

MONKEYPOX PREVENTION

LET'S PREVENT THE SPREAD TOGETHER

01

Avoid sex and close, skin-to-skin contact with people who have a new rash or blisters anywhere on their body.

02

Avoid contact with objects and materials that a person with monkeypox has used, like clothing, towels, and bed sheets.

03

Wash your hands often with soap and water or use an alcohol-based hand sanitizer, especially before eating or touching your face and after you use the bathroom.

04

Communicate with your sexual partner(s) about any potential risks of transmitting Monkeypox just as you would with sexually transmitted infections.

05 GET VACCINATED

If you are eligible to receive the Monkeypox Vaccine, get one! While the eligibility requirements may change due to supply and demand, it's important to get vaccinated if you're a member of a community higher at risk to contract the virus.

While everyone is vulnerable to acquiring Monkeypox, for the time being, certain communities are burdened with more positive cases than others.
