

COVID-19 Update October 19, 2020

As of **October 18, 2020, at 8:30 PM**, the total of laboratory-confirmed and probable COVID-19 cases reported among Connecticut residents is **64021**, including **61441** laboratory-confirmed and **2580** probable cases. **One hundred ninety-five** patients are currently hospitalized with laboratory-confirmed COVID-19. There have been **4554** COVID-19-associated deaths.

In Connecticut during the early months of this pandemic, it became increasingly clear that it would be necessary to track probable COVID-19 cases and deaths, in addition to laboratory-confirmed (RT-PCR) cases and deaths. This was needed to better measure the burden and impact of this disease in our communities and is now part of the [national surveillance case definition for COVID-19](#). Prior to June 1, probable and confirmed cases were reported together.

Overall Summary	Total**	Change Since Friday
COVID-19 Cases	64021	+1191
COVID-19-Associated Deaths	4554	+12
Patients Currently Hospitalized with COVID-19	195	+11
COVID-19 PCR Tests Reported	2037017	+71905

**Includes confirmed plus probable cases

COVID-19 Cases and Associated Deaths by County of Residence

As of 10/18/20 8:30pm.

County	COVID-19 Cases		COVID-19-Associated Deaths	
	Confirmed	Probable	Confirmed	Probable
Fairfield County	20791	883	1115	314
Hartford County	15833	735	1126	323
Litchfield County	1942	91	122	21
Middlesex County	1733	76	156	39
New Haven County	15110	570	963	157
New London County	3145	89	102	32
Tolland County	1486	114	52	15
Windham County	1251	15	16	1
Pending address validation	150	7	0	0
Total	61441	2580	3652	902

[National COVID-19 statistics](#) and information about [preventing spread of COVID-19](#) are available from the Centers for Disease Control and Prevention.

Day-to-day changes reflect newly reported cases, deaths, and tests that occurred over the last several days to week. All data in this report are preliminary; data for previous dates will be updated as new reports are received and data errors are corrected. Hospitalization data were collected by the Connecticut Hospital Association. Deaths reported to either OCME or DPH are included in the daily COVID-19 update.

Hospitalization Surveillance

The map below shows the number of patients currently hospitalized with laboratory-confirmed COVID-19 by county based on data collected by the Connecticut Hospital Association. The distribution is by location of hospital, not patient residence. The labels indicate the number of patients currently hospitalized with the change since yesterday in parentheses.

Patients Currently Hospitalized by Connecticut County

Distribution by location of hospital not patient residence. Data from the Connecticut Hospital Association.

More information about hospitalized cases of COVID-19 in New Haven and Middlesex Counties is available from [COVID-NET](#).

Characteristics of COVID-19 Cases and Associated Deaths

Number of Confirmed and Probable COVID-19 Cases by Date

As of 10/18/2020 at 8:30pm

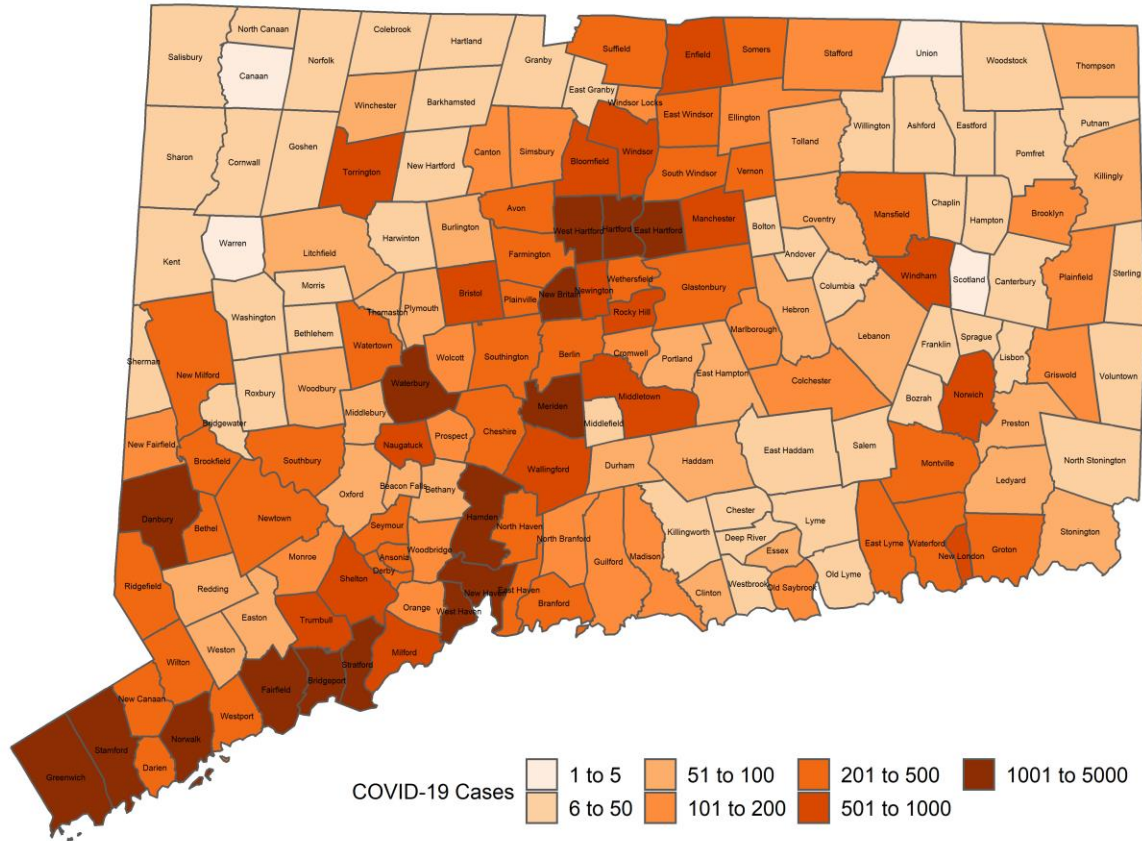

Number of COVID-19-Associated Deaths by Date of Death

As of 10/18/2020 at 8:30pm

Cumulative Number of COVID-19 Cases by Town

Map does not include 157 cases pending address validation

All data are preliminary and subject to change. Last updated 10-19-2020.

APPENDIX A. Cumulative Number of COVID-19 Cases by Town

Table does not include 157 cases pending address validation

Town	Confirmed Cases	Probable Cases	Town	Confirmed Cases	Probable Cases	Town	Confirmed Cases	Probable Cases
Andover	14	0	Griswold	101	2	Prospect	104	1
Ansonia	338	11	Groton	324	16	Putnam	49	1
Ashford	29	1	Guilford	144	10	Redding	81	7
Avon	243	11	Haddam	61	2	Ridgefield	280	15

APPENDIX B. The following graphs show the number of cases and deaths by race and ethnicity. Categories are mutually exclusive. The category “multiracial” includes people who answered ‘yes’ to more than one race category. NH=Non-Hispanic

The following graphs show the number of COVID-19 cases and COVID-19-associated deaths per 100,000 population by race and ethnicity. Crude rates represent the total cases or deaths per 100,000 people. Age-adjusted rates consider the age of the person at diagnosis or death when estimating the rate and use a standardized population to provide a fair comparison between population groups with different age distributions. Age-adjustment is important in Connecticut as the median age of among the non-Hispanic white population is 47 years, whereas it is 34 years among non-Hispanic blacks, and 29 years among Hispanics. Because most non-Hispanic white residents who died were over 75 years of age, the age-adjusted rates are lower than the unadjusted rates. In contrast, Hispanic residents who died tend to be younger than 75 years of age which results in higher age-adjusted rates.

The 2018 Connecticut and 2000 US Standard Million populations were used for age adjustment; population estimates from: [DPH Population Statistics](#). Categories are mutually exclusive. Cases missing data on race/ethnicity are excluded from calculation of rates. NH=Non-Hispanic

**Age adjusted rates only calculated for groups with at least 30 deaths*
