

Getting the Facts to Promote Young Worker Safety in Connecticut

Nork is an important and beneficial experience for many teens.

When part of a structured work-based learning experience, work outside of school can add relevancy to students' classroom learning and help in future decision-making regarding further education and careers. However, young workers face many of the same occupational hazards as adult workers, especially when they are allowed to perform tasks that should be restricted to more experienced employees.

National Data

- ◆ 70 teens die from work-related injuries every year in the United States.
- The leading causes of work-related deaths among teens are motor vehicle injuries, job-related homicides, and injuries associated with machinery/equipment.
- Teen workers are injured at higher rates than adult workers despite the fact that they typically work fewer hours than adults and are prohibited from high-risk occupations.
- 200,000 teens under the age of 18 years are injured on the job each year, according to National Institute for Occupational Safety and Health (NIOSH) estimates.
- 70,000 teens are injured seriously enough at work each year to receive treatment in hospital emergency departments.
- It's estimated that only 1/3 of teens injured on the job seek medical treatment.

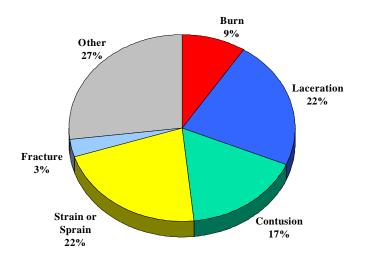

Connecticut Data

- Over 144,000 Connecticut teens are working outside of school at some point during each year.
- Between 1997 and 2001, there were 1,418 workers' compensation reports of injury among young workers ages 14-17 years in Connecticut.
- This number is most likely a conservative estimate of the true extent of the problem, since many injuries to young workers are not reported, and many other young workers are paid "under the table."
- 95% of the reported injuries were to 16 and 17 year olds.
- 60% of the injuries involved male workers.
- Twice as many injuries were reported in restaurants as in any other type of workplace.

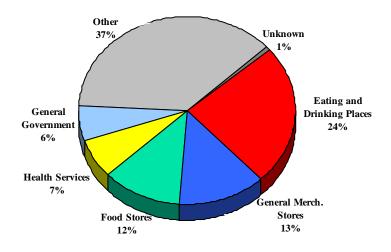

Connecticut Data

Distribution of Reported Known Injury Types among Young Workers, Connecticut, 1997-2001

About the Connecticut Young Worker Safety Team

The CT young Worker Safety Team is a collaboration among state, federal, local and regional agencies. Our members include the CT State Departments of Education, Labor and Public Health, the US Department of Labor, Capitol Workforce Partners, Capitol Region Educational Council, and the City of Middletown

Health Department. The goal of this collaborative effort is to improve the health and safety of teens in the workplace through awareness, education, training and advocacy.

How Can You Prevent Young Worker Injuries
