PETITION NO. 88

Field Review

November 9, 1982

Gloria Dibble Pond, James G. Horsfall and Christopher S. Wood met Jerry Thompson, Art Dery, and John Harrington of Northeast Utilities (NU) to review the project site described in NU's petition dated September 27, 1982.

NU petitioned for a determination that no certificate of environmental compatibility and public need was required for the replacement of an angle structure at a new location to allow the property owners to relocate its driveway. That work is made necessary by state Department of Transportation highway work on the adjacent state route 107, and by plans to widen the driveway to accommodate anticipated development of the property. The new angle structure will be moved over 100 feet up a slope; the new position will permit removal of an adjacent structure and require alteration of another from a tangent to an angle structure. No wetlands will be affected by any of the required work. Clearing of the hillside will be necessary an approximately 1 1/2 acres of new right-of-way and about 600 feet of access road will be required.

NU also submitted pursuant to section 16-50z(a) of the General Statutes, a notice of intent to acquire real property, which is necessary to accommodate the land-owners request for relocation of the line. The existing right-of-way will be traded for the new right-of-way and the property owner will pay for the relocation work.

Christopher S. Wood
