PUBLIC WATER SYSTEMS VIOLATIONS REPORT
CALENDAR YEAR 2009
CONNECTICUT DEPARTMENT OF PUBLIC HEALTH
DRINKING WATER SECTION**

The Department of Public Health (DPH) is Connecticut's lead State agency in all matters related to the purity and adequacy of drinking water. The Drinking Water Section (DWS) in DPH's Regulatory Services Branch administers the Federal Safe Drinking Water Act (SDWA) at the State level. The DWS responsibilities for the SDWA include regulating approximately 2692 public water systems (PWS) throughout Connecticut.

In 1996, the United States Congress amended the SDWA. One of the important provisions in the amendments was a public information component that requires State drinking water programs to provide the public with a summary of PWS violations on an annual basis.

During calendar year 2009:

- A total of 359 Maximum Contaminant Level (MCL) violations were issued to 187 PWS.
- Of the 359 MCL violations, 239 were for total coliform bacteria of which 16 were for E. coli bacteria (total coliform (acute)).
- One hundred and twenty MCL violations were also issued for the following contaminants: Arsenic (21); Nitrate (5); Net Gross Alpha (19); Uranium (43); Combined Radium-226/228 (25); Total Haloacetic Acids (1); Cadmium (1); and Di(2-Ethylhexyl)-Phthalate (5).
- One PWS failed to complete public education requirements under the Lead and Copper Rule (LCR).
- Four hundred and fifty PWS were issued monitoring and reporting violations.
- Ninety PWS were issued violations for failure to complete public notification requirements related to maximum contaminant level and/or monitoring and reporting violations.
- One hundred and twelve community public water systems were issued violations for failure to submit to DPH a copy of the 2008 Consumer Confidence Report and/or Certification that the report was issued to their customers.

The complete Calendar Year 2009 Public Water Systems Violations Report is available for review on the DWS website at <http://www.ct.gov/dph> or at DWS offices located at Department of Public Health, 450 Capitol Avenue, Hartford, CT. To schedule an appointment to review this document at the Drinking Water Section call 860-509-7333.

**PUBLIC WATER SYSTEMS VIOLATIONS REPORT
CALENDAR YEAR 2009
CONNECTICUT DEPARTMENT OF PUBLIC HEALTH
DRINKING WATER SECTION**

INTRODUCTION

The Connecticut Department of Public Health (DPH) is the State's lead agency in all matters related to the purity and adequacy of drinking water. Connecticut's "primacy" status, granted by the United States Environmental Protection Agency (EPA) allows DPH to implement and enforce provisions of the Federal Safe Drinking Water Act (SDWA) through State statutes and regulations in the Public Health Code. The Drinking Water Section (DWS) in the DPH's Regulatory Services Branch administers the statewide drinking water program associated with the SDWA.

In 1996, the United States Congress amended the SDWA. One of the important provisions in the amendments is the public information component that requires State drinking water programs to issue an annual report on violations incurred by public water systems (PWS). States must also make this report available to the public. This document comprises DPH's annual report which must be made available to the public and submitted to EPA. This report covers the calendar year 2009.

PUBLIC WATER SYSTEMS IN CONNECTICUT

The DWS exercises regulatory oversight of approximately 2692 PWS throughout Connecticut. These PWS fall into three categories. Community PWS, of which there are about 580, serve at least 25 year round residents. In Connecticut, approximately 82 % of the state's population of 3.5 million people obtains their drinking water from community water systems. Non-transient non-community PWS, of which there are approximately 602, serve at least 25 of the same individuals, other than year round residents, for more than six months per year. Examples of non-transient non-community PWS are schools, day care centers, and factories. Finally, there are about 1510 transient non-community PWS in Connecticut which provide drinking water to places like restaurants and campgrounds.

Over two-thirds of the population on community PWS are supplied by surface water. Groundwater serves the remaining population on community water systems, and almost all non-community PWS rely on groundwater.

REGULATION OF CONTAMINANTS

Public water systems are required to monitor and test their drinking water. Community PWS monitor and test for all regulated microbiological, chemical and radionuclide contaminants. Non-transient non-community PWS monitor and test for all regulated microbiological and chemical contaminants. Transient non-community PWS are required to monitor and test for microbiological contaminants and two chemical contaminants (nitrate and nitrite). EPA sets a national limit or standard known as the Maximum Contaminant Level (“MCL”) for each regulated contaminant. The MCL represents the maximum permissible level of a contaminant in the water.

Public water systems submit the results of their water quality tests to the DWS. The water quality data is then entered into SDWIS/STATE and compliance with all applicable MCLs and monitoring requirements is determined.

EPA also establishes minimum treatment techniques. This report includes violations of treatment techniques under the Lead and Copper Rule. For this report, a violation of this treatment technique means a failure to meet operational and PWS requirements under the rule.

CALENDAR YEAR 2009 REPORT OF PUBLIC WATER SYSTEM VIOLATIONS

This annual violation report includes four types of violations. The first type of violation is for MCL exceedances. The second type is for treatment technique violations under the Lead and Copper Rule and Disinfection ByProducts Rule. The third type is for significant monitoring violations which are defined by EPA as a PWS’s failure to collect a required sample or submit a required water quality test result to the DWS. The fourth type is for failure to comply with the consumer confidence reporting and public notification requirements.

When a PWS has a violation, the DWS provides technical assistance to the PWS to ensure that it implements all required procedures associated with the violation, such as public notification and any necessary corrective action, such as the installation of appropriate treatment.

For calendar year 2009, the DPH issued 61 formal enforcement actions to PWS. The actions taken included 5 Administrative Orders, 5 Consent Orders and 51 Notices of Violation with Civil Penalty. The majority of these formal enforcement actions were issued to community and non-transient non-community PWS that incurred significant monitoring and reporting violations.

Connecticut does not have any PWS that have been granted a variance or exception; therefore there have not been any violations in calendar year 2009 that were related to variances or exceptions.

Our goal is to oversee the return of PWS to compliance as quickly as possible. The DWS remains committed to continuing its positive working relationship with the PWS for the express purpose of protecting public health by minimizing violations.

REPORT EXPLANATION

The majority of PWS with violations are small systems serving populations of less than 1,000 people. Small PWS are the most frequent violators of Federal and State drinking water mandates. The DWS devotes considerable time and effort to helping small community and non-community PWS understand and comply with their mandated requirements.

The attached tables present data on PWS violations in calendar year 2009. Table A reports violations by the four types of violations incurred in calendar year 2009. Table B covers MCL violations; Table C covers treatment technique violations; Table D covers significant monitoring and reporting violations; Table E covers public notification violations; and Table F covers consumer confidence reporting violations. The definitions appended to Table A further explain the terms in the report and tables.

MCL Violations: (refer to Table B)

For calendar year 2009, the DWS issued a total of 359 violations to 187 PWS for MCL exceedances.

Microbiological: Approximately sixty percent (67%) of all MCL violations in calendar year 2009 were for microbiological contamination of public water supplies.

1. Total Coliform: One hundred sixty three PWS were issued a total of 223 total coliform MCL violations. A PWS incurs a violation for total coliform when the test result shows the *presence* of coliform bacteria in the water. When a violation occurs, the DWS assists the PWS with identifying the source of the coliform bacteria. Total coliforms are common in the environment and are generally not harmful themselves. The presence of these bacteria in drinking water, however, generally indicates a problem with the system that should be corrected. The problem is often corrected through system improvements and chlorination of the system.

2. Total Coliform Acute: Sixteen PWS were issued a total of 16 total coliform acute MCL violations. An acute total coliform violation occurs when fecal coliform or E. coli bacteria is detected in the system's water. E. coli bacteria are generally not harmful themselves, but their presence in drinking water is serious because they usually are associated with sewage or animal wastes.

Public water systems must notify customers that E. coli bacteria have been found in the water, and the DWS strongly recommends that the system request that its customers boil their water until the source is free of contamination.

For E. coli bacteria contamination, the DWS assists the PWS with completing a thorough or detailed inspection of the well and surrounding area. This inspection often reveals the source of the contamination. Chlorination of the well and removal of the identified contaminant source usually returns the system to compliance. Formal enforcement actions are needed in some situations to address these violations.

Chemical and Radionuclides: In calendar year 2009, twelve PWS in Connecticut incurred 33 violations for MCL exceedances of 5 different regulated chemicals. Long-term exposure to these chemicals can pose serious risk to public health. Additionally, infants can become ill if exposed to high levels of nitrate for a short period of time. Regulated contaminants can occur naturally in the ground. They can also be the result of releases to the ground from commercial and industrial processes or improper disposal of hazardous waste.

In calendar year 2009, fourteen PWS in Connecticut incurred 87 violations for MCL exceedances of radionuclides. Administrative Orders were issued to 2 public water systems in 2009 for failure to comply with the MCLs for radionuclides.

When a PWS exceeds an MCL it must notify its customers of the violation. At the same time, the PWS takes action to return to compliance by replacing the contaminated source of supply or by identifying and installing treatment specifically designed to reduce the level of the contaminant in the water. The DWS approves all treatment prior to installation.

Treatment Technique Violations: (refer to Table C)

Lead and Copper Rule: Failure to install treatment for lead or copper or failure to issue public education materials under the Lead and Copper Rule have been defined by EPA as treatment technique violations in this report. In calendar year 2009, one PWS incurred a treatment technique violation. This violation was for failure to provide adequate public education to customers on the health risks associated with the presence of lead in the drinking water.

Significant Monitoring and Reporting Violations: (refer to Table D)

Each year, a PWS has specific monitoring and reporting requirements. When a PWS fails to comply with these requirements, a public health risk may be created due to the absence of test results on the quality of the system's water. For calendar year 2009, the DWS issued a total of 2263 violations to 450 PWS for failure to monitor and report water quality test results.

Through technical assistance and enforcement actions, the DWS will continue to work to reduce the number of monitoring and reporting violations issued to PWS in 2009.

Public Notification Violations: (refer to Table E)

For calendar year 2009, the DWS issued 162 violations to 90 PWS for failure to comply with public notification requirements related to maximum contaminant level and/or monitoring and reporting violations.

Consumer Confidence Report Violations: (refer to Table F)

For calendar year 2009, the DWS issued 150 violations to 112 community public water systems for failure to submit copies of their 2007 consumer confidence report and/or certification form to the DWS.

CONCLUSION

The DPH's annual "Public Water Systems Violations report, Calendar Year 2009" documents the number of systems in Connecticut that incurred violations for MCL exceedances, treatment techniques, monitoring and reporting requirements, and public notification requirements. Where a violation occurred, the DWS acted promptly to ensure that the PWS addressed the problem. Further enforcement actions were taken against PWS that did not take corrective action to resolve their violations.

Our mission is to protect public health by ensuring the purity and adequacy of drinking water, now and in the future. The Section's enforcement actions and technical assistance efforts are two of the strategies employed by the DWS to achieve our mission. On behalf of the DPH, the DWS will continue to capitalize on opportunities to promote compliance among the State's public drinking water systems to achieve this mission.

PUBLIC WATER SYSTEMS VIOLATION REPORT
CONNECTICUT DEPARTMENT OF PUBLIC HEALTH DRINKING WATER SECTION

TABLE A

January 1, 2009 to December 31, 2009

DEFINITIONS FOR TABLE A

<i>Inorganic Contaminants:</i>	Non-carbon-based compounds such as metals, nitrates, asbestos. These contaminants are naturally occurring in some water but can get into water through farming, chemical manufacturing, and other human activities. EPA has established MCLs for 15 inorganic contaminants.
<i>Lead and Copper Rule:</i>	This rule established national limits on lead and copper in drinking water. Lead and copper corrosion pose various health risks when ingested at any level, and can enter drinking water from household pipes and plumbing fixtures. States report violations of the Lead and Copper Rule in the following four categories: <i>Failure to perform initial lead and copper tap M/R:</i> System did not meet initial lead and copper testing requirements, or failed to report the results of those tests. <i>Failure to perform follow-up or routine lead and copper tap M/R:</i> System did not meet follow-up or routine lead and copper tap testing requirements, or failed to report the results. <i>Failure to provide public education:</i> System did not provide required public education about reducing or avoiding lead intake from water
<i>Maximum Contaminant Level (MCL):</i>	The highest amount of a contaminant that EPA allows in drinking water. MCLs ensure that drinking water does not pose either a short-term or long-term health risk. MCLs are defined in milligrams per liter (parts per million) unless otherwise specified.
<i>Monitoring and Reporting:</i>	EPA specifies which water testing methods the water systems must use, and sets schedules for the frequency of testing. A water system that does not follow EPA's schedule or methodology is in violation. States must report monitoring violations that are significant as determined by the EPA Administrator and in consultation with the States. For purposes of this report, significant monitoring violations are major violations and they occur when no samples are taken or no results are reported during a compliance period. A major monitoring violation for the surface treatment rule occurs when at least 90% of the required samples are not taken or results are not reported during the compliance period. A major monitoring violation of the Lead and Copper Rule is defined as failure to submit the associated report and failure to collect one or more of the required routine or follow-up samples, or failure to submit one or more reports associated with the collection of these samples, will be a significant monitoring violation.
<i>Organic Contaminants:</i>	Carbon-based compounds, such as industrial solvents and pesticides. These contaminants generally get into water through runoff from cropland or discharge from factories. EPA has set legal limits on 54 organic contaminants that are to be reported.
<i>Radionuclides:</i>	Radioactive particles which can occur naturally in water or result from human activity. EPA has set legal limits on four radionuclides: Combined radium-226/228, Gross Alpha Particle activity (including radium-226 but excluding radon and uranium), Uranium, and beta particle/photon emitters.
<i>RTC:</i>	Return to Compliance indicates that the system is in compliance with monitoring and reporting requirements or is operating below the established Maximum Contaminant Level for the analyte indicated.
<i>Total Coliform Rule:</i>	The Total Coliform Rule establishes regulations for microbiological contaminants in drinking water. These contaminants can cause short-term health problems. If no samples are collected during the one month compliance period, a significant monitoring violation occurs. States are to report four categories of violations: <i>Acute MCL violation:</i> System found fecal coliform or E. coli, potentially harmful bacteria, in its water, thereby violating the rule. <i>Non-acute MCL violation:</i> System found total coliform in samples of its water at a frequency or at a level that violates the rule. For systems collecting fewer than 40 samples per month, more than one positive sample for total coliform is a violation. For systems collecting 40 or more samples per month, more than 5% of the samples positive for total coliform is a violation. <i>Major routine and follow-up monitoring:</i> System did not perform any monitoring.
<i>Treatment Techniques:</i>	A water disinfection process that EPA requires instead of an MCL for contaminants that laboratories cannot adequately measure. Failure to meet other operational and system requirements under the Surface Water Treatment and the Lead and Copper Rules have also been included in this category of violation for purposes of this report.
<i>Violation:</i>	Violation: A failure to meet any state or federal drinking water regulation
