

Hoisting Equipment Operator's Testing Study Guide

FOR THE WRITTEN TEST THE HOISTING EQUIPMENT OPERATOR MUST BE ABLE TO:

- Determine weight of loads by use of simple mathematics and unit weights.
- Know basic rigging:
 - Hardware - wedge sockets, shackles, clips, thimbles, eyebolts, etc.
 - Wire rope - parts of, inspection
 - Different types of slings - effects of sling angle
 - Effects of center of gravity when rigging a load
 - Types of hitches to hold and control loads
 - Be able to size slings and hardware given tables
 - Safety rules - do's and don'ts
 - Definitions: rated strength, ultimate strength, etc.
 - Hand signals:
 - Equipment inspection: pre operation, daily, etc.
- Load Charts: know how to use and interpret to determine capacity, structural strength vs. stability, determine hook height at various radiuses, pick and carry capacities if any.
- Quadrants of operation and their adverse effects: "working over side", "over rear" or 360°
- Operating procedure near power lines and safe working distance
- Know general safety rules - shock and dynamic loading, swing out, consideration of weather conditions, items which could cause reductions in rated capacity, net capacity vs. gross capacity.
- Know and understand OSHA 1910 General Industry Standard and 1926 Construction Industry Standards pertaining to hoisting and related items.
- Know OSHA laws pertaining to soil excavations, classifications, and sloping/shoring.
- Know "Call Before You Dig" requirements
