibility applications that were received after the initial drafting of the annual IUP. If any changes were made to the CPL, an amended IUP will be posted on the DPH DWS website for a 30-day comment period. Once an amended IUP has been finalized, any project on the CPL will be considered for funding according to the bypass procedures in the IUP.

Projects on the CPL that are not included on a PPL will remain eligible for DWSRF funding in the future. Projects on the CPL may be subsequently added to a PPL if additional funding becomes available, other PPL projects are withdrawn by the applicant or a PPL project is bypassed by DPH.

There will be 5 factors taken into consideration when drafting a PPL. Those factors are:

1. The total numerical points assigned to a project which is arrived at by tallying points from each of the 10 priority point categories.
2. A PWS's readiness to proceed with the activities they have requested funding for.
3. To the extent that there are sufficient eligible small systems projects that are ready to proceed, not less than 15% of the available funding shall be dedicated to them.
4. To the extent required by federal law, a portion of DPH's capitalization grant shall be dedicated to projects that address green infrastructure, water or energy efficiency improvements, or other environmentally innovative activities.
5. To the extent that there are sufficient eligible projects that qualify under the DWSRF's Disadvantaged Community Assistance Program (DCAP), the DPH shall dedicate at least 40 percent of the available funding each year to these projects. The DPH reserves the right to make changes to the DCAP at any time if such changes are necessary to comply with Section 223 of federal Executive Order 14008 (i.e. Justice40).

The DPH will publish the draft IUP and PPL for a 30 day public comment period followed by a public hearing on the PPL. Written comments and oral testimony provided on the IUP and PPL during this public participation process will be considered before the IUP and PPL are finalized.

### **M. Tie-Breaking Procedure**

Following the implementation of factors 1-5 in Section L, in circumstances where more than one project has an equivalent ranking score, the following tiered approach will be implemented to break the tie:

1. Projects that qualify under the DCAP
2. The percentage of total system population served by the project; the project serving a higher percentage of the overall system population will be given preference.
3. The size of the population served by the project; the project with the larger population served will be given preference.
4. The size of the total population served by the system applicant; the system with the larger population will be given preference.

## Attachment B

If two or more projects remained tied after implementation of tie-breaker #1, then #2 will be applied. If two or more projects remain tied after implementation of tie-breakers #1 & #2, then #3 will be applied. If two or more projects remain tied after implementation of tie-breakers #1, #2 and #3, then #4 will be applied. This tie-breaking method shall apply to projects listed on both the PPL and CPL.

### **N. Project Priority List Bypass Procedures**

If for some reason an applicant listed on a PPL encounters significant delays in their project schedule, the DPH reserves the right to bypass that project and offer those funds to the next highest ranked project on the CPL that is ready to proceed. In these cases, the by-passed project will remain on the CPL and remain eligible for future funding. This bypass process is necessary to help ensure that the available DWSRF funds will be committed and disbursed in a timely fashion.

The DPH Commissioner may make a project loan or loans with respect to an eligible drinking water project without regard to the priority list of eligible drinking water projects if a public drinking water supply emergency exists, pursuant to CGS Section 25-32b, which requires that the eligible drinking water project be undertaken to protect the public health and safety. In such cases of unexpected public drinking water supply emergencies there may be a need to bypass projects on the PPL.

## APPENDIX A – PRIORITY POINT ACTIVITIES AND VALUES

## Category 1: Water Quality

Activity #	a. Immediate Action	Points	Exclusions <sup>1</sup>
1	Surface Water Treatment Rule Violation	50	None
2	Microbiological MCL Violation (E. Coli)	50	1
3	Nitrate MCL Violation	50	None
4	Nitrite MCL Violation	50	None
5	Lead Action Level Exceedance <sup>2</sup>	50	None
6	DPH Determination of Acute Health Risk for Other Contaminants	50	None
7	Arsenic	40	None
Activity #	b. Non-Acute MCL Violations	Points	Exclusions <sup>1</sup>
8	Radioactivity MCL Violations	30	None
9	Inorganic Chemical MCL Violations	30	3-7
10	Organic Chemical MCL Violations (excluding total trihalomethanes)	30	None
11	Pesticides, Herbicides and PCBs MCL Violations	30	None
12	Disinfection By-Product MCL Violations	30	None
Activity #	c. Emerging Contaminants	Points	Exclusions <sup>1</sup>
13	PFAS Exceeding the DPH Action Level	30	None
14	PFAS at or Below the DPH Action Level	20	None
15	Other Emerging Contaminant on an EPA Contaminant Candidate List (CCL) Exceeding an Established Action Level	25	None
16	Other Emerging Contaminant on an EPA Contaminant Candidate List (CCL) at or Below an Established Action Level	15	None
17	Other Emerging Contaminant on an EPA Contaminant Candidate List (CCL) which does not have as Established Action Level	10	None
Activity #	d. Other Contaminants of Health Concern	Points	Exclusions <sup>1</sup>
18	DPH Action Level Exceedance (excluding lead and copper)	25	5, 13-17, 20
19	Contaminant Exceeds 50% of MCL	20	1-12
20	Copper Action Level Exceedance	20	5,13-18

<sup>1</sup> Exclusion column indicates activity #'s that would be ineligible for additional points if the activities associated with those points are the same. Where 2 or more activities conflict the higher point activity shall be assigned to the project. These potential exclusions are typically displayed with the lower point value activity.

<sup>2</sup> Eligible schools and child care facilities with lead levels at or above 75% of the lead action level would qualify for this activity.

Attachment B

Activity #	e. Physical/EPA Secondary MCL Exceedances	Points	Exclusions <sup>1</sup>
21	Turbidity Limit Exceedance	10	1
22	Odor Limit Exceedance	10	None
23	Color Limit Exceedance	10	None
24	pH Outside Range of 6.4 - 10	10	None
25	EPA Secondary MCL Exceedance	10	9,13-19,22-24
Activity #	f. Private Wells	Points	Exclusions <sup>1</sup>
26	Water Main Extension to Serve Private Wells with MCL Violations	30	1-25, 27-29
27	Water Main Extension to Serve Private Wells with Action Level Exceedances	25	1-26, 28-29
28	Creation of New PWS to Serve Private Wells with MCL Violations	30	1-27, 29
29	Creation of New PWS to Serve Private Wells with Action Level Exceedances	25	1-28

**Category 2: Water Supply /Conservation**

Activity #	a. Source Water Deficits (Maximum 40 pts from this subcategory)	Points	Exclusions <sup>1</sup>
30	New Groundwater Well Development	40	None
31	Rehabilitation of Existing Groundwater Wells	40	None
32	Interconnection to Purchase Water from Another Community PWS	40	49
Activity #	b. System Capacity Deficits	Points	Exclusions <sup>1</sup>
33	System Capacity Deficit	20	None
Activity #	c. Source Development (Maximum 10 pts from this subcategory)	Points	Exclusions <sup>1</sup>
34	New Groundwater Well Development	10	30
35	Rehabilitation of Existing Groundwater Wells	10	31
Activity #	d. Conservation/Water Loss Reduction	Points	Exclusions <sup>1</sup>
36	Installation of Source Water Meters (previously unmetered) <sup>3</sup>	25	30-32, 34-35
37	Installation of Distribution Meters (previously unmetered) <sup>3</sup>	25	40-41
38	Replacement of Source or Distribution Meters <sup>3</sup>	15	40-41
39	Incorporation of Advanced Metering Infrastructure (AMI) technology (real-time metering) <sup>3</sup>	10	40-41
40	Water Transmission Main Rehabilitation or Replacement	15	37-39
41	Water Distribution Main Rehabilitation or Replacement	10	37-39
42	Project Will Significantly Reduce Water Loss (i.e. Unaccounted-for or Non-Revenue Losses)	10	36-39

<sup>3</sup> The primary purpose of the project must be for the installation or replacement of meters to qualify for these points.

Attachment B

Activity #	e. Water Main Extension to Replace Private Wells with Inadequate Supply	Points	Exclusions <sup>1</sup>
43	Water Main Extension (complete Private/Non-Public Well Consolidation Form)	30	1-25, 28-29

**Category 3: Infrastructure Violations/Deficiencies/Safety Hazards/Failures**

Activity #	Elements	Points	Exclusions <sup>1</sup>
44	Infrastructure Violation/Deficiency/Safety Hazard/Failure (Source to Curb Stop)	10	36
45	Hydropneumatic Storage Tank Replacement/Elimination	50	None

**Category 4: Consolidation (Maximum 20 pts from Activities 47 and 48 combined)**

Activity #	Elements	Points	Exclusions <sup>1</sup>
46	Consolidation of a Community PWS	15 each	None
47	Consolidation of a Non-Transient Non-Community PWS	10 each	None
48	Consolidation of a Transient Non-Community PWS	5 each	None

**Category 5: Resiliency/Security**

Activity #	a. Resiliency	Points	Exclusions <sup>1</sup>
49	Regional Interconnection with Another Community PWS	15	32
50	Relocation of Critical Facilities <sup>4</sup>	10	None
51	Redundancy of Critical Facilities <sup>4</sup>	10	None
Activity #	b. Planning (Maximum 50 pts from this subcategory) <sup>5</sup>	Points	Exclusions <sup>1</sup>
52	Climate Change/Drought Planning	50	1-51, 53-73
53	Asset Management Planning	50	1-52, 54-73
Activity #	c. Security <sup>6</sup>	Points	Exclusions <sup>1</sup>
54	Security Fencing, Alarms, Surveillance Systems or Other Security Measures	5	None
Activity #	d. Emergency Power Provisions for Existing Critical Facilities	Points	Exclusions <sup>1</sup>
55	New (does not currently exist) <sup>7</sup>	50	1-54, 56-73
56	Replacement or Upgrades <sup>7</sup>	20	1-55, 57-73
57	Included as Part of a Larger Project	5	None

<sup>4</sup> Project must be supported by a formal resiliency or climate change plan to qualify for these points.

<sup>5</sup> Points are only awarded for the creation of an initial plan.

<sup>6</sup> Security points may awarded to projects with existing security provisions or for the installation of new security provisions.

<sup>7</sup> Project must be only an emergency power project to qualify for these points.

Attachment B

**Category 6: Other Capital Improvements**

Activity #	Elements	Points	Exclusions <sup>1</sup>
58	Treatment Facilities	10	None
59	Pumping Facilities	5	None
60	Storage Facilities	5	45
61	Transmission or Distribution System	5	40-41
62	Facility Automation (SCADA)	5	None
63	Internal Building Piping Replacement (as part of Lead or Copper remediation) (only for those PWS which owns all internal plumbing, e.g. school which is also a PWS)	10	None
64	Other Eligible Capital Improvements	5	All except: 44, 50, 51, 54, 57, 65, 70-72, 74
65	Project is a result of AWOP (Area-Wide Optimization Program)	10	None

**Category 7: Lead Service Line Inventory & Replacement**

Activity #	Elements	Points	<a href="#">Exclusions<sup>1</sup></a>
66	Lead Service Line Inventory (planning)	50	1-4, 6-65, 67-73
67	Lead Service Line Replacement (Design/Construction)	50	1-4, 6-66, 68-73
68	Lead gooseneck, pigtails, connectors only (removal/replacement)	40	1-4, 6-67, 69-73

**Category 8: Sustainability/Statewide Planning Recognition**

Activity #	Elements	Points	Exclusions <sup>1</sup>
69	Acquisition/Transfer of a Community PWS	10	None
70	Project is supported by an on-going Asset Management Program	10	71
71	Project is supported in a PWS's Water Supply Plan pursuant to RCSA Section 25-32d-3	5	70
72	Project Identified in a Statewide or Regional Water Planning Document under DPH oversight	10	None

**Category 9: Individual Planning Projects**

Activity #	Elements	Points	Exclusions <sup>1</sup>
73	Broad-based Drinking Water Infrastructure Planning	50	1-72

**Category 10: Affordability**

Activity #	Elements	Points	Exclusions <sup>1</sup>
74	Distressed Municipality (per DECD)	10	None

**SFY 2023 Comprehensive list: \$922,660,935**

**Footnotes:**

- 1 These projects are for water supply reservoir dams which will require an approved deviation from EPA in order to be eligible for funding.
- 2 These Lead Service Line projects have been split between Planning and Design & Construction Phases for the purposes of assigning ranking points and readiness.
- 3 This project did not provide or does not yet have sufficient information available to make a determination as to whether the project qualifies under the DCAP. DPH will work with this PWS and upon receipt of more defined project information, DCAP qualification will be reevaluated.
- 4 These projects include at least a portion to address an emerging contaminant. Final eligibility for specific funds will be determined when more specific project details are available.
- 5 The Town of Brooklyn is not an eligible borrower.
- 6 Projects listed as "SFY 2023" are expected to proceed during this year. Projects listed as "TBD" are expected to proceed in a future year.

**Footnotes:**

- 1 These projects are for water supply reservoir dams which will require an approved deviation from EPA in order to be eligible for funding.
- 2 These Lead Service Line projects have been split between Planning and Design & Construction Phases for the purposes of assigning ranking points and readiness.
- 3 This project did not provide or does not yet have sufficient information available to make a determination as to whether the project qualifies under the DCAP. DPH will work with this PWS and upon receipt of more defined project information, DCAP qualification will be reevaluated.
- 4 These projects include at least a portion to address an emerging contaminant. Final eligibility for specific funds will be determined when more specific project details are available.
- 5 The Town of Brooklyn is not an eligible borrower.
- 6 Projects listed as "SFY 2023" are expected to proceed during this year. Projects listed as "TBD" are expected to proceed in a future year.

**Footnotes:**

- 1 These projects are for water supply reservoir dams which will require an approved deviation from EPA in order to be eligible for funding.
- 2 These Lead Service Line projects have been split between Planning and Design & Construction Phases for the purposes of assigning ranking points and readiness.
- 3 All projects are eligible for either base subsidy or DCAP subsidy. The amount of subsidy will be determined at the time a project is ready for a loan agreement, to the extent such funds are available.
- 4 This project did not provide or does not yet have sufficient information available to make a determination as to whether the project qualifies under the DCAP. DPH will work with this PWS and upon receipt of more defined project information, DCAP qualification will be reevaluated.
- 5 These projects include at least a portion to address an emerging contaminant. Final eligibility for specific funds will be determined when more specific project details are available.

**SFY 2023 BIL EC PPL: \$59,788,000**

**Estimated funding line - EC subsidy funds: \$6,258,450**

**Footnote:**

- 3 All projects are eligible for either base subsidy or DCAP subsidy. The amount of subsidy will be determined at the time a project is ready for a loan agreement, to the extent such funds are available.
- 4 This project did not provide or does not yet have sufficient information available to make a determination as to whether the project qualifies under the DCAP. DPH will work with this PWS and upon receipt of more defined project information, DCAP qualification will be reevaluated.
- 7 Projects which are intended to address PFAS have been prioritized above other projects, regardless of overall points, to comply with Congressional intent to focus on projects which address PFAS with these specific funds.
- 8 This project falls across the funding line and may be only be partially funded by these Emerging Contaminant funds.
- 9 Funding from the Emerging Contaminant capitalization grant will be provided as subsidy up to the limits outlined in the IUP and to the extent available. The remaining funding for a project will be provided as loan funds.

**Connecticut Department of Public Health  
Drinking Water Section  
Drinking Water State Revolving Fund**

**Disadvantaged Community Assistance Program**

I. Purpose:

The Safe Drinking Water Act (SDWA) §1452 (d) requires that States provide a minimum of 12% up to a maximum of 35% of their annual Drinking Water State Revolving Fund (DWSRF) base capitalization grant as additional subsidy to disadvantaged communities. In addition, 49% of funding allocated to the DWSRF programs through the Bipartisan Infrastructure Law's (BIL) General Supplemental and Lead Service Line Replacement capitalization grants must be provided as additional subsidization for eligible DWSRF assistance recipients or project types that meet the state's disadvantaged community criteria. For the BIL's Emerging Contaminant capitalization grant, states must direct at least 25% of these funds to disadvantaged communities or public water systems serving fewer than 25,000 persons.

A key priority of the BIL funding is to ensure that disadvantaged communities fully benefit from these historic investments in the water sector. In EPA's initial BIL Implementation Guidance they expected states to evaluate and revise, as needed, their DWSRF disadvantaged community assistance programs. The DPH performed this evaluation of its existing DWSRF Disadvantaged Community Assistance Program (DCAP) and has made revisions to include Census tract level Median Household Income data from the U.S. Census Bureau's American Community Survey (ACS) to further capture disadvantaged populations in Towns and Cities that are not listed on the Department of Economic and Community Development's (DECD) distressed municipality list. The DPH believes these changes will assist in targeting these additional subsidization funds to more projects that will directly benefit disadvantaged populations. This DCAP document establishes the DPH's criteria under which an eligible DWSRF project will qualify for disadvantaged community subsidy under this program. The methods of distributing these subsidy funds to projects that qualify under the DCAP are further detailed in Section IV.I. of the DWSRF Annual Intended Use Plan.

II. Definitions:

- A. **"Benefit" or "Benefits"** means equitable access to safe drinking water, a safe living environment, financial assistance, or any other positive impacts from investments that directly improve the quality of living for one or more distressed municipalities or other area(s) of a Connecticut municipality that meets the definition of a disadvantaged community.
- B. **"Disadvantaged Community"** means the service area of community public water system (PWS) meeting the affordability criteria contained in Section III.
- C. **"Distressed Municipality"** means a distressed municipality as defined in Connecticut General Statute 32-9p(b)
- D. **"Service Area"** means the geographical area served by a PWS that will be impacted by the water system improvement that is proposed to be financed with DWSRF funding.
- E. **"Water System Improvement"** means a planning, design or construction project, or group of interrelated projects which meets all the eligibility requirements for DWSRF funding.

III. Affordability Criteria: A community PWS shall be eligible for loan subsidization under this DCAP if one of the following conditions are satisfied:

## Attachment K

- A. The PWS's project will benefit one or more distressed municipalities. The DPH shall utilize the Department of Economic and Community Development's (DECD) "distressed municipality" list when assigning a project a "disadvantaged community" designation. Such designation shall be applied to a DWSRF project if it serves one or more qualifying communities during the year in which they enter into a DWSRF financial assistance agreement with the State or at any point within the 2 years prior.
- B. The PWS's project will provide direct benefits to community residents with a Median Household Income (MHI) less than the State MHI. This criterion will be derived using the results of the US Census Bureau's American Community Survey 5-Year Estimate for the years 2015-2019. If the project area has more than one census tract, then the median of the MHI values for those impacted census tracts will be used and compared to the state MHI.
- C. If the PWS serves less than 1,000 people and it does not meet the affordability criteria in subsection A or B, an income survey may be conducted to include each residential rate payer for the purpose of determining the MHI of residential rate payers. The PWS will qualify as a disadvantaged community if:
  1. the outcome of the survey shows that the rate payers' MHI is less than the Connecticut statewide MHI as determined by the results of the US Census Bureau's American Community Survey 5-Year Estimate for the years 2015-2019, or;
  2. the average annual residential rate payers' water bill equals or exceeds 1% of the rate payers' MHI or;
  3. if the PWS also provides sewer service to their residential customers, the average annual combined water and wastewater bill equals or exceeds 1.5% percent of the rate payers' MHI.

An income survey can also be conducted to meet the above affordability criteria for residential property owners served by private wells that have impaired water quality, or an insufficient quantity of water from their private wells and are receiving water system improvements.

Planned customer rate increases including those that will be necessary to undertake the project for which a PWS is seeking DWSRF funding may be included in the water or combined water and wastewater bill calculations detailed in C.2 and C.3.

All income surveys shall be coordinated with and approved by the DPH in advance to be considered valid. These surveys must also be conducted by a qualified independent third party with no vested interest in the survey's outcome. A previously conducted survey that has been accepted by another state or federal agency for the purpose of qualifying for a grant or subsidization under a similar disadvantaged community program may be considered valid if sufficient documentation is provided and determined to be acceptable to the DPH. All income surveys and MHI data shall be considered valid for a period not to exceed 60 months and the income survey shall include not less than 80% participation by all residential rate payers.

#### IV. Amount and Form of Subsidization: To the extent that sufficient DWSRF funding applications

Attachment K

are received from qualifying disadvantaged communities, the DPH shall utilize no less than 12% and up to 35% of its annual capitalization grant to subsidize loans to these communities for eligible DWSRF projects. The actual subsidization percentage that the DPH will make available from the annual capitalization grant under this DCAP shall be determined annually and detailed in the annual DWSRF Intended Use Plan (IUP).

The General Supplemental and Lead Service Line Replacement capitalization grants from the BIL require that the DPH utilize 49% of the grants to subsidize loans to communities that meet the State’s DCAP. In addition, the BIL requires that 25% of the Emerging Contaminants capitalization grant be utilized by DPH to subsidize loans to communities that meet the State’s DCAP or have a population of less than 25,000 people.

Connecticut General Statute (CGS) Section 22a-477(t)(2) authorizes the DPH Commissioner to provide additional forms of subsidization, including grants, principal forgiveness or negative forgiveness loans or any combination thereof to recipients in a manner provided under the federal Safe Drinking Water Act in the amounts and in the manner set forth in a project funding agreement. The federal AWIA and BIL restrict the form of subsidization states can use under their DCAP to principal forgiveness or negative interest rate loans. To the maximum practical extent, the DPH will provide the subsidy in the form of loan principal forgiveness.

All subsidization programs under the DWSRF shall be detailed in the annual DWSRF IUP.

- V. Extended Loan Terms: The DPH shall initially make \$50 million in DWSRF loan funds available to disadvantaged communities for loans with extended loan terms in excess of 20 years. Such loan terms may be extended up to 40 years and shall be given out on a first-come first-served basis. Loan terms cannot exceed the useful service life of the infrastructure improvement that is being financed. Maximum extended loan terms shall be based on the DWSRF loan amount provided to a project as indicated in Table 1.

Table 1

<b>DWSRF Loan Amount</b>	<b>Maximum Loan Term</b>
less than \$5,000,000	25 years
\$5,000,000 - \$10,000,000	30 years
Greater than \$10,000,000	40 years

Large PWS that serve greater than 100,000 persons shall not receive more than \$10 million dollars in loans with extended loan terms from the initial \$50 million that is being made available.

Annually, the DPH in consultation with the Office of the State Treasurer (OTT) may make additional funding available for extended loan terms under this Section. Any additional funding made available under this Section will be described in the DPH’s annual DWSRF IUP.
