Executive Summary

The Connecticut Department of Energy and Environmental Protection (“DEEP”) has prepared this report to satisfy the reporting requirements of Section 16-245ee of the General Statutes to evaluate:

- (1) The funding distribution for calendar years 2016 and 2017 for the Conservation and Load Management (“C&LM” or “C&LM Plan”) programs administered by Eversource and The United Illuminating Company (“UI”), which together will be referred to as the electric distribution companies or (“EDCs”); and
- (2) The funding distribution for calendar years 2016 and 2017 for the clean energy Operations Plan implemented by the Connecticut Green Bank (“the Green Bank”).

All residential, and commercial and industrial (“C&I”) customers contribute to the C&LM fund by paying a surcharge on their electric bill that combines the “3 Mill Charge” (established in 2000) and an additional 3 mills in the form of a Conservation Adjustment Mechanism (CAM) (established in 2013). Together, these two collections are referred to as “C&LM collections”. Customers can apply for and receive incentives funded by these collections to reduce the costs of implementing energy efficiency and clean energy measures.¹

Connecticut General Statutes (CGS) §16-245ee requires that “before approving any plan for energy conservation and load management and clean energy projects issued to the Commissioner of Energy and Environmental Protection by the Energy Conservation and Management Board, the board of directors of the Connecticut Green Bank or an electric distribution company, said commissioner shall determine that an equitable amount of funds administered by each such board are to be deployed among small and large customers with a maximum average monthly peak demand of one hundred kilowatts in census tracts in which the median income is not more than sixty per cent of the state median income.” DEEP is also required to report to the Connecticut General Assembly’s Energy and Technology Committee on an annual basis. Reports have previously been submitted for calendar years 2012, 2013, 2014, and 2015 are available on DEEP’s webpage.

This report considers whether funding has been distributed on an equitable basis during calendar years 2016, and 2017 to “small load” customers in distressed census tracts. Specifically, this refers to customers with a maximum, average, monthly peak demand less than one hundred kilowatts, in tracts where “the median income is not more than 60% of the state median income (SMI).”² Throughout this report, these tracts are referred to as “distressed census tracts”.

In many applications of “equitable distribution,” the division of resources is not intended to be “equal” but rather, “fair.” In this review, DEEP has evaluated “equitable distribution” by comparing proportions of contributions made to proportions of incentives received by a census tract. In other words, a census tract receiving a greater than or equal percentage of total incentives than that same tract’s C&LM contributions as a percentage of total collections would have

¹ “3 Mill Collections” refer to a \$.003/kWh C&LM charge that all customers of the referenced EDC’s pay. Thus, the amount contributed per customer is determined by the amount of energy they use each month.

² Conn. Gen. Stat. § 16-245ee.

EQUITABLE DISTRIBUTION 2016-2017

achieved equitable distribution. For an EDC to have achieved equitable distribution, small load distressed census tracts in its territory will collectively meet that definition.³

Although not required by 16-245ee, DEEP has expanded its review of equitable distribution for customers that have an average monthly peak greater than one hundred kW's (large load) in distressed census tracts, and residential customers vs. C&I customers in distressed census tracts.

At DEEP's request, the EDC's also have provided residential data on the Home Energy Solutions (HES) and the Home Energy Solutions-Income Eligible (HES-IE) programs as an indicator of the level of participation achieved by each company in 2016 and 2017 with residential customers in distressed municipalities, according to housing stock.

Findings for Years 2016 and 2017

In accordance with CGS §16-245ee, DEEP has analyzed ratepayer collections and incentive disbursements from Eversource, United Illuminating, and The Connecticut Green Bank for years 2016 and 2017. Table 1 below displays the analysis for small load, distressed census tracts in each companies' territory as well as the Green Bank's distribution for customers within the <60% of SMI band.

DEEP found that in 2016, both United Illuminating and the Green Bank met DEEP's equitable distribution standard but Eversource did not, by 0.11%. Conversely, in 2017 Eversource and the Green Bank met DEEP's equitable distribution standard, but UI did not by a differential of 6.31%.

It is important to note that each entity (i.e. Eversource, UI, and the Green Bank) is evaluated independently. Each entity has a different amount of collections available based on number of customers in the territory, number of distressed census tracts in the territory, and the size of the CAM, meaning the baseline is different for each.

DEEP has provided a graphical depiction of year-over-year trends from 2014 through 2017 for each entity (Figure 1). Continued analysis may help to provide probability models for distribution going forward.

³ A simple example would be a census tract contributing \$1,000 to the total of \$100,000 of 3 Mill Collections and receiving \$900 from out of the \$80,000 in total disbursements across census tracts. The tract only contributed 1% of total collections but received 1.125% of total incentives. This achieved equitable distribution.

EQUITABLE DISTRIBUTION 2016-2017

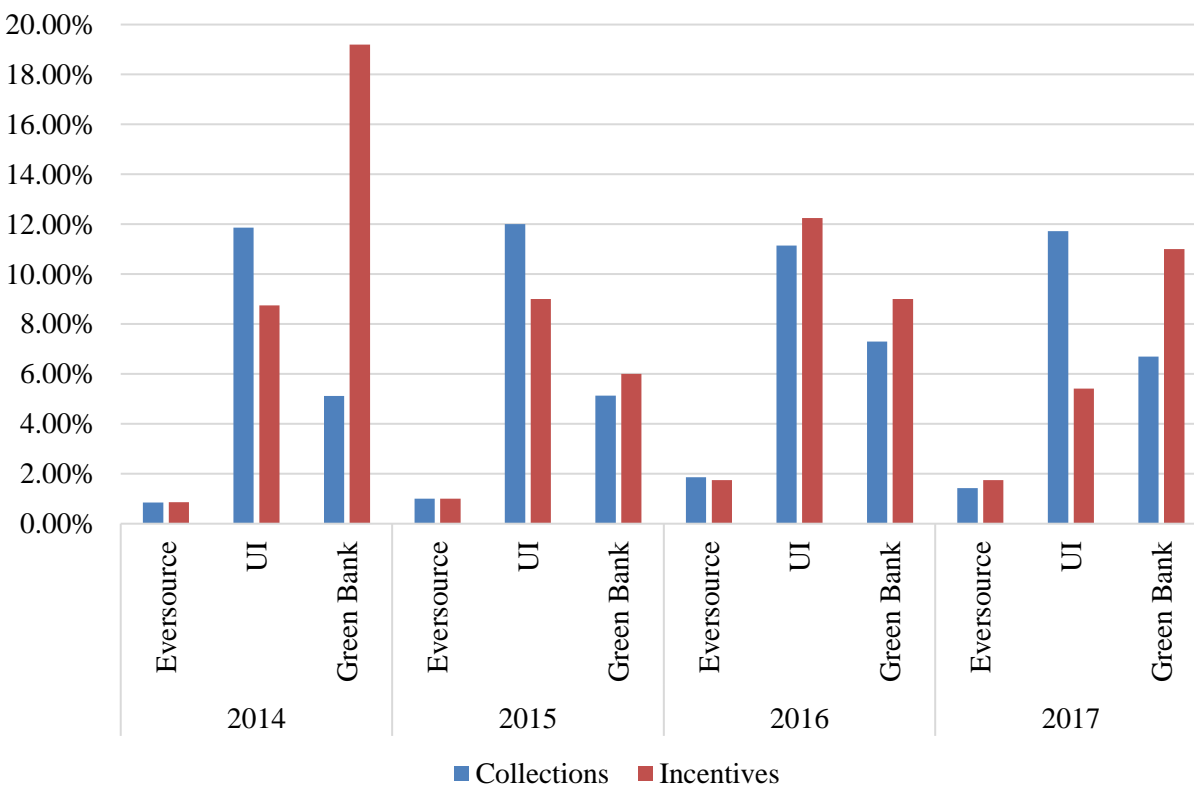

Table 1: Overview of Equitable Distribution for Years 2016 and 2017

Company	Census Tract Type & Customer Size	2016			2017		
		% of Collections	% of Incentives	Equitable	% of Collections	% of Incentives	Equitable
Eversource	Distressed Census Tract <100kW*	1.86%	1.75%	No	1.42%	1.74%	Yes
United Illuminating	Distressed Census Tract <100kW*	11.15%	12.25%	Yes	11.72%	5.41%	No
Green Bank	Distressed Census Tracts**	7.3%	9%	Yes	6.7%	11%	Yes

*Statutory Requirement

**Estimates based on reporting from the EDCs

Figure 1: Equitable Distribution Annual Trend by Entity

Background

In 2013, Public Act 13-298 amended CGS §16-245m(d) and directed PURA to establish a fully reconciling Conservation Adjustment Mechanism (CAM) of \$0.003/ kWh collections in order to fund increased energy efficiency investment. Subsequently, the C&LM budget increased from \$142.04M in 2013 to \$228.61 in 2016, a 60% increase.⁴ This increase has transformed the conservation and load management plan's programs.

This report assesses the collection of these revenues by census tract, as well as disbursement by census tract. Pursuant to CGS §16-245ee, before approval of any C&LM plan submitted by the Energy Efficiency Board ("EEB") or any plan for renewable energy projects submitted by the Green Bank, DEEP is tasked with determining whether or not funds are equitably deployed to economically distressed tracts. DEEP is required to submit its report and resulting determination to the Joint Legislative Committee on Energy and Technology on an annual basis. As utilities are not able to provide revenue and incentive disbursement data until the close of the calendar year, DEEP must retrospectively review trends in equitable distribution before approving a plan.

The 2013-2015 C&LM Plan Decision included two conditions of approval germane to DEEP's annual review of the equitable distribution. Condition No. 8 of the C&LM Plan Decision stated:

DEEP directs [Eversource and UI] to track relevant data on a census tract basis or report to DEEP what steps they are taking to comply with the requirement to track data on this basis.

In addition, Condition No. 9 stated:

On or before June 1, 2014, and thereafter annually on March 1, each EDC shall submit to DEEP and the EEB a table containing data for the prior calendar year that includes, on a census tract basis or, if not available by census tract, on a town-by-town basis, the amount of conservation program funds assessed and the amount of incentives expended, disaggregated as small or large customers according to the one hundred kilowatt peak demand threshold, and further disaggregated by customer class (i.e. Residential and C&I). Additionally, on or before June 1, 2014, and thereafter annually on March 1, each EDC shall submit to DEEP and the EEB a table further disaggregating the residential data component from small customers as follows: specifically the residential data component for small customers shall be disaggregated by the HES and HES-IE programs, and identify the total number of project participating in each program, and disaggregate those project numbers by housing stock (i.e. single family, multi-family (2-4 units), and multi-family (>4 units)). The EDCs shall work together to produce a table format that presents the data from each of the companies in a consistent manner.

As these conditions state that the EDCs shall submit data "on or before June 1, 2014, and thereafter annually on March 1," DEEP has not specifically identified these as conditions in the approval of the 2016-2018 C&LM Plan, or in the 2019-2021 C&LM Plan in order to reduce redundancy. These

⁴ Energy Efficiency Board Annual Legislative Reports. <https://www.energizect.com/connecticut-energy-efficiency-board/about-energy-efficiency-board/annualreports>

conditions have guided the reporting format for the past several years but may be modified going forward to streamline and improve analyses and data transfer.

DEEP Methodology for Evaluation

The C&LM programs administered by the utilities are not funded solely by proceeds from 3 Mill Collections (see Table 2 below). Likewise, the Green Bank's renewable energy projects are funded by more than just the Renewable Energy Investment charge of \$.001/ kWh ("Collections") on the EDCs' electric bills. Other funding sources that also support the total budgets for those programs include auction proceeds from the sale of Regional Greenhouse Gas Initiative ("RGGI") allowances, grant funds, Forward Capacity Market proceeds, and more (Table 2).⁵ Furthermore, funds and incentives are allocated not only to programs that benefit specific customers or communities, but also to programs and expenses that have a generalized impact across Connecticut, such as administrative costs, planning, research and development programs, and education and outreach programs. Therefore, the contributed amounts cannot be expected to match the expended funds for a given census tract the C&LM programs and projects. Additionally, the total amount of incentives allocated to a given census tract is not directly controlled by the EDCs or by the Green Bank. Rather, fund allocation is driven by the level of customer participation in a given census tract.

The Collection amounts in the context of this report represent just the revenues collected through the C&LM Program charge on customers' electric bills. By contrast, the incentive amounts represent the disbursements from C&LM budgets that also include, as explained earlier, other sources of funding. A breakdown of the electric C&LM funding for 2016 and 2017 is provided in Table 2.⁶

⁵ Connecticut is one of nine states (Delaware, Maine, Maryland, Massachusetts, New Hampshire, New York, Rhode Island and Vermont) currently participating in the Regional Greenhouse Gas Initiative ("RGGI"), a cooperative effort amongst these states to cap and reduce CO₂ emissions from the power sector. Proceeds from the sale of emission allowances through RGGI's quarterly auctions are invested in energy efficiency, renewable energy, and other consumer benefit programs. RGGI, available at www.rggi.org/ (last visited Nov. 4, 2015).

Table 2: 2016 & 2017 Electric Conservation and Load Management Revenues

	2016 EDCs Combined	2017 EDCs Combined	2016 EVERSOURCE	2017 EVERSOURCE	2016 UI	2017 UI
CAM	\$74,524,807	\$71,982,474	\$59,631,007	\$57,754,405	\$14,893,800	\$14,228,069
Carrying Charges	\$1,805,040	\$1,209,755	\$1,805,040	\$1,209,755	\$0	\$0
Class III Renewable Energy Credits	\$4,177,255	\$4,830,354	\$3,438,160	\$4,080,078	\$739,095	\$750,276
Collections (Mill Rate)	\$80,423,675	\$77,496,112	\$64,399,918	\$62,194,808	\$16,023,757	\$15,301,304
ISO-NE FCM Energy Efficiency	\$12,025,505	\$24,694,580	\$9,001,667	\$19,397,905	\$3,023,838	\$5,296,675
ISO-NE Load Response	\$2,993,131	\$2,954,718	\$2,993,131	\$2,954,718	\$0	\$0
Other Revenues	\$0	\$0	\$0	\$0	\$0	\$0
Prior Year Carryover/(Carry Under)	\$10,471,083	(\$4,083,238)	\$10,775,402	(\$3,279,894)	(\$304,319)	(\$803,344)
RGGI	\$13,756,048	\$4,250,189	\$9,589,720	\$3,400,152	\$2,397,430	\$850,037
Legislative Diversion of Funds	\$0	(\$31,750,000)	\$0	(\$25,400,000)	\$0	(\$6,350,000)
Total	\$200,176,544	\$151,584,944	\$161,634,045	\$122,311,927	\$38,542,499	\$29,273,017

Revenues from the sources listed in Table 2 are aggregated and distributed across the CL&M programs. Isolating ratepayer revenues for this analysis is difficult, therefore DEEP deemed it more reasonable to evaluate equitable distribution by:

- (1) Separating customers into the following categories for each EDC: small load distressed census tracts, large load distressed census tracts, small load other tracts, and large load other tracts, where “other” indicates a non-distressed tract;
- (2) Then calculating each customer grouping’s 3 Mill contributions amount as a percentage of their EDC’s total amount of 3 Mill Collections;
- (3) Then calculating that same customer grouping’s incentive disbursement as a percentage of their EDC’s total incentives disbursed;
- (4) Then finally comparing the two resulting percentages for equivalence.

For example, to consider the equitableness of what small load residential customers in distressed census tracts had contributed in 3 Mill Collections as a group, versus what that same group received back collectively in incentives, a percentage would be calculated for each of those amounts as a ratio to the total 3 Mill Collections and incentives for all small load residential customers and then aggregated together.

<i>Example of Equitable Distribution Calculations:</i>				
	<u>Collections</u>		<u>Incentives</u>	
Total 2016 Utility “A” Collections: \$1100				
Total 2016 Utility “A” Incentives: \$1000	$\frac{100}{1100} = 9\%$	<	$\frac{95}{1000} = 9.5\%$	<input checked="" type="checkbox"/>
Census Tract 1234 Collections: \$100	1100		1000	
Census Tract 1234 Incentives: \$95				

In the past, equitableness was evaluated by comparing the contributions and incentives received by census tract as a percentage of the total of their specific category (i.e. all small load, residential, distressed tracts in Eversource territory). Although CGS §16-245ee includes a determination by DEEP that funds have been equitably distributed based on census tract, ratepayer incentives are distributed by program, and are not set aside for projects specifically in their census tract’s category. To more effectively compare the contributions to the participation, DEEP has assessed the ratios by company, as customers from Eversource territory cannot access funds raised by UI customers, and vice versa.

For calendar years 2016 and 2017, equitableness will be defined as a census tract receiving incentive disbursements proportions that are greater than or equal to that same tract’s 3 Mill contribution proportion. For an EDC to achieve technical equitable distribution, the distressed census tracts in its territory will collectively meet this standard. Potential determinants to be analyzed in future reports could include return on investment (i.e. projected energy savings) and percent-of-income comparisons between economic groupings. For future reports, DEEP will examine trends and assess the ability to provide a specific percentage for determining equitable distribution. In the Appendices of this report, DEEP provides tables to present these calculations for each EDC.

Analysis of Equitable Distribution 2016

EDCs Overall 2016

Below is a chart that specifically identifies each company's success in 2016 in achieving equitable distribution compliant with CGS §16-245ee. As this is historical data and will not impact current energy policy decisions, the following analyses, tables and graphs are purely observational and will serve as a record for comparison in future reports.

Table 3: Overview of 2016 Equitable Distribution of Eversource, UI, and the Green Bank

2016	Census Tract Category & Customer Size	% of Collections	% of Incentives	Equitable Distribution Achieved? <i>% Incentives greater than % Collections?</i>
Eversource	Distressed Census Tracts (all loads)	3.03%	3.49%	Yes
	Small Load Distressed Census Tract*	1.86%	1.75%	No
United Illuminating	Distressed Census Tracts (all loads)	25%	19.6%	No
	Small Load Distressed Census Tract*	11.15%	12.25%	Yes
Green Bank	Distressed Census Tracts	7.3%	9%	Yes

*Statutory requirement.

Though the utilities are assessed individually, DEEP has conducted an analysis of the equitable distribution of C&LM funds overall to gain perspective on statewide performance. In 2016, a smaller proportion of incentives were distributed than were received in collections from distressed census tracts.

Table 4: 2016 EDC's Combined, All Customers (Statewide Totals)

2016		Collections	Incentives
Distressed Tracts	Amount	\$10,934,077	\$7,661,997
	% of Total	7.3%	6.5%
Other Tracts	Amount	\$137,927,545	\$109,373,056
	% of Total	92.6%	93.4%
All Tracts	Amount	\$148,861,622	\$117,035,053

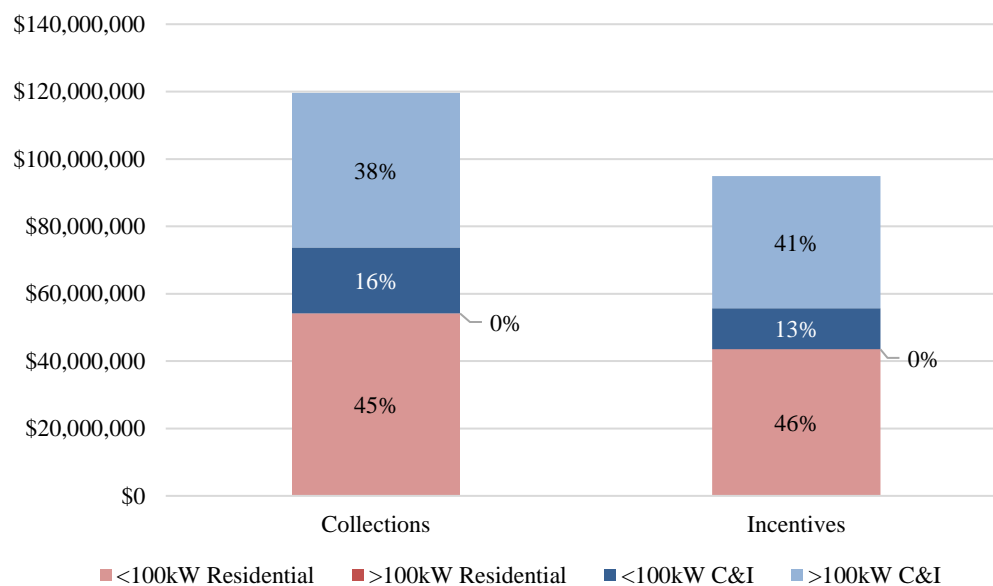

EQUITABLE DISTRIBUTION 2016-2017

Eversource 2016

Table 5: 2016 Eversource, All Customers

2016		Collections	Incentives
Distressed Tracts	Amount	\$3,625,757	\$3,311,920
	% of Total	3.03%	3.49%
Other Tracts	Amount	\$116,017,941	\$95,576,148
	% of Total	96.97%	96.51%
All Tracts	Amount	\$119,643,968	\$94,888,067

Figure 2: 2016 Breakdown of Eversource Collections and Incentives by Size and Class

In 2016 Eversource customers contributed 80% of total, statewide electric C&LM collections, and received 81% of total, statewide incentives.

Experian was used to match the census tracts with customer billings, and then calculate the contributions and incentives for each tract. Only tracts where 100% of the population was below 60% of SMI were considered distressed. Of its 895 total census tracts, Eversource identified 18 census tracts in 15 towns as distressed.

For the purposes of this report, DEEP has found that collectively, Eversource's small-load, distressed census tracts did not receive a greater proportion of incentives than their contributions. While the differential appears small (0.11%), this translates to over \$560,000. On a census-tract-by-census-tract basis, only five of the 18 distressed census tracts with small load customers met the equitable distributions standards. A summary of these tracts collections and incentives is listed in Tables 6 and 7 below.

EQUITABLE DISTRIBUTION 2016-2017

Table 6: 2016 Eversource, All Customers ≤100kW

2016		Collections	Incentives
Distressed Tracts	\$ Amount	\$2,224,498	\$1,662,139
	% of Total	1.86%	1.75%
Other Tracts	\$ Amount	\$71,471,256	\$54,061,660
	% of Total	59.74%	56.97%
All Tracts	\$ Amount	\$79,098,896	\$57,804,188
	% of Total	61.60%	58.73%

Table 7: 2016 Eversource Small Load, Distressed Census Tracts Distributions

Census Tract	Town	CLM \$ Collected	% of Total Collections	Incentives Distributed	% of Total Incentives	Equitable
09005263200	CORNWALL	\$55,216	0.046%	\$29,210	0.031%	NO
09003484100	EAST WINDSOR	\$222,077	0.186%	\$173,205	0.183%	NO
09007630100	ESSEX	\$247,975	0.207%	\$78,814	0.083%	NO
09003503100	HARTFORD	\$44,537	0.037%	\$4,265	0.004%	NO
09003502800	HARTFORD	\$31,904	0.027%	\$12,690	0.013%	NO
09015904400	KILLINGLY	\$61,995	0.052%	\$13,194	0.014%	NO
09015904100	KILLINGLY	\$258,527	0.216%	\$227,440	0.240%	YES
09011695201	MONTVILLE	\$102,202	0.085%	\$18,127	0.019%	NO
09003417300	NEW BRITAIN	\$591	0.000%	\$0	0.000%	N/A
09003417100	NEW BRITAIN	\$22,139	0.019%	\$20,444	0.022%	YES
09015907100	PLAINFIELD	\$73,168	0.061%	\$16,922	0.018%	NO
09015902500	POMFRET	\$107,820	0.090%	\$32,335	0.034%	NO
09005261100	SALISBURY	\$168,687	0.141%	\$129,983	0.137%	NO
09015900200	THOMPSON	\$69,940	0.058%	\$163,432	0.172%	YES
09005267100	WASHINGTON	\$175,927	0.147%	\$105,758	0.111%	NO
09009350100	WATERBURY	\$53,075	0.044%	\$89,782	0.095%	YES
09015800500	WINDHAM	\$304,429	0.254%	\$476,684	0.502%	YES
09015901100	WOODSTOCK	\$224,288	0.187%	\$69,855	0.074%	NO
		\$2,224,498	1.86%	\$1,662,139	1.75%	5/18

Overall, customers in these 18 tracts contributed 1.86% of the total Eversource collections and received 1.75% of its incentive disbursements. The majority of both collections and incentives in small load distressed census tracts were from residential customers, consistent with past analyses. On an individual census tract basis, the table above identifies tracts that warrant additional focus in the future to ensure and increase participation.

EQUITABLE DISTRIBUTION 2016-2017

Table 8: 2016 Eversource, Residential Customers ≤100kW

2016		Collections	Incentives
Dist.	\$ Amount	\$1,598,086	\$1,289,081
Tracts	% of Total	1.34%	1.36%
Other	\$ Amount	\$52,529,589	\$42,215,075
Tracts	% of Total	43.91%	44.49%
All	\$ Amount	\$54,127,676	\$43,504,157
Tracts	% of Total	45.24%	45.85%

Table 9: 2016 Eversource, C&I Customers ≤100kW

2016		Collections	Incentives
Dist.	\$ Amount	\$626,411	\$373,058
Tracts	% of Total	0.52%	0.39%
Other	\$ Amount	\$18,941,667	\$11,846,585
Tracts	% of Total	15.83%	12.48%
All	\$ Amount	\$19,568,079	\$12,219,643
Tracts	% of Total	16.36%	12.88%

DEEP has found that large load, distressed tracts (greater than 100kW) demonstrated positive results. Overall, large load customers across classes contributed 38% of collections but received 41% of incentives (Table 10) and distressed census tracts.

Table 10: 2016 Eversource, All Customers >100kW

2016		Collections	Incentives
Dist.	Amount	\$1,387,400	\$1,649,780
Tracts	% of Total	1.16%	1.74%
Other	Amount	\$44,498,970	\$37,513,500
Tracts	% of Total	37.19%	39.53%
All	Amount	\$45,886,371	\$39,163,281
Tracts	% of Total	38.35%	41.27%

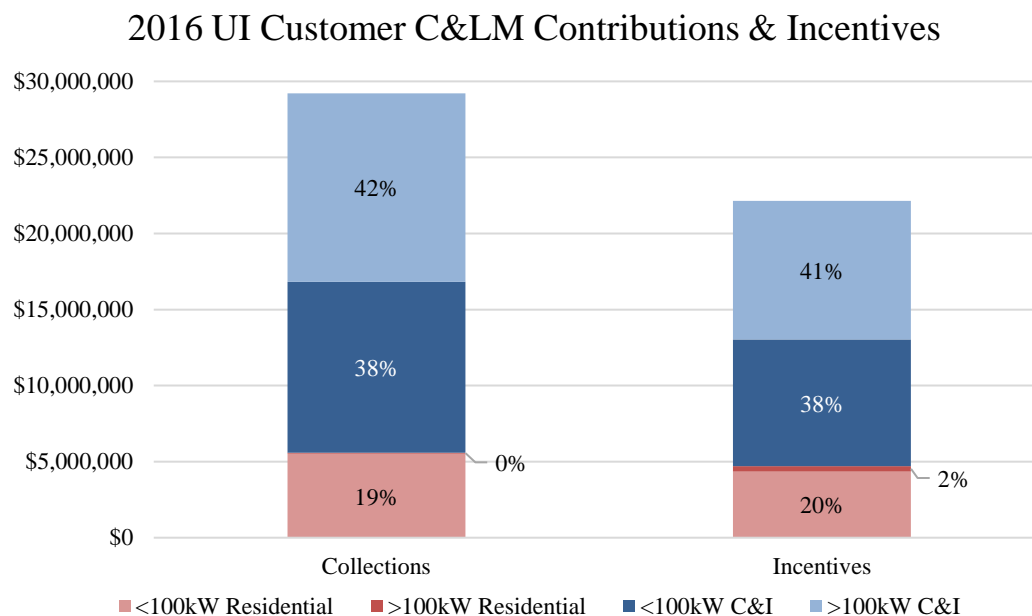

EQUITABLE DISTRIBUTION 2016-2017

United Illuminating 2016

Table 11: 2016 United Illuminating, All Customers

2016		Collections	Incentives
Distressed Tracts	Amount	\$7,308,320	\$4,350,077
	% of Total	25.01%	19.64%
Other Tracts	Amount	\$21,909,604	\$17,796,908
	% of Total	74.99%	80.36%
All Tracts	Amount	\$29,217,924	\$22,146,986

Figure 3: 2016 Breakdown of United Illuminating Collections and Incentives by Size and Class

On an overall basis United Illuminating customers contributed \$29.2 million dollars, amounting to 19.62% of total 2016 collections, and received 18.92% of total incentives.

Across its 18 towns and 190 census tracts, UI identified 48 distressed census tracts in five of those towns. When disaggregated by income level, United Illuminating customers in distressed census tracts contributed 25.01% to the total collections and received 19.64% of total incentives (Table 11).

EQUITABLE DISTRIBUTION 2016-2017

However, DEEP's analysis reveals that while on a general basis UI did not achieve equitable distribution to distressed census tracts, it did meet the statutory requirement of equitable distribution to *small load* distressed census tracts in its territory as shown by Table 12.

Table 12: 2016 United Illuminating, All Customers ≤100kW

2016		Collections	Incentives
Dist. Tracts	Amount	\$3,259,038	\$2,713,668
	% of Total	11.12%	12.01%
Other Tracts	Amount	\$13,496,685	\$9,974,837
	% of Total	46.19%	45.04%
All Tracts	Amount	\$16,755,723	\$12,688,505
	% of Total	57.35%	57.29%

Small load customers in distressed census tracts contributed 11.15% of UI collections, but received 12% in incentives, the majority of which was distributed in Bridgeport and New Haven census tracts due to strong multifamily and HES-IE pushes in those towns. Additionally, 23 of the 48 distressed census tracts with small load customers in UI territory achieved equitable distribution as shown in Table 13. DEEP applauds the efforts by UI to serve these census tracts and customers and encourages continued focus on driving program participation in these areas.

All Tracts	Amount	\$11,236,770	\$8,335,108
	% of Total	38.46%	37.64%

Additionally, UI's large load customers achieved equitable distribution, as shown in Table 16. This is primarily attributed to the fact that despite contributing only 41% of total UI collections, these customers received about half of the incentives. Large load, C&I customers in distressed tracts received a substantial portion of the incentives in particular, receiving over 300% more incentives in 2016 than 2013. This is likely explained by the higher number of distressed tracts in UI territory than in Eversource, the greater concentration of large industries and multifamily housing centers in southern Connecticut, and the fact that C&I customers pay a lower rate.

Home Energy Solutions (HES) 2016

While it is not required by statute, DEEP requested that the EDCs provide data on the total amount of incentives paid under the Home Energy Solutions (HES) program and the Home Energy Solutions- Income Eligible (HES-IE) program separately. This data is also broken down into single and multi-family unit participation. This allows for a closer look at each EDC's penetration of the residential marked in distressed census tracts. It should be noted that these are HES and HES-IE units that were funded by electric ratepayer contribution funding, as opposed to natural gas contribution funding.

Table 18: 2016 Eversource- HES and HES-IE Participation

In 2016, the data demonstrates that more customers in Eversource's distressed census tracts participated in the HES program at market rate than the no-participant-cost HES-IE program (Table 18). Considering that Eversource census tracts are determined by Experian with a criterion that 100% of a tract be less than 60% of SMI to qualify as "distressed," this is counterintuitive. If

EQUITABLE DISTRIBUTION 2016-2017

100% of customers in a tract are at 60% or less than SMI, all would also be eligible for HES-IE. DEEP has considered two possible explanatory scenarios that would produce such result:

- a) The majority of the HES units in distressed tracts were larger multifamily properties. It is conceivable that the property owners chose to participate in the market-rate Multifamily Initiative rather than income eligible.
- b) The single family units that (should) have qualified for HES-IE did not follow the procedure needed to qualify.⁷

HES-IE participants in distressed census tracts received about 3% of the total HES-IE incentive allocations in Eversource's territory and represented 2% of the participation.

United Illuminating served more customers in distressed census tracts with HES-IE program incentives than with HES. While UI experienced similar results where customers in distressed tracts did not participate in HES-IE, it is possible that these households would not meet the income eligibility requirement of being less than 60% of SMI. The threshold for determining which census tracts are distressed in UI territory also includes households that are 60% of SMI (rather than just less than that percentage). Customers in distressed census tracts received about 17% of the total HES-IE incentive allocations in UI's territory and represented 43% of HES-IE participation.

The incentives allocated to residential customers in distressed census tracts are lower than what was collected from those same customers in each company's territory in each company's territory, but HES-IE is just one of the services available for customers to utilize the available funds.

Connecticut Green Bank 2016

DEEP analyzed the Green Bank's efforts in achieving equitable distribution separately from the utilities, but utilized a similar methodology. The Green Bank operations are partially funded by a 1 Mill Collection charge on utility customer's monthly bill, in addition to many other forms of funding (CGS §16-345n(b)). The Green Bank received approximately \$25 million in 1 mill collections and distributed approximately \$16 million in incentives across in 2016. The Green Bank does not track the per-census tract contributions as the utilities do, but DEEP has simply extracted these amounts by considering the fact that as the total collections are technically a total of 6 Mills, the 1 Mill Contribution is equal to one sixth of that.

Table 20: 2016 Green Bank Activity

Green Bank 2016		Collections	Incentives
Dist. Tracts	Amount	\$1,822,346	\$1,457,818
	% of Total	7.3%	9%
Other Tracts	Amount	\$22,987,924	\$14,708,967
	% of Total	92.7%	91%
All Tracts	Amount	\$24,810,270	\$16,166,785

⁷ <https://www.energizect.com/your-home/solutions-list/save-energy-and-money-all-year-long/>

EQUITABLE DISTRIBUTION 2016-2017

The Green Bank reports its distribution by SMI band (e.g. “<60%”, “60%-80%”, “80%-100%”, etc.), aggregating the incentives distributed by band, but does not indicate load size of its customers (i.e. <100kW or >100kW). Therefore, DEEP determines equitable distribution purely based on the proportions of collections and incentive distributions by income bands. Thus, based on these reports, DEEP has found that technically the Green Bank achieved equitable distribution in 2016.

The incentives do not reflect the investment made by the Green Bank in the form of loans, leases, and credit enhancements, all which are designed to improve access to renewable energy programs. These additional investments are on the order of \$2.9 million. DEEP has opted to not include these as part of the incentives to retain analysis consistency between the Green Bank and the companies, but does acknowledge their inclusion and effects.

Analysis of Equitable Distribution 2017

EDCs Overall 2017

In 2017, the EDCs collected \$152 million through the 3 Mill Collections and the CAM, and disbursed \$111 million in incentives for energy efficiency projects. Customers in distressed census tracts contributed approximately 6.7% to the fund and also received about 5.6% of the total statewide incentives (Table 22). These proportions suggest that utilities are making efforts to maintain equitable distribution of incentives. DEEP will evaluate these findings further on a company by company basis in this section.

Table 21: Overview of 2017 Equitable Distribution of Eversource, UI, and the Green Bank

2017	Census Tract Category and Customer Size	% of Collections	% of Incentives	Equitable Distribution Achieved?
Eversource	Distressed Census Tracts	2.29%	2.3%	Yes
	Small Load Distressed Census Tract*	1.42%	1.74%	Yes
United Illuminating	Distressed Census Tracts	24.4%	18.1%	No

Figure 4: 2017 Breakdown of Eversource Collections and Incentives by Size and Class

Trending with 2016 data, Eversource customers contributed 80% of the total statewide electric collections in 2017, and received just over 79% of the total incentives disbursed.

In 2017, Eversource reported 14 census tracts out of its 915 total, as distressed. Eversource continues to use Experian to match the census tracts with customer billings, and then calculate the contributions and incentives for each tract. Only tracts where 100% of the population was below 60% of SMI were considered distressed. This is consistent with previous filings.

EQUITABLE DISTRIBUTION 2016-2017

Table 24: 2017 Eversource, All Customers <100kW

2017		Collections	Incentives
Dist. Tracts	Amount	\$1,731,190	\$ \$1,529,604
	% of Total	1.42%	1.74%
Other Tracts	Amount	\$68,546,645	\$55,168,520
	% of Total	56.04%	62.72%
All Tracts	Amount	\$70,277,835	\$56,698,124
	% of Total	57.5%	64.5%

Eversource distributed a greater proportion of incentives to small load, distressed census tracts to what it received in collections from those customers, indicating equitable distribution (Table 24). On a census-tract-by-census-tract basis, Eversource achieved this in 3 out of the 14 distressed census tracts (Table 25).

While Eversource's distressed customers were equitably served, other customer classes did not receive incentive proportions approximately equivalent to their collection contributions, DEEP notes that 2017 was the first year affected by the June Special Session Public Act 17-2 diversion of the C&LM and RGGI funds and program budgets were reactively adjusted to this. While efforts were made to maintain low-income program budgets, it is evident that these adjustments impacted other programs such as those for large load C&I customers (Table 28). DEEP encourages the companies continued dedication to serving distressed communities in Connecticut during this period of funding limitations.

Figure 5: 2017 Breakdown of United Illuminating Collections and Incentives by Size and Class

Overall, in 2017, United Illuminating small load customers in distressed census tracts contributed 11.7% of total collections and received 5.41% in incentives. Therefore DEEP has determined that United Illuminating has not achieved equitable distribution in 2017.

EQUITABLE DISTRIBUTION 2016-2017

All Tracts	Amount	\$17,660,579	\$12,612,417
	% of Total	58.1%	54.2%

United Illuminating has 186 census tracts in its territory, many of which cross town lines. Table 32 below shows the collections and incentive disbursements to small load distressed census tracts. On a narrow analysis of the data, United Illuminating achieved equitable distribution in 4 out of its 48 distressed census tracts in 2017 which was a significant change from 2016.

DEEP notes that the diversions may have been the partial cause of this shift, as well as the fact that a major portion of the HES-IE incentives were disbursed to eligible customers that do not live in distressed census tract.

It should be noted that United Illuminating achieved equitable distribution to its other customer classes in distressed census tracts including distressed, large load commercial and industrial customers. DEEP recognizes the efforts of United Illuminating in 2017 and encourages similar efforts going forward.

In 2017, customers in distressed tracts in Eversource's territory were primarily serviced through the Home Energy Solutions- Income Eligibly (HES-IE) program, which provides customers below 60% of SMI the same services as the Home Energy Solutions (HES) program at no cost. Customers in distressed census tracts received approximately 4% of total incentives used for HES-IE services overall, which was also equivalent to 68% of the incentives allocated to customers in those census tracts that wished to participate in HES/HES-IE. This indicates that customers in distressed census tracts were primarily served at no (additional) cost through the HES-IE program.

In United Illuminating's territory, customers in distressed census tracts were also primarily serviced through HES-IE, receiving about 85% of the total incentives used for HES-IE services, and about 9% of HES incentives. DEEP notes that 48 distressed census tracts make up about 26% of the total tracts, and that majority of units served were in multifamily buildings.

DEEP has determined that distribution of HES-IE and HES services to be equitable as households qualifying for the no-cost program are not limited to just distressed census tracts. Overall, more money was allocated to low-income HES services than were collected from residential customers in distressed census tracts.⁸ It is clear that both utilities are making

⁸ It should be noted that HES-IE serves income eligible customers statewide, not just in distress-census tracts.

EQUITABLE DISTRIBUTION 2016-2017

significant efforts to provide low or no cost HES services to their customers in distressed census tracts through their HES-IE program funding.

Connecticut Green Bank 2017

In 2017, the Green Bank provided DEEP with detailed records documenting the distribution of funds, and credit enhancements across the state which allowed a more granular consideration of distribution practices than in previous years. As previously stated, the Green Bank is partially funded by a 1 mill Collection charge on utility customer's monthly bill (CGS §16-245n(b)), but does not track the expenditure of the charge explicitly. DEEP estimated that the Green Bank received approximately \$25.5 million in 1 mill collections and distributed over \$12.1 million in direct incentives in 2017. However, this amount does not entirely reflect the private investment leveraged using the 1 mill collections, or the credit enhancements or loans offered by the Green Bank.

Table 37: 2017 Green Bank Activity.

2017		Collections	Incentives
Dist. Tracts	Amount	\$1,705,622	\$1,340,511
	% of Total	6.7%	11%
Other Tracts	Amount	\$23,746,042	\$10,780,561
	% of Total	93.3%	89%
All Tracts	Amount	\$25,451,663	\$12,121,027

Based on these estimates and reported incentive allocations, DEEP has determined that the Green Bank again achieved equitable distribution to distressed census tracts. The Green Bank's reporting does not include a load metric (i.e. small load vs. large load) and therefore DEEP's determination is based solely on income bands. However, DEEP notes CGS §16-245ee does indicate that reporting should include distribution to small and large load customers and therefore in future filings, DEEP requests that the Green Bank include this metric.

Additionally, the Green Bank has increased its incentive distribution to distressed census tracts over the past six years, as shown in Figures 6a-6c below. DEEP encourages this trend to continue especially as Connecticut continues to pursue greater clean energy access for low income communities.

EQUITABLE DISTRIBUTION 2016-2017

Figure 6a- Annual Aggregate Green Bank Incentives Distributed to Customers <60% of SMI

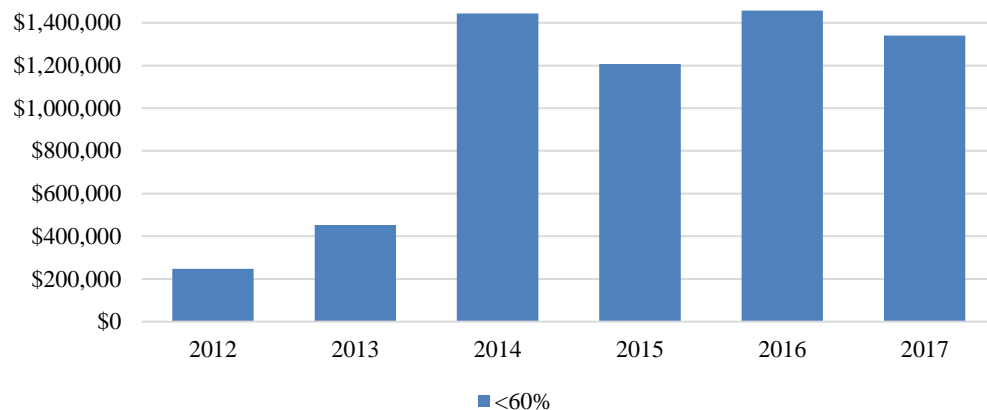

Figure 6b- Annual Aggregate Green Bank Investment in Programs for Customers <60% of SMI

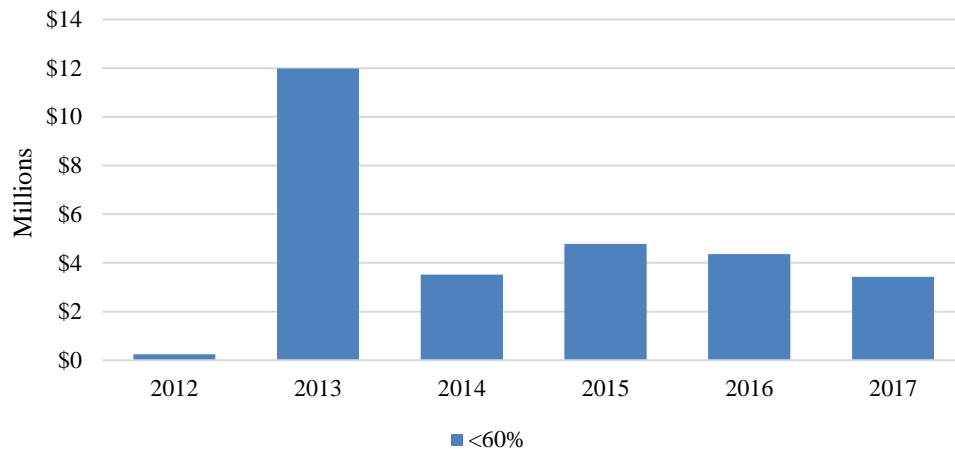

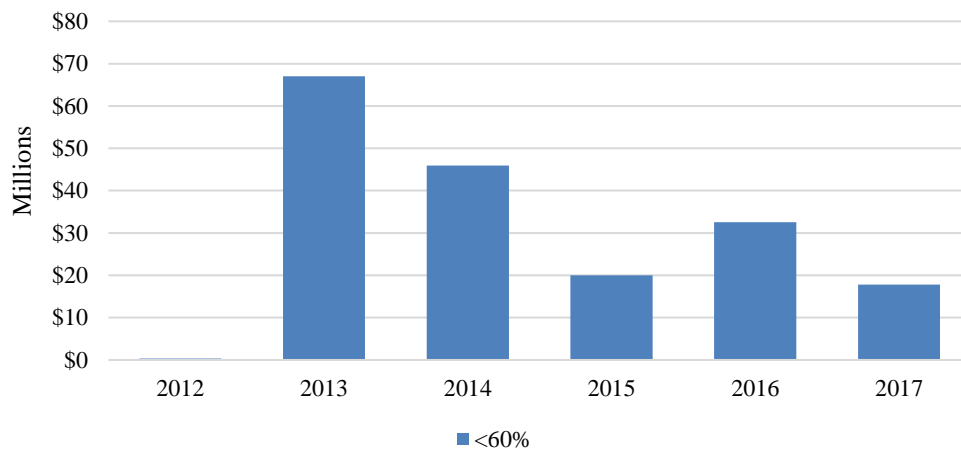

Figure 6c- Annual Aggregate Private Capital used for Programs for Customers <60% of SMI

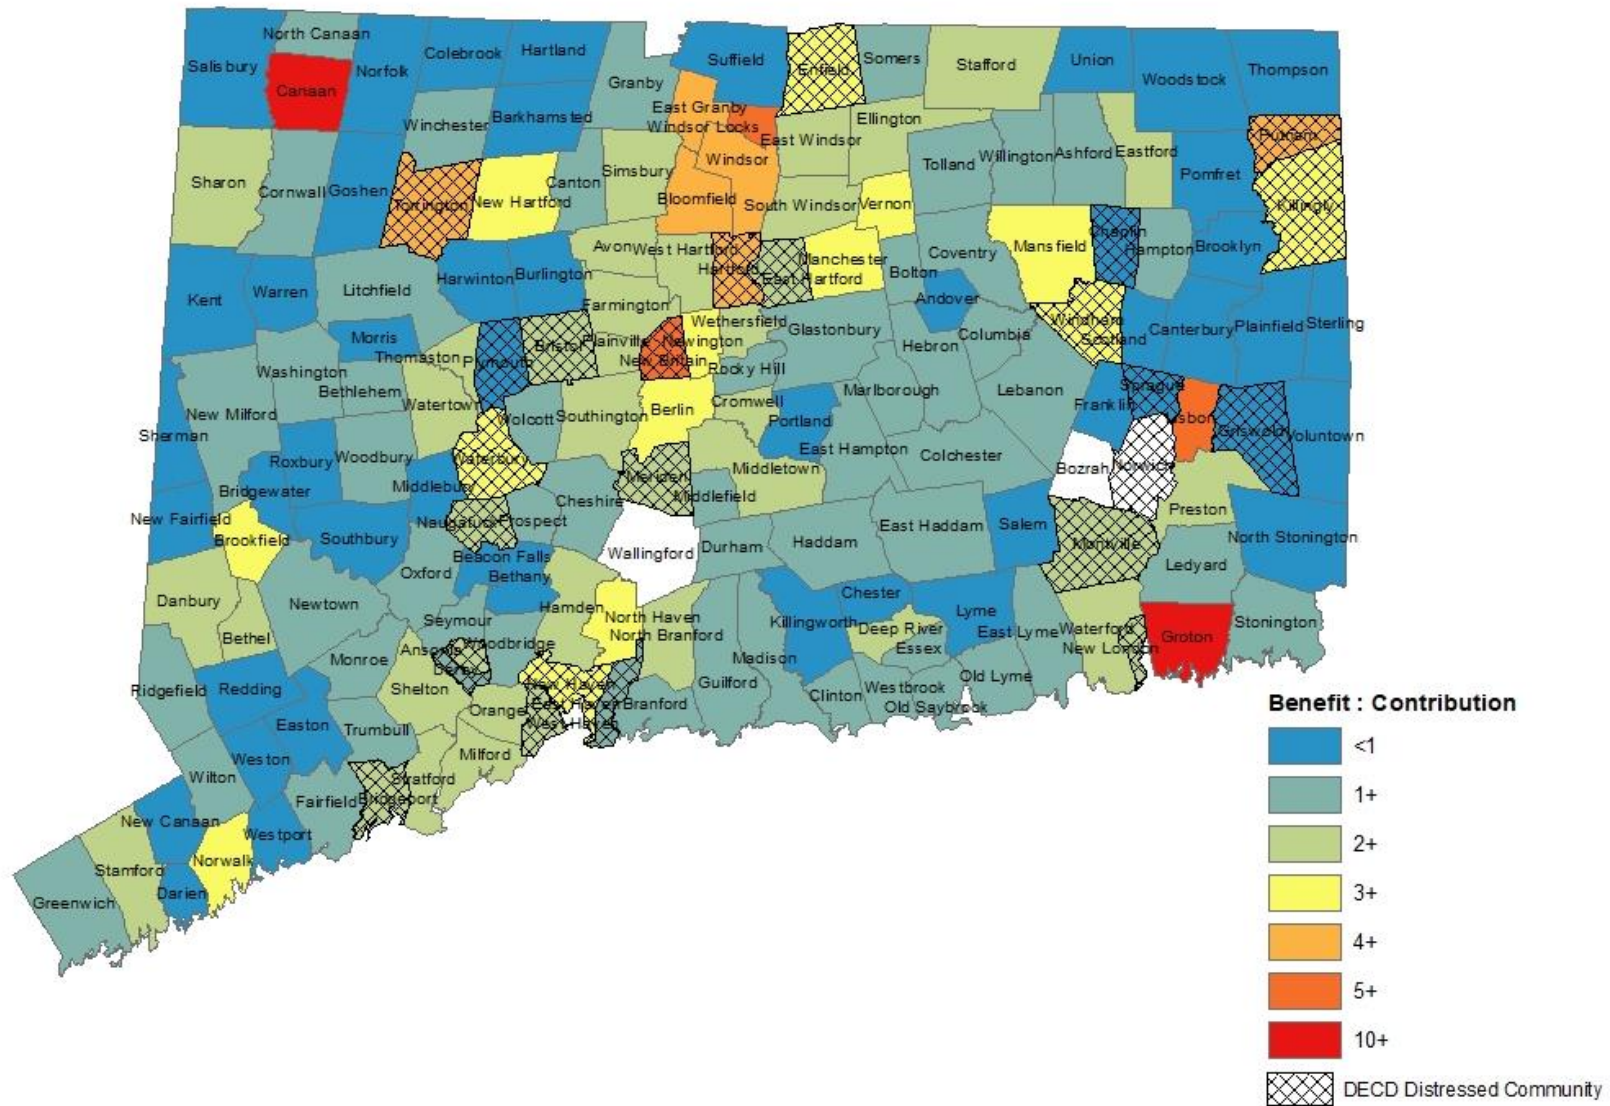

Benefit-Cost Ratio Analysis (2017)

Many changes have occurred on the state level and programmatic level since the practice of evaluating equitable distribution began in 2012, and opportunities exist to improve the evaluation process. The current methodology uses distribution of monetary incentives as the only success metric and does not account for the fact that many low-cost programs can leverage large energy cost savings for consumers. An evaluation process that incorporates energy cost savings would provide a more accurate analysis of these programs which are not designed to simply be one-to-one (i.e. “put a dollar in, get a dollar out), but to leverage CAM and 3 mill charges to generate even greater savings.

Currently, the companies do not provide energy savings by census tract, but do on a town-by-town basis in their annual legislative reports. DEEP has used this data to further assess the distribution of the 2017 C&LM fund statewide (the most recently available data).⁹ The maps below visually depict the distribution of the funds, and their effectiveness in generating economic benefit in a town (defined as the sum of incentives and the resulting energy cost savings). DEEP will continue to work with the utilities to refine this approach to more comprehensive review equitableness of the programs and their benefit to participants.

⁹ The 2018 equitable distribution data is scheduled to be available July 1, 2019.

Benefit-Contribution Ratio Map

The above map was calculated by comparing the contributions that ratepayers in a town made in 2017, to the sum of the incentives ratepayers in that town received, and the resulting annual energy cost savings from those incentives. As shown by the map, any towns that are not blue (white coloration indicates a town that is not served by UI or Eversource, but by a municipal utility) had a benefit-contribution ratio of one or higher; roughly three quarters of the state.

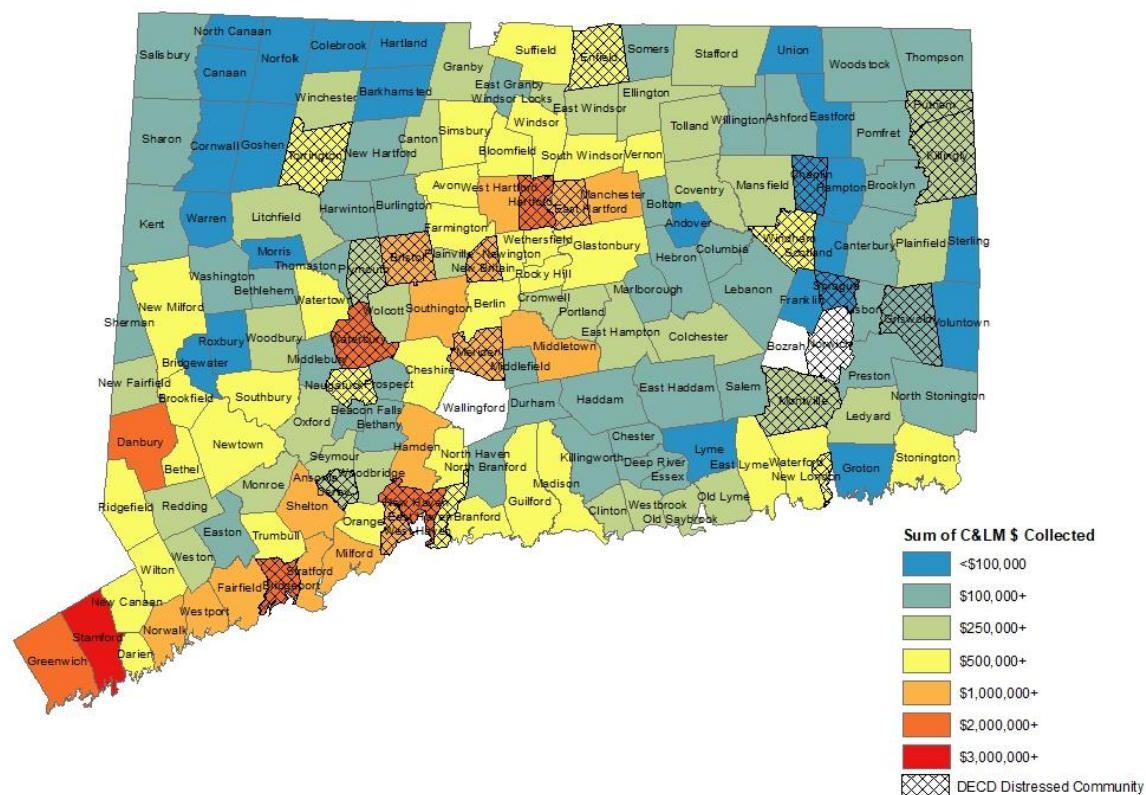

The interpretation of this is that these towns received greater economic benefits than what they contributed through 3 mill and CAM charges as a result of those charges. Additionally, towns filled with crosshatch indicate those that are identified by the Connecticut Department of Economic and Community Development as the 25 most fiscally and economically distressed municipalities. Comparing towns' contribution-benefit ratios to the list of DECD distressed communities revealed that 21 of these 25 towns had ratios greater than one.

The maps below further clarify that using a gradient to symbolize collections and benefits received from the program. Towns that generally contribute less, likely due to population, accordingly have received proportionate benefits on the scale, and vice versa. For example, Brooklyn, Connecticut' contributions and benefits fall roughly within the same range of the scales (\$186k and \$176, respectively), signaling that generally the programs have provided returns to customers equivalent to what they contribute on their electric bills. DEEP finds that these maps support the conclusion that the companies achieved equitable distribution on an overall basis.

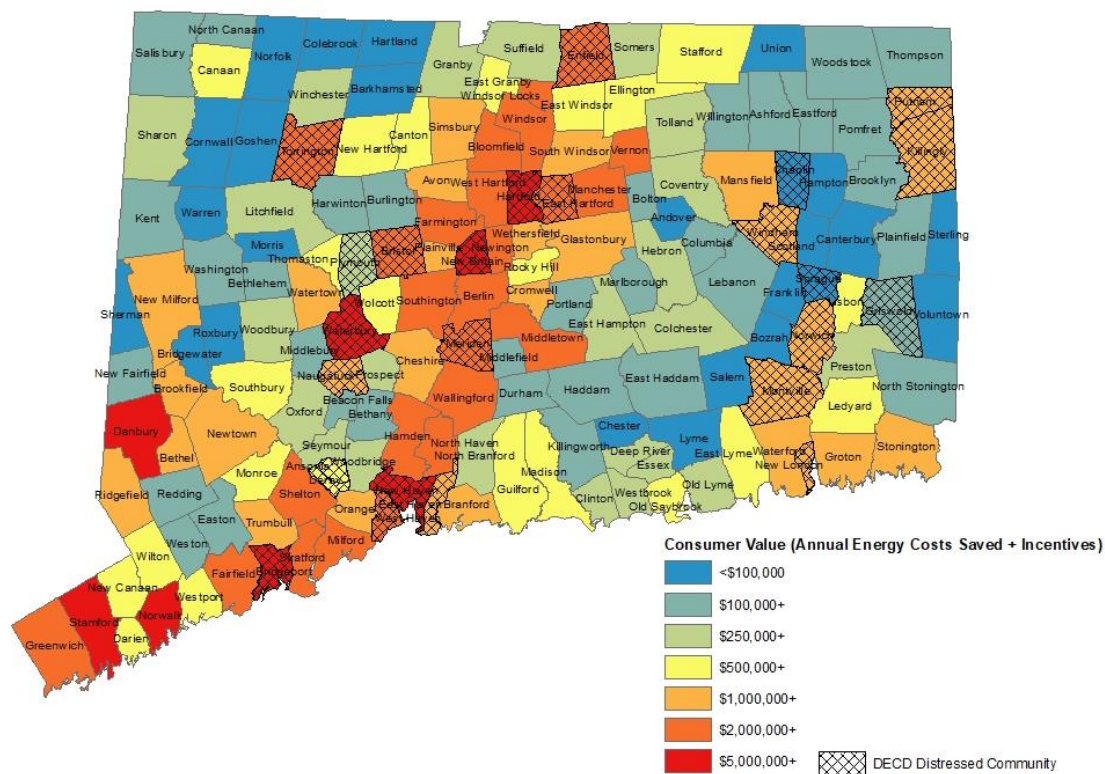

There are some instances of disproportionate benefits to contributions, such as the town of Enfield, Connecticut \$971k collectively, and received a total benefit of \$3.7 million. At first glance, this would appear inequitable for other towns. However, using our statutory analysis method (i.e. simple comparison of the collections to incentives) it is revealed that only \$1.1 m of the total benefit was from incentives. This example highlights the usefulness of this modified benefit-contribution ratio analysis, by showcasing the impact that these programs have. The collections on ratepayer electric bills can help to realize energy efficiency upgrades that return over two times the value of the collections in the form of incentives and energy cost savings. Furthermore, based on this analysis, in 2017, energy projects resulting from the C&LM programs and funding resulted in energy cost savings that alone exceeded the contributions that town made.

The statutory analysis requirements of CGS §16-245ee are useful at taking a granular look at the distribution of these programs statewide. However, the conclusions produced from that level of granularity can sometimes be inconsistent with the scope and scale of these statewide programs. Going forward, DEEP recommends that this level of analysis, including the energy cost savings, be used to review the C&LM programs on an overall basis in order to better understand the impact they have statewide.

Collections by Town 2017

Benefits (Incentives+Energy Cost Savings) by Town 2017

Conclusions and Recommendations

On an overall basis, DEEP has found that with some variance, the EDCs and the Green Bank are achieving equitable distribution, and that this evaluation is comprehensive and reasonable for this two year period.

DEEP does note that the C&LM programs are funded from a variety of sources, and the use of these funds to implement energy savings statewide come in the form of not just customer incentives, but program administrative costs, research and development, marketing, etc. Therefore, the data on contributions and incentive disbursements used by this evaluation serves as a helpful tool for DEEP to assess the programs' effectiveness at serving the entire state comprehensively, but is not the only indicator of program success. DEEP is committed to refining the equitable distribution evaluation process by considering the costs and benefits applicable by census tract and customer class. DEEP will review options for other possible analysis techniques prior to submitting the 2018 Equitable Distribution report.

APPENDIX A

Past Context

Prior to passage of Section 101 of Public Act 11-80, neither the EDCs nor the Green Bank were compelled by any directive to compile relevant data along census tract parameters. Given the circumstances at that time, the EDCs submitted their data on a town-by-town basis, and DEEP conducted its evaluation for the 2010 and 2011-2012 Equitable Distribution Report (“2010 ED Report, 2011-2012 ED Report”) using the economically distressed municipalities list published by the Department of Economic and Community Development (“DECD”) as a proxy in the absence of the census tract-specific criteria.

In 2012, DEEP began to anticipate that the C&LM program participation could result in wide variances in spending levels across the state, year to year. For example, smaller towns could experience extreme variations due to commercial customer program participation in a sparsely populated community. While the EDCs were still unable to report data on census tract basis, they found that they were able to disaggregate data according to the one hundred kilowatt peak demand threshold in each municipality and by customer class (residential vs. C&I). As a result, DEEP began requesting that the EDCs additionally present the required data according to such parameters.

This explanation may appear incongruous with previous DEEP directives which established that data must be submitted on such terms starting in 2016. The reasoning for this is that the utilities submitted both the 2011 and 2012 data in such a way that it made more sense for DEEP to do a joint assessment of those years.

Past Methods of Census Tract Identification

Prior to the 2013 report, the EDCs did not produce data organized by census tracts. For both the 2010 and the 2011-2012 reports, DEEP condoned the submission of required data on a town-by-town basis using the DECD’s 2010 list of distressed municipalities, as defined by Conn. Gen. Stat. § 32-9p(b).¹⁰

In response to Condition Nos. 8 and 9 of DEEP’s approval with conditions of the 2013-2017 C&LM Plan, Eversource and UI achieved the technological capability to submit 2013 data on a census tract basis. For each census tract in their respective service territories, each EDC provided: (1) the amount contributed through the \$.003 per kilowatt hour (“kWh”) C&LM

¹⁰ "Distressed municipality" means "any municipality in the state which, according to the United States Department of Housing and Urban Development meets the necessary number of quantitative physical and economic distress thresholds which are then applicable for eligibility for the urban development action grant program under the Housing and Community Development Act of 1977, as amended, or any town within which is located an unconsolidated city or borough which meets such distress thresholds." CGS § 32-9p(b).

EQUITABLE DISTRIBUTION 2016-2017

charge on customers' electric bills ("3 Mill Collections") in 2013; and (2) the amount of incentives disbursed by the EDCs from funds for C&LM programs in 2013.¹¹ For each census tract, customers were split into two groups according to usage: small load customers (customers with an average monthly peak demand of 100kW or less), and large load customers (customers with an average monthly peak demand greater than 100kW). Moreover, with each size grouping, Eversource and UI further disaggregated the data by customer class (residential customers and commercial and industrial ("C&I") customers). Lastly, the EDCs identified the census tracts within their respective service territories wherein the median income is not more than 60% of SMI for small and large customers with a maximum average monthly peak demand of 100kWh, as defined by Sec. 16-245ee. For the purposes of this report, the qualifying census tracts so identified will be referred to as "distressed census tracts".

In a joint letter filed August 20, 2016, the EDCs provided a narrative further explaining the processes they used to comply with the Orders. While both the EDCs achieved similar equitable distribution data submissions, they acknowledged that they employed differing information technology engagements to arrive at the data that incorporated census information to identify distressed census tracts.

Eversource obtained census tract and distressed census tract information directly from Experian.¹² As for UI, it first associated each meter with its latitude and longitude, and then identified the distressed census tract based on the 2012 American Community Survey Five Year Estimates, which were released by the U.S. Census Bureau in December 2013. UI was then able to assign a census tract to each meter, thereby identifying the meters that are within the distressed census tracts. Thereafter, the information technology departments of both EDCs processed billing data and census tract information into separate databases to create their respective 2013 equitable distribution data submissions.

Additionally, at DEEP'S request, the Green Bank submitted an Excel workbook of approved program projects during calendar year 2013 that included details relevant to equitable

¹¹ EVERSOURCE, UI and the Green Bank each provided census tract codes that varied slightly in presentation. To unify these census tract codes for the purposes of this report, while still providing a unique identifier for each of Connecticut's census tracts, DEEP will generally display just the first 4 digits of the last 6 numbers of a given geographic identifier ("GEOID") if the last 2 digits are zeroes. In the event that either of the last 2 digits is not zero, DEEP will display the first 4 digits of the last 6 numbers of the GEOID plus a hyphen and the last 2 digits. For example, if the last 6 digits are 123400, it would be displayed simply as 1234. If it is 123401, it would instead be displayed as 1234-01.

The C&LM Program charge is one of three charges that comprise the Combined Public Benefits Charge that appears on EVERSOURCE's and UI's bills. The other two charges are the Renewable Energy Investment charge of \$0.001/kWh, of which the proceeds go to the Green Bank for its renewable energy programs; and the System Benefits charge, of which the proceeds go to fund certain public costs.

¹² Experian identifies itself as a global information services company that provides data and analytical tools to clients around the world. EXPERIAN (last updated 2015), available at www.experian.com/

EQUITABLE DISTRIBUTION 2016-2017

distribution such as project identifiers, locational data (census tract and municipality information) and incentive disbursements.

The narratives and information provided by the EDCs and the Green Bank were deemed adequate by DEEP for the 2013 Report's purposes. However, as DEEP's evaluation of the data has become more detailed, it requested that the EDCs and the Green Bank provide an additional explanation of their distressed census tract identification methods for this 2016 report. Specifically, DEEP felt it was unclear how a census tract's median income was identified as SMI varies by household size.¹³

¹³ SMI varies by household size, as determined by the Department of Social Services
