Influenza-like Illness has increased from 1.62% to 1.82% over the last week.

**2019-2020 Overview for Week 42 (October 13-19, 2019)**

<table>
<thead>
<tr>
<th>Outpatient Influenza-like illness (ILI) activity increased over the previous week, and is higher than what was seen this time last season. Influenza geographic activity is SPORADIC.</th>
</tr>
</thead>
<tbody>
<tr>
<td>A total of 5 patients hospitalized with influenza were reported in week 42. A total of 32 influenza related hospitalizations have been reported since the beginning of the 2019-20 season.</td>
</tr>
</tbody>
</table>

In week 42, the percent of emergency department visits for ILI statewide increased but remained similar to levels seen at this time in previous years.  |
| No new influenza associated deaths were reported in week 42. No influenza associated deaths have been reported since the beginning of the 2019-20 season. |

Of the 14 positive influenza tests reported to DPH in week 42, none (0%) were Influenza A 2009 (H1N1), 1 (7%) was Influenza A (H3N2), 3 (21%) Influenza Type B, and 10 (72%) were Influenza A (type unspecified).  |
| No new influenza-associated pediatric deaths were reported in week 42. No influenza-associated pediatric deaths have been reported since the beginning of the 2019-20 season. Annual vaccination is the best way to protect children from influenza. |

**ALL DATA ARE PRELIMINARY AND SUBJECT TO CHANGE.**

National influenza statistics through [Flu View](https://www.fluview.cdc.gov/).

Annual vaccination is the best way to protect against severe illness due to influenza.
ILINet Surveillance

Each week anetwork of volunteer outpatient providers, including clinics, health centers, and urgent care centers, known as ILINet, report the percentage of patient visits with influenza-like illness (ILI), which consists of cough and/or sore throat and a fever >100°F in the absence of a known cause. Previous years are shown for comparison. As of October 19, 2019, outpatient ILI is at 1.82%.

Percentage of outpatient patient visits associated with ILI per MMWR week.

Hospital Syndromic Surveillance

DPH receives near real-time information about emergency department (ED) visits from all 38 licensed, hospital EDs in Connecticut. This system was fully in place starting with the 2018-2019 season. Data from previous years are derived from the Hospital Emergency Department Syndromic System. As of October 19, 2019, 5.71% of ED patients had ILI.

Percentage of patients presenting to emergency departments statewide with complaints of ILI.
## Laboratory Surveillance

Laboratories report positive influenza tests to DPH. Test results may include the virus subtype (as H3N2), which helps determine the specific virus strains circulating in CT. Other results only provide a general type (Type A Unspecified, Type B). As of October 19, 2019, 74 positive influenza tests have been reported.

### Percent of each influenza virus type reported to DPH during the current season.

- **Type A 2009 H1N1**: 16%
- **Type A H3N2**: 3%
- **Type A Unspecified**: 7%
- **Type B Seasonal**: 74%

### Total number of positive influenza tests and the number of each influenza virus type reported to DPH per MMWR week during the current season.

---

**2019-2020 Influenza Season**
Hospital Surveillance

Hospitals report patients hospitalized with influenza to DPH. As of October 19, 2019, 32 patients have been hospitalized with influenza during the current season.

Total number of patients hospitalized with laboratory-confirmed influenza by virus type per MMWR week during the current season.

![Graph showing the number of patients hospitalized by week and virus type.]

Total number of reported patients hospitalized with influenza by age and influenza virus type during the current season.

NOTE: Type A Unspecified test results are not displayed so other results may be clearly seen.
Influenza-associated Deaths

Influenza associated deaths are reported to DPH. The graph shows the number of deaths associated with influenza by age group. Comparisons to previous years are provided when new data are available. **Due to the need to confirm reports and reporting delays, consider the current week data preliminary. As of October 19, 2019, no influenza-associated deaths have been reported to DPH.**

As of October 19, 2019, no influenza-associated deaths have been reported to DPH.
