# ACKNOWLEDGEMENTS

**Connecticut Department of Public Health**  
Commissioner – J. Robert Galvin, MD, MPH

**Connecticut Department of Public Health**  
Deputy Commissioner – Norma Gyle, RN, PhD

**Regulatory Services Branch**  
Chief – Ellen Blaschinski, MBA, RS

**Environmental Health Section**  
Chief – Suzanne Blancaflor, MS

**Lead Poisoning Prevention and Control Program**  
Supervisor – Alan Buzzetti, BA, RS

**Childhood Lead Unit**  
Krista Veneziano, MPH, CHES, RS  
Linda Bailey, RN, MSN  
Brian Testut, MS, RS

**Environmental Lead Unit**  
Mark Aschenbach, BS, RS  
Sharon Sharp, MBAH  
Michelle McCullen-Green, BS  
(Currently Assigned to DPH Immunization Program)

**Data Management Unit**  
Justin Peng, MPH  
(Currently Assigned to DPH Asthma Program)  
Tracy Hung, MHS, CLS(C)

**Education, Outreach, Media, and  
Special Projects Unit**  
Ana Chambers, MPH, CHES  
Rhonda Pales, BA

**Administration**  
Waynett Bobbs  
Nakesha Scrivens

**Operation Branch  
Informatics Section**  
System Developer – Amjad Mahmood, MBA (Former DPH Staff Member)

# TABLE OF CONTENTS

KEY FINDINGS.....	1
UNDERSTANDING THE LEAD DATA .....	2
LEAD SCREENING .....	3
COMPLIANCE WITH LEAD SCREENING GUIDELINES .....	13
PREVALENCE OF ELEVATED BLOOD LEAD LEVELS .....	20
INCIDENCE OF ELEVATED BLOOD LEAD LEVELS .....	37
DEMOGRAPHIC CHARACTERISTICS ASSOCIATED WITH ELEVATED BLOOD LEAD LEVELS.....	45
MEDICAID VS. NON-MEDICAID .....	47

## KEY FINDINGS

- **Statewide Screening:** In CY 2005, 69,263 (25.6%) CT children from birth to six years of age and 42,954 (48.8%) CT children from one to two years of age had at least one blood lead screening.
- **Prevalence of Elevated Blood Lead Levels (EBLLs):** Among children under 6 years of age who had a confirmed blood lead test in 2005, 1263 (1.8%) and 212 (0.3%) children were found to have blood lead levels of  $\geq 10$   $\mu\text{g}/\text{dL}$  and  $\geq 20$   $\mu\text{g}/\text{dL}$ , respectively.
- **Incidence of EBLLs:** Of the 1263 children who were found to have blood lead levels  $\geq 10$   $\mu\text{g}/\text{dL}$  in 2005, 829 were new cases. Of the 212 children who were found to have blood lead levels  $\geq 20$   $\mu\text{g}/\text{dL}$  in 2005, 157 were new cases.
- **Race and Ethnicity Associated with EBLLs:** Among children under 6 years of age who had a confirmed blood lead test in 2005, Blacks (4.0%) or Native Americans (3.0%) were more likely to have EBLLs of  $\geq 10$   $\mu\text{g}/\text{dL}$  than Whites (1.4%) or Asians (0.8%); Hispanics (2.5%) were more likely to have EBLLs of  $\geq 10$   $\mu\text{g}/\text{dL}$  than Non-Hispanics (1.5%). There was no significant difference in the prevalence of EBLLs between males and females (1.9% and 1.8% respectively).
- **Screening among Children enrolled in Medicaid during FFY 2005:** In CY 2005, 35.3% of children under 6 years of age who were enrolled in Medicaid at some time during federal fiscal year 2005 (10/1/2004 to 9/30/2005) had a lead screening. Only 21.0% of children under 6 years of age who were not enrolled in Medicaid at any time during federal fiscal year 2005 had a lead screening.
- **Screening Compliance by Medicaid Status:** For children born in 2002, those who were ever enrolled in Medicaid, when compared to those who were never enrolled in Medicaid, were more likely to have had at least one lead screening by 18 months of age (54.0% vs. 44.9%) and two lead screenings by 36 months (38.5% vs. 24.6%).
- **Elevated Blood Lead Level by Medicaid Status:** Among children under 6 years of age who had a confirmed blood lead test in 2005, 3.2% of those who were enrolled in Medicaid at any time during federal fiscal year 2005 (10/1/2004 to 9/30/2005) had elevated blood lead levels of  $\geq 10$   $\mu\text{g}/\text{dL}$  while only 0.8% of those who were not enrolled in Medicaid had elevated blood lead levels of  $\geq 10$   $\mu\text{g}/\text{dL}$ .

# UNDERSTANDING THE LEAD DATA

The CT Department of Public Health has maintained a blood lead surveillance system since 1994. At the end of 2004, CT LPPCP upgraded the blood lead surveillance system to a more comprehensive system. The upgraded system has the ability to merge birth records, Medicaid data, and environmental data with child blood lead data. The upgraded surveillance system also has client and blood test de-duplication tools. The surveillance system application has had a significant positive impact on the CT LPPCP's capability to utilize surveillance data to enhance case management efforts and has resulted in cleaner and better data.

The aggregate data presented in this Calendar Year (CY) 2005 Surveillance Report are based on analyses of surveillance data from the new surveillance system. Starting with the 2004 report, the LPPCP has slightly modified the statistical analysis methods. The unit of analysis for elevated blood lead levels in the CY 2004 and CY 2005 Surveillance Reports were based on the number of individual children, whereas Surveillance Reports prior to 2004 were based on the number of valid or confirmed blood tests. In addition, additional criteria have been added to the definition of confirmed blood tests.

The LPPCP Data Management Unit has reanalyzed the screening and prevalence data for CY 2002 and CY 2003 using the revised methods. The revised 2002 and 2003 data are included in this current report. Therefore, you will find the 2002 and 2003 data outlined in this current report are slightly different from the data that were published by the CT LPPCP in Surveillance Reports prior to 2004 (most commonly known as Screening Data by Town).

## Important Business Rules:

Children who had a blood sample collected for a lead screening in 2005 are included in this report regardless of whether the test was analyzed in 2005.

When a child had more than one lead screening in CY 2005, the child was only counted once and the highest confirmed lead result was used. If the child had multiple lead screenings while living in more than one town in CY 2005, the statistics regarding the child were applied to the town where the child lived when tested with the highest confirmed lead result.

## Remark:

Children who are 1 to 2 years old refer to those who are 12 through 35 months of age. Unless otherwise specified, "years" refer to calendar years within this report.

# LEAD SCREENING

**Lead Screening** – A person is considered to have a lead screening if he or she was tested for lead with either a venous or capillary blood draw.

Connecticut recommends that every child should have a blood lead screen performed at age 12 months and again at age 24 months. Any child between 25-72 months of age, who has not previously been screened, should also have a blood lead screen performed immediately, regardless of risk. In CY 2005, 69,263 children from birth to 6 years of age were tested for lead poisoning.

Per federal requirements, all children 6-72 months of age who are enrolled in HUSKY Part A Medicaid must be assessed for risk, and at a minimum, screened at 12 months and 24 months of age. In CY 2005, among the children under 6 years of age who had a lead screening, 30,864 (44.6%) were enrolled in Medicaid at some time during federal fiscal year 2005.

---

## Demographics of children under 6 years of age who had a lead screening – Connecticut CY 2005 (N=69,263)

Demographics	Number	Percent
<b>Age Group</b>		
<12mo	7,018	10.1%
12-23 mo	23,728	34.3%
24-35 mo	19,226	27.8%

Hispanic	17,055	24.6%
Non-Hispanic	45,727	66.0%
Unknown	6,481	9.4%

---

**Percent of children under 6 years of age who had a lead screening, by calendar year – Connecticut 1995-2005**

In CY 2005, 69,263 (25.6%) children from birth to six years of age had at least one lead screening. Over the last five years (CY 2001 through CY 2005), the percentages of children under 6 years of age who have been screened have been approximately 25%. There was a 0.2% increase in screening in 2005 compared to 2004, which resulted in 657 more children screened.

**Percent of children 1-2 years of age who had a lead screening, by calendar year – Connecticut 1996-2005**

In CY 2005, 42,954 (48.8%) children from one to two years of age had at least one lead screening. There are 4.8 percent and 3.5 percent increases when compared to CY 2003 and CY 2004, respectively. There were 3,060 more children screened in CY 2005 as compared to CY 2004.

\* Data of 1995-2001 are based on analysis using number of tests instead of number of children screened as the unit of analysis. Data source of the 1995-2001 data is the previous published reports commonly known as Screening Data by Town.

**Percent of children under 6 years of age who had a lead screening, by town and by age at test – Connecticut CY 2005**

<sup>a</sup> Population data obtained from 2000 U.S. Census.

<sup>b</sup> Any test (capillary or venous) in CLPPP from 01/01/2005 - 12/31/2005.

NOTE: Children are counted only once, regardless of the number of times they are tested.

# COMPLIANCE WITH LEAD SCREENING GUIDELINES

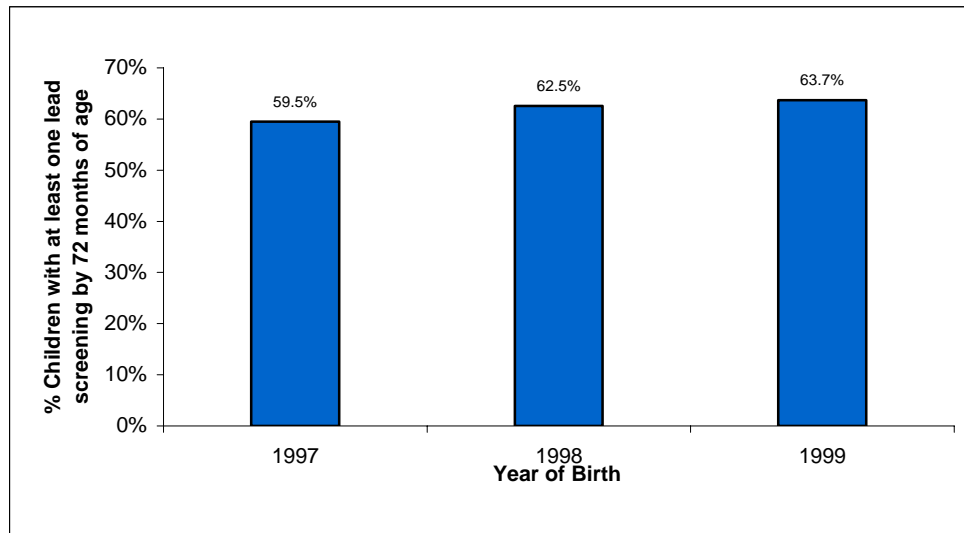

As discussed previously, it is recommended that all healthcare providers in Connecticut screen every child for lead poisoning at age 12 months and again at age 24 months. Compliance with these guidelines is assessed by measuring the proportion of children born in Connecticut during a given year who have had at least one blood lead test by 18 months of age, and at least two blood lead tests by 36 months of age.

**Percent of children who have had at least one/two screening(s) by 18/36 months of age, by year of birth – Connecticut 1997-2002**

For children born in 2002, 48.3% had at least one lead screening by 18 months of age and 30.0% had at least two lead screening by 36 months of age. The percents of children who have been screened in compliance with the screening guidelines declined in the 2002 cohort, after rising steadily in the past 5 birth cohorts (1997-2001 cohorts).

**Percent of children who have had at least one screening by 72 months of age, by year of birth – Connecticut 1997-1998**

For children born in 1999, 63.7% had at least one lead screening by 72 months of age. There was a slight increase through the three cohorts that have been evaluated.

**Percent of children who have had at least one/two screening(s) by 18/36 months of age, by town and by year of birth – Connecticut 1997-2002**

Note: Birth cohorts beyond 2002 are not included here because those children had not yet turned 36 months of age in CY 2005.

# PREVALENCE OF ELEVATED BLOOD LEAD LEVELS

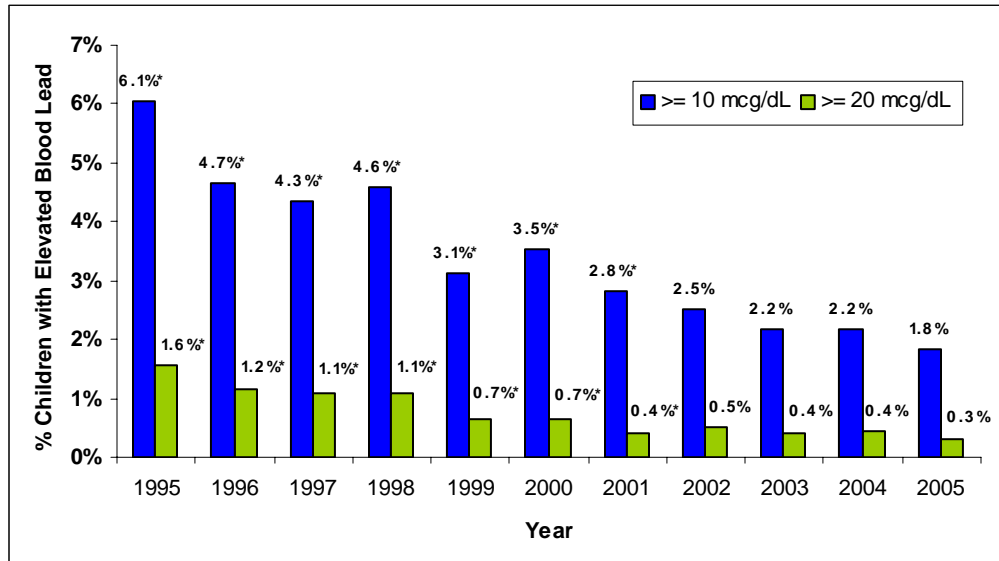

**Confirmation of Test Results** – A lead test is considered ‘confirmed’ if it was:

- 1) A venous blood draw,
- 2) A capillary blood draw with a result of  $<10 \mu\text{g/dL}$ ,
- 3) The second of two capillary blood draws, if both screenings results were  $\geq 10 \mu\text{g/dL}$  and the blood tests were drawn within 12 weeks of one another, or
- 4) A capillary blood draw with a result of  $\geq 10 \mu\text{g/dL}$ , if the previous lead test was a confirmed elevated blood lead level of  $\geq 10 \mu\text{g/dL}$ , regardless of the time lag between tests.

**Prevalence of Elevated Blood Lead Levels** – Prevalence of elevated blood lead levels is defined as the proportion of children under 6 years of age with a confirmed lead test in CY 2005 whose blood lead levels were  $\geq 10 \mu\text{g/dL}$ .

**Prevalence of Significant Elevated Blood Lead Levels** – Prevalence of significant elevated blood lead levels is defined as the proportion of children under 6 years of age with a confirmed lead test in CY 2005 whose blood lead levels were  $\geq 20 \mu\text{g/dL}$ . Per Connecticut General Statutes, significant elevated blood lead levels require an epidemiological investigation including the inspection of residences for lead hazards by local health departments.

**Percent of children under 6 years of age with elevated blood lead, by calendar year and by blood lead levels – Connecticut 1995-2005\***

\* Data of 1995-2001 are based on analysis using number of tests instead of number of children screened as the unit of analysis. Data source of the 1995-2001 data is the previous published reports commonly known as Screening Data by Town.

Among children under 6 years of age who had a confirmed blood lead test in 2005, 1.8% and 0.3% children were found to have blood lead levels of  $\geq 10 \mu\text{g/dL}$  and  $\geq 20 \mu\text{g/dL}$ , respectively. The prevalences of elevated blood lead levels of  $\geq 10 \mu\text{g/dL}$  and significant elevated blood lead levels of  $\geq 20 \mu\text{g/dL}$  have decreased from CY 1995 to CY 2003. The prevalences of elevated blood lead levels of  $\geq 10 \mu\text{g/dL}$  and significant blood lead levels of  $\geq 20 \mu\text{g/dL}$  in CY 2005 declined 0.4% and 0.1% respectively as compared to CY 2004.

**Number of children under 6 years of age with elevated blood lead, by calendar year and by blood lead levels – Connecticut 2002-2005**

Among children under 6 years of age, there was a decline of 209 children who were found to have blood lead levels of  $\geq 10 \mu\text{g/dL}$  from CY 2004 to CY 2005, and a decline of 470 children from CY 2002 to CY 2005.

Similarly the prevalence of blood lead levels of  $\geq 20 \mu\text{g/dL}$  has decreased over time. Comparing the numbers of children who were found to have blood lead levels of  $\geq 20 \mu\text{g/dL}$  across years, there was a decline of 76 children from CY 2004 to CY 2005, and a decline of 141 children from CY 2002 to CY 2005.

**Percent of children under 6 years of age with elevated blood lead, by town and by blood lead levels – Connecticut CY 2005**

# INCIDENCE OF ELEVATED BLOOD LEAD LEVELS

**Incidence of Elevated Blood Lead Levels** – Incidence of elevated blood lead levels (i.e., new cases of elevated blood lead) is defined as the proportion of children under 6 years of age who had a confirmed lead test of  $\geq 10 \mu\text{g/dL}$  for the first time in 2005 compared to all children under 6 years of age who were screened for lead in 2005 and had not had a result of  $\geq 10 \mu\text{g/dL}$  prior to 2005.

**Incidence of Significant Elevated Blood Lead Levels** – Incidence of significant elevated blood lead levels (i.e., new cases of significant elevated blood lead) is defined as the proportion of children under 6 years of age who had a confirmed lead test of  $\geq 20 \mu\text{g/dL}$  for the first time in 2005 compared to all children under 6 years of age who were screened for lead in 2005 and had not had a result of  $\geq 20 \mu\text{g/dL}$  prior to 2005. As discussed previously, per Connecticut General Statutes, significant elevated blood lead levels require an epidemiological investigation including the inspection of residences for lead hazards by local health departments.

## Number of existing and new cases of elevated blood lead, by blood lead levels – Connecticut CY 2005

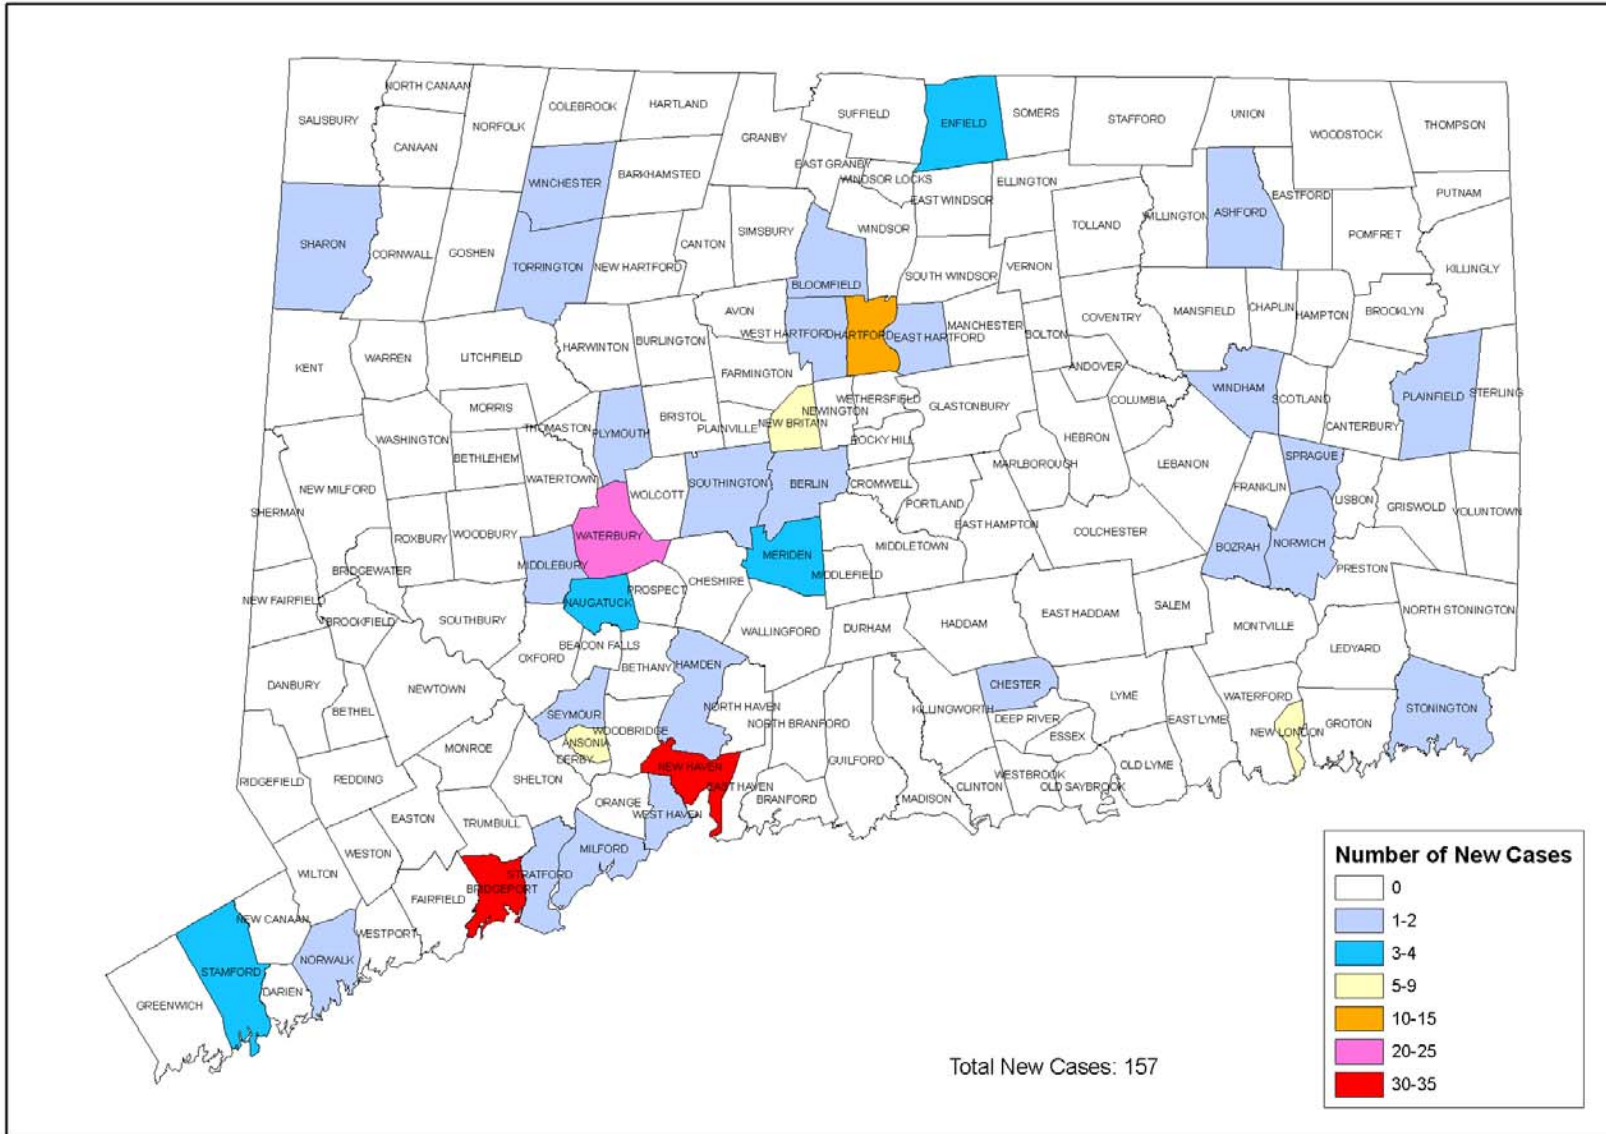

Of the 1263 children who were found to have blood lead levels  $\geq 10 \mu\text{g/dL}$  in 2005, 829 were new cases. Of the 212 children who were found to have blood lead levels  $\geq 20 \mu\text{g/dL}$  in 2005, 157 were new cases of significant elevated blood lead.

**Incidence of elevated blood lead among children under 6 years of age, by blood lead levels – Connecticut CY 2005**

Among children who had a blood lead screening in 2005 and had not had a result of  $\geq 10 \mu\text{g/dL}$  blood lead levels before 2005, 829 (1.2%) children had confirmed elevated blood lead levels of  $\geq 10 \mu\text{g/dL}$  for the first time in 2005. Among children who had a blood lead screening in 2004 and had not had a result of  $\geq 20 \mu\text{g/dL}$  blood lead levels before 2005, 157 (0.2%) children had confirmed significant elevated blood lead levels of  $\geq 20 \mu\text{g/dL}$  for the first time in 2005.

## 2005 Connecticut Children Under 6 years Old By Town Number of New Cases 20 mcg/dL and above

**Incidence of elevated blood lead, by town and by blood lead levels – Connecticut CY 2005**

# DEMOGRAPHIC CHARACTERISTICS ASSOCIATED WITH ELEVATED BLOOD LEAD LEVELS

Children who were tested with a blood lead level of  $\geq 10 \mu\text{g/dL}$  are considered to have elevated blood lead. The following figures portray the association between certain demographic characteristics (e.g., gender, race, and ethnicity) and elevated blood lead levels.

Percent of children under 6 years of age with elevated blood lead, by gender – Connecticut CY 2005

The percent of children with elevated blood lead level in males (1.9%) is similar to the percent in females (1.8%) among children under 6 years of age who had a confirmed blood lead test in 2005.

### Percent of children under 6 years of age with elevated blood lead, by race – Connecticut CY 2005

Among children under 6 years of age who had a confirmed blood lead test in 2005, Blacks (4.0%) or Native Americans (3.0%) were more likely to have elevated blood lead levels of  $\geq 10 \mu\text{g/dL}$  than Whites (1.4%) or Asians (0.8%).

### Percent of children under 6 years of age with elevated blood lead, by ethnicity – Connecticut CY 2005

Among children under 6 years of age who had a confirmed blood lead test in 2005, Hispanics (2.5%) were more likely to have elevated blood lead levels of  $\geq 10 \mu\text{g/dL}$  than Non-Hispanics (1.5%).

## MEDICAID VS. NON-MEDICAID

The Connecticut Department of Public Health and the Connecticut Department of Social Services (DSS) have had a no cost Memorandum of Understanding regarding data exchange since 2003. Part of the data exchange is the mutual sharing of childhood lead screening data from the LPPCP and Medicaid HUSKY A enrollment data from DSS. At least on an annual basis, DSS provides the LPPCP with a list of children aged 6 years or less who are enrolled in Medicaid HUSKY A at some time during a federal fiscal year (FFY) period. In turn the LPPCP provides DSS with a list identifying the children on the DSS Medicaid enrolled list who have received a lead screening and those who have elevated blood lead levels.

DSS has provided the LPPCP with Medicaid HUSKY A enrollment data for FFYs 2002, 2003, 2004, and 2005. In the FFY 2005 Medicaid enrollment data, 87,461 children under 6 years of age were enrolled in Medicaid HUSKY A at some time during FFY2005 (10/1/2004 to 9/30/2005). According to 2000 U.S. Census data, there were 270,187 children under 6 years of age in Connecticut. Therefore, it was estimated that approximately 182,726 children were not enrolled in Medicaid HUSKY A at any time during federal fiscal year 2005. The following figures portray the association between Medicaid enrollment and lead screening and elevated blood lead levels.

---

### Percent of children under 6 years of age who had a lead screening, by Medicaid enrollment – Connecticut CY 2005

In CY 2005, 35.3% of children under 6 years of age who were enrolled in Medicaid at some time during FFY 2005 (10/1/2004 to 9/30/2005) had a lead screening, while 21.0% of children under 6 years of age who were not enrolled in Medicaid at any time during FFY 2005 had a lead screening.

**Percent of children 1-2 years of age who had a lead screening, by Medicaid enrollment – Connecticut CY 2005**

In CY 2005, 52.2% of children 1-2 years of age who were enrolled in Medicaid at some time during FFY 2005 (10/1/2004 to 9/30/2005) had a lead screening, while 46.6% of children 1-2 years of age who were not enrolled in Medicaid at any time during FFY 2005 had a lead screening.

**Percent of children under 6 years of age with elevated blood lead ( $\geq 10 \mu\text{g/dL}$ ), by Medicaid enrollment – Connecticut CY 2005**

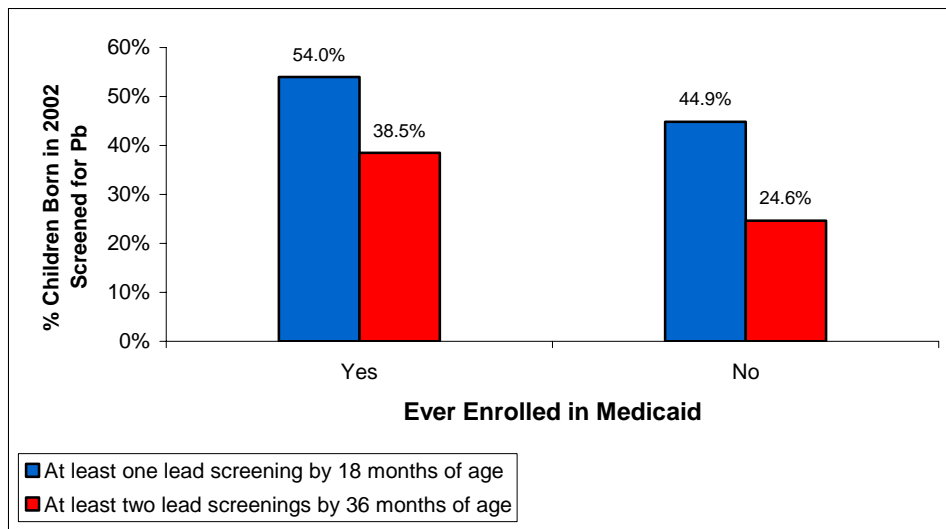

Among children under 6 years of age who had a confirmed blood lead test in 2005, those who were enrolled in Medicaid (3.2%) at some time during FFY 2005 (10/1/2004 to 9/30/2005) were more likely to have elevated blood lead levels of  $\geq 10 \mu\text{g/dL}$  than those who were not enrolled in Medicaid (0.8%) at any time during FFY2005.

**Percent of children under 6 years of age with significant elevated blood lead ( $\geq 20$   $\mu\text{g/dL}$ ), by Medicaid enrollment – Connecticut CY 2005**

Among children under 6 years of age who had a confirmed blood lead test in 2005, those who were enrolled in Medicaid (0.5%) at some time during FFY 2005 (10/1/2004 to 9/30/2005) were more likely to have significant elevated blood lead levels of  $\geq 20$   $\mu\text{g/dL}$  than those who were not enrolled in Medicaid (0.1%) at any time during FY 2005.

**Percent of children born in year 2002 who have had at least one/two screening(s) by 18/36 months of age, by Medicaid enrollment**

For children born in 2002, those who were enrolled in Medicaid at some time during their lives compared to those who were never enrolled in Medicaid were more likely to have had at least one lead screening by 18 months of age (54.0% vs. 38.5%) and two lead screenings by 36 months (38.5% vs. 24.6%).
