HPV (males & females)	9-18 years	YES	NO	YES	YES	90649, 90650

1 VFC eligibility is defined as follows: (a) Medicaid enrolled; (b) NO health insurance; (c) American Indian or Alaskan native; or (d) underinsured seen at a Federally Qualified Health Center (FQHC).

2 Non-VFC children refers to patients who have private insurance that covers the cost of immunizations, patients that are under-insured for some or all vaccines seen by a private provider; and S-CHIP children- those children enrolled in HUSKY B.

3 Susceptible children who do not have a clinical history of chicken pox.

4 Td vaccine can be given to children 7-18 years of age to complete their primary series, or to those children 7-18 years of age who are in need of a Tetanus containing vaccine and cannot receive Tdap.

5 Tdap vaccine should be administered routinely to children at the 11-12 year old preventive health care visit, and to children 7-10 years old who have not been fully vaccinated against pertussis and for whom no contraindication to pertussis containing vaccine exists.

As of March 1, 2013 the only recommended childhood vaccines not available from the Connecticut Vaccine Program are: Influenza for privately insured patients 5-18 years of age; Hepatitis A for privately insured patients 2-18 years of age; Rotavirus for privately insured patients 6 weeks-8 months of age; and HPV for privately insured patients 9-18 years of age. For those vaccines providers can purchase them privately and submit billing requests to the appropriate private insurer in accordance with normal billing procedures.
