The District is requesting that an alternate method of measurement be approved for use on the subject project to allow the use of GPS/RTS inspection tools and accompanying software to measure and calculate final pay quantities.

We have been in contact with AEC Applications (Greg Sardinas) and understand the proficiency and documentation requirements.

The proposed method of measurement will be utilized for items paid for based on quantities of Linear Foot, Area and Volume.

Should you have any question relating to this matter, please contact Mr. Craig Albert at (203)996-0859.
