Re: MCM Holdings, LLC  
Proposed Wireless Telecommunications Tower Facility

12 and 4 Marchant Road, Redding, Connecticut Docket 517

Intervenor Trevisani Testimony:

I am and have been a Verizon Wireless customer for many years and have found their service to be satisfactory at the farm at 12 Marchant. I remain concerned about the impact to my honey bees, the safety of the scouts, the detrimental aesthetic, potential health and environmental impacts. I am concerned about the negative impact to New Pond Farm and Marchant Farm businesses.

Questions:

1. Is there a possibility of a light having to be installed at the top part of the tower sometime in the future? If no, what assurances that this won't be mandated by some government body sometime in the future.
2. In the event that the tower cause adverse effects on the wildlife or human health, does MCM or Verizon have adequate reserves and or insurance coverage to address potential repercussions to the impacted community? Is there any financial remedy to a potential collapse of my honey bees?
3. The tower height is stated as 150 feet. What is the actual height of the tower relative to the road on Marchant and Simpaug?
4. Do you have any pictures of the balloon without tree leave coverage?

Sincerely,

Dino Trevisani
