

**Connecticut Department of Public Health HIV Surveillance Program  
Rate of Newly Diagnosed HIV Cases by Race/ethnicity, Connecticut, 2016-2020**

Race/ethnicity	Year diagnosed									
	2016		2017		2018		2019		2020	
	N	rate	N	rate	N	rate	N	rate	N	rate
<b>Black/African American</b>	108	28.3	110	28.5	104	26.9	102	26.1	57	14.6
<b>Hispanic/Latino</b>	80	14.2	84	14.5	67	11.4	51	8.5	60	10.0
<b>White</b>	69	2.8	77	3.2	79	3.3	58	2.4	53	2.2
<b>Other</b>	8	4.4	9	4.8	7	3.7	8	4.2	4	2.1

**This table presents HIV Infection cases using the year the person was first diagnosed with HIV**

**The term HIV Infection is used to refer to three categories of diagnoses collectively:**

- (1) persons with a diagnosis of HIV infection (not AIDS)**
- (2) a diagnosis of HIV infection and a later diagnosis of AIDS**
- (3) concurrent diagnoses of HIV and AIDS**

**Rate per 100,000 population based on corresponding years' State-level Bridged Race Estimate**

**Rates based on reported numbers less than 12 should be interpreted with caution because the numbers have underlying relative standard errors greater than 30% and are considered unreliable**

**Note: data for 2020 should be interpreted with caution due to the impact of the COVID-19 pandemic on access to HIV testing & care-related services.**
