

**Connecticut Department of Public Health HIV Surveillance Program  
Recently Diagnosed HIV Cases by Sex, Race, Risk and Age, Litchfield County, 2016 - 2020**

|                             | N  | % of total |
|-----------------------------|----|------------|
| <b>Total</b>                | 34 | 100.0      |
| <b>Sex</b>                  |    |            |
| Male                        | 31 | 91.2       |
| Female                      | 3  | 8.8        |
| <b>Race/ethnicity</b>       |    |            |
| Black/African American      | 5  | 14.7       |
| Hispanic/Latino             | 5  | 14.7       |
| White                       | 24 | 70.6       |
| <b>Mode of Transmission</b> |    |            |
| MSM                         | 22 | 64.7       |
| MSM and IDU                 | 2  | 5.9        |
| Heterosexual contact        | 5  | 14.7       |
| Unknown                     | 5  | 14.7       |
| <b>Age at diagnosis</b>     |    |            |
| <40                         | 14 | 41.2       |
| 40+                         | 20 | 58.8       |

**This table presents HIV Infection cases using the year the person was first diagnosed**

**The term HIV Infection is used to refer to three categories of diagnoses collectively:**

**1 - persons with a diagnosis of HIV infection (not AIDS)**

**2 - a diagnosis of HIV infection and a later diagnosis of AIDS**

**3 - concurrent diagnoses of HIV and AIDS**

**Note: other risk includes perinatal and presumed heterosexual contact**
