

Bed Bug Treatments

Please read and follow the 9-Step preparation instructions on the reverse of this sheet to get ready for a bed bug treatment.

Understand that the application of pesticides alone will not satisfactorily eliminate bed bugs. You must adhere to the instructions carefully, step-by-step, to be properly prepared for the treatment.

Failure to follow the procedures will result in an ineffective treatment. Follow-up treatments are always necessary, however, the number of follow-up treatments will increase if the area to be treated is not fully prepared for the extermination.

Bed bugs are very difficult to control and your full cooperation is necessary to rid your home of these unwanted parasites.
