Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Monday, May 4, 2020 3:55:49 PM

Dear Mr. Stephen Edwards,

We have breached planetary boundaries and must immediately stop using the Earth's finite natural resources and pollution and warming the planet. Let's move more urgently to renewable energy with storage. Where is community solar? We have lots of highway like MA does. Let's line them with solar arrays and get Tesla Powerwalls on homes for \$15/month like VT does. What's going on in CT that we can't do this? THE CLIMATE CRISIS IS URGENT AND WE HAVE ONLY 9 YEARS BEFORE WE BLOW OUR CARBON BUDGET. WE'RE AT 413 PPM AND RISING.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Dear Mr. Stephen Edwards,

On behalf of public health risks, PLEASE REJECT KILLINGLY PLANT NIMBY. The Killingly Plant designed with antiquated fossil fuel is not in my backyard. However, if my grandchild were to move there, the contaminated residue in waste water treatment plant would enter her watersupply. The air would exacerbate her allergies and asthma. In 2020, with a plethora of alternative SMART choice, why overburden our cleaner water and blue skies with the imposed COVID-19 shelter in place mandate. Now that Connecticut folks have collectively experienced CLEANER AIR and CLEARER WATER, why muck it up? VOTE NO. PLEASE REJECT THE KILLINGLY PLANT.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

We do not need this plant in our state (we should be investing in green technology) and its infuriating that the DEEP plans on allowing the plant to discharge 90,000 gallons of toxic wastewater DAILY!!! Words cannot express my outrage. I don't trust that this toxic waste water will not make its way into our wetlands and rivers. I worry that the municipal water treatment plant will be overwhelmed and result in either the Killingly waste water being discharged (untreated) or other untreated wastewater being discharged.

In conclusion, you are the department of environmental protection. Approving these discharge permits is not environmental protection--you are legalizing pollution.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

If Dr. Katharine Hayhoe of Texas Tech says that the planet requires all countries to move to renewable energy for human life to continue, the least Connecticut can do is cut out the Killingly plant. I believe Brian Swimme and Mary Evelyn Tucker of Yale University would agree as well as Bill McKinnon at Middlebury College in Vermont. Dr. Hayhoe suggests that more pandemics will occur if we don't keep our air clean. Since the pandemic, the world has had bluer and cleaner skies than it has in a couple of decades.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Monday, May 4, 2020 7:30:58 PM

Dear Mr. Stephen Edwards,

Water is basic to the lives of humanity and the natural world. If waste and/or pollutants are discharged into the rivers of Connecticut from the Killingly Power Plant, those germs will eventually get into the state's groundwater and ultimately to our drinking water. This is a terrible idea. I ask that a public hearing be held to bring this information to the public.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Helen Applebaum

Dear Mr. Stephen Edwards,

DEEP, you allowed a polluting power plant in Oxford, by not listening to us citizens of Oxford who, with research, realized all the harm this plant would cause and most of us opposed this plant, but you put money over common sense. Please don't make the same mistake again!

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

We live in a beautiful part of the state. Because there are few of us, dirty plants like the Killingly Fracked Gas Plant find their way into our Quiet Corner. But let me say there IS huge opposition to this plant. The denial of a permit for discharging waste water is one way we can stop this unnecessary plant from being built. At a time when our governor has a goal to reduce our use of fossil fuels and greenhouse gas emissions by 45% it is a fool's errand to continue down the road to construct this plant. Please deny this permit!!!

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Tuesday, May 5, 2020 7:30:20 AM

Dear Mr. Stephen Edwards,

Such dumping into our CT waters should not even be an option in this day and age. How is this even on the table as a possibility? Please do the right thing and say "absolutely not!" to this disgraceful idea.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Claudia Volano

Dear Mr. Stephen Edwards,

Please do not give a permit for the Killingly plant in CT to discharge wastewater. Protect CT residents from pollution and the costs this plant will entail. You're supposed to be working for the people not the polluters and poisoners! There's enough death and misery in the country already without our public representatives selling us out.
-- Yann van Heurck, Madison CT

Dear Mr. Stephen Edwards,

With energy efficiency and conservation we would not need more power plants. The residents of Killingly should not have to pay the price of putting more dirty energy into the New England grid.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

This is criminal! Our environment is at risk daily, already, without the added stressors of this unneeded plant! This must be stopped immediately!
Maria Sangiolo-Jessurun

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

Dear Commissioner Katie Dykes,

We do not need this plant in our state (we should be investing in green technology) and its infuriating that the DEEP plans on allowing the plant to discharge 90,000 gallons of toxic wastewater DAILY!!! Words cannot express my outrage. I don't trust that this toxic waste water will not make its way into our wetlands and rivers. I worry that the municipal water treatment plant will be overwhelmed and result in either the Killingly waste water being discharged (untreated) or other untreated wastewater being discharged.

In conclusion, you are the department of environmental protection. Approving these discharge permits is not environmental protection--you are legalizing pollution.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Dennis Desmarais

Dear Commissioner Katie Dykes,

If Dr. Katharine Hayhoe of Texas Tech says that the planet requires all countries to move to renewable energy for human life to continue, the least Connecticut can do is cut out the Killingly plant. I believe Brian Swimme and Mary Evelyn Tucker of Yale University would agree as well as Bill McKinnon at Middlebury College in Vermont. Dr. Hayhoe suggests that more pandemics will occur if we don't keep our air clean. Since the pandemic, the world has had bluer and cleaner skies than it has in a couple of decades.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

Subject: Oppose NTE permit #SP002475 for Killingly power plant
Date: Wednesday, May 20, 2020 10:42:55 AM

I am writing to express my strong opposition to the proposed Killingly fracked-gas power plant. It is not needed for our energy future and will contribute 2 million metric tons of carbon to the atmosphere annually. I urge DEEP to reject all permits related to the building of this plant. With this letter I oppose Permit # SP002475 for a proposed discharge of 90,000 gallons of contaminated wastewater daily into the Killingly local water treatment system. Governor Lamont in Executive Order #3 stated a goal of achieving 100% renewables by the year 2040 and 50% by 2030. Does that Executive Order mean anything? Or was it just a sop to those in this state who believe that climate change is the biggest threat to our communities, our state, country and planet? Approval of this permit and others allowing the Killingly plant to go forward will demonstrate that the Executive Order #3 is hardly worth the paper it is printed on, and the Lamont Administration has little to no commitment to addressing the critical issue of climate change.

Apologize for missing letters in this comment. I can't replace them. Something is the matter with Yahoo, I think.

Subject: Proposed Fossil Fuel Plant in Killingly, Windham County, CT
Date: Sunday, May 17, 2020 4:51:29 PM

Dear Commissioner Dykes:

It has come to my attention that a 70-acre parcel in Killingly has been selected by the Killingly Energy Center (KEC) for the placement of a frac gas site; the company, NTE CT LLC owns the site. NTE is an international energy company; it has installed gas plants in Mexico, Europe and Asia. NTE justifies its proposal by stating that it is responding to the need for expanding the energy base in the Killingly area with a cost-effective, responsible facility. This claim is almost laughable; one might find it in the theme of a poorly written horror movie. It is common knowledge that fracking destroys the environment; its emissions of methane and other gases cause chronic and fatal illnesses. Fracking steals clean air and open space from our children. We have known that for many years now.

The solar energy Sunrun has installed solar panels in homes all across New London county. They are a common and welcome sight. Businesses as well as homes can work in a partnership to save money, protect the health of its citizens, and the environment.

You are well aware that the world is a health crises none of us could imagine. Many of us hope that will we emerge from this a better people. As Commissioner of DEEP you are in the unique position of making a real step towards saving a small part of our state. Please reject the NTE proposal and approaching Sunrun.

Sincerely,

Eleanor Fischer

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Tuesday, May 26, 2020 9:13:53 PM

Dear Mr. Stephen Edwards,

Why should the State give a permit to discharge POLLUTION for an ill-advised project that should never have gotten this far anyway? Please reject this permit.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

C Pyle

Dear Mr. Stephen Edwards,

Both NY and NJ DEC and DEP rejected the Williams fracked gas pipeline based on concerns about water contamination and climate impacts. Connecticut's Department of Energy has a duty to consider the climate impacts of this unneeded power plant because DEEP has done so much to encourage the development of fracked gas, such as issuing permits for this plant prior to the determination of need by ISO or CSC.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

Dear Commissioner Dykes - From public statements you have made, and which you reaffirmed to me in a one-on-one conversation, you are no longer describing fracked natural gas as a "bridge fuel," instead referring to it as a fossil fuel. And yet, the agency you lead continues to approve permits for the Killingly plant, which is clearly unnecessary in light of various assessments of the production and consumption of electricity in New England. Fossil fuels need to be kept in the ground!

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

As a resident of Eastern Connecticut, it makes me so angry that the bodies charged with protecting our environment instead intend to permit the Killingly plant to pollute our air with carbon dioxide, worsening the climate threat to us and our descendants, as well as the other life we share the state and planet with, and is also planning to harm, rather than protect, our beautiful eastern Connecticut waterways. This plant is an affront to the citizens of Connecticut and our future generations.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." Dear Mr. Stephen Edwards,

CLEAN UP AFTER YOURSELF! Pre-school/kindergarten lesson.

The only advantage to this discharge of waste into public waters is to the developers of this project. There is none to any other entity. This is now - after years of waste remaining in public water, remaining in public view, continuing to pollute our environment. And the bucks they save rarely trickle down to the rest of us.

If it is not a profitable project unless we, the citizens of this state, the users of these waters, pay for disposal of waste and pollution that they make, then they should not undertake to do it.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Saturday, May 16, 2020 12:46:48 AM

Dear Mr. Stephen Edwards,

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Matthew McCarthy

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Friday, May 15, 2020 11:49:40 PM

Dear Mr. Stephen Edwards,

this permit would allow NTE to strain the local Publica waste water treatment facility that was just updated with town tax money and 11% rate increases, but still won't be able to stem this new load. A failure/ spill is a matter of time.

The planned LNG pipeline underneath the river bed threatens the Quinnebaug river. And the power from this plant IS NOT NEEDED, as there is plenty of off-shore wind energy available: DEEP should bury all 2000MW from Vineyard Wind, instead of only 800!

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Megan Calchera

Dear Mr. Stephen Edwards,

New fossil fuel projects should not be approved when we're already seeing the disastrous impact of climate change. Climate change isn't linear...there are thresholds that we may cross that trigger rapid warming and severe shifts in precipitation patterns. The idea that this is seriously about to be approved speaks to the complete unfamiliarity (or more likely, disregard) of current climate research by these state organizations. And the fact that this was proposed during a global health crisis speaks to how they thought the public would react.

Of course I oppose dumping waste into our waterways, and I say that as a hydrologist. I'm not sure I know anyone in CT that wouldn't oppose this unless they financially benefit from the profits this plant will generate, or have been outright lied to about what this means.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

Please commit to the climate and clean energy laws that have been established to mitigate climate change. Our states may be divided by borders but one states actions affect the quality of life for the entire land. We cannot survive on this planet if companies are permitted to continue their atrocious policies of dumping toxic pollution into the water, land and air. Environmental abuse affects vulnerable populations first, people who already suffer at the hands of selfish, greedy companies. Please protect your citizens and all people living on this land. Please protect this Earth. Reject this permit.

Dear Mr. Stephen Edwards,

The faster we move away from dirty fossil fuels and replace them with cleaner, renewable, sustainable energy sources like wind and solar, the sooner we can begin to address the very real threat of, climate change - a threat that could make our planet uninhabitable in as little as 50 years. We must leave a better world for our children and grandchildren. If we don't, they will never forgive us!

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Tuesday, May 12, 2020 5:05:49 PM

Dear Mr. Stephen Edwards,

Stop Global Warming NOW, or nothing else we do will matter.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Dear Mr. Stephen Edwards,

We have plenty of environmental polluters already, we dont need to fund another one. Please vote your support for (mostly) clean renewables. Renewables with battery technology can go a long ways to reducing peak Demand as others have proven and at competitive pricing (especially if you include the true environmental costs of nat gas. Leakage in the supply lines at every nat gas pumping station is harmful as well. 90,000 gallons of discharge is likely to raise water temps in the river with consequences. Keep it simple, go economical, go clean. Support renewables with battery storage. Nat gas is no longer a reasonable "bridge" technology for power, choose the right long term solution that is actually the least cost (renewables and batteries). Thank you.

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Tuesday, May 12, 2020 7:26:16 AM

Dear Mr. Stephen Edwards,

We can no longer afford to allow actions that put further strains on our threatened national resources.
Please don't issue this permit!

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Julia Parry

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Monday, May 11, 2020 11:22:10 PM

Dear Mr. Stephen Edwards,

I am strongly opposed to any expansion of natural gas in CT. The decision to allow this gas plant will not only delay our transition to clean renewable energy in the region, but will pollute our waters, with associated health and environmental impacts. These costs and risks, which will fall on CT residents and taxpayers, are much too high, especially since this plant is NOT NEEDED.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." Dear Mr. Stephen Edwards,

I am a disabled Marine Corps vet who served a tour in our occupation of Afghanistan. Before that I was a poll worker in my town as soon as I was old enough. I am putting in dozens of hours volunteering at community farms and delivering mutual aid because of our current crisis. Even with all of that I feel that I am not doing enough. I need you to get that same feeling. I need you to do your duty to the people and the planet and reject this permit and then continue to do everything in your power to decarbonize our economy.

Thank you,
Erik Kuranko

Dear Mr. Stephen Edwards,

Time and time again we witness the implications of decisions like these, not only for our environment but for our own health and well-being. It is neglect and an abuse to our rights to continue unnecessary pollution and outdated practices rather than progress and move towards cleaner, more sustainable options. Why take the risk and continue this when it isn't even necessary? It's shameful and I encourage you not to wait until it's you, your children or your loved ones suffering from poor decisions before you decide to choose a better path for all of us.

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Monday, May 11, 2020 10:58:41 AM

Dear Mr. Stephen Edwards,

More money expanding alternative fuels is more important for our collective future.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Barry Kelly

Dear Mr. Stephen Edwards,

Why not actually take a stand on protecting our environment? Environmental protection is the name of your agency. Why not live up to your name? Grow a spine for Gods sake and do the right thing. Turn down this application. My children and grand children will live to thank you. Otherwise your embrace of fossil fuel energy providers will just further my cynical opinion of your so called "environmental protection". I hope and pray you make the right decision.

Dear Mr. Stephen Edwards,

Instead of permitting another fossil fuel plant, Connecticut needs to focus on Sustainable energy sources. It is unethical for a new plant to be able to discharge up to 90,000 gallons of wastewater containing oil and heavy metals in the local Killingly water treatment plant.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

1. My power cost adjustment was a credit for the last few months. Fossil generation will not be price competitive, but incur immeasurable future cost on Public health, storm/ flood/ freight damage etc.
 2. Explain a public benefit of 90,000 gallons waste water per day that containing heavy metals and oil? Explain that to the Quinnebaug Valley trout hatchery, or to any fishermen in Long Island Sound? Or to the water recreation industry and customers?
 3. No treatment is fail proof. There will be spills, and toxins in the Waters of the State. Inexcusable risk for public health!
- Please reconsider and deny the waste water permit!

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Leticia Colon

Dear Mr. Stephen Edwards,

The energy landscape has change considerably since the original need/ benefit analysis, and will change even more within the next couple years: While sale price for electric energy is falling so much that the power cost adjustment rate for CT consumers is negative, meaning my electric bill has been showing a credit for the last few months. Renewable energy generation is growing rapidly and being price competitive if not more economic than gas fueled generation, but the future cost from fossil generation (Public health, storm/ flood/ fraught damage etc) will be devastating. There is no need for fossil generation, to the contrary, we cannot afford to build another fossil fuel power plant!

So while the need side is inverted, so is the benefit side. How would you construct a social, cultural, economic or health benefit from 90,000 gallons waste water per day that contains toxins like heavy metals and oil derivatives? Explain that to the Quinnebaug valley trout hatchery, or to any fishermen in the Long Island Sound? Or to the water recreation industry and their customers?

Gas turbine waste water is an inexcusable ecological risk and public health burden, especially when the product (electricity) can be achieved with a cleaner, less toxic and sustainable technology!

No treatment plan, if ever so carefully conceived, can guarantee keeping the Quinnebaug River clean, it's not a matter of 'if' but if 'when' a spill will occur, or the treatment plant will fail, and the toxins flood the Waters if the State.

I urge you to reconsider the ecological burden and public health risk, and deny the waste water permit for this plant.

Thank you for your consideration.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

I have been intensely enjoying our Connecticut woodlands and swiftly flowly clear rivers, especially during these days of covid-19 social distancing . . . they are the only places I can go outside safely. I shudder at how horrible those rivers will become if this discharge is allowed. Also, I am a person of faith who engages in Creation Care, and this discharge is really the exact opposite--creation destruction. Please reject this permit!

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Wednesday, May 6, 2020 10:14:17 AM

Dear Mr. Stephen Edwards,

There are several reasons why I oppose the whole Killingly plant, but permission to discharge 90,000 gallons of wastewater A DAY into Connecticut's waterways is perhaps the greatest assault on our clean water and, apart from all other objections, the major factor in NOT GRANTING A PERMIT.

Please respect our waterways; we need them, now and in the future.

Thank you for rejecting this permit.

Sincerely,

Jere Armen

Madison, CT 06443

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Jere Armen

Dear Mr. Stephen Edwards,

Why would anyone in their right mind give permission to discharge wastewater in a water treatment plant??

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Elizabeth Eldridge

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Alex Delehanty

Dear Mr. Stephen Edwards,

I remember clean air and water being a given when I was growing up. Sadly, my 8 grandchildren, aged 11 thru 24, are now left with an increasingly polluted environment and may never enjoy what we had then. Please do everything in your power to keep our environment from further deterioration - my grandchildren will appreciate it ??

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Dear Mr. Stephen Edwards,

In addition to any comments made previously, I want to remind you of the continuing negative financial findings of banks and other lenders when they look at the long term demand and significant increase in costs, let alone the 'after-use' or abandonment liabilities of fossil fuel infrastructure projects. Look how quickly fracked gas became uneconomical and unavailable during the pandemic. It will be worse 10 yrs from now, so I urge you to stop now this waste of money and deny this permit. Use our money to move to off-shore wind and home solar.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Subject: Reject NTE permit SP002475 to discharge into the waters of the State of CT
Date: Thursday, August 20, 2020 5:28:41 PM

Dear Mr. Stephen Edwards,

It is incomprehensible to me that a state agency given the responsibility to protect our water and air would approve this desecration of our environment. Do not carry out your plan to award this permit. It is scandalous. Did you hope to slip this through without the public being aware of your abrogation of your public responsibilities? Cease and desist.

I am writing to oppose DEEP's tentative decision to issue a state permit for NTE Connecticut LLC to discharge into the waters of the State of Connecticut, Permit ID. No. SP002475.

Neither Connecticut nor the region needs the power this plant proposes to generate, a fact which was recognized by Commissioner Dykes in her public statement that "This plant should run as little as possible." The water discharge from this plant will unnecessarily stress the water treatment system that exists for residents of Killingly, and create added expense that will burden taxpayers. It's disturbing to see DEEP allow environmental harm for the benefit of a fossil fuel company whose project we don't need.

DEEP should not permit pollution and degradation of our precious natural resources, especially when there is no public benefit from the project proposing environmental destruction. It is particularly egregious that DEEP intends to approve waste water pollution for a dirty power plant that we don't need and that will hinder the state from achieving the climate and clean energy laws that have been established to mitigate climate change.

I urge you to protect the residents of Connecticut from this unnecessary power plant and its dirty water discharge and reject this permit.

Sincerely,

Pat Topitzer

September 26, 2020

CT DEEP, Office of Adjudications
79 Elm Street
Hartford, CT 06106
Attn: Brendan Schain

Dear Mr Schain

On the matter of Application number 201615592, I request that DEEP reject this permit on the basis that it is incomplete in the prevention of harmful contaminants being dumped into the Quinebaug River here in Killingly.

NTE is another fossil fuel plant that is not wanted or needed here in Killingly. We have another plant just 1 mile down the road and have another company(Frito Lay) generating its own energy with a stack less than a mile from that as well. We are not a "not in my backyard community". We are concerned that we have become a place where corporations do not care if they pollute our rivers and streams as well as our air. We feel that DEEP is not looking out for our best interest but only those interests (Fossil Fuel) that produce the pollution.

NTE has a subpar proposal for contingencies for the pollution it will be producing and possible spill procedures(after the fact not in prevention). The waste water will no doubt have high concentrations of minerals and our wastewater treatment plant would be required to handle. The costs of filtering these contaminants will fall to residents. The chance that this and other pollutants from this plant could damage our water quality of a river that flows through our town as well as many others here in eastern Connecticut is one I don't want to make. We have eagles and osprey that nest on that river and whole ecosystem that depends on clean water. We use that river to enjoy the areas we live in, and during this pandemic, are grateful that we have access to.

DEEP has the ability to deny this permit right here and right now. This plant is not necessary or wanted here in Killingly. Please do your due diligence and realize this company has no interest other than profit and will sacrifice our clean water and air for money. We live here, they do not.

Sincerely,

Lisa Suchy

Subject: Let's stop expanding Gas plants in CT and invest in Efficiency and Renewables
Date: Wednesday, September 23, 2020 12:42:34 PM

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Dear Connecticut decision makers,

Gas is a dirty nonrenewable fuel. Can we please stop subsidizing the expansion of harmful fuels and instead invest in our best option to lower energy waste and energy emissions through demand reduction and EE, as well as clean energy expansion.

There is no need for this new plant if we instead shift to draw down demands and ramp up clean energy resources which would create additional local jobs and put our people to work while protecting our health.

We want a clean, healthy, safe future for our people. Please stop expanding gas. We are tired of this nonsense excuse that this is needed for demand. It is not needed. If we continue to decrease demand we can save Millions for ratepayers and protect our health and our environment.

Subject: N.T.E. Industrial Waste Water Permit
Date: Sunday, September 20, 2020 11:58:34 AM

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Dear DEEP Staff - We are in opposition to the permitting of industrial wastewater from the proposed Killingly gas powered electric generation plant. Permitting this plant's wastewater will not only result in the discharge of hazardous chemicals into the town's water treatment facility but the potential downstream contamination of the Quinebaug River and the Long Island Sound. Additionally, the spewing of toxic wastes into the atmosphere by the burning of fracked gas to generate the electric output is totally harmful to the environment of Connecticut and life on this planet. The realities of all these harms necessitates DEEP's disapproval of this permit.

Respectfully,
Marge and David Schneider, 78 Cedar Street, Branford, CT 06405

Subject: Wastewater discharge permit by NTE
Date: Wednesday, September 30, 2020 7:05:23 AM

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

I am writing to oppose the water discharge permit being requested by NTE. I live on Alexander's Lake in Dayville, CT. Many homes and businesses in the area have embraced solar power. There are several solar power farms in the area. We are doing our part to keep the air and water clean. The Lake already has a power plant and we do not need another one. It's my understanding that the electricity is not even needed in this area, but will go on the grid to service other states (that have clean air initiatives). Gov. Lamont has also started a clean air initiative and this power plant goes against his goal of reducing pollutants. NTE is taking advantage of the low socio-economic situation in this town. The approval of this permit would allow the possibility of wastewater contaminants to enter our water supply. A spill could go undetected for awhile, especially when the company is based in FL and would be monitoring from a distance.

Please reject the wastewater permit being requested by NTE.

Dear Mr Schain,

I write to express my opposition to Application No. 201615592 by NTE Connecticut, LLC for a permit to discharge industrial wastewater associated with steam electric power generation operations located at 189 Lake Rd, Killingly CT.

CT does not need more pollution and dirty wastewater, which will unavoidably cost us all a dear price in cleaning and on the impact on our health.

I hope that the DEEP will reject it.

Thank you for your attention.

Let's flood the media! For you, for me, for all...Put it on!

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Thank you for the opportunity to comment on the Application No. 201615592 by NTE Connecticut, LLC for a permit to discharge industrial wastewater associated with steam electric power generation operations located at 189 Lake Rd, Killingly CT.

I strongly urge the Department of Energy and Environmental Protection (DEEP) to reject this application. The last thing Connecticut needs is more costly pollution. This power plant will not only cause filthy air pollution, but also irreparable water pollution. The dirty wastewater from this plant is likely to contain oil and heavy metals which would be treated at the Killingly water treatment plant and then discharged into the Quinebaug River. Despite being treated, the wastewater going into the river will still contain harmful pollutants. Protecting Connecticut's water should come before an unnecessary power plant.

This power plant is not only unnecessary but costly to our residents. We have made considerable commitments to clean energy and emissions reduction, but approval of this plant goes directly against Governor Lamont's Executive Order 3 to ensure a zero-carbon electric grid by 2040. It will increase our continued reliance on fossil fuels and is out of alignment with Connecticut's Global Warming Solutions Act goals. Investing in gas infrastructure when we already have renewable energy options in the pipeline will hurt our environment and our residents, and will hold Connecticut back from real solutions to climate change and resiliency.

Furthermore, this application does not address perfluoroalkyl and polyfluoroalkyl substances (PFAs). These chemicals must be monitored in the wastewater being generated by this power plant. PFA's are bioaccumulative, toxic to people and animals, and cannot be broken down. Wastewater will be generated from a number of sources including cleaning equipment and drains. In the future, the Town of Killingly Water Pollution Control Facility may be required to treat these chemicals; and DEEP's permitting process should require PFAs monitoring to ensure that treatment for them does not fall solely on the rate payers and local tax revenue.

Again, I strongly oppose this contract and hope that DEEP will reject it. Thank you for the opportunity to submit comments on this important issue.

Dear Mr. Schain,

Please reject the application for the Killingly Gas Plant. The climate clock in New York tells us that we have just seven years left to save the earth from the imminent catastrophe of climate change caused by fossil fuel plants like this one. We do not need this plant, as Connecticut has wisely invested in wind power and is on the path to win-win solutions that allow us to have power and also to preserve our lives and our health. Fossil fuel plants have contributed to our world being on fire. Our trees are dying from acid rain. Our food security is more and more precarious. Please, do not accept this proposal.

Sincerely,

Jill Harris
Middletown Resident

I submit these comments regarding NTE Connecticut LLC, Application No. 201615592. I urge Connecticut to reject this request to allow discharges into local waterways for several reasons:

Discharges may likely harm the local environment and human health
Connecticut has pledged itself to transition to zero emissions over time. Gearing up the Killingly plant goes against our state's own climate goals.

Thank you!

Subject: DEEP Needs to Reject the Wastewater Discharge Permit for the Killingly Gas Plant!
Date: Wednesday, September 30, 2020 12:07:25 PM

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Hello Brendan,

Please forward my comments onward for the discussion tomorrow:

In the 21st century, it makes no viable sense to allow for the Killingly Gas Plant to exist, let alone be permitted to legally discharge PFA-laden wastewater into the environment. I say viable because it is paramount to recognize that environmental and health viability are at stake here, human and otherwise. DEEP ought to be encouraging sustainable energy technologies that promote environmental vibrancy, not continuing to permit technologies that will contribute to permanent environmental poisoning, especially given the disproportionate environmental justice burdens in the surrounding area.

As a CT resident and business owner, I plead with you NOT to grant the Wastewater Discharge Permit for the Killingly Gas Plant!

Kris Coperine, 06033

Take care,

Kris Coperine

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

I am writing to urge DEEP to reject this discharge permit sought by NTE.

I and my neighbors have opposed this fracked gas power plant for the last four and a half years. It would be constructed on pristine land along the Quinebaug River about one mile from my home. The reasons for our opposition are many, including the clear lack of any need for the additional energy, when we have another, seldom used mega wattage power plant less than a mile from the proposed site. We also object to the pollution this plant will cause especially as the smoke stack is too short to properly vent the noxious gases into the upper levels of the atmosphere. The stack height had to be reduced to accommodate the Federal Aviation Agency's requirement limiting tall structures within 10,000 feet of an airport.

But our opposition also includes the threat that contaminated wastewater will pose to our community and to the Quinebaug River, where the pollutants in such wastewater will eventually end up. The Killingly Water Pollution Authority has conceded that it will be unable to identify or filter out any contaminants from this source. NTE's offer to establish monitoring is woefully inadequate assurance that the monitoring will be effective for all pollutants, or that any communication of a contamination incident would be timely.

NTE has deliberately misled the Siting Council, the town of Killingly and town residents as to its intentions over the years. NTE cares not for the welfare of the community, but only for their determination to foist this unnecessary and unwanted monster in our midst.

For our well-being and that of future generations, I urge DEEP to reject this permit.

Sincerely,

Earl McWilliams

I am 1 short block from the river and have great health concerns if this plant would be in operation. I am against this for this reason.

I do not consent to allowing the plant in killingly.

[Sent from Yahoo Mail on Android](#)

PS: You know all those power transmission lines criss crossing the state? The big ones moving the power from the plants to the homeowners?
They are wide swaths/spreads of land that should have solar on them.
If we built solar arrays on the entire stretch, we would never ever need fossil fuel burning electric plants.....We would need Elon to sell us big battery storage like he did down under.
The land is there and panels would make the nasty looking towers actually look better!

I will sell solar, electric cars, clean lithium ion batteries, electric vehicle chargers for the rest of my life because it is the only way forward.

I remain available to help you in any way.
cell/text friendly: 203-543-3200

IMAGINE THE THRIVING ECONOMY WOULD COULD HAVE: each home must get geo-thermal heat/a/c or put in heat pumps/mini splits.....electric heat/a/c.
Then each home must have solar and batteries.
We could open 100 factories in CT and get people to actually start moving back here rather than running away from CT at full speed!
We can dig up each and every road in CT and rip out the natural gas lines and put in geo thermal leaching fields!!!!!!
We could get Elon to open another gigafactory here.....we can build Jeff Bezos' cargo vans....all electric and clean.

I strongly oppose the Killingly Gas Plant. I urge DEEP to reject the pending contract. This project is contrary to the urgent goals established by Governor Lamont and Commissioner Katie Dykes to offer a sustainable future for the State of Connecticut based upon alternative forms of energy.

When I was a Milford Alderman, we deliberated and passed unanimously a resolution to prevent fracking hazardous waste from traveling through or being deposited within the city limits of Milford.

Further, state policy should be established to more tightly control the expansion of gas lines throughout Connecticut. Thank you for your consideration.

Best wishes,
Bryan

Good morning,

I'm writing to express my opposition to the Killingly Gas Plant. The proposed plant will increase our emissions & relies on methane - a greenhouse gas exponentially more heat retaining than carbon which is extracted through the ecologically disastrous hydraulic fracturing (aka "fracking"). In addition, the proposed plan does nothing to address the release of highly toxic PFAs which would be released into the Quinnebuag River if this plan were to go through. We have just ten years to dramatically reduce our greenhouse gas emissions and make significant progress towards 100% clean renewable energy. Approving another fossil fuel power plant at this stage of the game would be adding fuel to the fire. I strongly advise the committee to block this plan from moving forward.

Thank you,

Brendan,

I live in Hampton Ct and know many people that live around Alexander Lake which is a Connecticut treasure. I feel very bad for the people in Killingly having to put up with another polluting generation plant. I have purchased our own 8KW Solar system and also installed two Tesla Powerwalls, we plan on letting Eversource utilize some of our stored power during periods of high electrical demand. If more people would do this there would be much less need for peak demand plants like the one planned for Killingly. Lets solve this problem while saving clean air and water.

Best regards,

Roger & Irene Dionne

Mr. Schain,

I am writing in opposition to the granting of a water discharge permit for the Killingly Gas plant. I am concerned about the discharge of chemicals into the Quinebaug River, including chemicals that will not break down for many years.

I am also concerned that the expansion of natural gas infrastructure will mean a rise in methane emissions which will accelerate climate change. Resources need to go to wind, solar and energy efficiency instead.

Thsnk you

Dear Mr. Schain,

I am a current resident and homeowner in the town of Ledyard CT and have been a resident of Southeastern Connecticut since 1979.

As a child I lived by the polluted Hudson River in New York State. The only fish I ever saw were floating belly up, with ulcers all over their scaly bodies. In the 1960's my parents opposed and fought to prevent Consolidated Edison from building a power plant on our mountain, and dump wastewater into the Hudson. Many decades of damage had already been done, but they prevailed in preventing more. That action literally turned the tide for the Hudson. Today, I know a young man who works on a dredging barge that CONTINUES WORKING TO REMOVE the toxic sludge from the riverbed. 60 years, and still dredging.

Also Today, I have a granddaughter to whom I want to leave clean water. Clean water for drinking, for fish to grow and birds to hunt. Clean water to flow from river to river and on to the Sound, for my granddaughter to swim and play in, and to harvest fish and shellfish from, and to enjoy for her lifetime. For a clean environment in her home state, where she can be proud to live and work, and raise her own family.

And when she becomes a mother in 20 years, I don't want my granddaughter to have to warn her children (as my mother did for me) to stay out of the water, lest they be poisoned from the toxic chemicals dumped into the Quinnebaug River in wastewater from the Killingly Gas plant. Don't you dare pollute her rivers.

Thank you for your attention to this critical matter.

Dear Representative Schain,

To be brief, I am asking you to keep gas plants and the Killingly Gas PLant out of our state. NJ is a state that is mocked and viewed as a state full of factories that is gross.

Don't turn us into New Jersey.

It is a beautiful state that everyone comes to now they have escaped the cities and NYC. let keep it beautiful and most importantly NO risk to our water.

I have grown up the daughter of the former head of British Gas, also a CT resident of many years, who has told me of the dangers to our water supply and environment in the work of gas extraction, shipping and factories and his criticisms of how the US industries mismanage and expose Americans to risks that are not the case in more regulated countries where he work, Britain for example.

Americans deserve the same safety standards others enjoy.

I do not know your level of personal knowledge and time learning from people in this industry, that are not interested in your vote, so I share what I have learned and what I will vote on, for my state.

thank you for your time

September 30, 2020

Dear Mr. Schain,

Thank you for this opportunity to present public comment on Application No. 201615592 by NTE Connecticut, LLC for a permit to discharge industrial wastewater associated with steam electric power generation operations located at 189 Lake Rd, Killingly CT. I write to you with the hope that you will consider the following concerns regarding this proposal.

First, I am a 16 year old resident of the state of CT, and am incredibly concerned about what a new fossil fuel power plant would mean for our state, and climate as a whole. I am worried for my future if we as a state continue building fossil fuel infrastructure. By agreeing to build a new fossil fuel plant you are jeopardizing the future of my generation as well as future generations.

Secondly, this proposed power plant is not only a danger to the future of the planet, it is also unnecessary. According to a study by the Acadia Center, under current plans and laws, New England's reliance on fossil fuel power plants could drop from 45% to approximately 10% by 2030. This would make new fossil fuel infrastructure unnecessary, as well as a waste of money and state resources.

CT has the opportunity to be either a leader, or a state stuck in the past waiting for others to go first. We no longer have time to waste debating climate change, or what we can and cannot do to stop it. Now is the time. We must stop building new fossil fuel infrastructure, and instead invest in renewable energy and energy efficiency.

Thank you for your consideration of my comments, and I look forward to working with you

on our state's commitment to clean energy and climate change mitigation.

Sincerely,

Sena Wazer

CT DEEP, Office of Adjudications 79 Elm Street
Hartford, CT 06106
Attn: Brendan Schain
Re: NTE Connecticut LLC, Application No. 201615592

We urge the Department of Energy and Environmental Protection (DEEP) to reject this application. The last thing Connecticut needs is more costly pollution. This power plant will not only cause filthy air pollution, but also irreparable water pollution. The dirty wastewater from this plant is likely to contain oil and heavy metals which would be treated at the Killingly water treatment plant and then discharged into the Quinebaug River. Despite being treated, the wastewater going into the river will still contain harmful pollutants. Protecting Connecticut's water should come before an unnecessary power plant.

This power plant is not only unnecessary but costly to our residents. We have made considerable commitments to clean energy and emissions reduction, but approval of this plant goes directly against Governor Lamont's Executive Order 3 to ensure a zero-carbon electric grid by 2040. It will increase our continued reliance on fossil fuels and is out of alignment with Connecticut's Global Warming Solutions Act goals. Investing in gas infrastructure when we already have renewable energy options in the pipeline will hurt our environment and our residents, and will hold Connecticut back from real solutions to climate change and resiliency.

Furthermore, this application does not address perfluoroalkyl and polyfluoroalkyl substances (PFAs). These chemicals must be monitored in the wastewater being generated by this power plant. PFA's are bioaccumulative, toxic to people and animals, and cannot be broken down. Wastewater will be generated from a number of sources including cleaning equipment and drains. In the future, the Town of Killingly Water Pollution Control Facility may be required to treat these chemicals; and DEEP's permitting process should require PFAs monitoring to ensure that treatment for them does not fall solely on the rate payers and local tax revenue.

NO MORE CHEMICALS! NO MORE POLLUTION! RENEWABLES ONLY!

Mr. Schain,

Please read the fine print in the application.

nTE has not been in full transparency re their application...their discharge water will add to already taxed sewer system here in Killingly. There is already a power plant in Dayville....in addition to a busy effluent producing industrial park already in place.

And goodness, all for a power plant that NTE is proposing when there has been no need indicated....that's right line the pockets of out state investors....they put a plant, have little to no supervision.....and voila we the residents are left holding the bag.

Thank you for your careful consideration, and deny the proposed permit.

Thank you Denise Archambault a Ct resident

Dear Mr. Schain,

As a retired high school science teacher, who spent a couple of decades teaching Earth and Environmental Science, I find the proposed gas plant difficult to understand. As a teacher, I have explained to hundreds of students the importance of addressing global climate change. As the chair of the local Conservation Commission, I have worked to save forested open space and promote sustainability. As a state we have committed to clean energy and reduced emissions in order to be part of the solution to this problem. Since the 1970's we have been involved in cleaning up waterways to the point where eagles once again nest in our state. These are worthy goals and impressive achievements, decades in the making.

Why would the dirty wastewater from this plant (with possible oil, PFA's, and heavy metals contaminants) be any part of forward-thinking planning? How can approval of this plant be anything but a slap in the face for Governor Lamont's promise of a zero-carbon electric grid by 2040. Building out the fossil fuels infrastructure should have no place in moving toward Connecticut's Global Warming Solutions Act goals. This spending should go toward achievable solutions to climate change and resiliency. The citizens of this state deserve policies and proposals that move us forward not backward to combat the worst planetary crisis of my lifetime.

Sincerely,

Elisabeth Holder

To CT DEEP, re:

Application No. 201615592 by NTE Connecticut, LLC

I am writing to request that you deny the waste water discharge permit for the Killingly gas power plant, filed by NTE.

The Killingly waste water treatment facility will not be able to treat 90,000 gallons or how much ever appropriately; any discharge to the Quinnebaug river will still contain high levels of residues and highly toxic substances, including cancer causing substance. The trout hatchery on Quinnebaug river, the aquatic wildlife in the river and the Log Island Sound, all the way to the fish you or I might eat from the Sound, will contain those toxins - if the aquatic creatures don't die first.

This is utterly irresponsible, and totally unnecessary. A power plant that plans to burn fossil fuel, contribute to GHG emission (against CT's GHG emission reduction plan), and poison the water of the region, but can not prove the public need (not given, as wind and solar can cover CT energy needs with little to no external cost) nor a public benefit (of which there are non, only risks) - such a plant should not receive any permit at all, but definitely not a permit to kill the river.

Side not: where does the water even come from? The northeastern part of our state is currently in severe drought; what about the shrinking water supply for farming and drinking, and why would we allow abstraction of much needed clean water only to get it poisoned on its way to the Sound?

I urge you to deny this wastewater permit.
Thank you for your consideration.

Respectfully,

Adelheid Koepfer

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Please Reject the Killingly Gas permit and get Connecticut back on track to achieving our Global Warming Solutions Act goals.

The approval of this permit will allow harmful chemicals and heavy metals to be discharged into the Quinebaug River. This wastewater is likely to cause irreparable and costly damage to our rivers and in turn, Long Island Sound. Additionally, the permit application does not address the "forever chemicals", PFAs. PFAs never break down in our environment and accumulate in plants, animals, and our bodies, causing severe health effects.

This power plant is unnecessary and costly to our residents. Connecticut has made great strides in solving our climate crisis by investing in offshore wind and setting ambitious carbon reduction goals, but the Killingly power plant is a step in the wrong direction.

Dear Mr. Schain,

I am writing to urge DEEP to oppose NTE Connecticut, LLC's application to discharge industrial wastewater associated with steam electric power generation in Killingly, CT. I am a Yale University graduate student, but I have lived in Connecticut most of my life and care deeply about our state's environment and people. This power plant would continue our reliance on fossil fuels which is not consistent with CT's goal for a clean energy future, as outlined in the Global Warming Solutions Act and Governor's Council on Climate Change report. Furthermore, wastewater discharge from the plant will likely result in more pollutants entering Connecticut waterways, which could negatively impact human and ecosystem health.

Thank you,
Klara Zimmerman

Dear Mr. Schain,

There seems to be no immediate need to reinstate this gas plant. There are too many reasons for it to be harmful, the chemicals that will impact the environment; that alone should be reason enough for rejection to allow this plant to be back in running, and then this plant will set us back for our goal of reducing our carbon imprint for the future.

Please be brave and reject this plant from operating because of so many negatives against it, not to mention great health benefits and economic reasons arising from its not being operational..

Thank you for considering all these reasons for not supporting this gas plant. I do not live in this area, but we all are eventually affected by these chemicals when they enter Long Island Sound.

Sincerely,

Re: NTE Connecticut LLC, Application No. 201615592

Dear Mr. Schain,

I am writing with concerns about the Killingly natural gas plant and its plan to discharge wastewater into Connecticut's waterways. I am concerned that the state is taking a short-term perspective to build a fairly small new natural gas plant. Given the pollution that the plant is adding to the state, and recent research that has shown the unsuitability of natural gas as a "bridge fuel" towards a zero carbon future, I encourage DEEP to decline NTE Power's request.

- (1) The plant is will operate for decades if not longer. This means we need to use a long-term perspective to evaluate the plant.
- (2) The costs of natural gas are becoming more apparent. The drilling process produces far more methane than previously realized. Natural gas is not suitable as a "bridge fuel".
- (3) For the state to achieve its zero carbon goals it's essential that we not build new natural gas plants when we already have dozens of such plants. The claims of 25% increased efficiency are suprisingly minor for a new, state-of-the-art plant--this is not nearly good enough to justify the costs.
- (4) From an environmental justice perspective, the Killingly plant will directly impact nearby and downstream lower-income communities. They will also be less able to pay to mitigate those costs.
- (5) The water and air pollution coming from the plant will have consequences for the health of residents that outweigh the minor energy cost reductions that the plant provides. In addition, NTE Energy has not submitted a plan for how they will clean and vacate the site in 2050 when the plant may end operation. In the absense of such a plan, it seems likely that Connecticut taxpayers will cover the cost of safe cleanup and retirement of the facility.

Sincerely,

Marcel Knudsen

Dear Brendan,

May this email finds you having a great day. I am writing in with my public comments regarding the consideration of a discharge permit for the Killingly power plant.

Based on what I have learned, to move forward with a discharge permit for this plant would be a disaster us move for the health of Connecticut's environment. As I understand it, there will be chemicals and heavy metals discharge into a river. And that forever chemicals have not been addressed in the permit application.

As a Connecticut resident, who values the natural beauty in our state, this is not to be a wise permit to approve.

Thank you,
Juliet

This is an opportunity for our state and its leadership to be in the vanguard moving from fossil fuels. While yes...natural gas is better than other fossil fuel approaches to provide energy, i.e., the chemistry of combustion makes gas the best of the fossil choices, it nevertheless is still another way to add greenhouse gases to our atmosphere. We must stop changing the composition of the atmosphere. This is a no-brainer...we need to invest resources in renewables. We are past the point considering natural gas as a transition source of energy. Every town needs to carry some of the burden in renewables. Small towns can use their former landfill sites to locate solar facilities. High elevation towns, such as in the NW region can set up windmill facilities. Coastal towns can help with the offshore wind projects. Let`s just do it and make this state a leader going into the future. This is the constitution state!

Dear Mr. Schain:

I am opposed to the Killingly gas plant.

I will simply reiterate what you have already heard, and likely already know: this is most certainly not the time to put into service another dirty power plant that will neutralize our state's best efforts to be part of the climate-change solution.

Connecticut does not need this plant. I expect DEEP to have the courage to acknowledge the deep trouble our planet is in, and not add to the trouble. Instead, DEEP must resolve to fully and forthrightly embrace renewable energy solutions - such as solar, wind, and electric transportation - that will give our children and grandchildren a chance at a habitable planet . Anything short of a full commitment to these modalities represents a failure to grasp the gravity of the problem.

Your first responsibility is to current and future generations, not to the power companies. I'm respectfully but intently looking for DEEP to do the right thing and reject the Killingly permit.

Sincerely,

Ron Blumenfeld, MD, FAAP
Fairfield, CT

Subject: Wastewater discharge permit by NTE
Date: Wednesday, September 30, 2020 7:05:23 AM

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

I am writing to oppose the water discharge permit being requested by NTE. I live on Alexander's Lake in Dayville, CT. Many homes and businesses in the area have embraced solar power. There are several solar power farms in the area. We are doing our part to keep the air and water clean. The Lake already has a power plant and we do not need another one. It's my understanding that the electricity is not even needed in this area, but will go on the grid to service other states (that have clean air initiatives). Gov. Lamont has also started a clean air initiative and this power plant goes against his goal of reducing pollutants. NTE is taking advantage of the low socio-economic situation in this town. The approval of this permit would allow the possibility of wastewater contaminants to enter our water supply. A spill could go undetected for awhile, especially when the company is based in FL and would be monitoring from a distance.

Please reject the wastewater permit being requested by NTE.

Public Comment:
Application No. 201615592 NTE Connecticut LLC

October 1, 2020

CT DEEP
Office of Adjudications
79 Elm Street
Hartford, CT 06106

Attn: Brendan Schain
Re: NTE Connecticut LLC, Application No. 201615592

Dear Mr. Schain:

I urge the Connecticut Department of Energy and Environmental Protection (Ct DEEP) **to reject** Application No. 201615592 by NTE Connecticut, LLC for a permit to discharge industrial wastewater associated with steam electric power generation operations located at 189 Lake Rd, Killingly CT. I am opposed to approval of this permit, which will allow industrial discharges that may contain oil, heavy metals, cleaning fluids, and PFAs through the Killingly water treatment plant into the Quinebaug River.

This permit application does not address perfluoroalkyl and polyfluoroalkyl substances (PFAs). The Town of Killingly Water Pollution Control Facility might be required to treat these chemicals in the future. This permitting process ought to require PFAs monitoring to ensure that treatment costs are not pushed onto water/sewer utility rate payers and local tax revenue. If Ct DEEP approves Application No. 201615592, perfluoroalkyl and polyfluoroalkyl substances (PFAs) chemicals must be monitored in the wastewater generated by this power plant, along with funds to monitor the health of Quinebaug aquatic life.

I have worked for over a decade to improve water quality in the impaired tributaries of the Park River regional watershed. The North Branch, Park River, is impaired in part due to permitted discharges from 23 industries and 36 facilities located in the Town of Bloomfield. No longer swimmable, fishable or drinkable, the North Branch is merely one of approximately five hundred and forty (540) impaired waters on the [Ct DEEP's 2020 IWQR List of Impaired Waters](#). Once swimmable, fishable, and potable, there are efforts to down-grade the classification of the North Branch, which would further ease restrictions on polluters, and hinder efforts to improve environmental health. Permitted discharges need to required substantial long-term permittee commitments to downstream communities. If Ct DEEP approves this application, **twenty-five percent (25%) of the profits ought to be dedicated to on-going efforts to monitor and improve water quality in the Quinebaug River**. In addition, the permittee ought to be required

to collaborate with the community to support environmental health along the Quinebaug's riparian corridor.

Approval of this application goes against Governor Lamont's Executive Order 3 to ensure a zero-carbon electric grid by 2040. Ct DEEP is currently hosting multiple virtual meetings in which citizens from across the state are volunteering to prepare recommendations on how our state can mitigate the climate crisis and transition to a new green economy. **Given resounding citizen concern for our state's environmental and community health, Ct DEEP leadership ought to reject this application.** As our state is increasingly impacted by prolonged droughts and rising temperatures, rather than this controversial fossil fuel power plant, Ct DEEP ought to prioritize protection of Connecticut's fresh water.

Sincerely,

Mary V. Rickel Pelletier

Dear Mr. Schain:

Thank you for the opportunity to comment on the Application No. 201615592 by NTE Connecticut, LLC for a permit to discharge industrial wastewater associated with steam electric power generation operations located at 189 Lake Rd, Killingly CT. We appreciate your consideration of some of the concerns we have with this permit. We urge the Department of Energy and Environmental Protection (DEEP) to reject this application. The last thing Connecticut needs is more costly pollution. This power plant will not only cause filthy air pollution, but also irreparable water pollution. The dirty wastewater from this plant is likely to contain oil and heavy metals which would be treated at the Killingly water treatment plant and then discharged into the Quinebaug River. Despite being treated, the wastewater going into the river will still contain harmful pollutants. Protecting Connecticut's water should come before an unnecessary power plant.

Dear Mr. Schain;

Please consider rejecting the permit for the Killingly power plant. Clean energy and emissions reduction are crucial to our environment and climate change. Governor Lamants executive order to ensure a zero-carbon electric grid by 2040 is a move in the right direction, however the approval of a permit for this plant goes directly in the opposite direction. PFA's are a real threat to not only animals, but humans as well , and this permit does not address how they would be monitored. I strongly oppose this contract, and hope DEEP will find other alternatives,

Sincerely,
Kathleen Mitchell

Dear Mr Schain,

I stand with the CT League of Conservation Voters on this matter and strongly oppose allowing waste water to contaminate our natural waterways without proper chemical treatment. We cannot backslide in environmental policies, especially when the federal government has made clear that they do not support protecting our environment. Now more than ever, the CT DEEP must be vigilant! I am counting on you to do that.

Many thanks,
Briana Benn-Mirandi
Madison, CT

Dear Mr. Schain:

On behalf of the Connecticut League of Conservation Voters, thank you for the opportunity to comment on the Application No. 201615592 by NTE Connecticut, LLC for a permit to discharge industrial wastewater associated with steam electric power generation operations located at 189 Lake Rd, Killingly CT. We appreciate your consideration of some of the concerns we have with this permit.

We urge the Department of Energy and Environmental Protection (DEEP) to reject this application. The last thing Connecticut needs is more costly pollution. This power plant will not only cause filthy air pollution, but also irreparable water pollution. The dirty wastewater from this plant is likely to contain oil and heavy metals which would be treated at the Killingly water treatment plant and then discharged into the Quinebaug River. Despite being treated, the wastewater going into the river will still contain harmful pollutants. Protecting Connecticut's water should come before an unnecessary power plant.

This power plant is not only unnecessary but costly to our residents. We have made considerable commitments to clean energy and emissions reduction, but approval of this plant goes directly against Governor Lamont's Executive Order 3 to ensure a zero-carbon electric grid by 2040. It will increase our continued reliance on fossil fuels and is out of alignment with Connecticut's Global Warming Solutions Act goals. Investing in gas infrastructure when we already have renewable energy options in the pipeline will hurt our environment and our residents, and will hold Connecticut back from real solutions to climate change and resiliency.

Furthermore, this application does not address perfluoroalkyl and polyfluoroalkyl substances (PFAs). These chemicals must be monitored in the wastewater being generated by this power plant. PFA's are bioaccumulative, toxic to people and animals, and cannot be broken down. Wastewater will be generated from a number of sources including cleaning equipment and drains. In the future, the Town of Killingly Water Pollution Control Facility may be required to treat these chemicals; and DEEP's permitting process should require PFAs monitoring to ensure that treatment for them does not fall solely on the rate payers and local tax revenue.

CTLCV strongly opposes this contract and hopes that DEEP will reject it. Thank you for the opportunity to submit comments on this important issue

Subject: No Fracked Gas Plant at Alexanders Lake.
Date: Thursday, October 1, 2020 4:39:03 PM

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

I strongly oppose the proposed fracked gas plant to be established adjacent to the Quinebaug River and Alexanders Lake. Since 1965, I have been a co-owner of an historic cottage on the lake (c 1900) which is only one mile from the proposed plant site.

The proposed plant poses unacceptable pollution threats to the Quinebauag and to Alexanders Lake. The stack for the plant is too short to disperse pollutants. As a result, local downwash of pollutants will inevitably impact the local environment and of course, local residents.

The Killingly Water Authority has stated it can not filter out contaminants from plant waste water. Moreover, noise pollution and traffic congestion during and after construction wil create separate, serious problems for local residents.

Undoubtably, the plant will significantly reduce property values for Lake and other local residents. There will also be associated negative consequences for property taxes for the town.

Please do not allow this plant to move forward.

Dear Brendan,

It makes me sad that our state is considering building a gas plant. I hopeful that the voice of the residents of CT will be heard and the plant will not be build. We can't let power companies take the "power". CT has been on a trajectory for slowing climate change and we need to keep that momentum up. "Natural" gas is so toxic. The workers who mine it and towns that have the mines are severely hurt by it. And who is going to bear the burden of the toxic byproducts? We need to be thinking about all people and our future when choosing electricity sources. Of course, the residents of CT are of utmost importance too. We cannot risk damaging our rivers and water sources. Some of these toxins will NEVER break down. What kind of future is that? Please, let's stick to considering wind and solar power. REJECT THIS PERMIT.

Thank you.

CT DEEP, Office of Adjudications
79 Elm Street Hartford,
CT 06106
Attn: Brendan Schain

Re: NTE Connecticut LLC, Application No. 201615592

Dear Mr. Schain:

Thank you for the opportunity to comment on the Application No. 201615592 by NTE Connecticut, LLC for a permit to discharge industrial wastewater associated with steam electric power generation operations located at 189 Lake Rd, Killingly CT. I urge the Department of Energy and Environmental Protection (DEEP) to reject this application.

This power plant will not only cause filthy air pollution, but also irreparable water pollution. The dirty wastewater from this plant is likely to contain oil and heavy metals which would be treated at the Killingly water treatment plant and then discharged into the Quinebaug River. Despite being treated, the wastewater going into the river will still contain harmful pollutants.

Protecting Connecticut's water should come before an unnecessary, costly power plant. As a State we have made necessary commitments to clean energy and emissions reduction, but approval of this plant goes against these goals. It will increase our continued reliance on fossil fuels, and investing in gas infrastructure when we already have renewable energy options in the pipeline and a mandate for clean energy. The plant will hurt our environment and our residents, and will hold Connecticut back from real solutions to climate change and sustainability.

As a Bethany resident, my family has been suffering the effects of multiple extreme storms, weather, and power outages that last for days and leave our town devastated and engaged in long, expensive clean-up. It's high time get our priorities straight and make a real commitment to improving our air and water quality and standing behind actions to bring down carbon emissions that effect our climate. This power plant seems like a terrible step in the opposite direction. Thank you for your time and taking into account citizens' comments on this project that affects us all.

Sincerely,

Elise Thoron,

CT DEEP, Office of Adjudications 79 Elm Street
Hartford, CT 06106
Attn: Brendan Schain
Re: NTE Connecticut LLC, Application No. 201615592 Dear Mr. Schain:

Dear Mr. Schain:

The Department of Energy and Environmental Protection (DEEP) must reject this application. The Intergovernmental Panel on Climate Change almost exactly two years ago in its [Special Report](#) stated that "rapid, far-reaching and unprecedented changes in all aspects of society" are required to deal with the unfolding climate catastrophe. Virtually no day goes by without the publication of new research that shows that the developments are much faster than expected. In fact, that has been going on for years and one might ask: "Whose expectations?" The point is that we have no time for continuing business as usual.

DEEP has two options: it can contribute to the solution or it can be part of the problem. Issuing an industrial wastewater permit will do the latter. The arguments for not issuing the permit are right there for the department to use: the application does not address perfluoroalkyl and polyfluoroalkyl substances (PFAs). Of course, there are numerous other arguments; where there is will there is a way.

If DEEP fails to stop this project, present and future generations will judge it for its reckless endangerment of life on earth.

Sincerely yours,
—Peter Nightingale

Well said!

On Wed, Sep 30, 2020 at 8:23 PM earl mcwilliams <earlmcwilliams@hotmail.com> wrote:

I am writing to urge DEEP to reject this discharge permit sought by NTE.

I and my neighbors have opposed this fracked gas power plant for the last four and a half years. It would be constructed on pristine land along the Quinebaug River about one mile from my home. The reasons for our opposition are many, including the clear lack

of any need for the additional energy, when we have another, seldom used mega wattage power plant less than a mile from the proposed site. We also object to the pollution this plant will cause especially as the smoke stack is too short to properly vent the

noxious gases into the upper levels of the atmosphere. The stack height had to be reduced to accommodate the Federal Aviation Agency's requirement limiting tall structures within 10,000 feet of an airport.

But our opposition also includes the threat that contaminated wastewater will pose to our community and to the Quinebaug River, where the pollutants in such wastewater will eventually end up. The Killingly Water Pollution Authority has conceded

that it will be unable to identify or filter out any contaminants from this source. NTE's offer to establish monitoring is woefully inadequate assurance that the monitoring will be effective for all pollutants, or that any communication of a contamination

incident would be timely.

NTE has deliberately misled the Siting Council, the town of Killingly and town residents as to its intentions over the years. NTE cares not for the welfare of the community, but only for their determination to foist this unnecessary and unwanted monster in

our midst.

For our well-being and that of future generations, I urge DEEP to reject this permit.

Sincerely,

Earl McWilliams

Please do the right thing for our environment and our climate. We need drastic reducing in greenhouse gasses every year to reach any of our climate goals in order to mitigate the most extreme consequences of the climate crisis. Opening new fossil fuel plants, especially ones we DON'T NEED is not the way to do that. This goes against Lamont's net zero climate goals and will be bad for CT.

Please reject their proposal.

Hi Brendan -

I have attached a letter from the Wyndham Land Trust in response to Application No. 201615592 by NTE Connecticut, LLC for a permit to discharge industrial wastewater into the Killingly publicly owned treatment works.

I have also mailed a paper copy of the letter to your office.

Thank you for your attention.

My family and I are directly affected by yet another power plant and all the segregated projects connected to it such as wastewater. I am deeply opposed as the cumulative health and environmental effects are drastic with all the other industries in this quiet lake community of 300 residents. The existing 750 MG natural gas power plant is less than one-half mile away from the proposed new plant. I feel that this rural NE corner of the state is being taken advantage of.

Dear Sir.

I am writing to you as a life long Lake Alexander resident for 55 years. I am also pleading with you to hear what we are all saying regarding NTE.

. PLEASE REJECT this permit

- NTE is a FL based company...not a local to be held accountable for the monitoring of the several pollutants this plant will emit.
- NTE is proposing to install automatic monitoring equipment which will be controlled by out of state operators
 - An excess spill could go undetected for a while as no one will be standing by waiting for an accident
- Analysis' by Synapse Energy Economics shows that the proposed gas plant is not needed · Approval by DEEP of this permit would needlessly be allowing the possibility of wastewater contaminates when protecting CT's water should come first.
 - Water would be treated by Town of Killingly Water Pollution Control Facility and then discharged into the Quinebaug River which already has legacy toxins from industrial pollution and despite being treated by KWPCF will still contain harmful pollutants.

The Town of Killingly already has a 750MG natural gas power plant with NTE's location being less than one half mile away.

How are we to meet the Governor's goal of zero carbon emissions by 2040 if we continue to support fossil fuels over solar and wind?

Climate Change is upon us. The time to act is now.

PLEASE SAVE ONE OF THE LAST BEAUTIFUL LAKES IN THE STATE OF CT!!

PLEASE!!!!!!!!!!!!

Dear Mr. Schain,

In the matter of Application number 201615592, I request that DEEP reject this permit.

Your review of the application found that the following "potential pollutants of concern" could enter the discharged water and required monitoring: "ammonia, copper, nickel, petroleum oil, phosphorus, total suspended solids, and zinc, in addition to the physical properties of corrosivity (pH) and temperature." In order to perform this monitoring, the Florida based corporation NTE proposes to install automatic monitoring equipment which will "record data" in order to "verify compliance with the terms". Almost certainly, this automatic system will be controlled by out of state operators, as is common practice with large energy infrastructure. It's just not that profitable to hire people to hang around waiting for something to go wrong. But the downside of this remote monitoring is that in the real world event of a spill and/or of higher concentrations of pollutants than DEEP allows, that excess or spill could continue for a while before being stopped. After all, these automatic monitors (read "not human") are programmed to monitor, not to stop or prevent problems. It is incorrect to say that these monitors "ensure protection of the waters of the state." They only let us know when something has already gone wrong, as it invariably will.

Oil-water separators will be used to remove petroleum oil from the wastewater. Depending on the types of oil-water separators that will be used, there can be increased risk of oil remaining in the treated wastewater. In the gravity plate separator, droplets of less than 60 micrometers can escape. The presence of other chemicals in the wastewater can also decrease the efficiency of the separator. The idea of even a small spill of petroleum in the Quinebaug River, a real possibility, is sickening. In addition, it is not specified where the oil waste will be disposed of after its removal by the separator. Connecticut has a waste management problem now; it is not clear where the state can put more industrial waste.

There is no requirement that heat recovery steam generator blowdown wastewater be treated prior to release to the POTW, yet HRSG blowdown releases, with force, water that has a high concentration of minerals in it, and must be blown off to maintain the proper balance of chemicals inside the boiler. There may be a risk of overwhelming the POTW by excess minerals in this case. It is not stated in the application review by DEEP why the HRSG blowdown wastewater doesn't need to be treated.

Another area that seems inadequately addressed is the section on spill prevention. The spill prevention plan must be given to DEEP no more than 30 days after the plant starts operations. That means that during the entire months of construction and for the first month of operation, there will be no spill prevention plan. Energy companies have a long and sordid history of not planning appropriately for contingencies, such as disasters. We have learned this over and over again, to tragic effects. In 2010, hundreds of thousands of barrels of oil spilled over months despite BP's 580 page spill response plan crafted by expert consultants. In less dramatic fashion, Connecticut's energy distribution companies, all two of them, failed to prepare for increasingly disruptive weather, despite predictions and their own recent experience with Storms/Hurricanes Irene and Sandy. It is unclear why DEEP would not ask for a spill prevention plan at the start of construction.

Killingly is not a wealthy community and hence is victimized by this type of polluting fossil gas infrastructure that has been rejected by Connecticut towns of wealthier means, such as New Milford which defeated a proposed gas power plant. DEEP's approval of NTE's proposed Environmental Justice Public Participation Plan is underwhelming to say the least. EJ should address the fact that more polluting

infrastructure is built in less affluent communities. Corporations profit while local people and natural resources are harmed. Something more than a bit of money should be given in exchange for knowingly increasing rates of disease and environmental destruction. In approving NTE's application in an economically disadvantaged community, DEEP appears to be putting people for sale in a place that can't afford to fight back.

Despite protestations to the contrary, DEEP is the arbiter of energy projects in Connecticut. DEEP would like the public to believe that it has no authority to prevent projects that are approved by federal or regional agencies such as FERC or ISO-NE. But that is not true. Other states have refused to approve federally approved projects that they found caused more harm than benefit to their state. These rejections have occurred recently in New York and New Jersey.

DEEP is the agency that is responsible for the overbuild of methane infrastructure in Connecticut, while it has blocked the full development of the renewable/efficiency economy in the state. Two fossil gas power plants came online recently in Oxford and Bridgeport, two interstate pipelines have been massively expanded, and thousands of unwitting consumers were converted to use of residential methane at ratepayer expense. DEEP had a hand in approving and promoting all these fossil gas expansion projects. At the same time, DEEP has tried to limit the development of the solar industry, by placing caps and opposing a state-wide community shared solar program. DEEP also limited the development of offshore wind energy, by placing a cap of 2000 MW on the amount of OFW the state can procure. The only people who benefit from these various limitations to the development of the renewable energy economy are the owners, executives and shareholders of fossil gas companies. This preferential treatment for fossil gas companies while suppressing renewable energy development might be construed as a restraint of trade.

There is only one state in the U.S that has combined the energy and environmental protection agencies, and that is Connecticut. Massachusetts has an agency of Energy and Environmental Affairs, but the Department of Environmental Protection is separate. There is a reason why these two agencies must remain separate: there is an inherent conflict of interest when at the same time, one approves and encourages energy projects while also approving and allowing the environmental degradation that accompanies such projects. DEEP's mission has been taken over by energy and the environmental protection mission has been abrogated.

The pittance in taxes collected will not be worth a polluted Quinebaug River. DEEP is preferentially choosing to help fossil gas companies profit while failing to protect the waters of the state.

Sincerely,
Martha Klein

Mr. Brendan Schain
CT DEEP, Office of Adjudications
79 Elm Street
Hartford, CT 06106

October 8, 2020

Dear Mr. Schain,

We write from the Collaborative Center for Justice, a faith-based social justice advocacy organization sponsored by six communities of Women Religious across Connecticut. Thank you for this opportunity to comment on Application No. 201615592 by NTE Connecticut, LLC for a permit to discharge industrial wastewater associated with steam electric power generation operations at 189 Lake Road, Killingly, Connecticut. We write in strong opposition, and urge the Department of Energy and Environmental Protection to deny this permit application.

As people of faith, we take seriously our call to care for the earth and its inhabitants. Clean water is a precious, life-sustaining resource. If NTE is allowed to discharge waste water into the waters of Connecticut, there will be significant risks to the quality of the water. Further, the wastewater treatment costs will fall to local residents, as the waste water would be treated by the publicly owned facility. Residents of Killingly already bear the health and environmental burdens associated with an existing gas power plant in their community, and they should not be further burdened by the construction and use of additional fossil fuel infrastructure.

The energy that would be produced at the new gas power plant is not needed in order to meet the energy needs of the people of Connecticut. To risk contamination of the Quinebaug River in order to produce unneeded power is unnecessary and is simply immoral.

We are concerned about the gas-power plant project as a whole. Beyond environmental concerns, a new gas power plant and pipeline do not make economic sense in 2020. A study by the Rocky Mountain Institute released in September 2019 found that “by 2035, over 90 percent of proposed combined-cycle gas plants, if built, would be uneconomic to run compared to the cost of building a new clean energy portfolio.”¹ It will be more cost effective to invest in clean, renewable energy.

If there is a concern about energy reliability, the state should increase research and investments in clean, renewable energy sources rather than building new fossil fuel infrastructure. We urge DEEP to consider projects that will expand clean, renewable energy infrastructure.

During this public health crisis, we urge you not to lose sight of the climate crisis we are also

facing together. A new fracked-gas power plant would exacerbate and accelerate that crisis, and would significantly impede, and potentially make impossible, our ability to meet our critical climate goals on schedule. We are also acutely concerned about the impacts of this project on the most vulnerable people in the surrounding communities.

We respectfully ask that you deny NTE's permit request to discharge wastewater from steam power generating activities into the Killingly publicly-owned treatment works, which discharges into the Quinebaug River.

Respectfully,

Dwayne David Paul – Director

Rachel Lea Scott, MSW – Associate Director

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Dear Mr. Schain,

I would like to express my opposition to the wastewater discharge permit that is being considered for the planned Killingly gas plant.

In truth, I oppose everything about this plant. The very idea of building it, in a time like this when we are in such grave danger from fossil fuels, is truly absurd. We need to be building more clean energy projects and investing in R&D for carbon capture, if we want any chance of protecting our planet and our own species.

We do not need to be adding more dangerous pollutants to our air and water, leading to even more illness in eastern Connecticut. The health risks to humans and many species from PFAs are truly scary.

I have also seen the Sierra Club's comments about how the construction will further harm the endangered long-eared owl. I have only recently become an amateur birder, and I have been delighted to learn about many of the amazing species we have in Connecticut. While it is thrilling to watch so many of them and learn about them, it brings an unbearable sadness at the same time - just knowing how they are suffering huge losses every year, all due to human irresponsibility. It's tragic and immoral in my view to knowingly allow something to go forward that will lead to the demise of a fantastic species like this owl.

I am no scientist and don't have a knack for the technical details that you are probably getting in other comments. I simply want to make you aware of how angry and frustrated I get by the way our mistakes of the past (such as reliance on fossil fuels for nearly everything we do) are perpetuated by the power of the mega-rich corporations who run the industry, and by the governmental agencies which often turn a blind eye to the big picture and allow the status quo to reign supreme, at the cost of so much else.

I truly hope, in this nearly final hour, that DEEP does something for the greater good. I think that is probably part of DEEP's mission statement, or at least it should be.

Thank you for your consideration.

Best regards,

Sandy Henschel

Subject: NTE Public Comment: in Opposition to Killingly Gas Plant
Date: Friday, October 9, 2020 10:49:24 AM

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Dear Governor Lamont and Commissioner Dykes,

I am writing to you to express my opposition to the fracked gas plant in Killingly. I agree with many people who have already expressed their opposition to this plant on the ethical grounds that building out more fossil fuel energy infrastructure at this late stage in the climate change catastrophe being visited upon the world is morally reprehensible; but there are also strong economic reasons to oppose this plant which should have also been considered before building the plant in Bridgeport.

Despite the historically low price of natural gas and other fossil fuels which makes this type of plant look attractive in today's dollars, gas plants are [already being closed](#) decades ahead of schedule and replaced with grid level battery storage for no other reason than it is less expensive to run and provides service that is just as reliable as the gas-fired plant. And it is very likely that the low cost of natural gas will not remain so for very long. Groups on all sides of the political aisle are working to pass legislation that will impose steep carbon fees on fossil fuels as the first major step to addressing climate change and to quickly move our economy off of fossil fuels. The idea that natural gas is some kind of a 'bridge' fuel has been thoroughly rebuked. On the political right, the Climate Leadership Council has a [carbon fee and dividend plan](#) that it is pushing that has broad support in the business community. In the political center, the Citizens Climate Lobby is supporting a bill in Congress, the [Energy Innovation Act](#), that is currently endorsed by 82 members of Congress, mostly Democrats. This too is a Carbon Fee and Dividend bill. Economists across the country, 3589 in all, including 4 former chairs of the Federal Reserve, 27 Nobel Laureates, and 15 former Chairs of the Council of Economic Advisors, have [signed a statement](#) calling for just such an approach to climate change mitigation. With so much support for carbon fees emerging, it is clear that some legislation will be forthcoming in the near future, especially should the Democrat party win in November, that will make the economic viability of fossil fuel generated electricity prohibitive. We do not want to be in a position in five years where we are looking to close this newly built plant because it is too expensive to run.

In addition to all of this, just last month, the Republican run Federal Energy Regulatory Commission passed [Order 2222](#) which will open up the country's wholesale energy markets to distributed energy resources (DERs) like rooftop solar, behind-the-meter batteries and electric vehicles. This new order will greatly expand the capacity of the grid to absorb more renewable energy and will help to usher in the clean energy economy. We do not want to be building one of the last fossil fuel powered plants at the very moment the new 'clean energy' economy is ramping up.

It will not be long before we regret having ever built a gas power plant in Bridgeport much less the one in Killingly. Let's not make the same mistake twice.

Sincerely,

Richard Walser

Subject: NTE's request for a DEEP Wastewater Discharge Permit in Dayville/Killingly, CT.
Date: Thursday, October 8, 2020 8:42:44 PM

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Dear Mr. Schain,

I am writing to express my concern about NTE's request for a DEEP Wastewater Discharge Permit in Dayville/Killingly, CT. As a resident of Alexander's Lake, I have numerous concerns regarding this company and its impact on our beautiful lake and surrounding community. Please reject this permit and do not approve it.

Our lovely lake community is currently surrounded by several industries that are already impacting and ever threatening our pristine waters. Our town already has a 750MG natural gas power plant less than .5 miles away. In addition, an analysis conducted by Synapse Energy Economics shows that NTE's proposed gas plant is not needed. How does this help us meet the Governor's goal of zero carbon emissions by 2040?

Water from this proposal would be treated by the town of Killingly Water Pollution Control Facility and then discharged into the Quinebaug River, a river that has a long history of industrial pollution, and despite being treated by KWPCF will still contain harmful pollutants. We have worked hard to clean up this river; please don't put it at additional risk by approving this permit.

NTE is a company based in Florida, far away from us here in the Quiet Corner. They want to install automatic monitoring equipment which will be controlled by out of state operators and a hazardous spill could go undetected. There are so many potential pollutants that would require close monitoring. I am uncomfortable and concerned with all of this. How is this company helping our community and the State of Connecticut?

Please help us keep this clean, healthy lake one of Connecticut's greatest places to enjoy. We are currently dealing with the impact of this summer's drought on our wells. Don't stress our homes any more than they are currently experiencing. There is no need for NTE to build a gas plant in our area. The potential dangers outweigh the potential advantages. Please reject this permit for NTE. Thank you.

Sincerely,

Valerie Nobilio

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

Dear Mr. Schain:

Please reject the Permit for the Killingly NTE Gas Power Plant.

I have been participating in the public forums for the Governor's Council on Climate Change, and I have been on the working group for Agriculture and Soil. An enormous number of people have been working hard to identify every way to reduce greenhouse gas emissions in the state. The report of the Working Group on Adaptation and Mitigation says specifically that the Killingly Gas Power Plant will prevent the state from reaching its greenhouse gas emission targets. Further, as the price of solar and wind continue to drop, along with the price of battery storage, investing in a gas power plant is poor economics, tying rate payers to a technology which is already more expensive to build and maintain than renewables, and which will become an increasingly bad investment for the life of plant - perhaps the next 40 years. [Solar and Wind Cheapest Sources of Power in Most of the World](#)

Solar and Wind Cheapest Sources of Power in Most of the World

Brian Eckhouse

Solar and onshore wind power are now the cheapest new sources of electricity in at least two-thirds of the world...

I have also been participating in the Environmental Justice webinars. Killingly an environmental justice community, and is listed as such by the DEEP. Dealing with the wastewater (as well as air pollution) from this facility will burden the taxpayers of this low-income community for the next 40 years. Killingly is not a wealthy community and would be victimized by this type of polluting fossil gas infrastructure that has been rejected by Connecticut towns of wealthier means, such as New Milford which defeated a proposed gas power plant. DEEP's approval of NTE's proposed Environmental Justice Public Participation Plan is underwhelming to say the least. Environmental justice should address the fact that more polluting infrastructure is built in less affluent communities.

Eastern Connecticut is currently in extreme drought, as it has repeatedly been in recent years. <https://droughtmonitor.unl.edu/CurrentMap/StateDroughtMonitor.aspx?CT>
Experts have reported as part of the GC3 reports that droughts will become more frequent with climate

change. Adding a power plant will burden the wastewater treatment capacities of the town and that will put freshwater supplies at risk from spills. Your review of the application found that the following "potential pollutants of concern" could enter the discharged water and required monitoring: "ammonia, copper, nickel, petroleum oil, phosphorus, total suspended solids, and zinc, in addition to the physical properties of corrosivity (pH) and temperature." In order to perform this monitoring, the Florida based corporation NTE proposes to install automatic monitoring equipment which will "record data" in order to "verify compliance with the terms". Almost certainly, this automatic system will be controlled by out of state operators, as is common practice with large energy infrastructure. It's just not that profitable to hire people to hang around waiting for something to go wrong. But the downside of this remote monitoring is that in the real world event of a spill and/or of higher concentrations of pollutants than DEEP allows, that excess or spill could continue for a while before being stopped. After all, these automatic monitors (read "not human") are programmed to monitor, not to stop or prevent problems. It is incorrect to say that these monitors "ensure protection of the waters of the state." They only let us know when something has already gone wrong, as it invariably will.

The pittance in taxes collected will not be worth a polluted Quinebaug River. DEEP is preferentially choosing to help fossil gas companies profit while failing to protect the waters of the state.

Dear Sir,

CT does not need another fracked gas plant. We are already exporting energy out of our state to the detriment of our natural resources. The wetlands surrounding the plant will be polluted, killing grasses and wildlife. Our air will be more polluted.

There are many more reasons for keeping this gas plant from being built, but I'm sure you are hearing them from others who feel as I do. We will not stop our efforts, but only increase them. Please stop efforts to build this plant now.

Thank you.

Carol Duffy

dear

Subject: Please reject Permit for NTE Gas Plant : Application No. 201615592
Date: Thursday, October 8, 2020 9:27:45 PM

EXTERNAL EMAIL: This email originated from outside of the organization. Do not click any links or open any attachments unless you trust the sender and know the content is safe.

I am writing to ask that you not approve the application regarding waste water from the proposed NTE Fracked gas power plant. The state of CT should be a leader in promoting safe, clean renewable energy; not in continuing to pollute and destroy the water and air that we all depend upon for healthy lives and a healthy planet. CT does not need the additional electricity, especially not from a project inconsistent with the goals of the GC3. In the midst of this most serious existential crisis of climate change, we can't afford to continue with business as usual. We need to stop all fossil fuel development and use. We are accountable now for the lives are our grandchildren and their grandchildren. Please reject this application. Thank you.

October 9, 2020

CT DEEP Office of Adjudications
79 Elm Street
Hartford, CT 06106
Attn: Brendan Schain

Dear Mr. Schain,

I'm providing comment regarding Application No.201615592 by NTE Connecticut, LLC for a permit to discharge industrial waste from their proposed power generation plant, Killingly Energy Center (KEC), at 189 Lake Road Killingly, CT.

I'm concerned about the Killingly Water Pollution Control Authority (WPCA) to handle 90,000 gallons of industrial wastewater per day. There are times the proposed KEC would run on ulsd (diesel) and would use up to 400,000 gallons of water per day. Seems a potential overburden for the system at Killingly WPCA.

When I was a child living in Putnam, CT, the Quinebaug River ran in unnatural colors from industrial pollutants. Made great strides in addressing the many insults to the Quinebaug River. It is now clean enough for recreational use and for fishing. After the wastewater is treated, it will be discharged into the Quinebaug River.

Why accept pollution for an unneeded fossil fuel power plant?

The level of effluent monitoring is inadequate and an open opportunity for abuse.

Connecticut residents should regard the unquantified heavy metal pollution as intolerable.

Thank you for allowing public comments.

Sincerely,

Carolyn Johnston

October 8, 2020

Mr Schain,

Thank you for the opportunity to comment on the effluent permitting process for the Killingly Power Plant.

Economically, the only way this project is profitable is by externalizing the costs of the pollution created - first at the fracking site and last at the effluent from the plant in Killingly. The cost is actually paid involuntarily by the communities involved. If the companies benefitting from this project actually returned the air and water to the condition they found it, the project would be economically untenable. Externalizing the true cost of fossil fuel production has contributed to creating the climate crisis we are in.

I oppose granting the permit for the Killingly Power Plant and I urge DEEP to oppose it.

Sincerely,
Susan Olson

Commissioner Katie Dykes
Connecticut Dept. of Energy and Env'tl. Protection
79 Elm Street
Hartford, CT 06106
Email: Katie.Dykes@ct.gov

Oct. 9, 2020

Dear Commissioner Dykes,

Sierra Club and others have weighed in on the specifics of the wastewater discharge permit for NTE's Killingly Energy Center. I agree with them, so I am going to make broader comments here and I urge you not to discount or discard my letter. I appreciated that the hearing officer, Brendan Schain, allowed many of us to speak more broadly at the hearing on Oct. 1.

I would reiterate what I said then – fracked gas is almost 100% methane, and methane leaks at every step of the process from drilling to final use. More recent studies have shown a greater amount of leakage (<https://bit.ly/3luy7hl>) than was previously reported. And methane, in the first 10 years after release, is 100 times worse for the climate than CO2. There is no way CT can meet its stated climate goals if we keep building fracked gas power plants (Killingly would be the third in three years).

A new FERC ruling also makes it clear that even the guardians of fossil fuels are seeing the need to expand energy choices. Order 2222 (<https://bit.ly/36l9Ee>) will allow full-scale market participation by batteries, EV chargers, smart appliances and other resources, and makes further construction of fossil fuel plants even more anachronistic.

Also, the NTE plant was approved before the legislature voted in 2019 to build significant offshore wind capacity, further lessening the need for the Killingly plant (which our elected officials and some energy experts have already said isn't "needed").

While all the crazy, violent weather we've been having in CT this summer and fall can't be linked (yet) directly with the climate crisis, these storms are what the IPCC predicted for the Northeast, so we shouldn't be surprised they are happening.

Please, please deny the state permits NTE needs to build this power plant! Our future depends on it.

Sincerely,

Melinda Tuhus

October 8, 2020

Dear Mr. Schain,

I am writing in opposition to the consideration, at this time, of approval of NTE's application for a 401 water certificate((201908002). In addition to environmental reasons listed below, the Covid 19 situation and its hamstringing of healthy public involvement in matters such as the NTE 40 makes it necessary to postpone this critical decision-rather than making it now 'ad-hoc'. Also, as stated in previous comments: the applicant, NTE, has not demonstrated clearly that there will be no lasting damage to the local wetland around the construction-especially over time. The purpose of the 401 protocol, as you know, is to stabilize what is effectively an emergency situation concerning our wetlands and overall water health situation. Any size parcel, no matter how small, is critical in this context. The applicant has not demonstrated that there is a sufficient public need to warrant a 'rolling of the dice' in terms of the 401 certification intent of wetland protection. Please delay any approval of the application until there can be a more responsible investigation of the long term effects of the construction and a less distracted input by the Connecticut public. There is no public need, especially with virus situation, to make this decision now.

Sincerely,

James Root

RE: Application No. 201615592

Commissioner Dykes,

We write to you today on the purposed application by NTE Connecticut, LLC for a permit to discharge industrial wastewater associated with steam electric power generation operations within the town limits of Killingly. This application is critical to the development and long-term sustainability of the wastewater within Killingly and surrounding areas. Currently, the town of Killingly has been waiting several weeks on multiple permits including: air permit extension, waste water discharge permit, and a Yankee Gas permit for construction of gas main expansion within existing easement under the Airline Trail. We hope these permits can be taken up by D.E.E.P. as soon as possible to continue the ongoing process.

Sincerely,
