

The Connecticut Agricultural Experiment Station Research Foundation, Inc.

AGRICULTURE • ENVIRONMENT • FORESTRY • PUBLIC HEALTH

Dear Friend:

The Connecticut Agricultural Experiment Station, founded in 1875, is America's first agricultural experiment station. The institution is well known for the development of hybrid corn, pioneering work that led to the discovery of vitamin A, and more recently, the first cultivation of the West Nile encephalitis virus in North America. In addition to agriculture, field and laboratory research is conducted on a variety of forestry, public health, and environmental problems. The Station remains a separate state agency supported mainly by state appropriations and federal grant dollars.

In 2007, The Connecticut Agricultural Experiment Station Research Foundation was founded as a tax-exempt 501(c)(3) non-profit organization to develop innovative funding opportunities supported by private contributions, industry, and philanthropic organizations. We do not charge fees for soil analyses, insect identifications, plant disease diagnoses, or on-site examinations. The community has asked how they can support our work. If you would like, contributions to support our research can be made payable to The Connecticut Agricultural Experiment Station Research Foundation, Inc. You may designate the area of research you would like to support. Thank you.

Sincerely,

Louis A. Magnarelli, Director
