## 1. Notice of Scoping for Norwalk First Taxing District - Grupes Dam Rehabilitation (REVISED)

**Addresses of possible locations:** On Silvermine River, off Valley Road and Deep Valley Road in New Canaan

**Municipalities where proposed action might be located:** Norwalk/New Canaan

**Project Description:**

Grupes Reservoir Dam impoundment serves as drinking supply water for the First Taxing District Water Department of Norwalk, Connecticut. Grupes Reservoir is the fourth of four reservoirs operated by the District along Silvermine River. Grupes Reservoir Dam was originally constructed in 1871 to impound the Grupes Reservoir as a drinking water supply for the City of Norwalk. Grupes Reservoir Dam is classified by Connecticut Department of Energy and Environmental Protection (CTDEEP) dam safety regulations (RCSA 22a-409) as a Class C, or "high hazard" dam, meaning that if the dam were to fail, it could result in probable loss of life, major damage to habitable structures and residences, damage to critical utilities and infrastructure, and great economic loss. As a Class C dam, a safety inspection of Grupes Reservoir Dam is performed by a Dam Safety Engineering consultant every 2 years. The information obtained from the inspections and studies generates recommendations for both short-term and long-term work necessary to maintain public safety and structural integrity as well as increase operational efficiency and District employee safety.

Potential work includes, but is not limited to:

- Raise the top of dam by 4 feet to elevation 306.0 with a cast-in-place concrete cap, and re-grade at dam abutments to mitigate overtopping during the spillway design flood (spillway to remain at current elevation);
- Construct earthen embankment along east side of Grupes Reservoir and re-grade existing high ground and access road to mitigate overtopping/flooding during the spillway design flood (spillway to remain at current elevation);
- Construct parapet / retaining walls along east side of Grupes Reservoir to mitigate overtopping/flooding during the spillway design flood;
