Medical Assistance Program
Oversight Council

January 16, 2015

HUSKY Health Data Dashboard Demonstration
Rationale

- Governor Malloy has instructed all state agencies to increase government transparency by making program data readily available to the public.

- Concurrently, the Department wishes to showcase the unique structure of the CT Medicaid Program as a single payer of managed fee-for-service health care using Administrative Services Organizations (ASOs).
The HUSKY Health Data Dashboard will be an online central repository of high-level information pertaining to the CT Medicaid Program. It will showcase select metrics on individual Medicaid services, as well as providing data on the entire program. Data will be grouped in the following categories:

- Covered Services
- Outcomes
- Member Experience
- Provider Experience
- Provider Enrollment
- Spending and Utilization
- Special Projects/Initiatives
The data will span all Medicaid services, including medical, behavioral health, dental, non-emergency medical transportation (NEMT), pharmacy and long-term services and supports (LTSS).

Those using the dashboard will be able to select a Medicaid service, then drill down to a category of interest. With each click of a button, users will be presented with options to further drill down on the desired metric.

The Data Dashboard will initially be launched based on data from dates of service CY 2012 and CY 2013. It will be updated annually.
Stakeholders

- Policy-makers
- State leaders responsible for protecting the interests of their constituents
- Advocacy groups and the Office of the Healthcare Advocate
- Students doing research
- Other state Medicaid programs
- The general public
Anticipated Benefits

It is expected that the Data Dashboard will:

- enhance transparency
- increase accountability
- provide useful information to stakeholders
- guide future goals and improvements
Users will be able to access the Data Dashboard via a hyperlink located on the HUSKY Health website.

The user will be directed to the Data Dashboard home page where they will have the option to view aggregate, program wide data or opt to view data on specific service categories.

Community Health Network of Connecticut is the medical Administrative Services Organization (ASO) contracted by the Department of Social Services to manage and deliver medical services to HUSKY members in a self-insured, managed fee-for-service arrangement. The ASO arrangement allows the Department direct access to an integrated data set, centralization of member and provider services and streamlined administrative costs.

A very important feature and result of the transition in Connecticut Medicaid medical services from managed care to the ASO model is development of fully integrated set of claims data across all categories of Medicaid services. CHN maintains this data within the Utilization & Cost Analyzer (UCA) system, an analytical and data discovery tool that includes Medicaid claims, member eligibility, and provider data. The integrated data set includes a wealth of claims and encounter data that has the unprecedented capability to be analyzed for purposes attributing members to primary care practices, supporting members through Intensive Care Management, and supporting providers in understanding the needs of the members whom they serve.

Centralized member services enable streamlined support to members. This is achieved by referrals to primary care physicians and specialists, assistance with prior authorization requirements and coverage questions, strengthened relationships with members throughout their entire enrollment periods, and promoting continuity of care. Centralized provider services enable data sharing of provider’s attributed members to facilitate tailored responses to members’ needs and one stop shopping for prior authorizations. CHN-CTs clinical functions include Utilization Management, Transitional Care Management and Intensive Care Management.

A person-centered approach is the cornerstone of the Department’s healthcare delivery system. Person-centeredness is defined as an approach that provides the member with needed information, education and support required to make fully informed decisions about his or her care options and, to actively participate in his or her self-care and care planning.
Behavioral Health ASO

The CT BHP is a Partnership that consists of the Department of Children and Families (DCF), the Department of Social Services (DSS), the Department of Mental Health and Addiction Services (DMHAS), ValueOptions® and a legislatively mandated Oversight Council. Expanded in 2011 to include DMHAS, the contract is designed to create an integrated behavioral health service system for our members; Connecticut’s Medicaid populations, including children and families who are enrolled in HUSKY Health and DCF Limited Benefit programs.

The Partnership’s goal is to provide access to a more complete, coordinated, and effective system of community based behavioral health services and support. This goal is achieved by making enhancements to the current system of care in order to:

- Provide access to a more complete, coordinated and effective system of community-based behavioral health services and supports
- Support recovery and access to community services, ensuring the delivery of quality services to prevent unnecessary care in the most restrictive settings
- Enhance communication and collaboration within the behavioral health delivery system and with the medical community, thereby improving coordination of care
- Improve network access and quality
- Recruit and retain traditional and non-traditional providers

This has been—and will continue to be—a coordinated effort between individual citizens and state agencies, between local service areas and a statewide delivery system, between those who use services and those who provide them. Just as this initiative could not have been implemented without the hard work of citizens who care about behavioral health care services, our joint vision cannot be achieved without our mutual determination to continue to make changes, focus on recovery and resiliency, evaluate their impact, and make more changes.
Non-Emergency Medical Transportation ASO

Non-emergency Medical Transportation (NEMT) is covered benefit of the CT Medicaid program. Active HUSKY A, C, D and limited benefit members are eligible for the transportation program if they have no other means to get to their Medicaid covered service.

All transportation is prior authorized by the non-risk broker, LogisitiCare Solutions. Available methods of transportation include ambulance, wheelchair accessible vehicle, sedan/livery, gas reimbursement, mass transit including bus and train, and transportation provided by an enrolled Companion agency staff member. The type of transportation approved is based upon the medical necessity of the member receiving the service.

Requests for mass transit must be received at least 5 business days in advance of the trip to a Medicaid covered service in order to allow time to process the request and get the pass to the member. Other levels of service must be requested at least 2 business days in advance to allow for appointment verification and scheduling of transportation. Same day and next day trips are available for hospital discharges and verified urgent appointments.
Dental Services

Dental ASO

The Connecticut Dental Health Partnership (CTDHP) is part of the HUSKY Health program. Specifically, the CTDHP provides management and customer service for the dental benefits portion of HUSKY Health. Orthodontic services are provided only to members under age 21.

The CTDHP will help eligible members locate a participating network dentist or dental specialist, provide appointment scheduling assistance for families, offer translation assistance and help with the coordination of transportation to and from dental appointments, including locating a dental office that will work with individuals with special healthcare needs or require ADA accommodations. For more information, contact the CTDHP Customer Service Representatives at 1-866-420-2924 or visit www.ctdhp.com.

The State of Connecticut’s publicly funded dental care programs, HUSKY A, HUSKY B, HUSKY C (Traditional Medicaid Title XIX Fee For Service) and HUSKY D (Medicaid For Low Income Adults-formerly State Administered General Assistance “SAGA”), now have been combined into one dental plan with a new name: the Connecticut Dental Health Partnership (CTDHP). CTDHP oversees the dental plan for the Department of Social Services (DSS) HUSKY Health program which covers more than 600,000 residents in Connecticut.

DSS is the lead agency for the State of Connecticut which provides a broad range of services to the elderly, people with disabilities, families and individuals who need assistance in maintaining or achieving their full potential for self-direction, self-reliance and independent living. DSS administers over 90 legislatively authorized programs and operates on one-third of the state budget. DSS also administers the Medical Assistance Program which includes the Connecticut Dental Health Partnership.

BeneCare Dental Plans was selected by DSS, in 2008, as the Administrative Service Organization to manage the Connecticut Dental Health Partnership for the State of Connecticut. BeneCare is a dental benefit management company that operates dental benefit programs for fully insured and self-insured clients in the Northeast and Mid-Atlantic regions under a wide array of State, County and Municipal government, multi-employer welfare fund and commercial employer sponsored plans.
Pharmacy Services

The Pharmacy Unit administers and operationalizes all aspects of the retail pharmacy benefit program while providing the clinical and healthcare expertise needed to coordinate these benefits for clients enrolled in the Department’s Medical Assistance Programs (Medicaid (Husky C), Medicaid for Low Income Populations (MCLIP/Husky D), HUSKY A/B, CADAP, Tuberculosis, and Family Planning.

The Pharmacy Unit also provides contract management and oversight to Hewlett Packard (HP) relative to the Manufacturer Drug Rebate Program, the Nursing Home Drug Return Program, the Preferred Drug List (PDL) program, Prior Authorization (PA), Prospective Drug Utilization Review (ProDUR), Retrospective Drug Utilization Review (RetroDUR), Pharmacy Lock-in, and Medicare Part D enrollment and interfaces with Medicare Part D Prescription Drug Plans.

Long-term care benefit eligibility is one of the most complex areas of Medicaid. Because Medicaid is a program for the poor or near-poor, there is a rigorous eligibility determination process, in part to help ensure that applicants are not attempting to gain benefits by inappropriate divesting of assets.

Home and Community-Based “Waivers”

Medicaid “waivers” serve financially eligible individuals who would, without benefit of waiver services, be institutionalized in a hospital or nursing facility. Waivers cover both the typical Medicaid “medical” home care services (e.g. skilled nursing, home health aide) as well as a range of additional home and community-based services (e.g. adult day care, homemaking). Waivers are typically targeted to identified populations, which under federal law may include the following: elders, individuals with physical disabilities, individuals with mental retardation or developmental disabilities, medically fragile/technology dependent children, individuals with HIV/AIDS, and individuals with TBI/SCI. Connecticut has received approval from the Centers for Medicare and Medicaid Services (CMS) for nine waivers, serving the groups listed above with the exception of individuals with HIV/AIDS. The Division of Health Services directly manages the largest of these waivers, the Connecticut Home Care Program for Elders, as well as the Katie Beckett waiver, and partners with another unit of the Department of Social Services, as well as the Departments of Developmental Services and Mental Health and Addiction Services, on implementation of the other waivers.
Special Projects and Initiatives

The intent of special projects and initiatives are to enhance program operations and improve the delivery of benefits to Medicaid eligible participants. Many of these programs center on how effectively care is delivered and as such, their effectiveness must be measured and evaluated. The Department of Social Services works closely with stakeholders to ensure that quality performance measures are established and monitors performance to ensure that the goals and objectives are achieved. As these programs and initiatives may be temporary in their duration or they may not have yet met a test of permanence they fall into the category of special programs and initiatives.

Community Health Network of Connecticut is the medical Administrative Services Organization (ASO) contracted by the Department of Social Services to manage and deliver medical services to HUSKY members in a self-insured, managed fee-for-service arrangement. The ASO arrangement allows the Department direct access to an integrated data set, centralization of member and provider services and streamlined administrative costs.

A very important feature and result of the transition in Connecticut Medicaid medical services from managed care to the ASO model is development of fully integrated set of claims data across all categories of Medicaid services. CHN maintains this data within the Utilization & Cost Analyzer (UCA) system, an analytical and data discovery tool that includes Medicaid claims, member eligibility, and provider data. The integrated data set includes a wealth of claims and encounter data that has the unprecedented capability to be analyzed for purposes attributing members to primary care practices, supporting members through Intensive Care Management, and supporting providers in understanding the needs of the members whom they serve.

Centralized member services enable streamlined support to members. This is achieved by referrals to primary care physicians and specialists, assistance with prior authorization requirements and coverage questions, strengthened relationships with members throughout their entire enrollment periods, and promoting continuity of care. Centralized provider services enable data sharing of provider’s attributed members to facilitate tailored responses to members’ needs and one stop shopping for prior authorizations. CHN-CTs clinical functions include Utilization Management, Transitional Care Management and Intensive Care Management.

A person-centered approach is the cornerstone of the Department’s healthcare delivery system. Person-centeredness is defined as an approach that provides the member with needed information, education and support required to make fully informed decisions about his or her care options and, to actively participate in his or her self-care and care planning.
## Member Experience

<table>
<thead>
<tr>
<th>Attribution To Primary Care Physician / Medical Home</th>
</tr>
</thead>
<tbody>
<tr>
<td>Centralized Member Services</td>
</tr>
</tbody>
</table>
Attribution is the process of linking a member to a Primary Care Provider (PCP) based on specific claims data. Members may self-select a PCP or Person-Centered Medical Home (PCMH) at any time. The selection will be effective first of the month following the selection. There is no default process to assign a member to a PCP/PCMH. It is run on a monthly basis with a look back at 15 months of claim data. Attribution is based on specific CPT and Revenue codes in order to link a member to a PCP/PCMH.

If a member is not attributed it does not mean they are not receiving care. They may have other private insurance or Medicare as their primary insurance and may have claims with doctors in that network. A member may also see a provider who has not attested to be a primary care doctor or who is a specialist. In this case a member is not counted as being attributed. An adult who did not self-select a PCP may also not have had a need for a medical visit because they are healthy in which case they would have no claims.
