COMMERCIAL FEEDING STUFFS

REPORT ON INSPECTION

1952

H. J. FISHER¹

THE FEED LAW

The statute relating to concentrated commercial feeding stuffs (Chapter 320, General Statutes, Revision of 1949) imposes upon the Station (1) all duties incidental to the annual registration of feeds offered for sale in the State; (2) the collection of samples for inspection and analysis; (3) the examination of all samples so collected; (4) the preparation and publication of a bulletin summarizing the results of inspection and giving other pertinent information; and (5) joint responsibility with the Food and Drug Commissioner for rules and regulations carrying out the provisions of the law.

The enforcement provisions of the statute are delegated to the Food and Drug Commissioner.

The following regulations were issued by the Director of this Station and the Food and Drug Commissioner in February, 1949:

REGULATIONS

REGULATION I. FEEDS NOT CLASSED AS CONCENTRATED COMMERCIAL FEEDING STUFFS (SEC. 6740)

It is held that the law exempts from classification as concentrated commercial feeding stuffs, and therefore from registration: (1) roughages such as hays, straws, corn stover and ensilage; (2) whole grains and mixtures thereof; (3) meals made from whole grains when not mixed with other materials or with each other; (4) feed ground from whole grain and sold by the manufacturer directly to the consumer; and (5) feed mixed according to a formula furnished by the consumer, for his own use.

Under clause (2), above, registration will not be required for mixtures in which the ingredients, excepting corn, are whole grains. Corn, if present, may be whole or cracked.

Clause (4) refers to feed ground from materials furnished by the consumer.

¹Analyses are by Messrs. O. L. Nolan and Sherman Squires, Miss Helen Kocaba and Mrs. Janice Lewis; biological assays under direction of Dr. R. B. Hubbell; microscopic examinations by Miss Janetha Shepard; and sampling by Mr. Richard Nichols. Compilations are by Miss Lillian Goffi.

Under clause (5) feed is regarded as "mixed to order" and must be so tagged together with the name of the customer for whom it is mixed, or otherwise identified to distinguish it from regular brands offered for general sale. Such feed must be sold only to the customer for whom it was mixed; if sold to others it becomes a regular brand and subject to registration and other provisions pertaining to feeds in general.

REGULATION 2. METHOD OF LABELLING

(SEC. 6741)

All concentrated commercial feeding stuffs, other than vitamin D carriers, must be labelled either by a statement printed on the bag or upon a properly attached tag; in the case of concentrated feeding stuff sold in bulk, a certificate which shall contain the information otherwise required to appear upon the bag or upon the tag, may be issued by the dealer in lieu thereof.

The use of wire or any metal in affixing tags is prohibited by law.

The law requires a statement of (1) the net weight of the feed contained in the package; (2) the name, brand or trademark, under which the feed is sold; (3) name and address of the manufacturer or importer; (4) the minimum percentages of (a) crude protein and (b) crude fat, and the maximum percentage of (c) crude fiber contained in the feed; (5) the separate ingredients of which the feed is composed.

While the law requires only a statement of the items enumerated above, no objection will be raised to more complete statements of chemical composition or formula.

REGULATION 3. CONCERNING VITAMIN D CARRIERS

Vitamin D carriers are required to be registered in the same manner and under the same conditions as obtain for feeds in general.

Information to be given on labels and in applications for registrations is (1) name of product; (2) vitamin D potency in terms of A. O. A. C. chick units per gram; (3) name and address of manufacturer, distributor or other person responsible for the product; and (4) on the label, a statement of net weight or volume.

The A. O. A. C. chick unit is the vitamin D activity produced by one U. S. Pharmacopoeia unit of vitamin D from the U. S. P. "Reference Cod Liver Oil", determined by the method of assay adopted by the Association of Official Agricultural Chemists.

REGULATION 4. CONCERNING COTTONSEED MEAL, ETC.

Cottonseed meal, linseed meal, soybean meal, and other vegetable feeds that are sold as fertilizer, are required to be registered under the provisions of the fertilizer law in addition to registration as feeds. If sold exclusively for one or the other of these purposes, the articles may be registered only under the law which applies.

For such of these articles as are used for fertilizer purposes chiefly or entirely as sources of nitrogen, only nitrogen (or protein) need be declared in the application for registration as fertilizer; and the tags or labels generally attached to such articles when intended for feeding purposes will be acceptable for them when sold as fertilizer.

REGULATION 5. DUTIES OF MANUFACTURERS, JOBBERS AND DEALERS WITH REFERENCE TO REGISTRATION

(SEC. 6742)

All concentrated commercial feeding stuffs, including vitamin D carriers, must be registered with The Connecticut Agricultural Experiment Station annually on January 1, or before they are offered for sale. Registration blank forms are supplied by the Station.

Manufacturers, jobbers or individuals shipping feeds into Connecticut will be expected to register their brands and pay the necessary fees thereon. *Connecticut dealers should assure themselves that the brands they handle are properly registered and labelled. In case the manufacturer or jobber outside the State neglects or refuses to register, the dealer who handles such feeds will be held responsible for such registrations, registration fees and other legal requirements.*

Dealers within the State who mix their own brands are responsible for the registration and proper labelling thereof.

REGULATION 6. DEFINITIONS OF TERMS USED IN THE LAW, AND OF OTHER TERMS

Person. The term "person" imports the singular or the plural as the case demands; and includes corporations, companies, societies and associations.

Importer. The term "importer" is defined in the act.

Brand. It is held that a distinct brand name, or a distinct analysis, constitutes a distinct brand.

Definitions for Feeding Stuff. The definitions and standards for feeding stuffs adopted from time to time by the Association of American Feed Control Officials are accepted as official in carrying out the provisions of this law; and the rules and regulations as adopted by that association are accepted as far as possible and when not inconsistent with the Connecticut Statutes.

REGULATION 7. METHODS OF ANALYSIS

(SEC. 6741)

The methods of analysis employed shall be those prescribed by the Association of Official Agricultural Chemists, wherever such methods have been adopted for the determinations desired.

REGULATION 8. CONCERNING MEDICATED FEEDS AND MINERAL MIXTURES

The law does not include medicated products used as "conditioners" for stock and poultry, and which consist essentially of substances possessing, or claimed to possess, medicinal or condimental properties; nor does it include products consisting of supplemental minerals.

REGULATION 9. FEEDS IN DIFFERENT PHYSICAL FORMS

The same feed offered in different physical forms, e. g., mash and pellets, requires but one registration.

REGULATION 10. REVISIONS AND SUBSTITUTIONS OF REGISTRATIONS

A feed registration after being filed may be revised without payment of an extra registration fee.

A brand of feed duly registered and subsequently discontinued may be replaced by another brand for the unexpired period of registration without payment of an extra registration fee.

REGISTRATIONS

For the period January 1, 1952, to December 31, 1952, 232 firms registered 1,385 brands of feeding stuffs, and 19 firms registered 53 brands of vitamin D carriers.

As required by statute the registrations are listed as follows:

SUMMARY OF INSPECTION

In the calendar year 1952, a total of 1,925 samples was examined. This total included official samples of commercial feeds and vitamin D carriers, and miscellaneous materials as shown in the following summary:

Biological specimens analyzed for poison	182
Check feeds, A. F. C. O., etc.	17
Commercial feeding stuffs, official samples	941
Fish foods	7
Medicated feeds	19
Miscellaneous feeds, etc., analyzed for purchasers	100
Pasture grass, etc., samples for Storrs Station	603
Vitamin D carriers, official samples	56
	1,925

Samples examined for Storrs Station are in connection with investigations carried on by that Station and are not for discussion in this report.

Commercial Feeding Stuffs

The results of analysis of official inspection samples, other than vitamin D carriers, are summarized as follows:

Total number of samples	941
Samples deficient in:	
one item	103
two items	114
Percentage of samples meeting guaranties	88
Total guaranties made	2,816 ¹
Guaranties not met:	
protein	38
fat	80
fiber	7
Percentage of guaranties met	95

This year's inspection showed six more samples found deficient than in 1951, although 109 fewer samples were taken. For the fourth successive year deficiencies in fat have considerably exceeded those for any other ingredient; the cause of this is probably failure of mixers to take into account the fact that the more efficient extraction processes now in use leave less fat in vegetable meals than did the methods formerly employed.

The percentage of samples meeting all guaranties (88) and the percentage of guaranties met (95) still remain very high, however.

Chemical analyses of official samples are given in Table 1; deficiencies are shown in **bold face** type.

Vitamin D Carriers

Fifty-six samples of Vitamin D carriers were tested during the year. Results of biological tests are summarized in Table 2. Fifty-one samples, or 91 per cent, met their guaranteed potencies or were sufficiently

¹Seven samples with only two guaranties.

close thereto to be passed; five samples were deficient. During the entire 16-year period from 1937 to 1952 inclusive, 821 samples have been examined, of which 732, or 89 per cent, have been passed.

Prior to 1951 guaranties for poultry feed supplements were required to be expressed in terms of A. O. A. C. chick units of vitamin D per gram of feed. The A. O. A. C. chick unit was abolished by the Association of Official Agricultural Chemists in 1950; its use on labels, which still survives to some extent, is therefore no longer proper. Beginning with 1951 we have followed the practice recommended by the Association of American Feed Control Officials in requiring guaranties for vitamin D supplements to be in terms of International chick units per pound.

Medicated Feeds

Medicated feeds are still not required to be registered under the feeding stuffs law, but they are analyzed every year for their drug content. Fifteen samples of sulfaquinoxaline feeds and four nitrophenide feeds, or a total of 19 medicated feed samples, were analyzed during 1952. Most of these samples were taken by inspectors of the Food and Drug Commission. Analyses are given in Tables 3 and 4; deficiencies are in **bold face** type. Of the sulfaquinoxaline feeds 12, or 80 per cent, were passed. Three of the nitrophenide feeds contained within 20 per cent of the guaranteed percentage of nitrophenide, but all except one were contaminated with a sulfa drug that was probably N⁴-acetyl-(4-nitrophenyl) sulfanilamide. This same situation was encountered in 1951.¹ At that time the explanation was not known, but we have since learned that the feed manufacturers had wished to add 3-nitro-4-hydroxyphenylarsonic acid as well as nitrophenide to their feed and had used "Nitrosal" as the source of the arsenical. "Nitrosal" is a proprietary product of Dr. Salsbury's Laboratories, Charles City, Iowa, which contains not only 9 per cent of the arsonic acid but also 30 per cent of N⁴-acetyl-(4-nitrophenyl) sulfanilamide; therefore, in adding an arsenical to the feed the manufacturers were unwittingly introducing a sulfa drug at the same time.

Fish Foods

The definition of "concentrated commercial feeding stuffs" in our present law includes "materials . . . intended for the feeding of domestic animals, including poultry". This definition may be broad enough to embrace fish foods, but in practice such products have never been required to be registered. During 1952 seven samples of materials used for feeding tropical fish were submitted by a manufacturer and were analyzed by us as a matter of public interest; analyses are given in Table 5.

Miscellaneous Feeds

One hundred unofficial samples of feed and fodder materials were examined. This total included commercial feeding stuffs analyzed at the request of purchasers and dealers and a number of silages submit-

¹Conn. Agr. Expt. Sta., Bul. 555, 44 (1952).

ted by farmers, as well as three feeds analyzed for the Federal Correctional Institution at Danbury. Twenty-two samples were analyzed for sulfaquinoxaline or nitrophenide.

A number of the feeds were submitted with complaints that animals refused to eat them or because contamination with poisonous ingredients was suspected. Ten samples were found to be contaminated: Six poultry feeds (all "Berkman 5-Star Broiler Mash," manufactured by the Berkman Grain & Coal Co., North Franklin, Conn.), which were labelled "With no anti-coccidial added", were found to contain a toxic concentration of nitrophenide (0.0804 per cent); one feed from another source contained an excessive quantity of sulfaquinoxaline (0.0800 per cent); two samples of cattle feed contained 0.50 per cent of arsenate of lead, apparently added maliciously; one poultry feed was high in salt (2.39 per cent); and one sample of oats was moldy.

Two samples of unusual materials were analyzed as follows:

	<i>Sample 8771, Broken Rice Per Cent</i>	<i>Sample 9603, Silkworm Chrysalis Per Cent</i>
Moisture	9.60	6.48
Protein	8.56	56.63
Ash	0.81	7.34
Fat	0.85	12.45
Crude fiber	0.23	5.38
Nitrogen-free extract	79.95	11.72

Biological Specimens Examined for Poisons

One hundred and eighty-two biological samples were examined in connection with suspected poisoning, mostly of domestic animals and poultry. In 78 of these, poisonous substances were found in sufficient quantity to suggest probable or possible causes of death.

The poisonous materials, and the number of specimens in which they were found, are summarized as follows: alpha naphthyl thiourea ("ANTU") (4), antimony (2), antimony with zinc (1), arsenic (1), arsenic with copper (Paris green) (1), arsenic with lead (lead arsenate) (1), barium with lead (2), boron (boric acid or borax) with lead and zinc (1), boron with zinc (1), cadmium (3), cadmium with kerosene and zinc (1), chromium with mercury (1), cyanide (choke-cherry) (1), cyanide with lead and zinc (1), DDT (4), lead (23), lead with mercury (1), lead with zinc (3), mercury (2), nitrate (1), nitrophenide (4), strychnine (1), thallium (1) and zinc (17). The predominant poisons were lead (32 cases) and zinc (25 cases). The four nitrophenide samples were all of chickens that had eaten the "Berkman" feed mentioned above; from 30 to 91 parts per million of nitrophenide were recovered from the livers of these birds.

Check Feeds

Six check feed samples were analyzed in the check feed program sponsored by the Association of American Feed Control Officials, and seven samples of alfalfa were analyzed for carotene in a program also

sponsored by that association. Four feeds were analyzed in a collaborative study of methods for the determination of copper that was conducted by the Association of Official Agricultural Chemists.

DETERMINING GUARANTIES

The most reliable way to determine safe guaranties for feed mixtures is by analysis. Larger manufacturers with laboratory facilities follow this method. Small manufacturers and home mixers are without such facilities and they must resort to other means. A close estimate can be made by a simple calculation using as a guide the analysis tags on the ingredients to be mixed.

If, for example, a mixture is to be made with cottonseed meal, corn meal, ground oats, gluten feed and wheat bran as ingredients, we may assume that the tags for these several ingredients show the following percentages of protein, fat and fiber:

Ingredient	Protein per cent (lbs. per 100)	Fat per cent (lbs. per 100)	Fiber per cent (lbs. per 100)
Cottonseed meal	41	7	11
Corn meal	24	2	11
Ground oats	12	5	11
Gluten feed	25	2	7
Wheat bran	16	5	10

Remembering that per cent means pounds per 100 pounds, then 100 pounds of each of the materials listed above will contain the number of pounds of the several nutrients shown.

If the formula to be mixed calls for the pounds of ingredients shown in column 1 below, then the pounds of the several nutrients will be as shown in columns 2, 3 and 4. The total weight of the mix is seen to be one ton (20 hundred pounds), so the analysis of the finished product is found by dividing the totals by 20, or by moving the decimal point one place to the left and dividing by 2.

Example

Column 1	² Protein lbs.	³ Fat lbs.	⁴ Fiber lbs.
Cottonseed meal 200 lbs.	82	14	22
Corn meal 200 lbs.	48	4	22
Ground oats 600 lbs.	72	30	66
Gluten feed 300 lbs.	75	6	21
Wheat bran 700 lbs.	112	35	70
Totals 2,000 lbs.	389	89	201
Per cent	19.45%	4.45%	10.05%

Mixers should remember that for protein and fat the guaranties are minimum values; for fiber the guaranty is the maximum. In other words, the manufacturer guarantees that protein and fat will not be less than the percentages declared and in case of fiber it will not exceed the figure declared.
