Project Overview

10.15.15
What is the “Connecticut Solid Waste System Project?”

• “CSWSP” includes 6 facilities throughout CT
  • 4 transfer stations: Ellington, Essex, Torrington, Watertown
  • The MIRA recycling center and Trash Museum at 211 Murphy Rd., Hartford
  • The “MidConnecticut” Connecticut Waste System Resource Recovery Facility (RRF), South Meadows, Hartford

• The system handles over 700,000 tons of trash/year, and 50,000 tons of recyclables. Provides approx. 1/3 of CT in-state disposal capacity.

• Facilities began operation in late 1980s and 1990s.

Why Redevelopment is Needed

• RRF exceeding design life.
  • Aging equipment difficult and expensive to maintain
  • Plant shutdowns cause backups in processing trash
  • Maintaining the current facility will require major capital investments, with costs passed along to member towns, including Hartford

• Process to receive and grind trash into “RDF” fuel is inefficient.

• Newer waste conversion technologies can increase efficiency and decrease environmental and community impacts (greater energy production, lower emissions, etc.).

• Current system built with expectation of steady supply of trash. Today, state seeks to recycle more and decrease trash.

• Statutory obligations: requirement for solid waste system to be consistent with the State’s Solid Waste Management Plan (CGS Sec. 22a-229).
What CT is Doing to Solve the Problem

• In 2013 the state’s Resources Recovery Task Force listened to concerns about community impacts of the South Meadows RRF.

• The Task Force recommended the state move to bring more innovative technologies into the state to replace aging RRFs.

• In 2014, the legislature established a process to seek a developer for the CSWSP (P.A. 14-94).

• DEEP is drafting a Request for Proposals (RFP) with input from MIRA, City of Hartford, and others.
  • Final proposal to be selected by DEEP in 2017
  • Final project subject to permitting and local approvals
What are the Project Goals?

**INCREASE:**
- Quality Jobs
- Materials Recovered
- Efficiency of Energy Recovery
- Purchase Local Goods and Services

**DECREASE:**
- Emissions
- Residuals for Disposal
- Negative Community Impacts
- Amount of Trash Combusted or Landfilled
What Could the Future Hold in the South Meadows?

• Smaller overall facility “footprint”
• Closed system, zero-emissions conversion technologies for portion of trash
• Reduced combustion of trash under more stringent emissions standards
• Sorting recyclables from incoming trash
• Phased down throughput as state recycles more = fewer trucks
• Improved visual impact
• Other…

Biogas Facility (Planned)
Grove City, OH

These images are intended to give a general sense of the visual impact of potential future development. They do not encompass the full range of technological possibilities.
How this will Impact Hartford?

- New host benefit agreements, including financial benefits for the City.
- Employment opportunities.
- More sustainable option for managing Hartford’s and other communities’ trash and recycling.
- Less pollution = better for the environment AND human health.
What Outcomes are NOT Acceptable?

- Unmanageable / noncompetitive costs for service to Hartford and other communities.
- Technologies that lack an environmental track record.
- A 100% mass burn or RDF process without modern recycling/waste conversion add-ons.
- A proposal that “locks in” current waste composition and does not account for increased recycling.
- Proposals that can not receive permits and/or necessary local approvals.
- Developers unable to finance and complete project.
- The status quo.
Community Involvement is Key

- Project should reflect priorities of host communities.
- To view draft and other info, visit: www.ct.gov/deep/ResourceRediscovery.
- Give comments on draft RFP through October 27, 2015 by email to: lee.sawyer@ct.gov.
- Throughout process, many other opportunities to comment:
  - City of Hartford representation in selection process
  - Public review and comment on final proposal(s) in 2017
  - Legislative review and likely hearing prior to final selection
  - Public notice of permit applications
  - Local approvals, including P&Z
Discussion: What are Your Project Goals?

Welcome to Sharon Lewis, Executive Director, CT Coalition for Environmental Justice, for closing remarks.
