## Section I: Premises Information/Description

### A. PREMISES INFORMATION

Nature of Business: Snack Food Products Manufacturer

Primary SIC: 2096

Other SIC: Not Applicable

Facility Mailing Address: 1886 Upper Maple Street, Dayville, CT 06241

Telephone Number: 860-412-1000

### B. PREMISES DESCRIPTION

Frito-Lay, Inc. manufactures snack food products at their facility in Dayville, CT. Raw material is received by the plant and stored onsite. The raw material is processed in various snack food production lines, packaged and distributed to off-site locations. Process steam is generated by three on-site boilers, and a Solar Combustion Turbine/Duct Burner cogeneration system, with each boiler vented to a common stack and the cogeneration system (CHP plant) vented to its own dedicated stack. Furthermore, a portion of hot (pre-treated) exhaust gas from the cogeneration system is diverted to the plant's starch dryers to be used as an alternate source of heat. The boilers are natural gas fired and the cogeneration system is also fueled exclusively by natural gas.

Frito-Lay's Cogeneration system (EU-11) consists of a Centaur 50-6200S Gas Turbine with a 44.4 MMBtu/hr duct burner is subject to 40 CFR Part 60 Subpart KKKK, New Source Performance Standards for Stationary Combustion Turbines since the unit is a stationary combustion turbine with a heat input at peak load greater than 10 MMBtu/hr and it was constructed after February 18, 2005. A portion of the SCR-treated exhaust gas is used as the primary source of heat and conveying gas for the two starch dryers (GEU-2) that comprise the facility's Starch Recovery System. Alternatively, when EU-11 is not operating, Starch Dryer No. 1 uses a steam heat exchanger to heat air used as the drying and conveying medium, while Starch Dryer No. 2 uses a direct fired natural gas heater burner.

The three on-site boilers (GEU-3) produce process steam for manufacturing and are vented to a common stack. The boilers were constructed in 1980 and 1981 and therefore are not subject to the New Source Performance Standards for Small Industrial-Commercial-Institutional Steam Generating Units since the applicability date is for units constructed, modified, or reconstructed after June 9, 1989. Additionally, the boilers are not subject to the National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers for Area Sources since they are considered a *gas-fired boiler* pursuant to 40 CFR §63.11195(e).

The two emergency fire pump engines (GEU-4) are subject to 40 CFR Part 60 Subpart IIII, New Source Performance Standards for Stationary Compression Ignition Internal Combustion Engines since the engines are stationary reciprocating internal combustion engines located at an area source of HAPs.

The single Cold Cleaner No. 1 (EU-28) is subject to RCSA §22a-174-20(l).

In addition to the boilers, fire pumps and cogeneration system, other potential sources of emissions are generated by process cookers, process ovens, a process cooler, a process popper, starch dryers, grain handling operations and furnaces.

Operating hours for the facility are 24 hours per day and 365 days per year.
