**Objectives**

- Review significant changes from the 2012 to 2015 IRC
- Highlight Connecticut Amendments to 2015 IRC
Use of Office of Education and Data Management (OEDM) training materials must be approved in writing by the State of Connecticut, Department of Administrative Services’ Office of Communications.
Use of Office of Education and Data Management (OEDM) training materials must be approved in writing by the State of Connecticut, Department of Administrative Services’ Office of Communications.
Electrical
(R101.4.5 – CT add)

IRC is the default electrical code for IRC occupancies.

(Add) R101.4.5 Applicable electrical code. The applicable electrical code requirements for buildings constructed under this code are those of chapters 34-43 of this code. The permit applicant may elect at the time of application for permit to follow the requirements of the 2017 NFPA 70 National Electrical Code portion of the 2018 State Building Code, as an alternative compliance to the electrical requirements of this code. The applicant must indicate this choice on the permit application and on all construction documents.

Appendices
(R102.5 – CT amd)

CT Adopted Appendices:
- E: Manufactured Housing Used As Dwellings
- F: Passive Radon Gas Controls Methods *(heavily amended)*
- G: Piping Standards for Various Applications
- H: Patio Covers
- K: Sound Transmission
- O: Automatic Vehicular Gates
- P: Sizing of Water Piping System
- V: Wind Speeds, Seismic Design Categories & Ground Snow Loads *(CT completely)*
Accessibility Exemptions
(R104.10.2 – CT amd)

Only OSBI involved in reviewing and approving.

(Add) R104.10.2 Accessibility exemption. Pursuant to subsection (b) of section 29-269 of the Connecticut General Statutes, any variation of or exemption from any provisions relating to accessibility to, use of and egress from, buildings and structures as required herein shall be permitted only when approved by the State Building Inspector. Pursuant to subsection (b) of section 29-269 of the Connecticut General Statutes, any person aggrieved by the joint decision of the State Building Inspector may appeal to the Codes and Standards Committee within 30 days after such decision has been rendered.

CT Removed Provision for Research Reports

This paragraph was in 2016 CSBC and has been removed from 2018 CSBC.

(Add) R104.11.2 Research reports. Submission to the local building official of a valid research report prepared by an approved evaluation service that supports the efficacy of use of any material, appliance, equipment or method of construction not specifically provided for in this code, or that demonstrates compliance with this code, may be deemed evidence of compliance with this code.
Significant Changes to the
2015 International Residential Code

Use of Office of Education and Data Management (OEDM) training materials must be approved in writing by the State of Connecticut, Department of Administrative Services’ Office of Communications.

<table>
<thead>
<tr>
<th>Wind Design Criteria for Existing Structures (R105.3.1.1.1 – CT Add)</th>
</tr>
</thead>
<tbody>
<tr>
<td>♦ Shoreline flood damaged dwellings may be subject to some upgrading of structure for wind resistance.</td>
</tr>
</tbody>
</table>

(Add) R105.3.1.1.1 Wind design criteria for existing structures. For structures where the proposed work is determined to be a substantial improvement or restoration under R105.3.1.1 and having a wind Exposure D, structural elements that are uncovered shall be required to be improved to meet the wind speed design criteria in R301.2.1.
Wind Design Criteria (R301.2.1.4 – CT Amd)

- CT amends sections regarding exposure category, wind direction and sectors, surface roughness
- Surface Roughness B and Exposure Category B will be used most often.

Component & cladding loads (Table R301.2(2))

- The component and cladding table has replaced basic wind speeds with ultimate design wind speeds.
- Roof slopes are divided into new categories for determining component and cladding loads.
Component & cladding loads (Table R301.2(2))

- 0 – 7 deg = up to 1.5:12  (2012: 0 – 10)
- >7 – 27 deg = up to 6:12  (2012: >10 – 30)
- >27 – 45 deg = up to 12:12  (2012: >30 – 45)
- Wall

Use of Office of Education and Data Management (OEDM) training materials must be approved in writing by the State of Connecticut, Department of Administrative Services’ Office of Communications.

---

**Sunrooms (R301.2.1.1.1)**

- 2015 IRC requires sunrooms to comply with AAMA/NPEA/NSA 2100-12 "Specifications for Sunrooms" which contains requirements for habitable and nonhabitable sunrooms.
- Sunroom: glazing >40% of enclosing walls & roof; either stick built wood or prefab parts.

---

**5 categories of sunrooms that affect performance requirements:**

- **I**: Thermally isolated; open or enclosed; screens or plastic film; nonhabitable; unconditioned.
- **II**: Thermally isolated; enclosed walls; plastic or glass, translucent or transparent openings; nonhabitable; unconditioned.
- **III**: Thermally isolated; enclosed walls; plastic or glass, translucent or transparent openings; fenestration rqmts for air/water & structural rqmts; nonhabitable; unconditioned.
- **IV**: Thermally isolated; enclosed walls; separate heat/cool system or controls; fenestration rqmts for air/water/thermal; structural rqmts; nonhabitable; conditioned.
- **V**: Enclosed walls; open to main structure incl. heat/cool; fenestration rqmts for air/water/thermal; habitable; conditioned.

SUNROOM MINIMUM REQUIREMENTS

Table from 2015 IRC Commentary

Protection of Openings in Wind Borne Debris Regions (R301.2.1.2)

- Increases height from 2 to 3 stories (45’ mean roof hgt) for use of wood structural panels to protect openings.
Wind Exposure Category (R301.2.1.4)

- **Category A** has been deleted (large city center with taller buildings). Was removed from IBC & ASCE 7.
- **Category B** unchanged. Most locations.
- **Category C** unchanged. Open terrain.
- **Category D** now applies to open water, mud & salt flats, unbroken ice fields for a distance of at least 5,000 ft & hurricane-prone regions on or near ocean shore. Extends 600 ft in from edge of unobstructed area. Wind takes some time to slow down due to new obstructions.

Story Height for Wall Const. (R301.3)

- Story height of wood & steel wall framing, insulated concrete, and SIP walls may not exceed 11’-7”.
- Masonry wall height is limited to 13’-7”.
**Story Height for Wall Const.**

Table R602.3.5

**Exterior Walls**

(R302.1)

- Unprotected roof overhangs are now permitted to project to within 2 ft of the property line (FSD) when fireblocking is installed between the top of the wall and the roof sheathing. See footnotes in Table R302.1(1).
Provisions for structurally independent fire-resistant-rated walls have been removed in favor of common wall provisions.

Common walls rated 2 hours w/o fire sprinklers
Significant Changes to the 2015 International Residential Code

Fire Protection of Floors (R302.13)

- Clarified that penetrations are permitted.

Stairway Illumination (R303.7 & R303.8)

- Interior & exterior stairway illumination provisions have been placed in separate sections. Conflicting language has been removed.
- Code no longer prescribes location of light source for interior stairs, allowing design flexibility.
- No minimum illumination level for exterior stairs.
Stairway Illumination (R303.7 & R303.8)

R303.7 Interior stairway illumination. Interior stairways shall be provided with an artificial light source to illuminate the landings and treads. The light source shall be capable of illuminating treads and landings to levels of not less than 1 foot-candle (11 lux) as measured at the center of treads and landings. There shall be a wall switch at each floor level to control the light source where the stairway has six or more risers.

Exception: A switch is not required where remote, central or automatic control of lighting is provided.

R303.7.1 Light activation. Where lighting outlets are installed in interior stairways, there shall be a wall switch at each floor level to control the lighting outlet where the stairway has six or more risers. The illumination of exterior stairways shall be controlled from inside the dwelling unit.

Exception: Lights that are continuously illuminated or automatically controlled.

R303.8 Exterior stairway illumination. Exterior stairways shall be provided with an artificial light source located at the top landing of the stairway. Exterior stairways providing access to a basement from the outdoor grade level shall be provided with an artificial light source located at the bottom landing of the stairway.

Minimum habitable room area (R304.1)

- Requirement for one habitable room with a minimum floor area of 120 SF has been removed from IRC.
- New language: “Habitable rooms shall have a floor area of not less than 70 square feet.” (Exception: Kitchens)
Minimum habitable room area (R304.1)

Small dwelling complying with minimum area requirements

Ceiling Height (R305)

- Min. ceiling height for bathrooms, toilet rooms & laundry rooms reduced to 6’-8”.
- The exception for allowing beams, girders, ducts or other obstructions to project to within 6’-4” is expanded to include basements w/ habitable space.
Glazing Adjacent to Doors (R308.4.2)

- Glazing installed perpendicular to a door in a closed position & within 24” of the door only requires safety glazing if it is on the hinge side of an in-swinging door.
Glazing & Wet Surfaces (R308.4.5)

The exception from the safety glazing requirements for glazing that is 60” or more from the water’s edge of a bathtub, hot tub, spa, whirlpool or swimming pool has been expanded to include glazing that is an equivalent distance from the edge of a shower, sauna or steam room.

SG = Safety glazing required
Measurements are to exposed glazing
Glazing facing shower
### Emergency Escape & Rescue Openings – EERO (R310)

- Section has been reorganized. Separate provisions spell out the requirements for windows & doors used for emergency escape & rescue.
- No technical changes.

### EERO for Additions, Alterations & Repairs (R310.5, R310.6)

- Remodeling a basement does not trigger installing in EERO
- Creation of new bedroom requires EERO
- Addition of a basement does not require EERO if there is access to existing basement w/ EERO
- CT deletes R310.6 – Alterations or repairs of existing basements. CT’s R310.1(2) says the same thing.
Means of Egress (R311.1)

- Added “The required egress door shall open directly into a public way or to a yard or court that opens to a public way.”

Stair Headroom (R311.7.2 – CT Amd)

- Lowered from 6’-6” to 6’-4” for existing or replacement stairways serving basements or attics being converted to habitable space.
### Stair Risers

(R311.7.3, R311.7.5.1)

- Vertical rise between landings has increased from 12’ to 147”
- Fully open risers permitted up to 30” high rise, then reduced to less than 4” opening.
- Open risers permitted on spiral stairs.

### Alternating Tread Devices & Ship Ladders (R311.7.11, R311.7.12)

- Brought in same provisions as in IBC.
- Cannot be used as an element of MOE.
- Can be used where MOE is not required or required MOE serving that space is located elsewhere.
Ramps (R311.8)

- Ramps that do not serve the required egress door are now permitted to have a slope not greater than 1:8.

Guard Height (R312.1.2)

- Removed requirement to measure deck guard height from adjacent fixed seating.
Smoke Alarms (R314)

- New provisions address smoke alarms installed in new bathrooms and cooking appliances.

R314.3(4): Smoke alarms shall be installed not less than 3 feet horizontally from the door or opening of a bathroom that contains a bathtub or shower unless this would prevent placement of a smoke alarm required by Section R314.3.

Smoke Alarms (R314)

R314.3.1: Smoke alarms shall not be installed in the following locations unless this would prevent placement of a smoke alarm in a location required by Section R314.3.

1. Ionization smoke alarms shall not be installed less than 20 feet horizontally from a permanently installed cooking appliance.
2. Ionization smoke alarms with an alarm-silencing switch shall not be installed less than 10 feet horizontally from a permanently installed cooking appliance.
3. Photoelectric smoke alarms shall not be installed less than 6 feet horizontally from a permanently installed cooking appliance.
Significant Changes to the 2015 International Residential Code

February 2018

Use of Office of Education and Data Management (OEDM) training materials must be approved in writing by the State of Connecticut, Department of Administrative Services’ Office of Communications.

Smoke Alarms (R314)

Mezzanines (R325)

- New provisions place limitations on the construction of mezzanines related to ceiling height and openness consistent with the IBC, so as not to be considered a story.
- Definition (R202): MEZZANINE. An intermediate level or levels between the floor and ceiling of any story.
Mezzanines (R325)

- Clear height above or below: 7 ft min.
- Aggregate area not more than 1/3 of the area of the room in which it is located and open to.
- Openness with walls not more than 42”, except when not more than 10% of the mezzanine, or except 2 stories w/ sprinklers & 2 MOE
Swimming Pools, Spas & Hot Tubs (R326 – CT Amd)

- IRC model text points to ISPSC.
- CT is adding all text from previous 2012 IRC Appendix G.
- Updated ANSI reference standards.

---

Minimum Footing Sizes (R403.1.1)

- The table for minimum footing sizes has been expanded into 3 tables based on the type of construction being supported: light frame, light frame w/ veneer, and concrete or masonry.
- Tables apply to concrete footings only.
- Footing sizes increase for homes with a crawl space or basement.
Minimum Footing Sizes (R403.1.1)

Two-story house with basement foundation:
- Light-frame construction
- Soil-bearing strength = 2000 psf
- Snow Load = 30 psf
- 28 ft. wide building with interior load-bearing wall (see footnote b)
- Footnote b allows buildings with roof widths smaller than 22 ft. to subtract 2 in. from the footing width for every 2 ft. of width less than 32 ft.

<table>
<thead>
<tr>
<th>Minimum Footing Width</th>
<th>2012</th>
<th>2015</th>
</tr>
</thead>
<tbody>
<tr>
<td>12 x 6</td>
<td>17&quot; - 2 x 2&quot; = 13&quot; Larger footing width required</td>
<td></td>
</tr>
<tr>
<td>13 x 6</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4-inch brick veneer over light-frame construction
- Soil-bearing strength = 2000 psf
- Snow Load = 30 psf
- 32 ft. wide building with interior load-bearing wall

<table>
<thead>
<tr>
<th>Minimum Footing Width</th>
<th>2012</th>
<th>2015</th>

</thead>
<tbody>
<tr>
<td>16 x 6</td>
<td></td>
<td></td>
</tr>
<tr>
<td>21 x 6</td>
<td></td>
<td>Larger footing width required</td>
</tr>
</tbody>
</table>

Foundation Anchorage (R403.1.6)

Anchor bolts are now required to be placed in the middle third of sill plates.
Retaining Walls
(R404.4)

- Retaining walls, freestanding walls not supported at the top with more than 48” of unbalanced backfill or resist additional lateral loads with more than 24” of unbalanced backfill must be designed “in accordance with accepted engineering practice”.

Floor Joist Spans
(Table R502.3.1(1), R502.3.1(2))

- Changes to lumber capacities
- Spans for Southern Pine (SP) decreased.
- Spans for Douglas-Fir-Larch (DFL) and Hemlock Fir (HF) have increased.
- 2015 IRC span tables now in agreement with wood standards’ span tables.
Significant Changes to the 2015 International Residential Code

Decking (R507.1, R507.5)

- New Table R507.4 provides maximum deck joist spacing depending on type of decking and its orientation.

<table>
<thead>
<tr>
<th>MATERIAL TYPE AND NOMINAL SIZE</th>
<th>MAXIMUM ON-CENTER JOIST SPACING</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Perpendicular to joist</td>
</tr>
<tr>
<td>1 1/4-inch-thick wood</td>
<td>16 inches</td>
</tr>
<tr>
<td>2-inch-thick wood</td>
<td>24 inches</td>
</tr>
<tr>
<td>Plastic composite</td>
<td>In accordance with Section R507.3</td>
</tr>
</tbody>
</table>

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 degree = 0.01745 rad.
<sup>a</sup> Minimum angle of 45 degrees from perpendicular for wood deck boards

Deck Ledger Connection (R507.2)

- The deck ledger section is reorganized to better describe minimum requirements for connection of deck ledgers to band joists. No real technical changes.
Significant Changes to the 2015 International Residential Code

February 2018

Use of Office of Education and Data Management (OEDM) training materials must be approved in writing by the State of Connecticut, Department of Administrative Services’ Office of Communications.

Deck Lateral Load Connection (R507.2.4)

- When the prescriptive deck lateral load connection that appeared in previous editions is chosen, IRC now requires the 2 hold-down devices to be within 2 ft of the end of the deck.
- A new lateral load connection option prescribes 4 hold-downs installed below the deck structure.
Significant Changes to the 2015 International Residential Code

February 2018

Use of Office of Education and Data Management (OEDM) training materials must be approved in writing by the State of Connecticut, Department of Administrative Services’ Office of Communications.

Deck Joists & Beams (R507.5, R507.6, R507.7)

- New Table R507.5 Deck Joist Spans
- New Table R507.6 Deck Beam Spans
- R507.7 Joist to beam bearing

Deck Posts (R507.8)

- New section establishes minimum sizes of wood posts supporting decks & describes requirements for connection to footing.

### TABLE R507.8 DECK POST HEIGHT

<table>
<thead>
<tr>
<th>DECK POST SIZE</th>
<th>MAXIMUM HEIGHT</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 x 4</td>
<td>8’</td>
</tr>
<tr>
<td>4 x 6</td>
<td>8’</td>
</tr>
<tr>
<td>6 x 6</td>
<td>14’</td>
</tr>
</tbody>
</table>

For SI: 1.06f = 0.344 ft. High.

d. Measured to the underside of the beam.
Deck Posts (R507.8)

R507.8.1 Deck post to deck footing.

Posts shall bear on footings in accordance with Section R402 and Figure R507.8.1. Posts shall be restrained to prevent lateral displacement at the bottom support. Such lateral restraint shall be provided by manufactured connectors installed in accordance with Section R507 and the manufacturer's instructions or a minimum post embedment of 12 inches (305 mm) in surrounding soils or concrete piers.

Fastening Schedule - Roof (Table R602.3(1))

- The Fastening Schedule now contains multiple nail size options. Clarification of roof rafter connections at ridge, valley and hip has been added.
**Fastening Schedule - Roof**

</table>

*Footnotes not shown for brevity and clarity.*
The Fastening Schedule now contains multiple nail size options. Clarification of joist-to-band-joist (rim board) connection has been added.

Coordinated with IBC Table 2304.10.1.
Deleted 2012 IRC Table R602.3.1 for Max. Allowable Length of Wood Studs...

The process for determining whether walls studs, a wall, or a story must be engineered based on stud height now checks:

- Table R602.3(5) – next slide
- Section R602.10 - Wall Bracing
- Section R602.3.1, Exception 2 (N/A in CT)

### Stud Size, Height & Spacing (R602.3.1)

**Stud Size, Height & Spacing (R602.3.1)**

For SI 1 inch = 25.4 mm, 1 foot = 304.8 mm.

a. Lateral heights and distances between points of lateral support placed perpendicular to the plane of the wall. Bearing walls shall be shored on not less than one side or bridged shall be installed not greater than 4 feet apart measured vertically from either end of the stud. Increases in unsupported height are permitted where in compliance with Exception 2 of Section R602.3.1 or designed in accordance with accepted engineering practice.

b. Shall not be used in exterior walls.

c. A habitable attic assembly supported by 2 x 4 studs is limited to a roof span of 32 feet. Where the roof spans exceed 32 feet, the wall studs shall be increased to 2 x 6 or the roof shall be designed in accordance with accepted engineering practice.
Significant Changes to the
2015 International Residential Code

February 2018

*(Portions of table and footnotes not shown for brevity and clarity.)*

Method PFH: Portal Frame w/ Hold-Downs (R602.10.6.2)

- Min. req’d capacity capacity of the hold-downs is lowered to 3,500 lbs from 4,200 in 2012 IRC.
- New testing confirms 2 sill plates are sufficient instead of 3 req’d in 2012 IRC.
Significant Changes to the 2015 International Residential Code

Use of Office of Education and Data Management (OEDM) training materials must be approved in writing by the State of Connecticut, Department of Administrative Services’ Office of Communications.
Masonry Walls
(R606)

- Sections R606, R607, R608 & R609 have been organized into one section providing requirements for masonry construction.
- Masonry unit requirements now defined, same as IBC.
- *Masonry veneer in Chapter 7 & masonry foundations in Chapter 4.*

Exterior Covering
(R703)

- Numerous changes regarding standards for siding & veneer materials and attachment methods.
Ceiling Joist & Rafter Tables (Tables R802.4, R802.5)

- Changes to Southern Pine, Douglas Fir-Larch, and Hemlock Fir capacities have changed the maximum spans.
- Shorter spans for SP; slightly longer spans for DF-L & HF.
- New design values apply only to new construction.

Attic Ventilation (R806.1)

- The 2012 IRC exception allowing the building official to waive ventilation requirements due to atmospheric or climatic conditions has been deleted.
Underlayment for Roofing (R905.1.1)

- Reorganizes underlayment provisions and adds 3 new tables for underlayment type, application, & attachment.
- Easier to locate provisions & highlights key differences

Photovoltaic Shingles (R905.16)

- Additional requirements and limits for PV shingles have been added.
Rooftop-Mounted PV Systems (R907)

- Specific requirements for roof mounted PV panels and modules have been added.
- Mirror provisions in 2015 IBC.

Energy Compliance Paths (N1101.13)

- Compliance paths have been clarified.
- Mandatory provisions combined with either the prescriptive or the performance provisions are deemed compliant.
Permanent Energy Certificate (N1101.14)

- Code now requires the permanent energy certificate to be placed on a wall in proximity to the furnace, in a utility room, or in another approved location.

R-Value – Insulated Siding (N1102.1.3)

- Insulated siding is considered continuous insulation & can be used in calculating wall insulation when R-2 minimum.
- The labeled R-value is reduced by 0.6 for the calculation.
Access Hatches & Doors (N1102.2.4)

- Clarification that vertical doors that access unconditioned attics & crawl spaces do not require an R-value to match wall insulation.
- Must comply with fenestration U-factor requirements in Table N1102.1.2.
Floor Framing Cavity Insulation (N1102.2.8)

- Added option for air space above floor insulation.

Reformatted Table N1102.4.1.1

<table>
<thead>
<tr>
<th>COMPONENT</th>
<th>AIR BARRIER CRITERIA</th>
<th>INSULATION INSTALLATION CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>General requirements</td>
<td>A continuous air barrier shall be installed in the building envelope. The exterior thermal envelope contains a continuous air barrier. Breaks or joints in the air barrier shall be sealed.</td>
<td>Air-permeable insulation shall not be used as a sealing material.</td>
</tr>
<tr>
<td>Ceiling/attic</td>
<td>The air barrier in any dropped ceiling/soffit shall be tightly sealed with the insulation and any gaps in the air barrier sealed. Access openings, drop down stairs or knee wall doors to unconditioned attic spaces shall be sealed.</td>
<td>The insulation in any dropped ceiling/soffit shall be aligned with the air barrier.</td>
</tr>
<tr>
<td>Walls</td>
<td>The junction of the foundation and floor shall be sealed. The junction of the top plate and the top of exterior walls shall be sealed. Knee walls shall be sealed.</td>
<td>Cavities within corners and headers of frame walls shall be insulated by completely filling the cavity with a material having a thermal resistance of R-3 per inch minimum. Exterior thermal envelope insulation for framed walls shall be installed in substantial contact and continuous alignment with the air barrier.</td>
</tr>
<tr>
<td>Windows, skylights and doors</td>
<td>The space between window/door jams and framing, and skylights and framing shall be sealed.</td>
<td></td>
</tr>
<tr>
<td>Rim joints</td>
<td>Rim joints shall include the air barrier.</td>
<td>Rim joints shall be insulated.</td>
</tr>
<tr>
<td>Floors (including above garage and crawl space floors)</td>
<td>The air barrier shall be installed at any exposed edge of insulation.</td>
<td>Floor framing cavity insulation shall be installed to maintain permanent contact with the underside of subfloor decking, or floor framing. Cavity insulation shall be permitted to be in contact with the top side of sheathing, or continuous insulation installed on the underside of floor framing, and extends from the bottom to the top of all perimeter floor framing members.</td>
</tr>
<tr>
<td>Crawlspace vents</td>
<td>Exposed earth in unvented crawl spaces shall be</td>
<td>Where provided instead of floor insulation.</td>
</tr>
</tbody>
</table>
Reformatted Table N1102.4.1.1

<table>
<thead>
<tr>
<th>Insulation @ Corners &amp; Headers (Table N1102.4.1.1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insulation requirements only apply when there is space to install insulation. Must be minimum R-3 per inch.</td>
</tr>
</tbody>
</table>

### Table N1102.4.1.1

<table>
<thead>
<tr>
<th>Crawl space walls</th>
<th>Exposed earth in inverted crawl spaces shall be covered with a Class I vapor barrier with overlapping joints taped.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shifts, penetrations</td>
<td>Dust shales, utility penetrations, and floor slabs opening to exterior or unconditioned space shall be sealed.</td>
</tr>
<tr>
<td>Narrow cavities</td>
<td>Poorly insulated cavities shall be covered with rigid or semi-rigid insulation.</td>
</tr>
<tr>
<td>Garage separation</td>
<td>Air sealing shall be provided between the garage and conditioned spaces.</td>
</tr>
<tr>
<td>Recessed lighting</td>
<td>Recessed light fixtures installed in the building thermal envelope shall be sealed to the drywall.</td>
</tr>
<tr>
<td>Pluming and wiring</td>
<td>Bath insulation shall be cut neatly to fit around wiring and plumbing in exterior walls, or insulation that on installation readily conforms to available space should extend beyond piping and wiring.</td>
</tr>
<tr>
<td>Showerhead on exterior wall</td>
<td>The air barrier installed at exterior walls adjacent to showers and tubs shall separate them from the showers and tubs.</td>
</tr>
<tr>
<td>Electrical/phone box on exterior walls</td>
<td>The air barrier shall be installed behind electrical or communication boxes or air-cooled boxes shall be installed.</td>
</tr>
<tr>
<td>HVAC register boxes</td>
<td>HVAC register boxes that penetrate building thermal envelope shall be sealed to the substrate or drywall.</td>
</tr>
<tr>
<td>Concealed sprinklers</td>
<td>When required to be sealed, concealed fire sprinklers shall only be sealed in a manner that is recommended by the manufacturer. Caulking or other adhesive sealants shall not be used to fill voids between fire sprinkler cover plates and walls or ceilings.</td>
</tr>
</tbody>
</table>

a. In addition, insulation of leg walls shall be in accordance with the provisions of ICC 400.
**Wood-Burning Fireplace Doors**  
(N1102.4.2, Table N1102.4.1.1)

- New wood-burning fireplaces shall have tight-fitting flue dampers or doors.
- Doors to be tested & listed.
- Requirement for gasketed doors has been removed.

**Air Leakage Testing**  
(N1102.4.1.2 – CT Amd)

- CT requires 3 ACH maximum.
- CT Exceptions:
  - DU’s >850 SF: Threshold 5 ACH
  - DU’s ≤850 SF: Threshold 6.5 ACH
  - Testing & protocol provisions involving multiple units
Duct Sealing & Testing (N1103.3)

- Duct sealing and testing provisions have been reorganized to clarify the application.
- Maximum duct leakage rates are now prescriptive rather than mandatory to accommodate design flexibility.

Dryer Exhaust Duct Power Ventilators (M1502.4.4)

- Code now recognizes the use of dryer exhaust duct power ventilators (DEDPVs) to increase the allowable exhaust duct length for clothes dryers.
Dryer Duct Length Identification (M1502.4.6)

- Label identifying the concealed length of the dryer exhaust duct no longer required, unless the duct exceeds 35 feet.

Makeup Air for Range Hoods (M1503.4)

- Automatic operation of a mechanical damper is no longer required for supplying makeup air for kitchen exhaust systems exceeding 400 cfm.
- Transfer openings are permitted to obtain makeup air from rooms other than the kitchen.
- CT Amendment gives a 400 CFM credit for amount of MUA required.
**Makeup Air for Range Hoods (M1503.4)**

- Option 1
- Outdoor air
- Motorized damper
- Exhaust duct through roof
- Makeup air
- Range exhaust hood = 400 cfm
- Kitchen range

- Option 2
- Exterior
- Gravity damper
- Makeup air
- Range exhaust hood = 400 cfm
- Transfer air opening
- Kitchen range

---

**Exhaust Duct Length (M1506.2)**

- New prescriptive table for sizing exhaust ducts.

**TABLE M1506.2 Duct Length**

<table>
<thead>
<tr>
<th>Duct Type</th>
<th>Flex Duct</th>
<th>Smooth-Wall Duct</th>
</tr>

</tr>
<tr>
<td>8 and above</td>
<td>NL</td>
<td>NL</td>
</tr>
</tbody>
</table>

- a. Fan airflow rating shall be in accordance with ANSI/AMCA 210-ANSI/ASHRAE 51.
- b. For non-circular ducts, calculate the diameter as four times the cross-sectional area divided by the perimeter.
- c. This table assumes that elbows are not used. Fifteen feet (5 m) of allowable duct length shall be deducted for each elbow installed in the duct run.
- d. NL = no limit on duct length of this size.
- e. X = not allowed. Any length of duct of this size with assumed turns and fittings will exceed the rated pressure drop.
Electrical Bonding of Corrugated Stainless Steel Tubing (G2411)

- CT amends this section.
- CT keeps the IRC model code language for bonding to apply to CSST not listed with an arc resistant jacket or coating system.

(Add) G2411.3 Arc-resistant CSST. This section applies to corrugated stainless steel tubing (CSST) that is listed with an arc-resistant jacket or coating system in accordance with ANSI LC 1/CSA 6.26. The CSST shall be electrically continuous and bonded to an effective ground fault current path. Where any CSST component of a piping system does not have an arc-resistant jacket or coating system, the bonding requirements of Section G2411.2 shall apply. Arc-resistant-jacketed CSST shall be considered to be bonded where it is connected to an appliance that is connected to the appliance grounding conductor of the circuit that supplies that appliance.

Maximum Gas Demand (G2413.2)

- Table G2415.2 (Approx. Gas Input for Typ. Appliances) has been deleted.
- Code requires actual maximum input rating of the appliances to be known and used for gas pipe sizing purposes.
Protection of Concealed Gas Piping (G2415.7)

- Completely rewritten to address more than just bored holes & notches.
- Now addresses piping parallel to & within framing members.
- New text requires that protection extend well beyond the edge of members that are bored or notched.
- Does not apply to black steel or galv steel piping

Medium-Pressure Regulators (G2421.2)

- Medium-Pressure (MP) line regulators installed in rigid piping must have a union installed to allow removal.
Door Clearance to Vent Terminals (G2426.7.1)

- Requirement added that an appliance vent terminal is not permitted within 12 inches of the arc of a swinging door.

Drain, Waste & Vent Systems Testing (P2503.5)

- The head pressure for a water test on DWV systems has been reduced from 10 ft to 5 ft.
- Reasoning is that 5 ft head test is sufficient to reveal any leaks or defects.
- Easier for installer & inspector to observe the water level inside the pipe without using a ladder.
Protection Against Physical Damage (P2603.2.1)

- Where piping (other than C.I. or galv) is installed thru holes or notches, the minimum clearance has been reduced from 1-1/2 to 1-1/4”.
- Protection required for piping less than 1-1/4” from the edge of framing member.

Protection Against Physical Damage (P2603.2.1)
Nonpotable Water Systems (P2901, P2910 – P2913)

- New sections P2910 – P2913 are taken from IgCC to provide guidance on collection, storage & distribution of various types of nonpotable water for residential buildings.

Lead Content of Drinking Water Pipe & Fittings (P2906.2)

- Code has a more stringent limitation for lead content in pipe, pipe fittings, joist, valves, faucets, and fixture fittings that convey water for drinking and cooking.

Complies w/ newer federal law.
Solvent Cementing of PVC Joints (P3003.9)

Purple primer is no longer required for joints of non-pressure PVC DWV piping 4 inches or less in diameter.

Trap Seal Protection Against Evaporation (P3201.2)

Can now be accomplished in a variety of ways, including trap seal primer valves supplied with nonpotable water and barrier-type trap seal protection devices.

Example: Kessel Multistop. Not an endorsement.
Receptacle Outlets for Garages (E3901.9)

- Garage receptacle outlets must be served by a separate branch circuit that does not supply other outlets. At least one receptacle for each car space.

GFCI Protection (E3902.8, E3902.9, E3902.10)

- Laundry areas now require GFCI.
- Receptacles within 6 ft of bathtubs & showers, & for DW also require GFCI.
Low-Voltage Luminaires Adjacent to Swimming Pools (E4203.4.3)

2015 CODE: **E4203.4.3 Low-Voltage Luminaires.** Listed low-voltage luminaires not requiring grounding, not exceeding the low-voltage contact limit, and supplied by listed transformers or power supplies that comply with Section E4206.1 shall be permitted to be located less than 5 feet (1524 mm) from the inside walls of the pool. [680.22(B)(6)]

Bonding of Outdoor Hot Tubs & Spas (E4204.2)

◊ New exception to equipotential bonding for listed self-contained hot tubs.

**Exceptions:**

1. Equipotential bonding of perimeter surfaces shall not be required for spas and hot tubs where all of the following conditions apply:
   1.1. The spa or hot tub is listed as a self-contained spa for aboveground use.
   1.2. The spa or hot tub is not identified as suitable only for indoor use.
   1.3. The installation is in accordance with the manufacturer's instructions and is located on or above grade.
   1.4. The perimeter of the spa or hot tub is not less than 28 in. (711 mm) above all perimeter surfaces that are within 30 in. (762 mm), measured horizontally from the spa or hot tub. The height of nonconductive external steps for entry to or exit from the self-contained spa is not used to reduce or increase this rim height measurement.
Appendix V – CT Add

And it goes through all the municipalities...........

Thank You for Your Attention!!
