

2019 Webinar Series

Connecticut Chapter of the American Academy of Pediatrics

Continuing Medical Education Program

Speakers:

Nancy Sharova, MPH

Nancy Sharova has over seventeen years of experience in the Immunization Program with the Connecticut Department of Public Health (DPH). In September 2018, Nancy and her team migrated over 873,000 patients with over 14,400,000 immunization records from CIRTS to the new Immunization Information System (IIS) called "CT WiZ" to meet national standards for operations and interoperability. Nancy serves as the IIS Supervisor overseeing day to day operations of the IIS; managing immunization Contracts to ensure compliance with the Centers for Disease Control and Prevention (CDC) federal grant objectives; developing policies and procedures for system users including DPH staff, Immunization Action Plan (IAP) Coordinators, providers and school nurses; and overseeing IIS training implementation statewide with the goal of improving childhood immunization services at the point of clinical care and at the population level.

Danielle Reader-Jolley, MHS

Danielle Reader-Jolley is an independent consultant with over twenty years of experience in immunization program activities and IIS technical support operations. Danielle has served at all levels of immunization programming including a local immunization program, state immunization coalition, state immunization program, multi-state IIS vendor, and national public health organizations. Danielle specializes in project management and coordination, assessment design and reporting, large-scale training and educational efforts, system requirements and design, meeting planning and facilitation, and general subject matter expertise. Danielle is currently providing technical assistance and CT WiZ implementation support to CT DPH through a sub-contract with HLN Consulting LLC.

All Aboard! Your Ticket to CT WiZ

Wednesday, April 24th, 2019

12:10pm to 1:00pm

The Connecticut Department of Public Health (DPH) is actively onboarding providers interested in establishing an electronic health record (EHR) HL7 interface with CT WiZ, Connecticut's new Immunization Information System (IIS). CT WiZ provides a centralized repository for immunization records and clinical decision support, while also providing tools and resources for ordering vaccines, managing inventory, and assessing clinic coverage levels. This webinar will describe the typical process for establishing an electronic connection between the EHR and CT WiZ. As the primary stakeholder in the onboarding process, providers have important roles and responsibilities at each stage of the process, including the periods before and after active onboarding.

Ultimately, providers can contribute to and leverage data in the IIS through a variety of methods: by directly logging into the user interface, electronic reporting to the IIS, and bi-directional query and response between the EHR and IIS. This webinar will also describe the training plan and support strategies that will be used for all users of CT WiZ, whether you have an EHR or not.

Please register online for this meeting at:
