

HIV Continuum of Care, Connecticut, 2017

Based on persons receiving HIV care in 2017 among persons ≥13 years old at diagnosis, resided in Connecticut (based on most recent residence) and diagnosed with HIV infection through 2016 and living with HIV on 12/31/2017. A visit is defined as a CD4, viral load, or genotype test result during the evaluation period. The overall HIV population is overestimated because cases are only followed up for 11 months after 12/31/2017. CDC suggests cases should be followed up at least 18 months to collect death certificate information. Source: HIV surveillance data through December 2018.

Based on the number of persons ≥13 years old, diagnosed with HIV in 2017, who resided in Connecticut (based on residence of HIV diagnosis) and were linked to care within 1,3,6,12 months after HIV diagnosis. Source: HIV surveillance data through December 2018.
