

COVID-19 Update November 06, 2020

As of **November 05, 2020, at 8:30 PM**, the total of laboratory-confirmed and probable COVID-19 cases reported among Connecticut residents is **78125**, including **73206** laboratory-confirmed and **4919** probable cases. **Four hundred two** patients are currently hospitalized with laboratory-confirmed COVID-19. There have been **4671** COVID-19-associated deaths.

In Connecticut during the early months of this pandemic, it became increasingly clear that it would be necessary to track probable COVID-19 cases and deaths, in addition to laboratory-confirmed (RT-PCR) cases and deaths. This was needed to better measure the burden and impact of this disease in our communities and is now part of the [national surveillance case definition for COVID-19](#). Prior to June 1, probable and confirmed cases were reported together.

Overall Summary	Total	Change Since Yesterday
COVID-19 Cases (confirmed and probable)*	78125	+1065
COVID-19 Tests Reported (molecular and antigen)	2484685	+29563
Daily Test Positivity**		3.6%
Patients Currently Hospitalized with COVID-19	402	+22
COVID-19-Associated Deaths	4671	+15

*Includes confirmed plus probable cases; probable cases include persons with positive antigen results

**Daily test positivity is the number of new positive molecular and antigen cases divided by the number of new molecular and antigen tests reported in the past 24 hours.

COVID-19 Cases and Associated Deaths by County of Residence

As of 11/05/20 8:30pm.

County	COVID-19 Cases		COVID-19-Associated Deaths	
	Confirmed	Probable	Confirmed	Probable
Fairfield County	24473	1962	1128	319
Hartford County	18645	1124	1179	326
Litchfield County	2378	181	125	21
Middlesex County	2124	107	159	39
New Haven County	17984	1170	978	159
New London County	4084	136	115	34
Tolland County	1757	183	53	15
Windham County	1580	30	20	1
Pending address validation	181	26	0	0
Total	73206	4919	3757	914

[National COVID-19 statistics](#) and information about [preventing spread of COVID-19](#) are available from the Centers for Disease Control and Prevention.

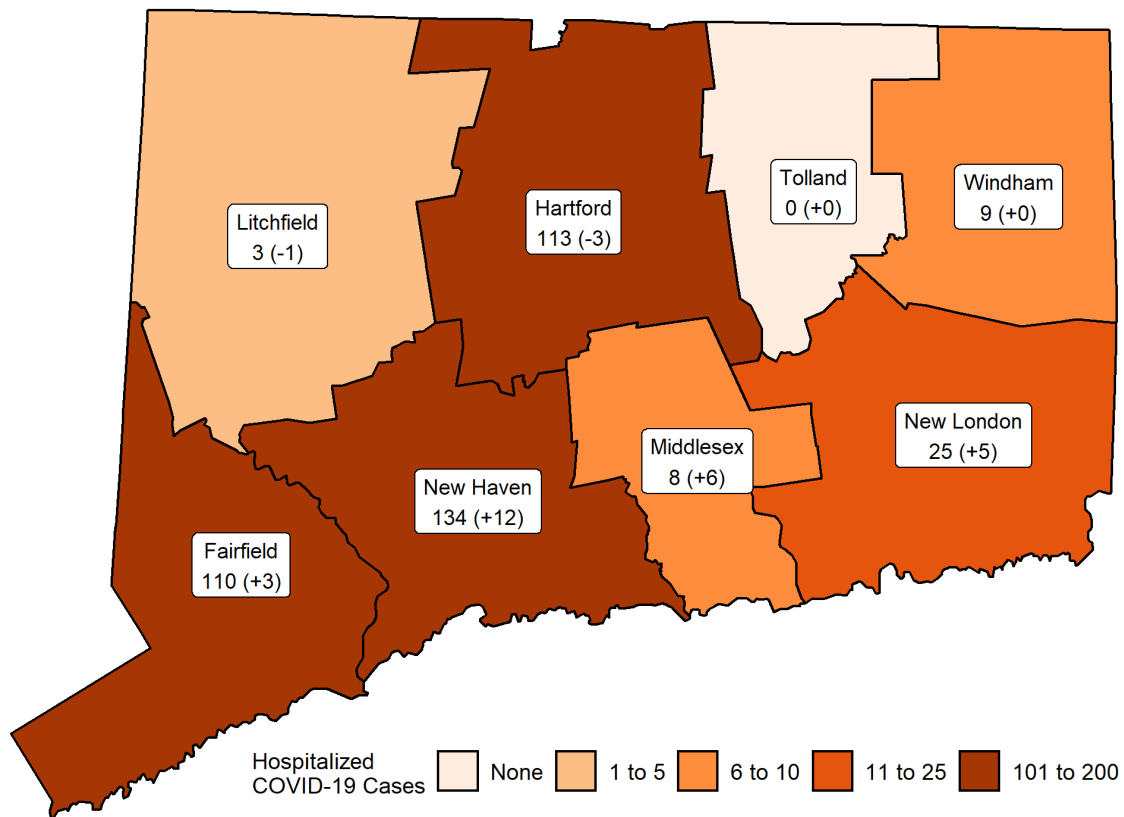

Day-to-day changes reflect newly reported cases, deaths, and tests that occurred over the last several days to week. All data in this report are preliminary; data for previous dates will be updated as new reports are received and data errors are corrected. Hospitalization data were collected by the Connecticut Hospital Association. Deaths reported to either OCME or DPH are included in the daily COVID-19 update.

Hospitalization Surveillance

The map below shows the number of patients currently hospitalized with laboratory-confirmed COVID-19 by county based on data collected by the Connecticut Hospital Association. The distribution is by location of hospital, not patient residence. The labels indicate the number of patients currently hospitalized with the change since yesterday in parentheses.

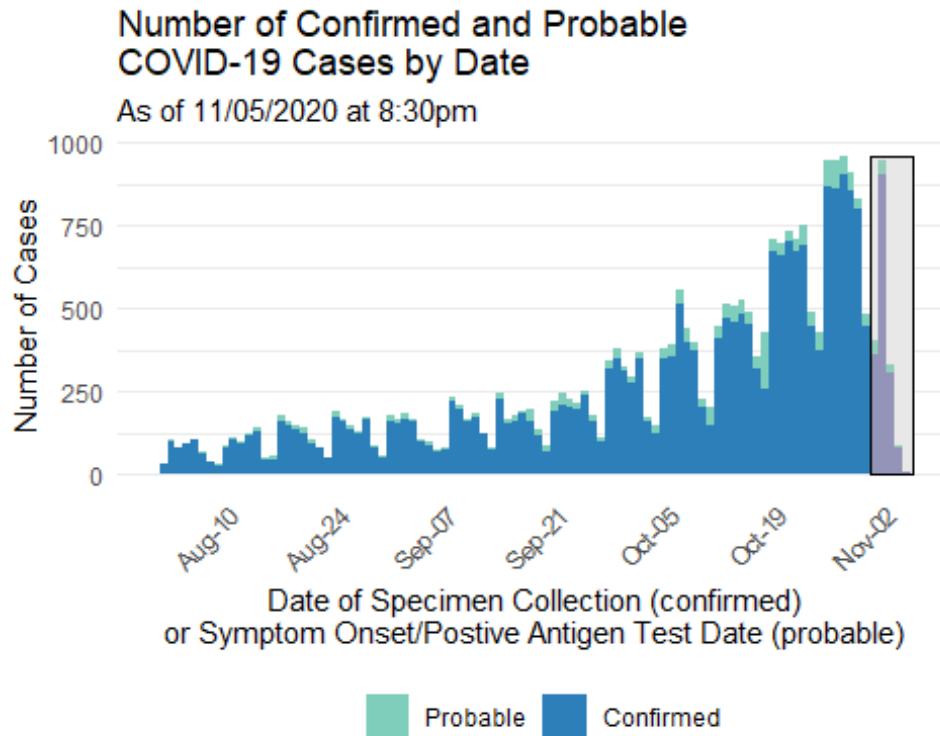

Patients Currently Hospitalized by Connecticut County

Distribution by location of hospital not patient residence. Data from the Connecticut Hospital Association.

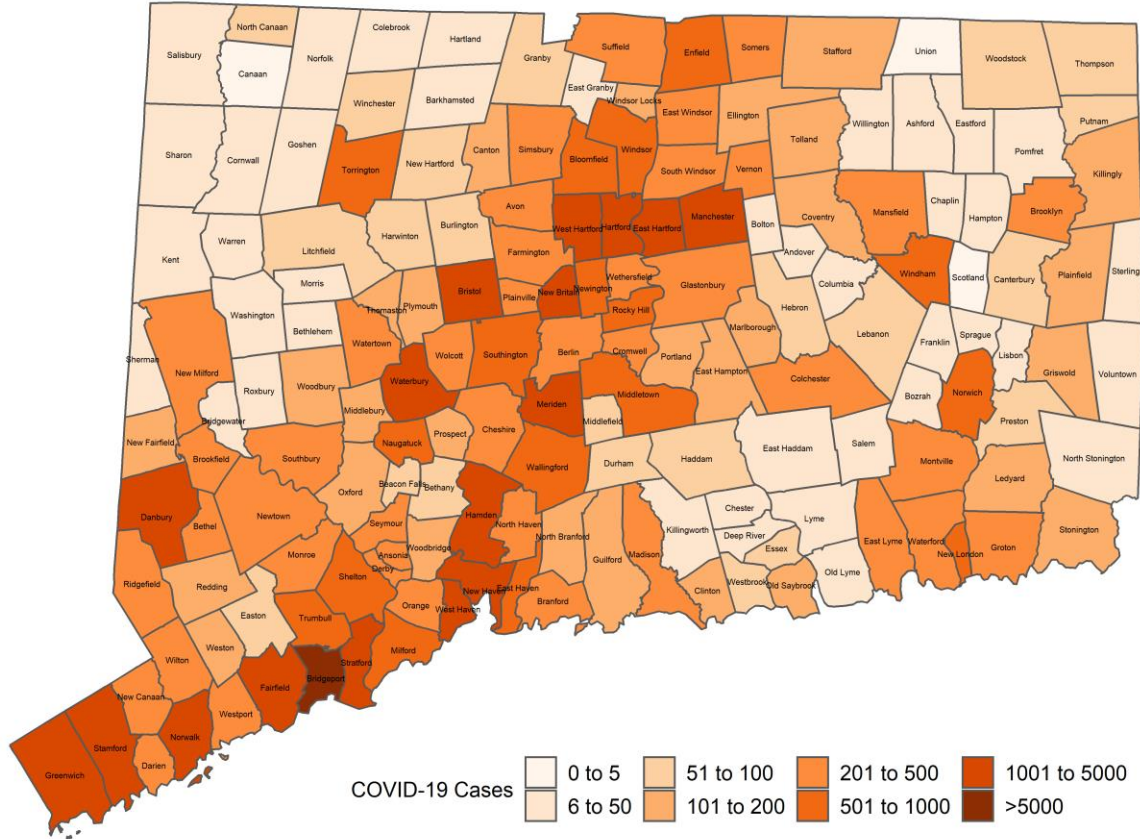

More information about hospitalized cases of COVID-19 in New Haven and Middlesex Counties is available from [COVID-NET](#).

Characteristics of COVID-19 Cases and Associated Deaths

Cumulative Number of COVID-19 Cases by Town

Map does not include 207 cases pending address validation

APPENDIX A. Cumulative Number of COVID-19 Cases by Town

Table does not include 207 cases pending address validation

Town	Confirmed Cases	Probable Cases	Town	Confirmed Cases	Probable Cases	Town	Confirmed Cases	Probable Cases
Andover	17	0	Griswold	135	2	Prospect	145	9

APPENDIX B. The following graphs show the number of cases and deaths by race and ethnicity. Categories are mutually exclusive. The category “multiracial” includes people who answered ‘yes’ to more than one race category. NH=Non-Hispanic

The following graphs show the number of COVID-19 cases and COVID-19-associated deaths per 100,000 population by race and ethnicity. Crude rates represent the total cases or deaths per 100,000 people. Age-adjusted rates consider the age of the person at diagnosis or death when estimating the rate and use a standardized population to provide a fair comparison between population groups with different age distributions. Age-adjustment is important in Connecticut as the median age of among the non-Hispanic white population is 47 years, whereas it is 34 years among non-Hispanic blacks, and 29 years among Hispanics. Because most non-Hispanic white residents who died were over 75 years of age, the age-adjusted rates are lower than the unadjusted rates. In contrast, Hispanic residents who died tend to be younger than 75 years of age which results in higher age-adjusted rates.

The 2018 Connecticut and 2000 US Standard Million populations were used for age adjustment; population estimates from: [DPH Population Statistics](#). Categories are mutually exclusive. Cases missing data on race/ethnicity are excluded from calculation of rates. NH=Non-Hispanic

*Age adjusted rates only calculated for groups with at least 30 deaths
