

Protocol	V2022.1 changes
<b>1.0 Routine Patient Care, p. 12</b>	<ul style="list-style-type: none"> <li>• Adds direction to label IV infusions with medications added</li> <li>• Correct definition of pediatric impending respiratory failure to greater than 60 breaths/minute</li> </ul>
<b>2.19A Pain Management, p. 49</b>	<ul style="list-style-type: none"> <li>• Decreases IV/IO ketamine dose and adds guidance regarding very slow administration</li> <li>• Allows for repeat ketamine dose</li> <li>• Adds ETOH intox to caution conditions for opioids and ketamine</li> <li>• Adds red flag to avoid ketamine if known cocaine use</li> </ul>
<b>3.2A Cardiac Arrest – Adult, p. 74</b>	<ul style="list-style-type: none"> <li>• Modifies timing of BVM ventilation during continuous chest compressions from 1 breath every 10 compressions to 1 breath every 6 seconds.</li> <li>• Modifies vascular access to “IV preferred”</li> <li>• Directs epinephrine administration as soon as possible for asystole or PEA</li> <li>• Modifies guidance on timing of advanced airway to earlier placement in asystole/PEA: <ul style="list-style-type: none"> <li>• For Initial VF/VT, after 4 cycles (8 minutes of CPR) consider SGA or ETT without interrupting chest compressions.</li> <li>• For initial PEA/Asystole, after 1 cycle of CPR (2 minutes) consider SGA or ETT without interrupting chest compressions</li> </ul> </li> </ul>
<b>3.2P Cardiac Arrest – Pediatric, p. 79</b>	<ul style="list-style-type: none"> <li>• Add guidance regarding CPR, ventilations and following AHA guidance</li> <li>• Adds guidance on use, sizing and cuff inflation pressure of cuffed ETTs for pediatrics</li> <li>• Directs epinephrine administration as soon as possible for asystole or PEA</li> <li>• With advanced airway in place, clarifies ventilations as one every 2-3 seconds</li> </ul>
<b>3.5A Tachycardia – Adult, p. 83</b>	<ul style="list-style-type: none"> <li>• Modifies magnesium rate of administration for torsades de pointes from “over 5 minutes” to “over 2-5 minutes”</li> <li>• Defines wide complex tachycardia as QRS&gt;0.12 sec</li> </ul>
<b>NEW 4.3 Low Titer 0 Negative Whole Blood Transfusion, p. 94</b>	

Protocol	V2022.1 changes
<b>4.6 Spinal Trauma, p. 99</b>	<ul style="list-style-type: none"> <li>Excludes patients &lt;3 or &gt;65 years from prehospital selective spinal clearance</li> <li>Revises/details range of motion exam within selective spinal clearance to “Cervical rotation (45°either direction) or flexion/extension elicits midline spinal pain.”</li> <li>Replaces spinal clearance algorithm to reflect changes to protocol</li> <li>Directs EMS to “move stretcher as close to patient as possible,” to minimize movement when allowing patient to self-extricate</li> <li>Adds clarification regarding head-up positioning (when necessary such as for diff breathing) to “Try to limit any stretcher back elevation to &lt;30°”</li> <li>Adds “kyphosis, ankylosing spondylitis,” to reasons a towel roll and/or padding may be used in place of a rigid cervical collar</li> <li>Patients with nausea or vomiting may now be placed with stretcher back elevated in addition to the previous option of a lateral recumbent position</li> </ul>
<b>NEW 4.9 Traumatic Cardiac Arrest, p. 106</b>	
<b>5.2 CPAP, p. 112 5.2.1 Bi-level PAP, p. 113</b>	<ul style="list-style-type: none"> <li>Adds references to bilevel positive airway pressure in appropriate protocols under paramedic scope of practice.</li> </ul>
<b>5.3.1A Cricothyrotomy – Surgical, p. 114</b>	<ul style="list-style-type: none"> <li>Adds additional detail on procedure including landmarking</li> <li>Increases suggested length of vertical incision from 3 cm (1.2") to 5 cm (2")</li> <li>Formatting</li> </ul>
<b>5.7, Quantitative Waveform Capnography, p. 125</b>	<ul style="list-style-type: none"> <li>Streamlines protocol, greater emphasis on waveform</li> </ul>
<b>5.8A Rapid Sequence Intubation (RSI) Adult, p. 126  5.8P Rapid Sequence Intubation (RSI) Pediatric, 129</b>	<ul style="list-style-type: none"> <li>Rewords indication</li> <li>Modifies 7 Ps and adds positioning</li> <li>Modifies pre-oxygenation to include CPAP/Bilevel PAP</li> <li>Removes atropine from adult premedication. Removes minimum dose from pediatric premedication.</li> <li>Modifies fentanyl and ketamine dosing</li> <li>Adds max of 30mg to etomidate dosing</li> <li>Adds push dose phenylephrine for peri RSI hypotension (PFS or pre-diluted vial). Also added to adult medication reference.</li> <li>RSI checklist replaces Cormack-Lehane glottic views</li> </ul>

Protocol	V2022.1 changes
<b>5.9 Suctioning of Inserted Airway, p. 132</b>	<ul style="list-style-type: none"> <li>Allows EMTs to deep suction endotracheal tubes and supraglottic airways</li> <li>Adds suction duration for pediatrics</li> <li>Adds detail regarding use of saline to facilitate suctioning</li> <li>Emphasizes sterile technique when possible</li> </ul>
<b>5.11 Tracheostomy Care, p. 135</b>	<ul style="list-style-type: none"> <li>Adds detail regarding types of trach tubes, management of tracheostomy emergencies and exchange/replacement of trach tubes</li> </ul>
<b>5.12 Ventilator, p. 137</b>	<ul style="list-style-type: none"> <li>Increases starting PEEP setting from “2-5” to “5 cm H<sub>2</sub>O” pressure and allows adjustment up to 10 cm H<sub>2</sub>O to support oxygenation as needed.</li> <li>Increased high pressure alarm setting to 35 cmH<sub>2</sub>O</li> <li>Adds several Pearls</li> </ul>
<b>6.1 Abuse and Neglect of Children and the Elderly, p. 142</b>	<ul style="list-style-type: none"> <li>Expands definition to be more inclusive of all vulnerable populations.</li> <li>Adds detailed info on elder abuse, persons with disabilities, sexual assault and human trafficking.</li> <li>Adds scene safety guidance</li> <li>Adds psychological/behavioral signs of abuse</li> <li>Adds additional detail on physical assessment and signs of physical abuse</li> <li>Directs documenting in PCR when abuse was reported</li> </ul>
<b>6.2 Air Medical Transport, p. 145</b>	<ul style="list-style-type: none"> <li>Adds “burn center” to definitive care receiving centers</li> <li>Adds “age-appropriate hypotension in children” to definition of circulatory insufficiency</li> <li>Adds detailed burn criteria to clinical considerations</li> <li>Rewords guidance on when to transport to closest hospital.</li> <li>Adds detail regarding not using AMT for patients in cardiac arrest</li> </ul>
<b>6.5 Consent for Treatment of a Minor, p. 150</b>	<ul style="list-style-type: none"> <li>Adds “another adult family member (e.g. a grandparent)” to those who may consent for health care treatment when a parent/legal guardian is not available</li> <li>Adds detail regarding restraint.</li> </ul>
<b>NEW 6.9 Naloxone Leave Behind, p. 156</b>	
<b>6.11 Pediatric Transportation, p. 159</b>	<ul style="list-style-type: none"> <li>Rewords first section regarding requirements and guiding principles</li> <li>Adds section on mother and newborn transportation</li> </ul>

Protocol	V2022.1 changes
<b>NEW 6.12 Pelvic Fracture Stabilization, p. 162</b>	
<b>Appendix 3 - Scope of Practice, p. 212</b>	<ul style="list-style-type: none"> <li>Multiple updates to scope of practice matrix</li> </ul>
<b>COVID-19 Emergency Medical Services Non-Transport Guidance, p. 224</b>	<ul style="list-style-type: none"> <li>Adds guidance for programs to pro-actively establish a mechanism for timely post-encounter follow-up and outpatient referral (as appropriate)</li> </ul>
