Input Review Report	9

Updates

New to 2.5

- Incorporates AASHTO BDS 8th edition revisions for stiffened beam ends.
- Added Emergency Vehicles
- Added ability to add user to additional vehicles

New to 2.4

- [Input Review Report XML](#)
Input Review Report is now an XML report versus a plain text report.
- [Detailed and Summary Ratings](#)
The rating output has the ability to show detailed or summary ratings.
- [Workbook Activation Method](#)
The program is now a read-only xlsm workbook as-opposed to the template workbook.
- Plus additional minor improvements
 - Sorting of Beam End IDs
 - Bug Fixes
 - UnDefined system and condition factors
 - Eccentricity formula

New to 2.3

- [UnDefined Beam Ends](#)
Now supports custom capacity checks for special beam ends.
- [Multiple BrR LRFRReports](#) for reactions
Now supports batched BrR runs.
- [Import Old Book](#)
Feature can be used to bring in input data store in older versions of the spreadsheet.
- [Generate Input Review](#)
The Input Review replaces printing to PDF select spreadsheet tabs to add to the load rating report.
- Localized Section Loss Analysis for Stiffened Webs
A new check was added to analyze the compressive resistance of the area with localized section loss for stiffened webs. Note that a new input variable is required: Stiffened Inputs -> H.loss.
- Plus additional minor improvements
 - Default XML path will direct to AASHTOWare BrR 6.8 Folder vs 6.7 folder
 - Auto filter, Sorting & Clearing contents before runs
 - Bug fixes
 - More behind the scenes improvements

User Input Data

This section discusses how the user will use the spreadsheet to compute ratings. At the end of this document there are PDFs of each sheet of the Beam End Spreadsheet with samples of inputted values.

Basic Spreadsheet Organization & Operation

The spreadsheet is designed to analyze multiple beam ends. Each row of each sheet corresponds to one beam end. Each beam end is identified by three criteria: Span, Member, and Support. Each sheet starts with these three columns; all the inputs in that row are specific to that beam end. The order of the beam ends does not need to be the same on each sheet. There shall be no blank rows between inputs, the program will terminate when it encounters a blank row. The preferred nomenclature for the Beam End Identification is the bridge logging convention based on the most recent bridge inspection report, this nomenclature can be observed in the [Sample](#).

The workbook will be required to be activated by inputs can be made. The activation process will save a copy of the Beam End Spreadsheet and necessary data files (BE-AppData) to the users References File for the Bridge. Click **Start** on the [Introduction](#) tab and follow the on-screen instructions.

Section Properties Input

Stiffened Inputs

The [Stiffened Inputs](#) tab is used to input the beam's original section properties and section losses for beam ends with bearing stiffeners. For the input of these variables see [Schematics](#) S-BE.1, S-BE.2 and S-BE.3.

UnStiffened Inputs

The [UnStiffened Inputs](#) tab is used for the inputs for the beam's original section properties and section losses for beams ends without bearing stiffeners. For the input of these variables see the [Schematic](#) S-BE.4 and S-BE.5.

UnDefined Inputs

The [UnDefined Inputs](#) tab is used for the inputs for beam ends/reactional forces that are not supported by Stiffened and UnStiffened modules. The UnDefined module can be used to analyze bolsters, asymmetric sections, or beam ends with severe localized corrosion where typical methods may not be applicable. Capacities and section properties must be computed outside of the spreadsheet and input into each corresponding column. Leaving R_e (eccentricity ratio) blank will omit consideration of the axial load magnification, which is used to account for eccentricities caused by end conditions and localized corrosion.

Loads

The [Loads](#) tab is used to input the reaction at each beam end. Either manual entry or BrR Automatic Import is supported. For instructions, see [BrR Automatic Import](#).

Load Factors

The Load Factors tab is used to input the Strength Load Factors for each beam end and each loading. Either manual entry or automatic generations of the load factors are supported. For automatic generation a separate spreadsheet is used, "Permit Truck Live Load Factor_v1.1.xlsx". This spreadsheet can be found within the Beam End Spreadsheet Package. The Live Load Factors are dependent on Analysis Type, ADTT, and Structure Length; enter this information in the orange boxes prior to pressing the **Generate Live Load Factors** button. Please note if any of these fields are blank, live load factors will be computed as if those values were a zero.

BrR Automatic Import

The BrR Control tab is used to automatically import the reaction forces generated by BrR into the spreadsheet. The inputs for this sheet is not required if the user intends to manually input the reaction loads for on the Loads tab.

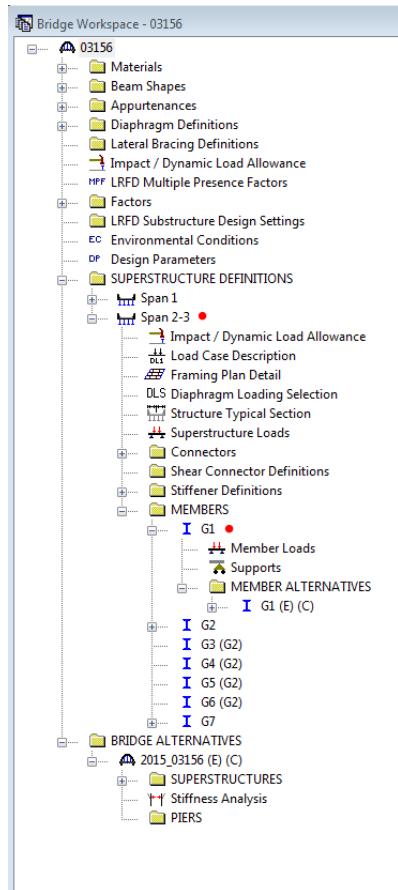

For computational intensive BrR models sometimes batch runs of the BrR model is required. Repeat steps 3 to 6 below to import multiple LRFR Reports for each BrR run. For every LRFR Report import, besides the first one, a new tab will be created.

1. In the BrR Control tab, click the **Populate IDs** button to populate the Beam End Identification columns with the data input by the user in the Stiffened Inputs tab, UnStiffened Inputs tab, and/or UnDefined Inputs tab.
2. The user will then need to link the Beam End Identification columns to the BrR Beam Identification columns, respectively. The reason for this is that the spreadsheet may use a different identification logging and naming convention then used in BrR. Below is an example on how to link IDs.

In this example, the span configuration is 3 spans, Span 1 is simple, and Span 2-3 is a two span continuous, the input would look like this:

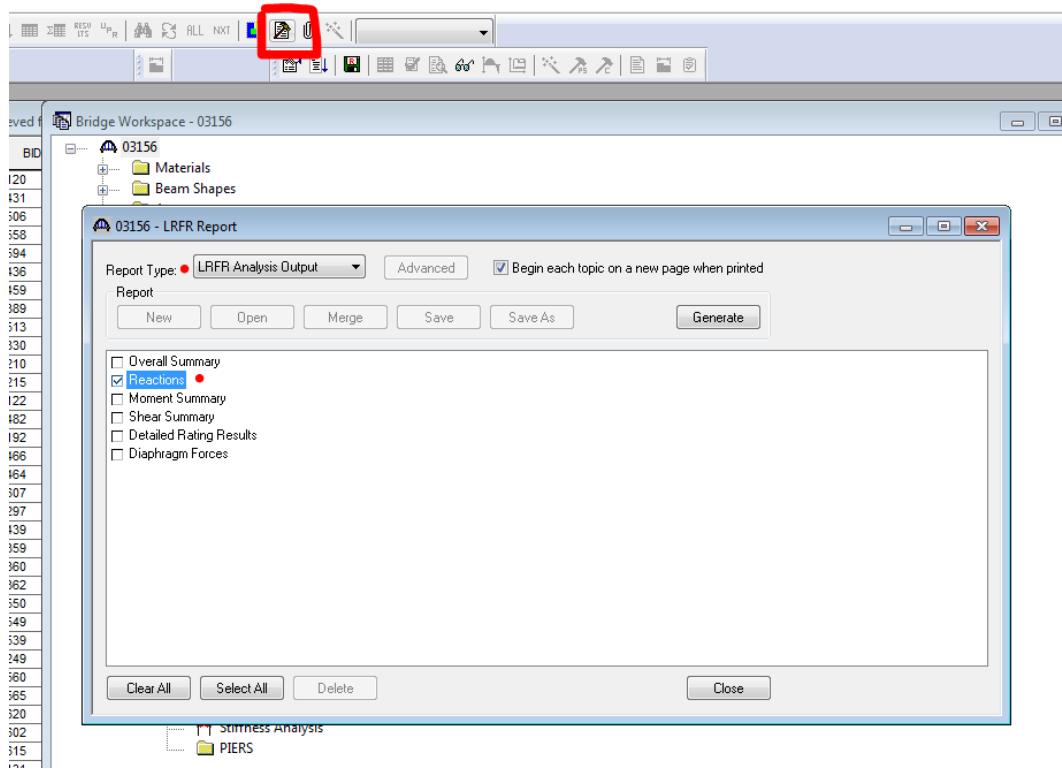

A	B	C	D	E	F
1	<Inputs	Loads->	BrR Control	Bridge	00000
2		LRFR Report Path	D:\Users\patriacm\Documents\AASHTOWARE\BrDR68\Reports\LRFRReport.XML	User	Pontis
3				Rundate	Wednesday, February 01, 2017 14:53:13
4	Top	Populate IDs	Default XML Path	Save XML Report	Version
5		Beam End Identification			AASHTOWare Beam Identification
6	Span	Member	Support	Superstructure Definition	Member Support
7	1	G4	S Abut	Span 1	G4 1
8	1	G2	Pier 1	Span 1	G2 2
9	2	G3	Pier 1	Span 2-3	G3 1
10	3	G5	N Abut	Span 2-3	G5 3

The BrR Beam Identification (Superstructure Definition, Member, and Support) must exactly match BrR inputted values.

Note that the Member is the name by the red dot above, and not the Member Alternative name.

3. The user should run the BrR model and generate all applicable LRFR Reports for Reactions, as shown in the screen image below.

4. The user shall set the LRFR Report Path to the report location by either the **Default XML Path** or **Custom XML Path** buttons. The **Default XML Path** button will set the path to the default location on the user's machine, this button will only work correctly if the BrR report path is set to the users "D" drive my documents folder as on the state in-house engineer machine. If BrR is not defaulted to this location, or accessing a previously saved LRFR Report, use the **Custom XML Path** button.
5. The user shall click the **Import LRFR Report** button, which will import the reactions into the **LRFRReport** tab. This tab will unhide itself when the **Import LRFR Report** button is pressed.
6. The **Save XML Report** button is used to save the LRFRReport for future use. Include this file in the References folder upon submission.
7. Select the **Loads** tab and click the **Populate IDs** button, then click the **Import BrR Reactions** button to import the reactions from the **LRFRReport** tab to the **Loads** tab.

Rating Factors

The final step is to select the **Rating Factors** tab and click **Compute Rating Factors** button.

Review Results

The ratings for each vehicle and beam end can be found on the **Rating Factors** tab. There are two different options to display ratings, Detailed and Summary.

Selecting the 'Detail Ratings' option will output beam end rating factors for all failure mechanisms for each vehicle for a particular beam end.

Selecting the 'Summary Ratings' option will only output the controlling beam end rating factors for each beam end per vehicle. Please note that failure mechanism between Stiffened, UnStiffened and Undefined will be enveloped and only the controlling Rating Factor for each vehicle will be displayed per Beam End ID. The 'Summary Ratings' option is selected by default.

Please note that an XML data file will be created in the BE-AppData folder with all ratings included.

To review the intermediate calculation values go to the [UnStiffened Outputs](#) tab and/or the [Stiffened Outputs](#) tab.

To review the governing rating factor for each vehicle go to the [Governing Ratings](#) tab.

To review the Legal and Permit ratings less than 1.0 for the Report, go to the [Low Legal](#) and [Low Permit](#) tabs, respectively.

Generate Input Review

After the beam end rating is complete, navigate to the [Governing Ratings](#) tab and press the **Generate Input Review** button. Print to PDF the generated Beam End Spreadsheet Input Review report from Internet Explorer. Note that the Input Review report will open in the Windows default program to view XML files; typically Internet Explorer is the default XML viewer. The XML report may not display correctly in other XML viewers. If the XML report opens in a program other than Internet Explorer and does not appear to be displaying correctly, navigate to the BE-AppData folder and open with 'BE-InputReview_v2.xml' in Internet Explorer.

Tip: Enabling 'Print Background Colors and Images' in Internet Explorer will display the table header background colors when printing to PDF. This option is within the Page Setup dialog box.

Import Old Book

The inputs of an older version of the Beam End Spreadsheet can be imported into the current version of the Beam End Spreadsheet. Open a new Beam End Spreadsheet, navigate to the [Revision](#) tab and click the **Import Input Values** button to select the file path of an older Beam End Spreadsheet. After the import is complete, the spreadsheet will automatically activate and the user will be prompted to save.

When updating it is recommended that rerunning the BrR automatic input on the [Loads](#) tab will provide the control vehicle configuration (lanes and truck pairs) in the [Governing Ratings](#) tab.

Method for Solution

Mathcad worksheets are provided within the BE-References folder within the Beam End Package, and also provided in the Sample Calculation Section in the appendixes of this document. These Mathcad worksheets serve as a verification that the spreadsheet is working correctly, by providing a "proof" or "sample" calculation. This section also serves to help the load rating engineer (LRE) understand the individual inputs and outputs of the spreadsheet related to the actual analysis. The LRE should be able to easily follow the calculations to determine if the methods used are appropriate for a specific beam end. It is the LRE's responsibility to agree with the methods used herein, and shall accept ownership of

the calculations, as with any other software the LRE uses to perform their tasks. The LRE may contact the Load Rating Section by messaging: DOT.BridgeRating@ct.gov with questions, improvements, or bugs to the analysis.

The LRE may modify the Mathcad worksheets to customize the analysis for any specific conditions the LRE believes it warrants. In this case the LRE shall document the reasons why the Mathcad worksheets were modified within the "Description" section of the worksheet, and add " – Modified" to the title of the Mathcad worksheet. The capacity information should then be inputted to the Beam End Spreadsheet, UnDefined Input tab.

Appendix

Schematics

- S-BE.1 Stiffened Web Original Section
- S-BE.2 Stiffened Web Localized Section Loss

RATING AID

BLRM v2.0

STIFFENED WEB
ORIGINAL GIRDER SECTION

Issue Date:	-
Revision Date:	-
Plate ID:	S-BE.1

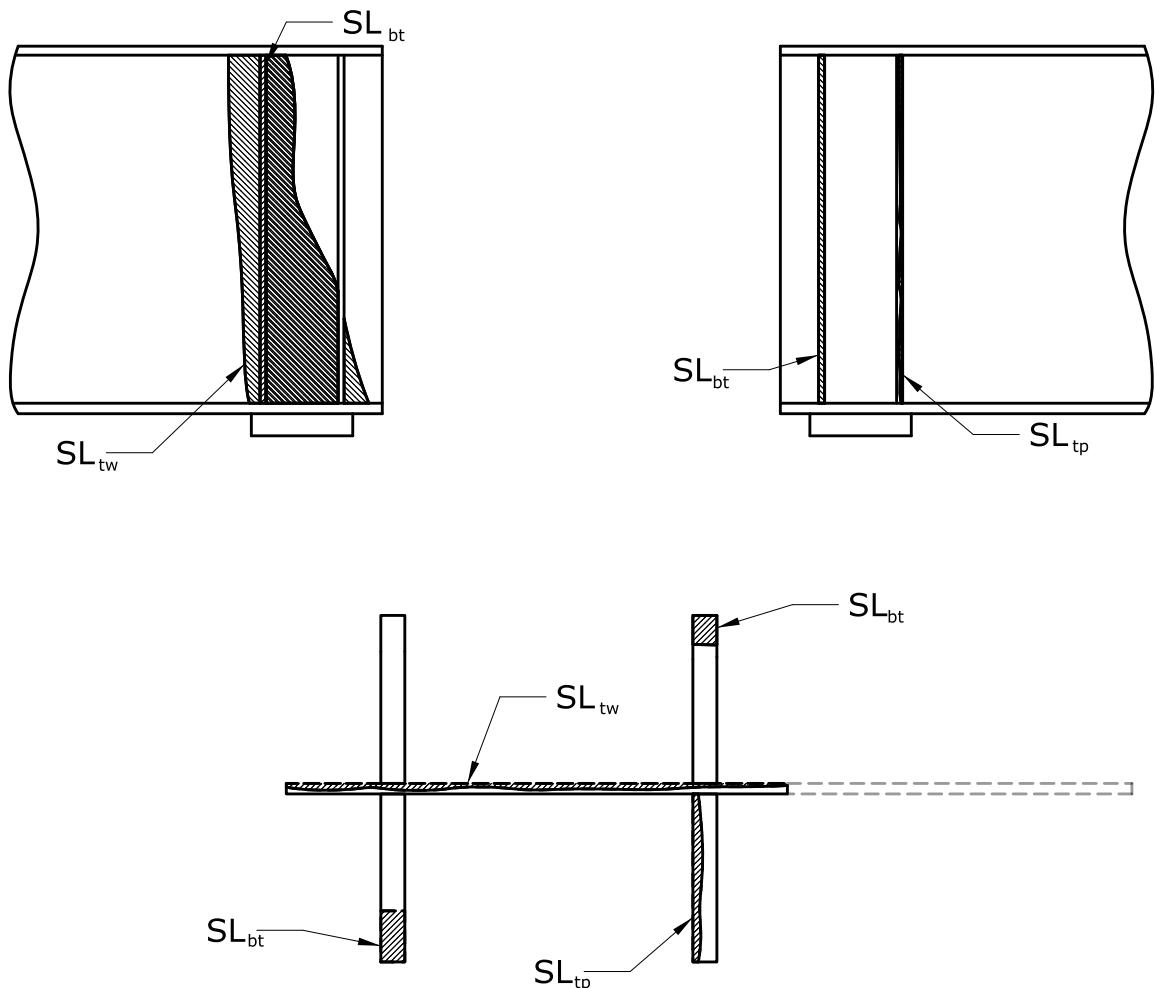

where:

- A Group A, stiffeners to the left of the web
- B Group B, stiffeners to the right of the web
- $sl_{bt} - A$ Width section loss of stiffeners in Group A
- $sl_{tp} - A$ Thickness section loss of stiffeners in Group A
- $sl_{bt} - B$ Width section loss of stiffeners in Group B
- $sl_{tp} - B$ Thickness section loss of stiffeners in Group B
- sl_{tw} Thickness section loss of web
- H_{loss} Height of localized corrosion

NOTE:

Losses are computed in percentages against the original gross section for each group and each dimension.

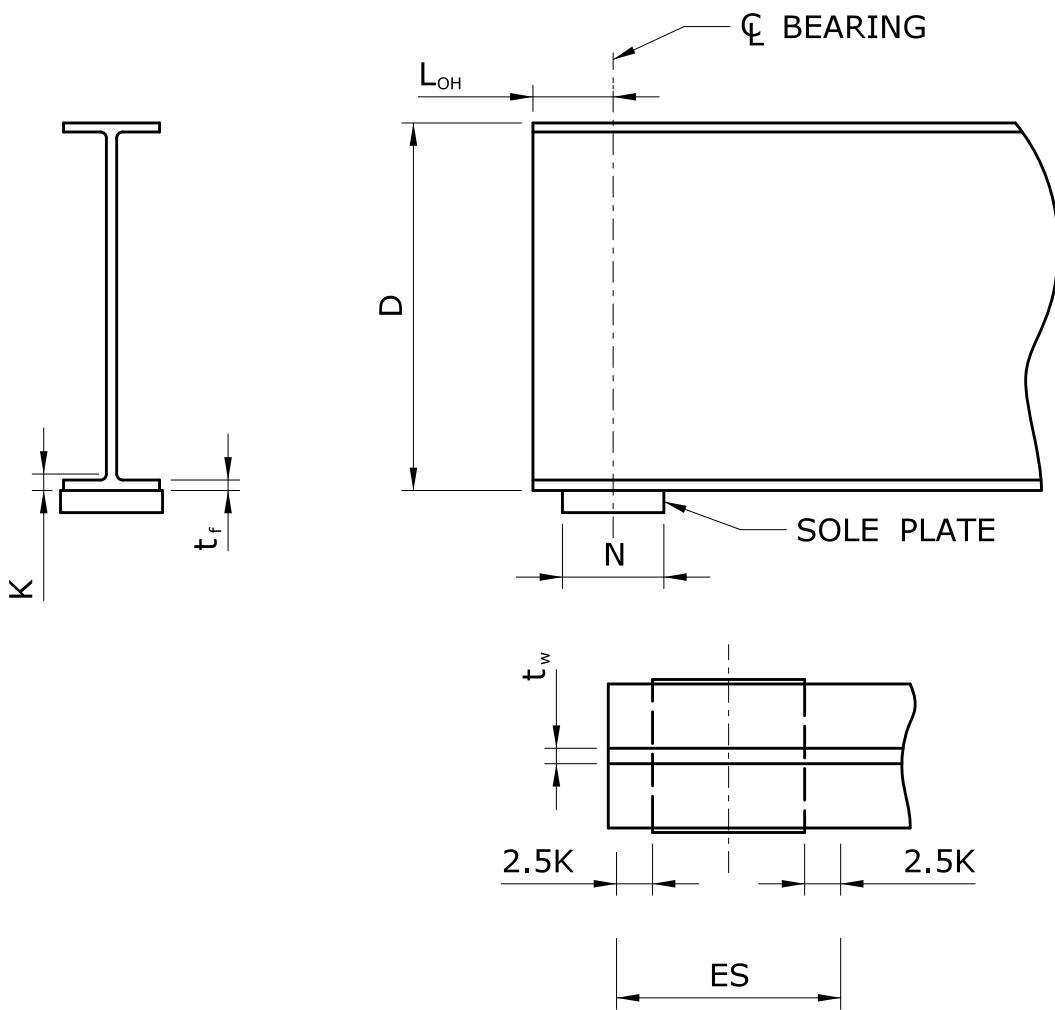

where:

- SL_{tw} Thickness section loss to the web
- SL_{bt} Width section loss to the stiffeners
- SL_{tp} Thickness section loss of the stiffeners

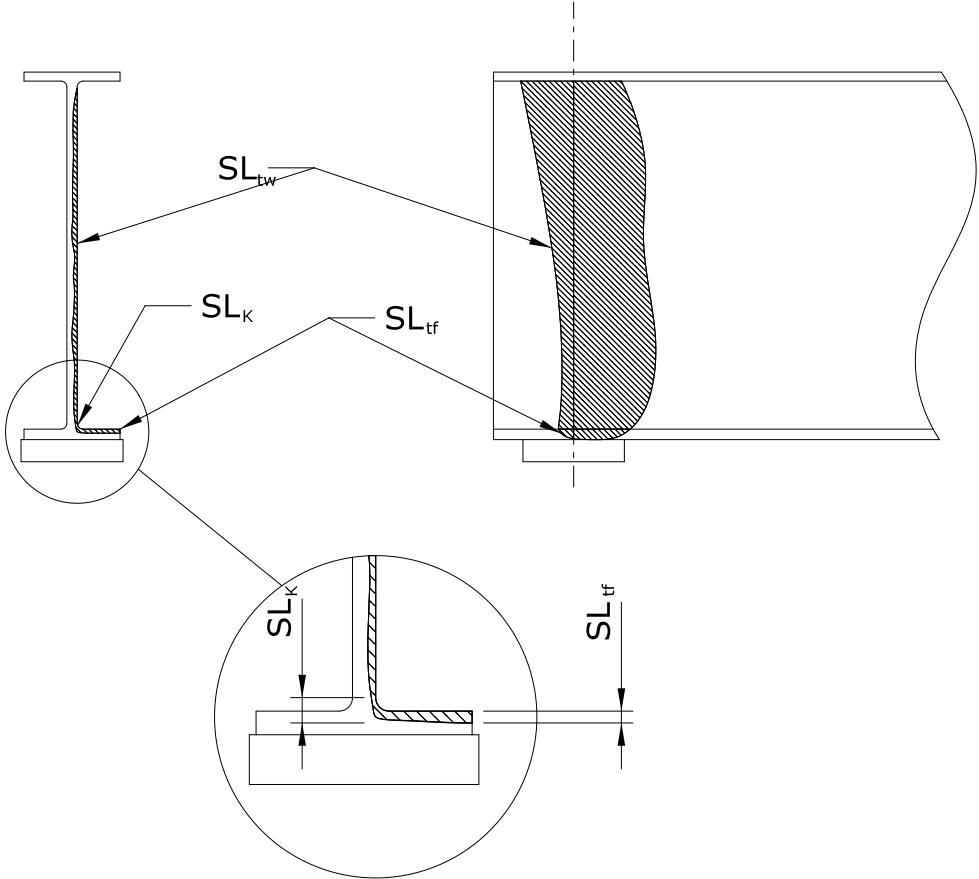

NOTES:

1. Losses are computed in percentages against the gross section for each dimension. Losses applied to the stiffener are assumed to be equally distributed amongst all stiffener elements.
2. Computed losses to the web should be limited to the deterioration within the effective section.

where:

- L_{OH} Distance from the centerline of bearing to the girder end
- D Depth of the section, out-to-out of flanges
- N Bearing/Sole plate length
- t_f Original bottom flange thickness
- K Bottom flange + fillet thickness
- t_w Original web thickness
- ES Effective column section

where:

SL_{tw} Thickness section loss to the web

SL_k Thickness section loss to the bottom flange + fillet

SL_{tf} Thickness section to the bottom flange

Steel Beam Ends Load Rating-Stiffened Web

v2 12/19/2017

Description: The purpose of this worksheet is to compute rating factors for Steel Beams with bearing stiffeners, and provide a sample calculation for the approval of the CTDOT Beam End Spreadsheet v2.

Steel Beam Ends Load Rating-Stiffened Web - Localized Region

v2 3/10/2017

Description: The purpose of this worksheet is to compute rating factors for Steel Beams with bearing stiffeners, and provide a sample calculation for the approval of the CTDOT Beam End Spreadsheet v2. This Mathcad outlines the procedure used to analyze the localized area of the beam as a column within the column methodology. The localized analysis was added to the Beam End Spreadsheet starting in v2.3.

Assumptions: The localized corrosion is uniform about the each stiffener in the group for computing b/t ratios. The localized region will behave as an independent column with the height of the column equal to the height of the corrosion.

Orginal Girder Properties

$$t_p := \frac{t_p}{(1 - SL_{tp})} = 0.625 \text{ in}$$

$$b_t := \frac{b_t}{(1 - SL_{bt})} = 7 \cdot \text{in}$$

As-Inspected Girder Section Properties

$$t_w := t_w \cdot \frac{(1 - sl_{t,w,l})}{(1 - SL_w)} = 0.337 \text{ in}$$

Group A

Stiffener Thickness $t_{p,a} := t_p \cdot (1 - sl_{t,a}) = 0.531 \text{ in}$
Stiffener Width $b_{t,a} := b_t \cdot (1 - sl_{b,a}) = 6.86 \text{ in}$

Group B

Stiffener Thickness $t_{p,b} := t_p \cdot (1 - sl_{t,b}) = 0.513 \text{ in}$
Stiffener Width $b_{t,b} := b_t \cdot (1 - sl_{b,b}) = 5.95 \text{ in}$

Height of Local Corrosion

$$d := H_{loss} = 5 \cdot \text{in}$$

**Beam Ends With Bearing Stiffeners, BDS 6.10.11.2****Axial Resistance of Bearing Stiffeners, BDS 6.10.11.2.4****Effective Section, BDS 6.10.11.2.4b**

$$ES := \begin{cases} (D_{stiff} + 9 \cdot t_w + \min(9 \cdot t_w, L_{OH})) \cdot \min\left(1, \frac{F_{yw}}{F_{ys}}\right) & \text{if Connection = "Welded"} \\ t_p & \text{otherwise} \end{cases} = 21.075 \text{ in}$$

General Requirements, BDS 6.10.11.2.4a

Determine Neutral Axis of Section of: ($Y = 0$ @ Centerline of Web)
Web

$$A_w := ES \cdot t_w = 7.113 \text{ in}^2$$

$$Y_w := 0 \text{ in}$$

Stiffeners on A side of Web

$$A_a := N_p \cdot t_{p,a} \cdot b_{t,a} = 10.933 \text{ in}^2$$

$$Y_a := \frac{t_w}{2 \cdot (1 - sl_{t,w,l})} + \frac{b_{t,a}}{2} = 3.617 \text{ in}$$

Stiffener on B side of Web

$$A_b := N_p \cdot t_{p,b} \cdot b_{t,b} = 9.148 \text{ in}^2$$

$$Y_b := \frac{-t_w}{2 \cdot (1 - sl_{t,w,l})} + \frac{-b_{t,b}}{2} = -3.163 \text{ in}$$

Determine Gross Remaining Area

$$A_g := A_w + A_a + A_b = 27.194 \text{ in}^2$$

$$Y := \frac{A_w \cdot Y_w + A_a \cdot Y_a + A_b \cdot Y_b}{A_g} = 0.391 \text{ in}$$

Determine Moment of Inertia of Elements

$$I_w := \frac{1}{12} E S \cdot t_w^3 + (Y - Y_w)^2 \cdot A_w = 1.152 \text{ in}^4$$

$$I_a := \frac{N_p}{12} \cdot t_{p,a} \cdot b_{t,a}^3 + (Y - Y_a)^2 \cdot A_a = 156.727 \text{ in}^4$$

$$I_b := \frac{N_p}{12} \cdot t_{p,b} \cdot b_{t,b}^3 + (Y - Y_b)^2 \cdot A_b = 142.474 \text{ in}^4$$

$$I_s := I_w + I_a + I_b = 300.353 \text{ in}^4$$

Determine Radius of Gyration

$$r_s := \sqrt{\frac{I_s}{A_g}} = 3.323 \text{ in}$$

Effective Length Factor, BDS 6.10.11.2.4.a

Assumed to behave similar to the full depth section due to the 2 dimensional projecting elements of the stiffeners about the Y, and the Web about the X. Corrosion generally tapers down to the bottom of the web, therefore the top of the localized region is rigidly attached to the remained of the beam end and more corrosion is located above the bottom flange.

$$K_{\text{eff}} := 0.75$$

Axial Compression, BDS 6.9.2.1

Elastic Flexural Buckling Resistance, BDS 6.94.1.2-1

$$P_e := \frac{\pi^2 \cdot E}{\left(\frac{K_{eff} \cdot d}{r_s} \right)^2} \cdot A_g = 6113186.688 \text{ kip}$$

Determine Equivalent Nominal Yield Resistance, BDS 6.9.4.1

$$P_o := F_{ys} \cdot A_g = 897.404 \text{ kip}$$

Determine P_n , BDS 6.9.4.1.1-1 & 6.9.4.1.1-2

$$P_{cr} := \begin{cases} \left[0.658 \left(\frac{P_o}{P_e} \right) \right] \cdot P_o & \text{if } \frac{P_e}{P_o} \geq 0.44 \\ 0.877 P_e & \text{otherwise} \end{cases} = 897.349 \text{ kip}$$

Compute the critical buckling stress, BDS eq. 6.9.4.2.2-2

$$F_{cr} := \frac{P_{cr}}{A_g} = 32.998 \text{ ksi}$$

Nonslender and Slender Element Cross-Section BDS 6.9.4.2

STIFFENERS

Determine Effective Width Imperfection Adjustment factors, c_1 and c_2 BDS Table 6.9.4.2.2a-1

$$c_1 := 0.22$$

$$c_2 := 1.49$$

Width to thickness ratio limit, modified form from BDS 6.10.11.2.2:

$$k := 0.48$$

$$\lambda_{rs} := k \cdot \sqrt{\frac{E}{F_{ys}}} = 14.229$$

Compute width to thickness ratios for each group of stiffeners

$$\lambda_{s.a} := \begin{cases} 1 & \text{if } b_{t.a} \cdot t_{p.a} = 0 \\ \frac{b_{t.a}}{t_{p.a}} & \text{otherwise} \end{cases} = 12.913$$

$$\lambda_{s.b} := \begin{cases} 1 & \text{if } b_{t.b} \cdot t_{p.b} = 0 \\ \frac{b_{t.b}}{t_{p.b}} & \text{otherwise} \end{cases} = 11.61$$

Elastic Local Buckling Stress BDS 6.9.4.2.2a-4

$$F_{el.a} := \left(c_2 \frac{\lambda_{rs}}{\lambda_{s.a}} \right)^2 \cdot F_{ys} = 88.962 \text{ ksi} \quad F_{el.b} := \left(c_2 \frac{\lambda_{rs}}{\lambda_{s.b}} \right)^2 \cdot F_{ys} = 110.054 \text{ ksi}$$

Compute Effective Width, BDS 6.9.4.2.2a-1 and 6.9.4.2.2a-2

$$b_{es}(b_t, \lambda_s, F_{el}) := \begin{cases} b_t & \text{if } \lambda_s \leq \lambda_{rs} \\ \text{otherwise} \\ b_t & \text{if } \lambda_s \leq \lambda_{rs} \cdot \sqrt{\frac{F_{ys}}{F_{cr}}} \\ b_t \left(1 - c_1 \sqrt{\frac{F_{el}}{F_{cr}}} \right) \cdot \sqrt{\frac{F_{el}}{F_{cr}}} & \text{otherwise} \end{cases}$$

$$b_{es.a} := b_{es}(b_{t.a}, \lambda_{s.a}, F_{el.a}) = 6.86 \text{ in}$$

$$b_{es.b} := b_{es}(b_{t.b}, \lambda_{s.b}, F_{el.b}) = 5.95 \text{ in}$$

This spreadsheet shall be included in the References File. See the CTDOT Bridge Load Rating Manual for more information about the References file. This workbook shall be saved as a macro-enabled workbook. Consult with Microsoft Support and Excel Help for questions about saving the workbook as a macro-enabled workbook.

A PDF of the Input Review text file generated shall be include in the Load Rating Report PDF document. The Input Review file should also be digitally provided in the references folder.

Mathcad or hand calculations may be needed for inputs for this spreadsheet. Those calculations shall be included within the Calculations section of the report.

Accuracy

The load rating engineer is responsible for the accuracy of the results. If the load rating engineer has reason to believe the results are not true contact the load rating section for guidance.

Current Version: 2.3

Import Input Values

[Top](#)

#	Version	Date	By	Approved by	Description
1	2	9/15/2016	cmp	mgd	Updated Stiffened web analysis method
2	2	9/15/2016	cmp	mgd	Updated User Interface
3	2.1	10/12/2016	cmp	mgd	Fixed squaring of the b/t ratio of stiffener slenderness check (reported by Lochner)
4	2.1	10/12/2016	cmp	mgd	Removed MathCad library, Mathcad plugin no longer required to use spreadsheet (reported by CME)
5	2.1	10/12/2016	cmp	mgd	Remove reformatting of bridge number after BrR import
6	2.1	10/12/2016	cmp	mgd	fix error if there where more unstiffened web locations than stiffened webs, would crash the rating (reported by Stantec)
7	2.2	10/26/2016	cmp	sjs	fixed issue in BrR Import routine where it would use the ID Support rather than the BrR Support Id
8	2.3	3/17/2017	cmp	sjs	fixed sorting/filtering function
9	2.3	3/17/2017	cmp	sjs	Added ability to add multiple BrR LRFRRReports
10	2.3	3/17/2017	cmp	sjs	Added Undefined Section Analysis for users to input user defined capacities to preform ratings
11	2.3	3/17/2017	cmp	sjs	Added Governing Rating Factors Sheets and Permit and Legal Less than 1.0 Tables for Reporting
12	2.3	3/17/2017	cmp	sjs	Updated buttons to stand out from the cell backgrounds
13	2.3	3/17/2017	cmp	sjs	Added importer to import older spreadsheet input data (button on this sheet)
14	2.3	3/17/2017	cmp	sjs	Added Input Review for reporting (button on Governing Rating Sheet)
15	2.3	3/17/2017	cmp	sjs	Added Localized Region analysis for Stiffened Webs
16	2.3	3/17/2017	cmp	sjs	Added Effective Section to UnStiffened Outputs sheet to assist in section loss calculations
