<sup>a</sup> Linkage to HIV medical care was measured by documentation of ≥1 CD4 or VL or genotype test ≤30, ≤91, ≤182 and ≤365 days after HIV

<sup>e</sup> Transmission category data presented based on sex at birth. <sup>f</sup> Heterosexual contact with a person known to have, be at high risk for, HIV

<sup>g</sup> Other transmission category includes persons whose infection was attributed to hemophilia, blood transfusion, perinatal exposure or whose risk factor was not reported or not identified. Data not displayed because the numbers were too small to be meaningful.
