

DRAFT Connecticut 2025 Species of Greatest Conservation Need

This document contains the draft Species of Greatest Conservation Need (SGCN) compiled by scientific experts, with partner and public input, to be considered for the Connecticut State Wildlife Action Plan revision for 2025. Below is an explanation of the columns in the tables below.

COLUMN DEFINITIONS

Taxon: Taxon

Subtaxon: Subtaxon

ScientificName: Species Scientific Name

CommonName: Species Common Name

Draft Status: Vote to list as a Species of Greatest Conservation Need or a Watchlist species; Species of Greatest Conservation Need (SGCN) – Defined by each state fish or wildlife agency in its Wildlife Action Plan, typically a native species with declining populations, or vulnerabilities expected to benefit from strategic conservation attention. State Assessment Priority Species (SAPS) –Species for which more information is needed to fully understand status and trends to determine the level of conservation concern or SGCN status. These species, separate from SGCN, are a priority for additional assessment or survey to address data deficiency.

Draft Importance Level: Guidance vote for Importance Level: MOST IMPORTANT: species with extant occurrences in Connecticut, Taxa which are rare throughout much of their restricted geographic range. VERY IMPORTANT: species with extant occurrences in Connecticut. IMPORTANT: species without known extant occurrences in Connecticut, species with or without known occurrences in Connecticut, species which have experienced documented declines in Connecticut.
