ACKNOWLEDGEMENTS

Many individuals and organizations provided invaluable assistance in the development of this Plan. Thanks to all the members of the Long-Term Care Planning Committee for their efforts. In addition, appreciation is extended to the members of the Long-Term Care Advisory Council who worked in partnership with the Planning Committee to enhance the quality of this Plan. Thanks also to all the individuals and organizations that took the time to review drafts of the Plan throughout its development and provided helpful recommendations and advice.

I. EXECUTIVE SUMMARY

A. Balancing the System

People of all ages and from all socio-economic, racial and ethnic backgrounds need long-term services and supports (LTSS). They are our parents, siblings, children, co-workers and neighbors. Whether challenged with limitations due to injuries, developmental disabilities, mental illness, chronic health conditions, or the aging process, they all share a common need for support in order to live, work and play.

LTSS are needed to help people carry out basic functions such as eating, dressing or bathing, the tasks necessary for independent community living, such as shopping, managing finances and house cleaning and the tasks necessary to lead a normal life, such as work and recreation. Likewise, needs range from minimal personal assistance with basic activities to virtually total care. These needs for LTSS are being met at home, in the community, in congregate residences and in institutional settings.

This Long-Term Services and Supports Plan (Plan) addresses the needs for LTSS of the citizens of Connecticut. Developed by the Long-Term Care Planning Committee in collaboration with the Long-Term Care Advisory Council, this Plan was produced to educate and provide recommendations to policymakers regarding what steps Connecticut should initiate and continue to take in order to achieve a balanced and person-centered LTSS system over time through 2025.

It is Connecticut's goal to establish a LTSS system that offers individuals the services and supports of their choice in the least restrictive and most enhancing setting. This means providing real choices to Connecticut residents regarding the types of supports that they need and requires a system that is person-focused and driven. To reach this goal, Connecticut must first address the fact that the LTSS system is out of balance.

As in the 2013 Plan, the 2016 Plan is committed to balancing the LTSS system in terms of the ratio of home and community-based and institutional care and the ratio of public and private resources. By balancing the ratio of community-based and institutional services, what is meant is not a system with an equal split between community and institutional services. Instead, a more balanced system in Connecticut would meet the 2025 goal of 75 percent of individuals receiving Medicaid LTSS in the community and 25 percent receiving LTSS in institutions. Central to achieving this balance is a commitment to independence and choice for all individuals seeking services and supports. Towards this end, this new Plan continues to address the development and maintenance of a person-centered system of LTSS across the lifespan and across all disabilities with the focus on informed choice, least restrictive and most enhancing setting, and community inclusion.

Three years have passed since the last Plan and much has changed to improve Connecticut's LTSS system, yet there is more to be done. Changes in policy and funding on the federal and state level have fostered progress in creating a balanced LTSS system in Connecticut. Despite this progress and the many highlights which are described later in this Executive Summary, Connecticut's LTSS system still faces many of the same rules, barriers and challenges that were in place three years ago.

To address these challenges, the Plan centers around two central themes.

1. Long-Term Services and Supports Affects Everyone

LTSS will affect all of us at some point in our lives. Whether it is because we need services and supports ourselves, or we are providing care for someone in need, regardless of age, health or wealth, it is unlikely that we will be able to escape the issue.

In keeping with this theme, this Plan is designed to address the current and future needs of all individuals in need of LTSS, regardless of their age or disability. This is the fifth Plan developed by the Long-Term Care Planning Committee under the Committee's expanded mandate to go beyond the needs of older adults and address the system as a whole, encompassing all individuals with disabilities and their families.

Therefore, all of the recommendations and action steps put forward in this Plan apply to individuals of all ages and disabilities, unless specifically noted. While we recognize that certain populations have not received the equal footing they deserve in terms of attention and resources in LTSS planning and program development, we have deliberately been inclusive in our recommendations and have not segmented out certain groups of individuals or disabilities. This strategy is designed to break down some of the barriers experienced by individuals with certain disabilities and promote a philosophy that is person-centered and focused on the needs of individuals and their families.

It is important to note that not only will virtually everyone be touched by the LTSS system at some point in their lives, but improvements in this system also benefit society at large. For example, addressing the shortage of LTSS workers also addresses the need for health professionals in other settings, and improving access to public transportation benefits everyone, not only individuals with disabilities.

Accordingly, the critical terms used in this Plan are defined as follows:

- *Long-term services and supports (LTSS)* refer to a broad range of paid and unpaid services for persons who need assistance due to a physical, cognitive or mental disability or condition. LTSS consist largely of personal assistance with the routine tasks of life as well as additional activities necessary for living independently at home, at work, at school and at recreational activities. Unlike medical care where the goal is to cure or control an illness, the goal of LTSS is to allow an individual to

attain and maintain the highest reasonable level of functioning in the course of everyday activities and to contribute to independent living.

- *Home and community-based care* encompasses home care, adult day care, respite, community housing options, transportation, personal assistants, assistive technology and employment services.
- *Institutional care* includes nursing facilities, intermediate care facilities for people with mental retardation (ICF/MRs), psychiatric hospitals, and chronic disease hospitals.

2. The Current System Is Out of Balance

Connecticut's LTSS system has many positive elements and great strides have been made in providing real choices and options for older adults and individuals with disabilities. Despite these gains, the system is still fundamentally out of balance in two important areas.

Balancing the Ratio of Home and Community-Based and Institutional Care

In order to provide real choices to individuals and families there needs to be equal access to community and institutional care, regardless of age and disability. While there are several sources of payment for LTSS, Medicaid is by far the largest payer and therefore is the focus of this discussion. Traditionally, in Connecticut and nationwide, Medicaid has made access to institutional care easier than home and community-based care. Largely, this is a result of federal Medicaid rules and regulations. Consequently, the ratio between care and supports provided in the home and community and those provided in institutions has consistently been out of balance and skewed towards institutional care.

It is important to note that while the Medicaid program provides a critical benchmark for the balancing of the LTSS system, there are other important sources of funding for LTSS in Connecticut. For example, the mental health system is substantially funded with state dollars, and the Department of Developmental Services (DDS) provides many services for individuals with intellectual disability with State funds. Also, a number of services for older adults are funded through the federal Older Americans Act. Programs and services funded by other sources are discussed when relevant and appropriate throughout this Plan.

In order to realize the Vision and Mission provided in Section II of this Plan, Connecticut must continue its efforts not only to balance the mix between home and community-based and institutional care, but must strive for a system that provides more options for home and community-based care so that individuals with disabilities and their families have real choices and control over the services and supports they receive. Institutional care plays a vital role in the continuum of LTSS. However, Connecticut should develop a system whereby individuals enter institutions by choice and not because the necessary and reasonable supports are unavailable for them to live in the community.

In addition, the LTSS system must provide support to the network of informal caregivers and ensure the recruitment and retention of formal caregivers, whose respective roles are essential, complementary and form the backbone of the LTSS system. This will become increasingly critical as the number of individuals receiving home and community-based care increases over the next several decades.

Balancing the Ratio of Public and Private Resources

The second area of imbalance involves the resources spent on LTSS. The need for LTSS is one of the most complex and difficult issues for individuals and families to understand and discuss. Many people are under the false impression that Medicare, and other health insurance programs, will cover their LTSS needs. This misunderstanding, coupled with the fact that most individuals understandably would rather not face, or discuss, the possibility of becoming disabled and dependent, leads most people to do little or no planning for their future LTSS costs.

The lack of Medicare and health insurance coverage for LTSS, combined with high costs of care, accessibility of affordable long-term care insurance policies and the lack of planning, has created a LTSS financing system that is overly reliant on the Medicaid program. Medicaid, by default, has become the primary public program for LTSS. However, in order to access Medicaid, individuals must first impoverish themselves. Therefore, we have a system that requires individuals to spend all their savings first in order to receive government support for their ongoing needs.

If our current system continues unchanged, not only will we experience more and more impoverishment as increasing numbers of Connecticut residents need LTSS, but the Medicaid safety net will start to erode. The financing of our LTSS system must be based on a balanced public/private alliance that stresses personal responsibility for those who can afford it coupled with the necessary obligation of government to provide supports for those who lack the resources to meet their needs.

B. Facts and Trends

- People of all ages and from all socio-economic, racial and ethnic backgrounds need LTSS.
- Disabilities affect 10.7 percent of all Connecticut residents – 378,244 individuals in 2013. (See page 25)
- It is estimated that 69 percent of 65 year olds will need LTSS as they age: 79 percent for women and 58 percent for men. On average, they will need three years of LTSS. (See page 25)
- Home and community-based services (HCBS) help people with LTSS needs stay in their homes and communities while reducing LTSS spending. States that have expanded their Medicaid home and community-based services programs require

increases in short term spending, followed by a reduction in institutional spending and long-term cost savings. (See page 41)

- Medicaid pays the majority of LTSS expenses. In Connecticut, in state fiscal year (SFY) 2015, Medicaid LTSS expenses accounted for 15 percent of the state budget and 40 percent of the Medicaid budget. (See page 40)

C. What's New in Connecticut

Some of the major changes that have been made to the system of LTSS in Connecticut in the last three years are described below (also see Appendix F). Although significant progress has been made in improving choice, opportunities for self-direction, community inclusion and access to community-based services, many inequities remain in access to services and many individuals have unmet needs for LTSS. More is needed if we are to meet our goals for achieving real choice and truly balancing the LTSS system.

Progress in Meeting the Balancing Goals

This Plan advocates that by providing more choices for those with LTSS needs and assuring access to needed services, by 2025 the Connecticut Medicaid program should be serving 75 percent of LTSS clients in home and community-based settings¹, with only 25 percent choosing institutional care². The proportion of Medicaid LTSS clients receiving services in the community has increased from 56 percent in SFY 2012 to 59 percent in SFY 2015. Slowly, but surely, the Connecticut Medicaid program is moving in the right direction and meeting the Long-Term Services and Supports Plan's target of a one percent increase a year.

With regard to public spending on LTSS, between SFY 2003 and SFY 2015 the proportion of Medicaid LTSS expenditures for home and community-based services increased by 14 percent, rising from 31 percent to 45 percent of all Medicaid LTSS expenditures – an average increase of one percent per year. Likewise, there was a 14 percent decrease in the proportion of expenditures for LTSS provided in institutional settings. Overall, total Medicaid LTSS expenditures increased by approximately 51 percent between SFY 2003 and SFY 2015 (\$1.914 billion to \$2.889 billion).

Long-Term Services and Supports Scorecard for Connecticut

As part of a national survey, a State Long-Term Services and Supports Scorecard based on the experience of older adults and people with physical disabilities (a subset of the

¹ The Medicaid long-term care community services include home health services, hospice, home and community-based waiver programs, and targeted case management for mental health and developmental disabilities.

² The Medicaid long-term care institutional services include nursing facilities, hospice, intermediate care facilities for persons with developmental disabilities (ICF/MRs), and chronic disease hospitals.

population using LTSS) was published by AARP in 2014³. Connecticut received an overall ranking of 12 among all the 50 states in the country. The score card looks at four areas of measurement, with each number ranking the state among all 50 states:

- 1) Affordability and access (CT = 4);
- 2) Choice of setting and provider (CT = 22);
- 3) Quality of life and quality of care (CT = 6); and
- 4) Support for family caregivers (CT = 30).

Money Follows the Person Rebalancing Demonstration

The Money Follows the Person (MFP) Rebalancing Demonstration, which began operation in December 2008, has been a leading force in Connecticut's efforts to rebalance the system of LTSS to reflect consumer needs and choice. The program, located within the Department of Social Services (DSS), serves Medicaid eligible individuals across the age span with physical disabilities, mental illness and intellectual and cognitive disabilities. Under MFP, as of October 30, 2015, over 3,000 individuals have been transitioned from a nursing facility to community living. Connecticut has established five rebalancing benchmarks under MFP that are aligned with the goals of the Long-Term Services and Supports Plan:

1. Transition 5,200 people from institutions to the community.
2. Increase dollars to home and community-based services.
3. Increase hospital discharges to the community rather than to institutions.
4. Increase the probability of returning to the community during the six months following nursing home admission.
5. Increase the percentage of LTSS participants living in the community compared to an institution.

Progress in meeting these benchmarks is monitored through ongoing evaluations by the University of Connecticut Center on Aging at http://www.uconn-aging.uchc.edu/money_follows_the_person_demonstration_evaluation_reports.html.

In April 2015, DSS submitted a five-year MFP Sustainability Plan to the Centers for Medicare and Medicaid Services (CMS) outlining the state's strategy to continue program efforts through 2020. Over the next five years MFP will continue the provision of (1) addiction services and supports; (2) informal caregiver supports; (3) peer supports; and (4) Transitional Recovery Assistance services and implement new rebalancing strategies focusing on community collaboration, social determinant interventions and collaboration with no-wrong door initiatives. DSS will administer the

³ *Raising Expectations: A State Scorecard on Long-Term Services and Supports for Older Adults, People with Physical Disabilities, and Family Caregivers*; AARP Policy Institute, 2014

transitional program until 2018 when the last nursing home transition will be made as part of the MFP demonstration. CMS awarded DSS \$236 million dollars through 2020 to implement the sustainability plan.

Long-Term Services and Supports Rightsizing Initiative

The Rightsizing Initiative, under the direction of the MFP Rebalancing Demonstration, was developed to respond to the projected rapid growth in the need for community-based LTSS over the next 10 to 15 years in Connecticut.

▪ **Public Act 11-242, Sections 83 & 84**

This Public Act mandated DSS to develop a strategic plan, consistent with the State's long-term care plan, to rebalance the Medicaid LTSS system. In developing the plan, DSS included providers representing in-home, institutional, and community settings and contracted with nursing facilities and home and community-based providers to implement the Plan. The law permits DSS to waive the Department of Public Health (DPH) codes regulating nursing facilities, residential care homes, and assisted living service agencies if (1) a regulated provider requires such a waiver to carry out the strategic plan and (2) the DSS Commissioner determines that the waiver will not endanger the health or safety of the provider's residents or clients. The law exempts from the general Certificate of Need moratorium on new nursing facility beds those beds relocated to a new facility to meet priority needs identified in the strategic plan.

▪ **Rightsizing Strategic Plan**

The Rightsizing Plan, *Rebalancing Long-Term Services and Supports, 2013-2015*, was released by Governor Malloy and DSS in January 2013. It is the result of a multi-month process of stakeholder briefings, engagement, and data and systems analysis. It also meets the requirements of Public Act 11-242, which requires DSS to develop a strategic plan, consistent with this LTSS Plan, to rebalance the Medicaid LTSS system. The plan can be viewed at <http://www.ct.gov/dss/cwp/view.asp?Q=517822&A=4125>.

According to the 2013-2015 Rightsizing Plan:

- By 2025, more than 48,600 individuals in Connecticut are expected to need Medicaid LTSS – an increase of more than 9,800 individuals over current levels.
- The ratio of clients receiving Medicaid home and community-based and institutional services is expected to shift from 60%/40% respectively in SFY 2015 to 76%/24% by 2025.
- Currently, the key initiative driving these results is the Money Follows the Person Rebalancing Initiative.

▪ **Rightsizing Grants**

DSS, in partnership with the Department of Economic and Community Development (DECD), developed a request for proposals for the planning and implementation of LTSS rightsizing initiatives for which nursing facilities, in conjunction with community partners, may apply. \$40 million in grant and bond funds through SFY 2017 have

been authorized to fund nursing facilities that are interested in diversifying their business practice to include the provision of home and community-based services. Governor Malloy awarded \$9 million to 7 facilities in early 2014, and over \$3 million to 4 additional facilities in May 2015. A third round of funds is expected to be awarded in late 2015/early 2016 bringing the total dollar amount awarded for nursing home diversification to \$25 million.

Aging in Place

As mandated by Special Act 12-6, a task force was established in August 2012 to study how the state can encourage “aging in place.” This study examined (1) infrastructure and transportation improvements, (2) zoning changes to facilitate home care, (3) enhanced nutrition programs and delivery options, (4) improved fraud and abuse protections, (5) expansion of home health care options, (6) tax incentives, and (7) incentives for private insurance. Final passage of several bills resulted due to the findings and recommendations presented to the legislature December 28, 2012 including (A) PA 13-109: An Act Concerning Livable Communities charged the Commission on Aging with the development of a Livable Communities Initiative; (B) PA 13-250 requires a coordinated outreach system to increase the use of supplemental nutrition assistance program; (C) PA 14-73 requires the State Department on Aging and the Department of Social Services hold quarterly meetings with nutrition service stakeholders to (1) develop recommendations to address complexities in the administrative processes of nutrition services, (2) establish quality control benchmarks, and (3) help move toward greater quality, efficiency and transparency in the elderly nutrition program; and (D) PA 15-40 requires the stakeholders required by 17a-302a to study alternative sources for nutrition services and submit a report of its findings, including any recommendations they may have regarding nutrition services to the Aging Committee by July 1, 2016. The full report of the Task Force to Study Aging in Place can be accessed online at:

<http://coa.cga.ct.gov/pdfs/AginginPlaceTF/Aging%20In%20Place%20Task%20Force%20FINAL%20report.pdf>.

Livable Communities

Public Act 13-109: *An Act Concerning Livable Communities* charged the Commission on Aging with the development of a Livable Communities Initiative. The Act required the Commission on Aging to establish and facilitate partnerships with (1) municipal leaders, (2) representatives of municipal senior and social services offices, (3) community stakeholders, (4) planning and zoning boards and commissions, (5) representatives of philanthropic organizations, and (6) representatives of social services and health organizations to (A) plan informational forums on livable communities, (B) investigate innovative approaches to livable communities nationwide, and (C) identify various public, private and philanthropic funding sources to design such communities. Public Act 13-109 also requires the Commission on Aging to report annually on Connecticut’s Liveable Communities Initiative to the Connecticut General Assembly’s Committees on

Aging, Housing, Human Services and Transportation. Reports can be accessed at <http://coa.cga.ct.gov/index.php/reports>.

Public Act 14-73: *An Act Concerning Livable Communities and Elderly Nutrition* offers opportunities for municipalities to be recognized as a “Livable Community” by meeting certain requirements through Connecticut’s Commission on Aging’s Livable Communities Initiative.

Private Financing of Long Term Services and Supports

Special Act 14-6: *An Act Concerning a Study of Funding and Support for Home and Community-Based Care for Elderly Persons and Persons with Alzheimer's Disease*, charged the Commission on Aging with studying: (1) private sources of funding available to elderly persons and persons with Alzheimer’s disease in need of home and community-based care; (2) the availability of programs funded by the state that provide home or community-based care to elderly persons or persons with Alzheimer’s disease in need of home and community-based care; (3) the cost effectiveness of such programs funded by the state; and (4) recommendations on which state programs should be expanded. The completed study was submitted to the Connecticut General Assembly’s, Aging Committee on January 1, 2015 and can be found at <http://coa.cga.ct.gov/index.php/additional-mandates-by-ct-general-assembly>.

On March 24, 2015, Connecticut’s Legislative Regulation Review Committee approved changes to the Connecticut Partnership for Long-Term Care regulations to allow for more affordable Connecticut Partnership policies and provide greater protections for Connecticut Partnership policyholders. The change to the Partnership regulation: (1) Reduces the minimum inflation protection requirement for Connecticut Partnership policies from 5% compounded to 3 ½% compounded; (2) Reduces the increase in the minimum daily benefit from 5% each year to 3 ½%; and (3) Allows policyholders who experience a lifetime cumulative rate increase of 50% or more to reduce their benefits below the Partnership inflation protection and minimum daily benefit requirements without having their policy lose its Partnership status. This means a Connecticut Partnership policyholder in this situation can reduce their daily benefit to any level offered by the insurer. They can also lower their inflation protection to any level, as long as they maintain some level of automatic inflation protection.

Home and Community-Based Services Programs

▪ Acquired Brain Injury Waiver II (ABI II)

Effective December 1, 2014, DSS implemented the ABI Waiver II in order to increase the number of available waiver slots for individuals ages 18-64 with disability due to an Acquired Brain Injury. ABI Waiver II varies from ABI Waiver I in the following ways (1) offers a lower cost cap, at 150% of the cost of institutional care vs. 200% of the cost of

institutional care for ABI Waiver I; (2) does not cover Transitional Living Services due to underutilization of the services in ABI Waiver I; and (3) includes five additional services: adult day health, ABI Recovery Assistant, ABI Recovery Assistant II, consultation services and agency-based personal care.

▪ **Aging and Disability Resource Center Grant (ADRC)**

In 2012 Connecticut was one of eight states awarded Enhanced Options Counseling grant funds from the federal Administration for Community Living (ACL). Connecticut received \$2,277,438 over three years to collaborate with ACL on the development of national standards for “No-Wrong Door” systems, person-centered training programs and the continued provision of one-on-one in-person and telephonic counseling and person-centered planning services to anyone seeking information and assistance regarding long-term services and supports. Connecticut was awarded an additional \$135,000 in September 2015 to continue their partnership with ACL through the development and testing of a web-based “No-Wrong Door” governance tool and piloting a national person-centered planning training curriculum.

▪ **Community First Choice (CFC)**

On July 1, 2015, DSS launched a new Medicaid State Plan service pursuant to 1915(k) of the Social Security Act. This new option, made possible by the Affordable Care Act, will enable Medicaid beneficiaries who require nursing facility or other institutional level of care to self-direct community-based services utilizing individual budgets, with the support of a fiscal intermediary. Services include transitional supports when moving from institutions to the community as well as services that increase independence or substitute for human assistance such as, personal care assistants, support and planning coaches, nurse coaches, home delivered meals, environmental accessibility modifications, Personal Emergency Response System, and assistive technology.⁴ As a parallel component to CFC implementation, all Medicaid Waivers offering self-directed services, including Personal Care Attendant and Acquired Brain Injury, were revised to remove personal care attendant services. Effective July 1, 2015, self-directed services for individuals on the affected Waivers are provided as a Medicaid State Plan service through CFC.

▪ **Expansion of Katie Beckett Waiver**

Effective January 1, 2015, 100 new slots were added to the Katie Beckett Waiver providing additional children up to age 22 with physical disabilities the opportunity to remain at home or in the community through access to home and community-based services.

▪ **State Balancing Incentive Payments Program (BIP)**

⁴ Department of Social Services Annual Report, State Fiscal Year 2015;
http://www.ct.gov/dss/lib/dss/pdfs/reports/dss_annualreport2015.pdf

Connecticut received \$72.8 million in 2012 and an additional \$4.2 million in July 2015 to implement the BIP program. Key aspects of the BIP include development and implementation of (1) a pre-screen and a common comprehensive assessment for all persons entering the LTSS system; (2) conflict-free case management across the system; (3) a “no-wrong door” system for access to LTSS through a web-based platform branded “My Place CT.” My Place aims to coordinate seamlessly with both ConneCT and the health insurance exchange; and (4) new LTSS aimed to address gaps that prevent people from moving to or remaining in the community.

▪ **Behavioral Health Homes (BHHs)**

Made possible by the Affordable Care Act, the Department of Mental Health and Addiction Services (DHMAS), in partnership with DSS and the Department of Children and Families (DCF), have initiated the process to amend the state’s Medicaid State Plan to implement Behavioral Health Homes utilizing the existing infrastructure of Connecticut’s private/non-profit and state Local Mental Health Authorities (LMHAs) and some of their affiliates effective October 1, 2015. BHH services are targeted to individuals with severe and persistent mental illness who are eligible for Medicaid with annual claims of at least \$10,000 per year and connects them to an array of services designed to improve experience in care, improve overall health, and reduce per capita costs of health care. The services available through BHHs include: (1) comprehensive care management; (2) care coordination; (3) health promotion; (4) transitional care; (5) patient and family support and (6) referral to community support services. As of October 30, 2015, BHH Designated Provider Agencies are providing outreach and engagement to consumers with the goal of enrolling an initial 6,000-7,000 individuals and up to 10,000 statewide at full capacity.

▪ **Testing Experience and Functional Tools (TEFT)**

In 2014, Connecticut received funding of \$5 million over 5 years to implement the TEFT grant consisting of 4 components: (1) Consumer experience of care survey: this is a voluntary survey of participants who receive home and community-based services through Medicaid. The survey examines consumer experience on various components of Medicaid LTSS. The goal of the survey is to improve Medicaid funded care received in the community. The UConn Center on Aging is administering the survey for Connecticut; (2) Pilot a functional assessment tool for the Centers for Medicare and Medicaid Services (CMS): Connecticut is field testing functional assessment measures for CMS using a CMS dictated tool. Testing is being conducted by the UConn Center on Aging. Connecticut will not be using this tool in practice because the state is implementing the Universal Assessment. However, to be good partners with CMS, Connecticut has agreed to pilot the tool on specific Medicaid populations; (3) Demonstrate use of Personal Health Records (PHR): Connecticut will be testing the use of PHRs with Medicaid consumers under the leadership of the UConn School of Nursing. Connecticut issued a request for proposals seeking PHR vendors in September, 2015 and UConn has been conducting town hall style meetings around the state to obtain consumer and provider thoughts and concerns regarding the use of PHRs. The PHRs will only contain

information that the consumer enters and will only be shared with those that the consumer grants permission; and (4) Develop and test standards for electronic long term services and support systems (e-LTSS): This portion of TEFT is being conducted by the UConn School of Nursing. The UConn School of Nursing is working with other TEFT grantees and CMS to “identify, evaluate and harmonize an electronic Long Term Services and Supports standards in conjunction with the Office of National Coordinator’s Standards and Interoperability Framework.”⁵

Nursing Facilities

▪ ***Moratorium***

The moratorium on new nursing facility beds was extended indefinitely during the 2015 legislative session.⁶ DSS continues to analyze and monitor the need for beds. Several methods are used to reduce unneeded capacity such as de-licensing or reclassifying beds.

▪ ***Nursing Facility Closures***

According to the Connecticut Annual Nursing Facility Census Survey, there were a total of three nursing facilities in the state that closed since the last LTSS Plan (2013 – 2015)⁷. As of September 30, 2015, there were 230 licensed nursing facilities in the State.

Workforce

- The Governor's LTSS Rebalancing Strategic Plan includes workforce development activities to support expansion of 13,700 additional community home health, personal care attendants and nurse LTSS workers by 2022 and to retrain an additional 3,000 institutional LTSS workers for work in the community. \$550,000 per year is available to fund the workforce development initiatives. A partnership has been established with the Workforce Investment Boards.

Transportation

- In accordance with Section 13a-153f (a) (d) of the Connecticut General Statutes, the CT Department of Transportation (DOT) issued a policy statement addressing the Department’s policy regarding the concept of Complete Streets. The policy statement defines complete streets as, “a means to provide safe access for all users by providing a comprehensive, integrated, connected multi-modal network of transportation options.” In the Policy Statement the DOT affirms its commitment to

⁵ Connecticut’s TEFT Grant Factsheet; DSS and the University of Connecticut Center for Quantitative Medicine.

⁶ Section 391, Public Act 15-5

⁷ State of Connecticut Annual Nursing Facility Census, Office of Policy and Management, Policy Development and Planning Division, 2015

considering the needs of users of all ages and abilities when designing and constructing Connecticut's transportation network.⁸

State Government

- A Department on Aging was established on January 1, 2013. In 2005, the legislature reestablished the department effective January 1, 2007, but implementation was delayed until 2013.
- A Department of Housing (DOH) was fully implemented on July 1, 2013 in an effort to consolidate housing related programs implemented across various state agencies. As the lead agency, DOH oversees all housing- related matters across the state.

Federal Government

- In 2014, the federal Administration for Community Living (ACL) was reorganized to include oversight of (1) the State Health Insurance Assistance Program and Senior Medicare Patrol Program (known as CHOICES in Connecticut) historically administered by the Centers for Medicare and Medicaid Services; and (2) the Centers for Independent Living, previously administered by the Department of Education and moved as a result of the federal 2014 Workforce Innovation and Opportunity Act.

http://www.acl.gov/NewsRoom/NewsInfo/2014/2014_10_20.aspx

D. Goals, Recommendations and Action Steps

The goals and recommendations provided in this Plan are put forward to improve the balance of the system of LTSS in Connecticut for individuals of all ages and across all types of disabilities and their families.

⁸ Connecticut Department of Transportation Policy Statement, Policy No, EX.0.-31; October 23, 2014.
http://www.bikewalkct.org/uploads/1/1/8/5/11852691/ex_o_-31_complete_streets_-_oct2014.pdf

In addition to two rebalancing goals, this Plan provides a set of long-term and short-term recommendations. The long-term recommendations provide a high level view of the essential components of a well-balanced and person-centered system of LTSS. These recommendations are reflective of a system of services and supports, and as such, must be viewed as both interrelated and interdependent. The short-term recommendations reflect strategic priorities identified for action over the next three years (2016-2018).

In 2005, a broad philosophical statement was enacted in Connecticut statute to guide policy and budget decisions. It states *“that Connecticut’s long-term care plan and policy must provide that individuals with long-term care needs have the option to choose and receive long-term care and support in the least restrictive, appropriate setting.”* This simple statement, designed to make real choices for individuals a reality, provides a larger framework for Connecticut upon which the Plan goals and recommendations rest.

Overall, the recommendations in this Plan are primarily focused on initiatives State government can undertake. While the focus of this Plan is on State government, it is important to recognize the vital role that cities, towns, the private sector and individuals and families play in the LTSS system. Government at all levels must work in partnership with individuals, families and the private sector in order to develop a quality and effective system.

Goals

1. Balance the ratio of home and community-based and institutional care:

Develop a system that provides for more choice and opportunities for community integration as alternatives to all institutional settings, and increases the proportion of individuals receiving Medicaid long-term home and community-based care from 60 percent in 2015 to 75 percent by 2025, requiring approximately a 1.5 percent increase in the proportion of individuals receiving Medicaid long-term services and supports in the community every year.

2. Balance the ratio of public and private resources:

Increase the proportion of costs for long-term services and supports covered by private insurance and other dedicated sources of private funds to 25 percent by 2025. Such an increase in private insurance and other sources of private funding would reduce the burden both on Medicaid and on individuals’ out-of-pocket expenses. Nationally, private insurance (long-term care and other health insurance) represented 11.9 percent of spending for long-term services and supports in 2012.⁹

⁹ “Other dedicated sources of private funds” means private long-term care insurance, other types of private insurance and other private spending for nursing facilities and home health services. It does not include “out-of-pocket” spending or informal care. Source: National Health Policy Forum; *The Basics: National Spending for Long-Term Services and Supports*; George Washington University; March 27, 2014.

Long-Term Recommendations

Optimally, a robust system of LTSS that is able to maximize autonomy, choice and dignity will provide a full range of services and supports. Individuals, regardless of disability or age, should have the options that allow them to live their lives as meaningfully and productively as possible in the settings that best suit their needs and preferences, in the least restrictive environment. As in any system, all the constituent parts are interrelated and interdependent. In order to meet the growing demand for LTSS and the goals set forth in this Plan, investment in the community-based infrastructure is critical. Over the long term, to realize the vision and achieve the goals set out in this plan, actions must be taken on the following fronts:

- Provide true individual choice and self-direction to all users of long-term services and supports, regardless of funding source.
- Promote efforts to enhance quality of life in various long-term services and supports settings.
- Ensure the availability of a wide array of support services for those living in the community. Ensure quality of long-term services and supports in the context of a flexible and person-centered service delivery system that acknowledges the dignity of risk.
- Provide individuals, caregivers and persons on nursing home waitlists options counseling and decision support to encourage advanced person-centered planning for long-term services and supports to prevent institutionalization and to extend the availability of private funds for care.
- Achieve greater integration and uniformity of administration of State long-term services and supports serving both older adults and people with disabilities and their families, and emphasize policies related to function as opposed to age or diagnosis.
- Encourage communities to take an active role in planning and supporting long-term services and supports for their residents.
- Address the long-term services and supports education and information needs of the Connecticut public, including specialized educational efforts to specific groups, such as baby boomers and employers.
- Address the anticipated long-term services and supports workforce shortage.
- Provide support to informal caregivers.

- Preserve and expand affordable and accessible housing for older adults and individuals with disabilities, including assisted living, residential care homes, and other supportive housing and emergency housing options for older adults.
- Encourage and enable the provider community to transform and develop services and supports that will help to achieve the goals of this Plan.
- Expand and improve employment opportunities and vocational rehabilitation for persons with disabilities and older adults.
- Support state and local efforts to improve and expand accessible, affordable, and inclusive transportation that accommodates the needs of residents, family and direct care worker companions.
- Improve quality of life and reduce utilization of long-term services and supports and health care services by focusing on health promotion and disease prevention.
- Address emergency preparedness/disaster planning for older adults and persons with disabilities.

Short-Term Recommendations

These short-term recommendations provide an action agenda for improving the system of long-term services and supports in Connecticut in the three years spanning 2016 through 2018. Criteria for proposing these targeted priority recommendations are that they will help to ensure the success of the system of long-term services and supports and can be acted upon in the next three years.

Programs and Services

- Adequately support and increase the number of and funding for slots of all the existing Medicaid home and community-based services waivers to meet the needs of all eligible applicants.
- Ensure access to all levels of the State-funded Connecticut Home Care Program for Elders.
- In the State-funded tiers of the Connecticut Home Care Program for Elders, eliminate or reduce the required co-payment.
- Support the continued implementation of the 1915(k) state plan option, Community First Choice.

- Identify skills needed for residents of institutions who desire to transition back to the community and provide appropriate skill training and resources.
- Expand funding for State-funded respite services, such as the Statewide Respite Program, the state-funded tiers of the Connecticut Home Care Program for Elders and the Department of Developmental Services in-home and out-of-home respite services in order to provide support to informal caregivers.
- Support family caregivers with training, respite care, mental health services and counseling, financial assistance, workplace flexibility and opportunities for workplace benefits.
- Measure the effectiveness of the new Adult Family Living model to determine future resource allocation, policy and programmatic enhancements and potential growth.
- Address isolation of all older adults and individuals with disabilities living in the community. Cultivate an atmosphere in communities of diversity and inclusiveness. Also, address the impact of isolation on quality of life, abuse, neglect and exploitation.
- Strengthen the No Wrong Door system and connection between State and local services by exploring reimbursement options for assistance through the CHOICES network, developing ongoing person-centered and options counseling training to senior centers, municipal government offices, resident service coordinators and other community agencies.
- Identify and remove barriers, such as insurance/entitlement reimbursements and licensing requirements that prevent or limit access to long-term services and supports.
- Promote coordination and service integration between physical and behavioral health providers and support the utilization of evidence based practices for providing care across the lifespan.
- Develop a pilot project focused on improving person-centered care across settings when an individual is transferred from one care setting to another.
- Address the education and training of direct care workers to include skills and competencies related to the physical, cultural, cognitive and behavioral health care needs of consumers of long-term services and supports.
- Adequately support Protective Services for the Elderly, the Office of Protection and Advocacy, the Office of the Chief State's Attorney, and other relevant agencies to

identify, investigate and prosecute cases of abuse, neglect and exploitation. Support the development of multi-disciplinary teams to enhance response to abuse.

- Support a robust local long-term services and supports system to address community needs through strategic collaborations among and between other municipal departments and divisions such as parks and recreation, public health and transportation services and community leaders. Explore opportunities for regional collaboration.
- Provide advocacy and financial support for increased use of assistive technology to meet the needs of individuals within their homes and avoid or defer the need for institutionalization.
- Provide nutritional counseling and elimination of food insecurity.

Infrastructure

- Coordinate efforts among various entities impacting No Wrong Door development and monitor progress on the state's No Wrong Door endeavors.
- Continue the Balancing Incentive Program (BIP), to create infrastructure investments of a consumer friendly statewide No Wrong Door system, a conflict free case management, and a uniform assessment tool.
- With a focus upon hospital admission and discharge, use best efforts to divert individuals to an appropriate care setting of their choice.
- Address the historical fragmentation of the Medicaid home and community-based waivers, which are associated with specific age and diagnostic eligibility criteria.
- Provide timely eligibility decisions regarding eligibility in all government sponsored long-term services and supports programs. Consider development and use of a presumptive eligibility model.
- Promote more widespread adoption of telehealth and other assistive technologies to improve access to care, coordination, quality and outcomes for residents, while reducing health costs.
- Ensure the Aging and Disability Resource Center initiative under the CHOICES program continues to offer information, referral, assistance and LTSS options counseling services statewide and is integrated within the state's No Wrong Door system.

- Achieve greater integration of employment of persons with disabilities into the Money Follows the Person Rebalancing Initiative and home and community-based services.
- Support improved coordination, communication and guidance among the medical care, behavioral health and long-term services and supports systems.
 - Ensure that current and future initiatives affecting the long-term services and supports system are well coordinated and complementary.
 - Support the development of electronic health records by providers of long-term services and supports and exchange of electronic health records among providers across the Connecticut health care system to streamline care transitions, coordinate care delivery and improve quality and outcomes.
 - Support a learning collaborative approach to bring together providers across disciplines and perspectives, and to learn from older adults and individuals with disabilities.
- Develop or enhance mobility management programs to help consumers learn how to access and navigate transportation options.
- Identify funding streams to sustain coordinate, grow and make more convenient both fixed route and demand-responsive transportation options (including providing door-to-door service), and provide technical assistance to support regionalization.

Financing

- Achieve adequate and sustainable provider reimbursement levels that support the cost of long-term services and supports and quality requirements for all segments of the long-term services and supports continuum in order to ensure capacity to meet the evolving needs and demographics of Connecticut residents.
- Provide greater flexibility in the budgeting and use of Medicaid funds for long-term services and supports.
- Capture and reinvest cost savings across the long-term services and supports continuum.
 - Reinvest savings resulting from Money Follows the Person, the Balancing Incentive Program and other emerging Medicaid long-term services and supports programs to enhance the availability and capacity of home and community based services.

- Explore reforming the Medicaid rate setting system to reflect quality, reimbursement related to the actual costs of care, the acuity level of the consumers and uncompensated care for all LTSS providers across the continuum consistent with long-term services and supports rebalancing, rightsizing and a range of home and community-based service initiatives.
- Explore various methods to increase the private sector's greater involvement as a payer of long-term services and supports.
 - Explore the development of tax incentives for the purchase of private long-term care insurance, including tax incentives for employer-based coverage.
- Work with the Federal government to preserve and reauthorize the Older Americans Act and preserve Social Security Act provisions for Supplemental Security Income, Social Security and Social Security Disability benefits funding, which are currently at risk.

Quality

- Enable a collaborative, flexible and efficient regulatory environment that is adaptive and receptive to individual provider's forward thinking ideas and planning. Such an environment would encourage providers of the long-term services and supports continuum to adjust, modernize and diversify their models of care to address current and future consumer needs and expectations, which in turn should lead to higher quality care.
- The Departments of Public Health and Social Services should work together to ensure consistency among their respective regulations and oversight activities.
- Review licensing certification requirements and Probate Court protocols (currently there is no licensing for conservators or guardians) for training of community-based formal caregivers, conservators and guardians to assure that the specialized needs of the individual are met and provide training where there are gaps.
- Expand the scope of the Long-Term Care Ombudsman program to provide Ombudsman support to consumers receiving long-term services and supports regardless of setting in order to align the program with Medicaid LTSS rebalancing efforts. Additional appropriations to the Long-Term Care Ombudsman program would be necessary to expand beyond their current jurisdiction.
- Support an integrated approach to CT's response to abuse, neglect and exploitation.

- Establish “learning collaboratives” where health care professionals come together on a regular basis for education and discussion on evidenced-based and emerging best practices in LTSS across the lifespan, in areas of both physical and behavioral health.

Housing

- Support programs that divert or transition individuals from nursing facilities or other institutions to community housing options, such as CT811.
- Develop new housing alternatives for persons with serious and persistent mental illness who do not need nursing facility level of care.
- Adopt policies that encourage incorporation of accessible housing features into new construction so that new housing can support its residents throughout the lifespan.
- Continue and expand State investment in the development of housing that is affordable and accessible for older adults and persons with disabilities.
- Encourage the growth and development of community- based service models that bring long- term services and supports to housing residents. Work with the federal government to secure at-risk housing subsidy, preservation, and development funds.

Workforce

- Develop a comprehensive and safe direct care workforce-consumer on-line matching system.
- Promote model re-training programs that allow the existing pool of institutionally-based paid direct care workers to be trained to provide services and supports in the community
- Promote workforce training that addresses physical and mental health needs across the lifespan.
- Promote flexibility in workplace employment policies and practices to accommodate the circumstances of unpaid family caregivers.

E. Development and Implementation of the Plan

Development

The Long-Term Care Planning Committee, created under Public Act 98-239, is charged with developing for the General Assembly a long-term care plan for Connecticut every three years. Committee membership is comprised of representatives of nine State agencies and the Chairs and Ranking Members of the General Assembly's Human Services, Public Health and Aging Committees (see Appendix B for a list of Planning Committee members). The Long-Term Care Advisory Council, created under Public Act 98-239, composed of providers, consumers and advocates, provides advice and recommendations to the Planning Committee (see Appendix C for a list of Advisory Council members).

In 2015, the Long-Term Care Planning Committee embarked on the development of its seventh long-term care plan in partnership with the Advisory Council. The Advisory Council worked with the Planning Committee in four essential areas: providing data, identifying areas of need, developing recommendations, and obtaining public input.

The Advisory Council assisted the Planning Committee with gathering broad public input on the draft Plan from diverse organizations and individuals throughout Connecticut with an interest in LTSS. Public comment was solicited twice: on the draft recommendation in July and September of 2015 and the full Plan in October and December of 2015. (*See Appendix D – Sources of Public Comment*).

Implementation

To implement the majority of the recommendations and action steps included in this Plan, the Governor and General Assembly will need to make decisions regarding statutory changes and allocation of resources. For those items that the Governor and the General Assembly choose to pursue, the State agencies represented on the Planning Committee, in collaboration with the Long-Term Care Advisory Council, will work together to implement those recommendations and action steps.

For those aspects of the Plan that do not require legislative changes or allocation, or reallocation, of resources, the State agencies represented on the Planning Committee, in collaboration with the Long-Term Care Advisory Council, will work together to address these items and periodically review their progress. In addition, annually, from 2016 through 2018, the Long-Term Care Planning Committee will choose to focus on several strategic priorities among the short term recommendations based on: 1) timeliness; 2) readiness for implementation or change; 3) availability of funding; and 4) need for coordination with other entities or programs.

II. VISION, MISSION AND GOVERNING PRINCIPLES

The Long-Term Care Planning Committee developed and continues to refine its Vision, Mission and Governing Principles to guide the development of its Long-Term Services and Supports (LTSS) Plan and recommendations for enhancing the system of LTSS in Connecticut. They provide a philosophical framework that values choice, person-centered care, and a seamless continuum of services and supports for all individuals in need of LTSS, regardless of disability and across the lifespan of fluctuating needs.

A. Vision

Connecticut residents have access to a full range of high-quality LTSS that maximize autonomy, choice and dignity.

B. Mission

To provide guidance for the development of a comprehensive system of community-based and institutional LTSS options. Such a system should promote access to affordable, high-quality, cost-effective services and supports that are delivered in the most integrated, life-enhancing setting.

C. Principles Governing the System of Long-Term Services and Supports

The system must:

1. Provide equal access to home and community-based care and institutional care.
2. Assure that people have control and choice with respect to their own lives.
3. Be adequately financed and structured to assure that decision-making and service delivery are based on the needs of the individuals and families served and on the needs of employees who provide care and services.
4. Deliver services in a culturally competent manner to meet the needs of a diverse population.
5. Assure that individuals have meaningful rights and protections.
6. Include an information component to educate individuals about available services and financing options.
7. Assure mechanisms for integration with related services and systems including acute medical care, housing and transportation services.
8. Include a prevention component to educate individuals regarding actions that can be taken to reduce the chances of needing long-term services and supports.
9. Include a strong independent advocacy component for those in need.
10. Include meaningful consumer input at all levels of system planning and implementation.

III. LONG-TERM SERVICES AND SUPPORTS IN CONNECTICUT

A. The People

People of all ages and from all socio-economic, racial and ethnic backgrounds need long-term services and supports (LTSS). They are our parents, siblings, children, co-workers, veterans and neighbors. They are us. Whether challenged with limitations due to injuries, developmental disabilities, mental illness, chronic health conditions, or the aging process, they all share a common need for assistance in order to live, learn, work and play.

Assistance may be needed to carry out basic functions such as eating, dressing or bathing (activities of daily living -- ADLs) or tasks necessary for independent community living, such as shopping, managing finances and house cleaning (instrumental activities of daily living -- IADLs). Likewise, needs range from minimal personal assistance with basic activities to virtually total care. These LTSS needs are being met at home, in the community, at work, in congregate residences and in institutional settings.

It is important to note that LTSS is different from medical care. The major distinction is that the goal of LTSS is to allow an individual to attain and maintain an optimal level of functioning in everyday living. The goal of medical care is to cure or control an illness.

A Word about the Data

Currently, there is no single source of information on the need for LTSS among individuals with disabling chronic illness and conditions in Connecticut. There is also no one source of information that looks at needs across the lifespan or across types of disabilities. In order to develop a picture of the need for LTSS in Connecticut, regardless of disability, limitation or age, a broad array of sources have been consulted.

Complicating our understanding of who needs LTSS is the fact that there is no single accepted definition of disability or way of defining the need for LTSS. Research findings vary from study to study depending on how the population in need is defined and whether the focus is on individuals with disabilities in general or those with LTSS needs specifically. Disability, which is most commonly defined in terms of long-standing limitations in tasks and activities, is used in this Plan as a measure for the need for LTSS, unless otherwise specified, although it is acknowledged that not everyone with a disability will need supports at any given time.

Much of the data on disability in Connecticut used in this Plan is drawn from the U.S. Census Bureau 2013 American Community Survey (ACS). In this survey, disability is defined as “the product of interactions among individuals’ bodies; their physical, emotional, and mental health; and the physical and social environment in which they live, work, or play. Disability exists where this interaction results in limitations of

activities and restrictions to full participation at school, at work, at home, or in the community.” The ACS uses six disability items to determine an individual’s disability status: 1) hearing difficulty, 2) vision difficulty, 3) cognitive difficulty, 4) ambulatory difficulty, 5) self care difficulty, and 6) independent living difficulty.¹⁰

Who Needs Long-Term Services and Supports?

National Perspective

Approximately 12 million people, or about 4 percent of the total U.S. population, are in need of some level of LTSS. In the community, about 10 to 11 million people, or 4 percent, need help with one or more ADLs or IADLs; roughly 4.7 million, or almost 2 percent, need help with ADLs; and about 3.2 million need help with two or more ADLs. Although older adults are proportionally much more likely than younger people to need long-term services and supports, approximately half of the individuals living in the community needing help with one or more ADLs or IADLs are non elderly.¹¹

Among older adults, it is estimated that 69 percent of 65 year olds will need LTSS as they age: 79 percent for women and 58 percent for men. On average, they will need three years of LTSS. Although over 30 percent of people age 65 will not need LTSS, 17 percent will need up to one year; 12 percent will need from one to two years; 20 percent will need from two to five years; and 20 percent will need 5 years or more.¹²

Connecticut

Disabilities affect 10.7 percent of Connecticut residents, lower

TABLE 1
Number of Persons with Disabilities in Connecticut by Age, 2013

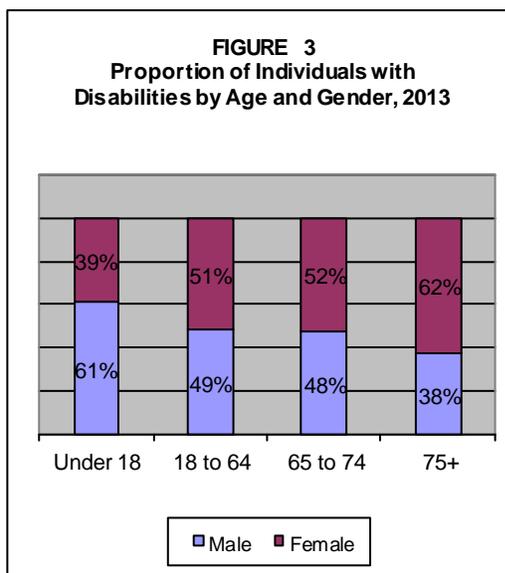

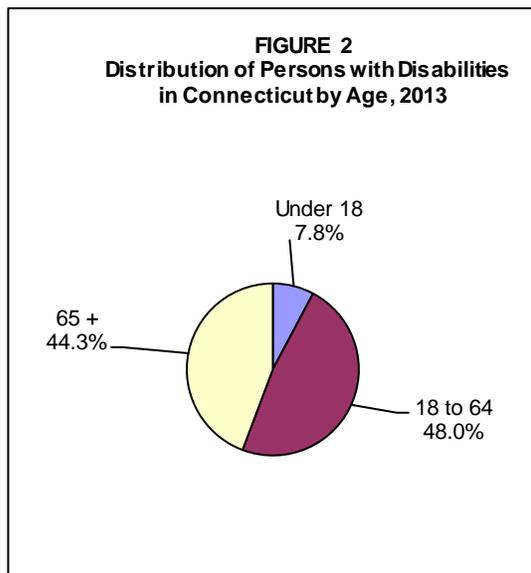

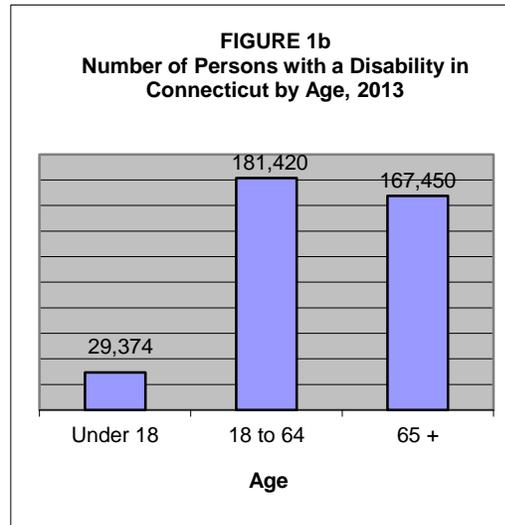

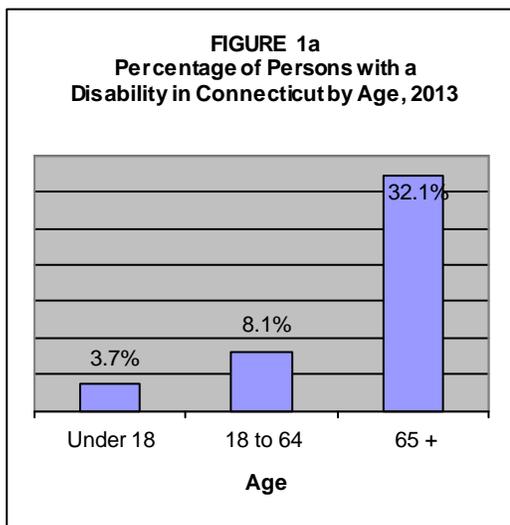

Age	Total Population	Persons with a Disability	Percentage
<5	190,738	1,637	0.9%
5 to 17	593,421	27,737	4.7%
18 to 34	767,690	38,665	5.0%
35 to 64	1,468,005	142,755	9.7%
65 to 74	288,151	55,057	19.1%
75+	233,404	112,393	48.2%
Total	3,541,409	378,244	10.7%

¹¹ H. Stephen Kay, Charlene Harrington, and Mitchell P. LaPlante; *Long-Term Care: Who Gets It, Who Provides It, Who Pays, and How Much?*; Health Affairs, Vol. 29:1; January 2010; pages 11-21.

¹² Peter Kemper et al, “Long-Term Care Over an Uncertain Future: What Can Current Retirees Expect?”, *Inquiry* 42, no. 2 (Winter 2005/2006): 335-350.

Source: U.S. Census Bureau, American Community Survey, Connecticut, 2013

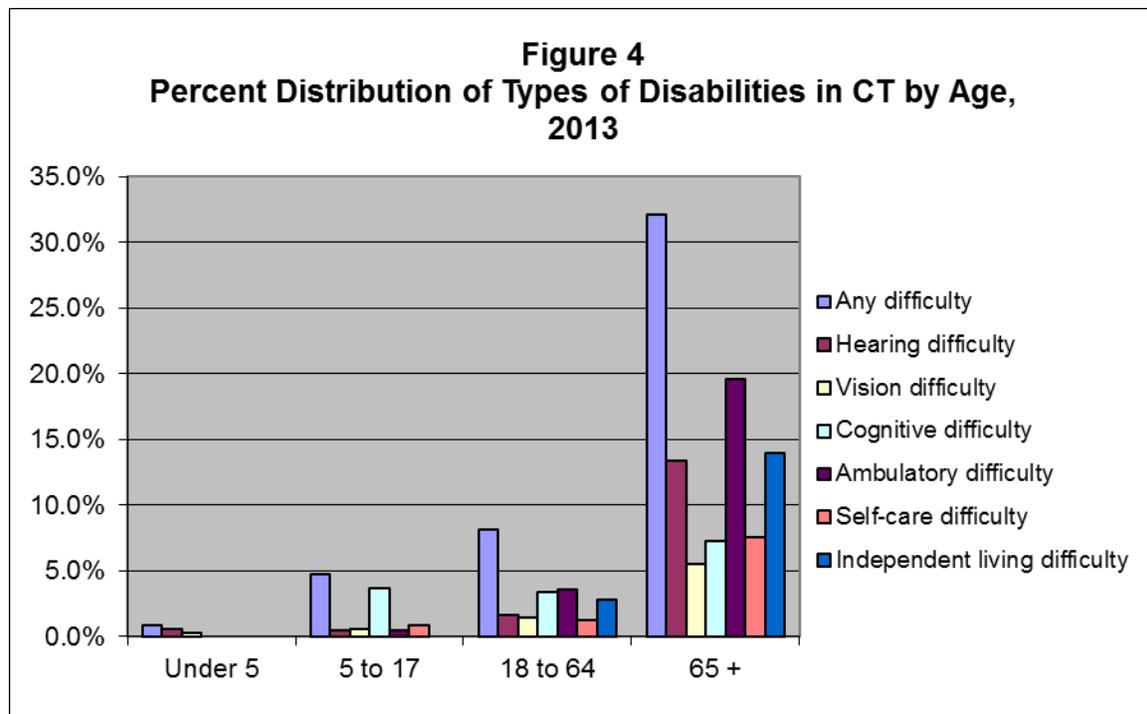

than the national average of 12.6 percent.¹³ In 2013, there were 378,244 individuals living in Connecticut with some type of long-lasting condition or disability (Table 1). Disability rates rise with age, with 3.7 percent of children and youth under age 18

¹³ U.S. Census Bureau, 2013 American Community Survey, Selected Social Characteristics (U.S. DP02 and Connecticut B18101). Data includes individuals living in households and group quarters and exclude the population living in institutions. The American Community Survey, which samples housing units and their occupants, provides Census data every year instead of once in ten years.

reporting a disability, 8.1 percent of adults age 18 to 64, and 32.1 percent of older adults age 65 and over (Figure 1a).

Although the largest proportion of the Connecticut population with a disability is found among those ages 65 and over (Figure 1a), 48 percent of the total numbers of persons with a disability are adults between the ages of 18 and 64 (Figures 1b and 2).

Among individuals with disabilities, the ratio of males to females shifts as the population ages, as is the case in the general population. Among children and youth with disabilities, 61 percent are males. By the senior years, this proportion is reversed, with females comprising 62 percent of those with disabilities age 75 and older (Figure 3).

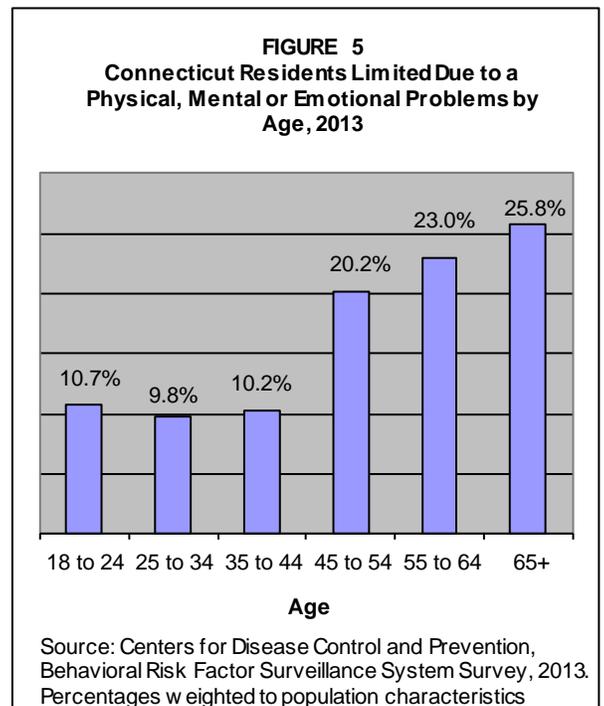

Source: U.S. Census, 2013 American Community Survey, Connecticut, Table S1810: Disability Characteristics

The distribution of types of disabilities in the population varies considerably by age (Figure 4). The proportion of individuals with disabilities increases with age, affecting less than one percent of children under age five and steadily rising to 32 percent of adults age 65 and older. Among individuals in the 5 to 17 year old group, the greatest reported difficulty is cognitive (3.7 percent). Among adults age 18 to 64, the greatest difficulty is ambulatory (4.0 percent) followed by cognitive (3.4 percent). Among individuals age 65 and older, ambulatory difficulties are most prevalent (19.6 percent) followed by independent living difficulties (14.0 percent). Cognitive difficulties were experienced by the same proportion of individuals in the 5 to 17 and the 18 to 64 age

groups (3.7 and 3.4 percent, respectively) and doubled in the over 65 age group (7.3 percent). The 2013 American Community Survey determined those with cognitive difficulty by asking individuals if due to a physical, mental or emotional condition, they had “serious difficulty concentrating, remembering or making decisions.”^{14 15}

Another picture of individuals with disabilities is provided by the Connecticut Behavioral Risk Factor Surveillance System (BRFSS), which surveys adults age 18 and over living in the community (Figure 5). Overall, in 2013, 17.5 percent of Connecticut adults answered yes when asked if they are “limited in any way in any activities because of physical, mental or emotional problems.”¹⁶ This translates into approximately 482,519 Connecticut adults age 18 and older living in the community with some degree of activity limitation. This compares to the 2013 Connecticut Census estimate of 348,870 individuals with disabilities age 18 and over.

B. Long-Term Services and Supports

Home and community-based services

Although LTSS traditionally have been associated with nursing facilities or other institutions, the fact is that the vast majority of LTSS is provided at home and in the community by informal and formal caregivers. Over the last decade, opportunities to live and obtain supports in community settings have increased significantly, with a growing emphasis on independent living and individual choice. Increased availability of home and personal care supports have allowed greater numbers of individuals to remain in their homes and avoid or delay moving to an institutional setting.

¹⁴ U.S. Census Bureau, 2013 American Community Survey, uses six items to determine an individual’s disability status: 1) hearing difficulty, 2) vision difficulty, 3) cognitive difficulty, 4) ambulatory difficulty, 5) self-care difficulty, and 6) independent living difficulty. Source: U.S. Census Bureau, American Community Survey, 2013 Subject Definitions, page 58 to 61.

http://www2.census.gov/programs-surveys/acs/tech_docs/subject_definitions/2013_ACSSubjectDefinitions.pdf

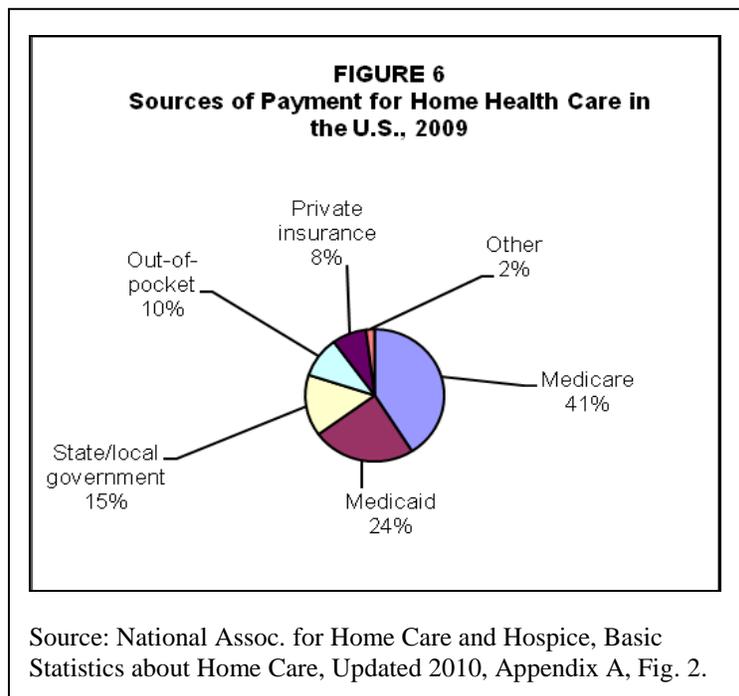

¹⁵ It should be noted that an individual may have one or more disabilities, so the percentages in any particular age group could exceed 100 percent. For example, a person with severe asthma may have difficulty climbing stairs and difficulty working at a job.

¹⁶ Centers for Disease Control and Prevention (CDC). Behavioral Risk Factor Surveillance System Survey Data. Atlanta, Georgia: U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, , 2013. <http://www.cdc.gov/brfss/brfssprevalence/index.html>.

Home and community-based care includes a range of varied services and supports provided either formally by paid individuals or informally by family and friends. Typically, the level of formal support used increases with age, functional impairment and income. In addition to private homes, community settings can include adult day care, assisted living, residential care homes, continuing care retirement communities, small group homes and congregate housing.

Home Care Services

In the U.S., approximately 33,000 home care providers delivered care to an estimated 12 million individuals who required services due to acute illness, long-term health conditions, permanent disability, or terminal illness. Of these agencies, 10,580 were Medicare certified in 2009.¹⁷

Nationally, 80 percent of home health care costs incurred in 2009 were covered by government payers (federal, state and local). Medicare paid the largest share of skilled home care costs, covering 41 percent of the total payments. Private sources, including private insurance and out-of-pocket payment, represented 20 percent of payments (Figure 6). It is important to note that home health care represents only a portion of home care services and generally addresses more medically oriented needs.

In Connecticut, paid home care services are provided by home health care agencies, homemaker-home health aide agencies, homemaker-companion agencies, and privately hired caregivers.

- *Home health care agencies*, which are licensed by DPH, provide care in the home that is typically prescribed by an individual's physician as part of a written plan of care. These agencies offer skilled nursing, home health aide services, physical therapy, occupational therapy, speech therapy, and hospice services. Non-medical services include helping individuals with activities of daily living such as bathing, dressing and eating; assistance with cooking, cleaning, and other housekeeping jobs; and managing medications. Although home health care may include some non-

¹⁷ National Association for Home Care and Hospice, *Basic Statistics About Home Care*, Updated 2010.

medical home care services such as homemakers and companions, home health care is more medically oriented, helping individuals recover from an illness or injury. Home health care agencies, unlike homemaker-home health aide agencies and homemaker-companion agencies, may be eligible for Medicare reimbursement. As of June 30, 2015, there were 104 agencies licensed by DPH to provide home health care services in Connecticut.¹⁸

- *Homemaker-home health aide agencies*, which are licensed by DPH, are similar to homemaker-companion agencies in that they provide non-medical assistance to individuals. In addition, they have the authority to provide training programs and competency evaluations for home health aides. As of June 30, 2015, there were 3 licensed agencies in Connecticut.¹⁹
- *Homemaker-companion agencies* provide non-medical assistance to persons with disabilities and older adults and must be registered with the Department of Consumer Protection. Tasks generally include grocery shopping, meal preparation, laundry, light housekeeping and transportation to appointments. As of June 30, 2015, there were 528 registered homemaker-companion agencies active in Connecticut.²⁰
- *Privately hired caregivers* often provide personal care and are hired directly by an individual in need of support. The individual who hires them is the employer and is responsible for paying for unemployment, social security, workers compensation, taxes and liability insurance.

Adult Day Care

Adult day services are an option for frail older adults who want to remain in their homes. They provide respite to family caregivers as well as therapeutic care for cognitive and physically impaired older adults. Health, personal care and social services are provided to adults who do not need the continuous services of a nursing facility or institutional setting and are able to leave their homes. Individuals receive professional services ranging from social activities and therapeutic recreation to nursing care and rehabilitation services, representing a blend of traditional health and social services.²¹

Adult day care centers are not regulated by DPH. Instead, the Connecticut Association of Adult Day Centers (CAADC) is authorized by DSS to provide a program of peer review and certification, which is required in order for an adult day center to receive State

²⁰ Connecticut Department of Consumer Protection, 2015.

²¹ The Connecticut Association of Adult Day Centers, <https://canpa.memberclicks.net/adult-day-services> , November, 2015.

funds. As of November 2015, there were 48 adult day centers certified by CAADC serving people who receive State assistance.²²

Public Home and Community-Based Programs - Medicaid Waivers and State-Funded Programs

An array of Medicaid and State-funded programs has been developed in Connecticut to address the need for LTSS for those living at home or in other community settings. Medicaid, through its home and community-based waiver programs, is the major public financing mechanism for providing LTSS in community settings. Under both Medicaid and State-funded programs, individuals who would otherwise require the level of care provided in an institutional setting are served in the community. Most people express a strong preference for home and community-based services over institutional care since it allows them to live in their own homes, participate in community life and exert more control over their own affairs.²³

▪ For Ages 65 and Older

Connecticut Home Care Program for Elders (CHCPE): provides home and community-based services to frail older adults age 65 and over as an alternative to nursing facility admission. The program has a Medicaid waiver as well as State-funded component. A no waiting list policy was established in 1997.

1. *Medicaid Elder Waiver*: constitutes the Medicaid portion of the CHCPE. As of June 30, 2015, it provided community-based services to 11,331 older adults age 65 and older, who would otherwise be institutionalized. Available services include adult day care, homemaker, companion, chore, home delivered meals, emergency response systems, care management, home health, skilled nursing, respite, assisted living and minor home modifications. The monthly average number of participants for SFY 2015 was 12,303.
2. *State-Funded CHCPE*: constitutes the State-funded portion of the CHCPE and provides the same services as the Medicaid Elder Waiver except that plans of care are capped at lower levels. The program serves adults age 65 and older with higher income and asset levels than permitted under the Waiver portion. The program will also cover individuals with fewer needs than under the Medicaid Elder Waiver. On June 30, 2015 there were 3,622 people enrolled.

▪ For Ages 18 to 64

²² The Connecticut Association of Adult Day Centers, <http://canpa.memberclicks.net/adult-day-centers>, November 2015.

²³ Teresa A. Keenan, Ph.D., *Home and Community Preferences of the 45+ Population*, AARP, 2010

Connecticut Home Care Program for Disabled Adults (CHCPDA): is a state-funded pilot program that provides services based upon the CHCPE model. The program serves up to 50 individuals age 18 to 64 with degenerative, neurological conditions who are not eligible for other programs and who need case management and other supportive services. On June 30, 2015, there were 100 people enrolled.

Medicaid Acquired Brain Injury Waiver: provides 23 specific behavioral and support services to persons between the ages of 18 and 64 with acquired brain injury. The monthly average number of participants during SFY 2015 was 384.

Medicaid Personal Care Assistance Services (PCA) Waiver: provides personal care services to persons with physical disabilities who are age 18 to 64 years of age. In this person-directed program, participants hire and direct their own care. The monthly average number of participants during SFY 2015 was 782.

- **For All Ages**

DDS Individual and Family Support (IFS) Waiver: provides in-home, day, vocational and family supports services for people who live in their own or family home. In SFY 2015, the monthly average number of participants was 3,934.

DDS Comprehensive Supports Waiver: provides for the vocational and in-home services needed for people who need a more intensive level of support to remain in their own family home. These services are delivered in licensed settings (community living arrangements, community companion homes and assisted living) and include residential and family support services, vocational and day services and specialized and support services. In SFY 2015, the monthly average number of participants was 4,976.

DDS Employment and Day Supports (EDS) Waiver: provides support to individuals who live with family or in their own homes and have a strong natural support system. This includes children under the age of 21 with complex medical needs who would otherwise require institutional placement and individuals over the age of 18 who require career development, supported employment or community-based day supports, respite, and/or behavioral supports to remain in their own or their family home. In SFY 2015, the monthly average number of participants was 637.

Mental Health Waiver: administered by the Department of Mental Health and Addiction Services, this program diverts people with serious mental illness from nursing facilities and works to discharge those who no longer need to live in a nursing facility. The program began on April 1, 2009. As of June 30, 2015, there were 400 individuals enrolled and using waiver services.

- **For Children**

Medicaid Katie Beckett Waiver: offers case management and home health services primarily to children with disabilities who would normally only qualify for Medicaid in an institution. The waiver itself offers only case management services, but the families have access to full Medicaid benefits, including home health and physical therapy. The program operates within available appropriations. The number of participants as of June 30, 2015 was 291.

State Long-Term Care Programs

In addition to the programs listed above, there are a wide range of LTSS that support individuals with disabilities and chronic health conditions that are funded or operated by State agencies. A description of these State agencies can be found in Appendix G as well as charts describing State LTSS programs, their eligibility requirements and participants and program expenditures.

Municipal, Non-Profit, Private Sector and Volunteer Services

In addition to the State programs, a wide array of statewide, regional and local long-term services and supports exist throughout Connecticut that are administered by government agencies, non-profit and for-profit organizations, as well as volunteer groups. Each city and town provides services and accommodations to address the needs of older adults and persons with disabilities. Connecticut has five regional Centers for Independent Living, five Area Agencies on Aging, and a number of statewide and local mental health councils and advisory councils for persons with disabilities. There is also the Corporation for Independent Living, which is a non-profit partner focused on new housing initiatives for persons with disabilities. Also indispensable to the system of care are the myriad of volunteer organizations that address the needs of individuals with specific chronic illnesses and conditions, providing support and companionship that foster “sustainable” independent living.

Community Housing Options

A number of housing options with LTSS are available in Connecticut, enabling individuals with LTSS needs the opportunity to avoid entering an institution. Residential housing is considered community living, where the goal is to provide an environment where people can live with maximum independence and minimum restrictions.

In fostering choice, self-determination, independence and community integration, it is important to assure that residential housing is community-based and not institutional. In distinguishing between residential and institutional settings, five aspects can be considered: 1) residential scale and characteristics; 2) privacy; 3) autonomy, choice and control within the residential settings; 4) integration with the greater community; and 5) resident control over moving to, remaining in, or leaving the setting.²⁴

²⁴ Rosalie A. Kane et al, *Community-Based Residential Care Settings as Rebalancing Vehicles: State Strategies to Make Them More like Home than like Institutions*, Submitted to the Division of Advocacy and Special Programs, Centers for Medicare and Medicaid Services, August 2008, page 7.

TABLE 2
Community Housing Options in Connecticut, June 30, 2015

	# Facilities	# Units/ Beds/ Residents	Age
State Funded Congregate Housing	24	985 residents	62 and older
Managed Residential Communities (Assisted Living)	119	N/A	Adults and older adults
Residential Care Homes	101	2,894 beds	Adults and older adults
Continuing Care Retirement Communities	19	N/A	Older adults
Nursing Facilities	231	27,510beds (as of 9/30/14)	All ages

Source: Office of Policy and Management, 2015

The community housing options described below all provide some common meals, housekeeping, and some degree of personal services, but vary with respect to the extent and range of services and staffing provided, the types of accommodations available, and requirements for residency.

Congregate Housing

Congregate housing provides frail older adults with private living arrangements, moderate supportive services, and common areas of dining, socialization and other activities. These facilities furnish at least one daily meal, which is usually included in the monthly fee, housekeeping services and a variety of social and recreational activities. They are generally meant for individuals who are basically self-sufficient but need a few services to help them to live independently.

As of June 30, 2015, 985 people age 62 and over lived in 24 State-funded congregate housing facilities in Connecticut. Residents were all low-income and had a minimum of one ADL limitation. Beginning in 2001, DOH (formerly DECD) and DSS introduced assisted living services within State-funded congregate housing facilities. Twelve of the

24 congregate facilities are participating in this service expansion. As of June 30, 2015, 114 congregate housing residents were actively enrolled in the assisted living program. Throughout the year, 158 residents were served under this program.²⁵

Assisted Living Services/ Managed Residential Communities

Assisted Living Services Agencies (ALSAs) are an alternative for older adults who need assistance with activities of daily living (e.g. bathing, dressing), but who do not require the intensive medical and nursing care provided in a nursing facility. In Connecticut, ALSAs are licensed to provide assisted living services in managed residential communities (MRCs). Assisted living services can be provided in a number of different settings, such as continuing care retirement communities or elderly housing, as long as the facility provides the services to qualify as a MRC. Services provided by the MRC include laundry, transportation, housekeeping, meals, and recreational activities. Individuals choosing to live in an MRC may purchase LTSS from the ALSA allowing them to live in their own apartment. Primarily, assisted living services in the MRC are available to individuals age 55 and older.

As of June 30, 2015, there were 90 ALSAs licensed in Connecticut providing services in 119 managed residential facilities.²⁶

Since the cost of living in a MRC and the assisted living services purchased are virtually all paid out of pocket, these community living arrangements are available to individuals who can afford the cost of both room and board and services. Through a collaborative effort of DECD, DPH, OPM and DSS, Connecticut has made assisted living services available to lower-income individuals through the Assisted Living Demonstration Project, State-funded congregate housing, HUD complexes and the Private Pay Assisted Living Pilot.

Residential Care Homes

Residential care homes are facilities that provide a room, meals and supervision, but no nursing services, for individuals whose limitations prevent them from living alone. Services vary from facility to facility but may include dietary and housekeeping services, monitoring of prescription medication, social and recreational opportunities, and assistance with activities of daily living. Residential care homes in Connecticut are licensed by DPH. As of June 30, 2015, there were 101 residential care homes in Connecticut with a total of 2,894 beds.²⁷

Continuing Care Retirement Communities

Continuing Care Retirement Communities (CCRCs) provide residents, through contractual agreements, lifetime shelter and access to a wide variety of services,

²⁵ Connecticut Department of Housing, 2015.

²⁶ Connecticut Department of Public Health, 2015.

²⁷ Connecticut Department of Public Health, 2015.

including long-term health services. Each resident pays a substantial entrance fee and monthly fees in exchange for a living unit and access to services. Various levels of care such as independent living, assistance with daily activities and nursing facility care are typically provided on CCRC campuses. As their needs change, residents are usually able to move from one level of care to another without leaving the community. If a CCRC does not have a nursing facility on campus, it often has an arrangement with a nearby nursing facility to admit its residents on a priority basis. Each CCRC is mandated to register with DSS by filing an annual disclosure statement. Although CCRCs are not licensed by the state, various components of their LTSS packages, such as residential care beds, assisted living services, and nursing facility care are licensed by DPH. As of June 30, 2015 there were 22 CCRCs operating in Connecticut, and two “CCRC at Home” providers.²⁸

Supportive Housing

Designed to enable individuals and families to live independently in the community, supportive housing provides permanent, affordable rental housing with access to individualized health, support and employment services. People living in supportive housing usually hold their own leases and have all the rights and responsibilities of tenants. In addition, they have the option to use a range of training and support services such as case management, budgeting and independent living skills, health care and recovery services, and employment services.

Residential Settings for Individuals with Intellectual Disabilities

DDS administers or contracts for residential services from independent living, individualized home supports, continuous residential supports, community living arrangements, community companion homes, and residential center settings.²⁹

- *Individualized Home Supports* -- Some people need minimal hours of staff support to live in their own place or family home. This staff support may be in the form of assistance with budgets, shopping and/or leisure activities. People receiving Individualized Home Supports get staff support from a few hours a day to only a few hours a month, depending on the needs of the person. On June 30, 2015, 2,823 individuals received Individualized Home Supports.
- *Community Companion Homes* -- People with an intellectual disability live in a family setting that is not within their own family. People in these settings live with a family that has received training and licensing from DDS. On June 30, 2015, 376 individuals lived in Community Companion Homes.
- *Continuous Residential Supports*-- People who need overnight support and live with three or fewer people share an apartment or house and have staff from an agency

²⁸ Connecticut Department of Social Services, 2015

²⁹ Connecticut Department of Developmental Services, 2015

or hired privately. On June 30, 2015, 723 individuals lived in Continuous Residential Supports.

- *Community Living Arrangements* -- People who need 24 hour support are provided with staff in group home settings. Usually, two to six people share an apartment or house and have staff available to them 24 hours a day. On June 30, 2015, 3,738 individuals lived in Community Living Arrangements.

Residential Settings for Individuals with Psychiatric or Addiction Disorders

DMHAS funds several types of residential settings for individuals age 18 and older with psychiatric or addiction disorders. In SFY 2015, a total of 56,912 individuals received mental health services in the community and 1,533 received services in inpatient settings. Also in SFY 2015, a total of 56,368 individuals received substance abuse services in the community and 2,691 received inpatient services.³⁰

Psychiatric disorders

- *Group Homes* – A community-based residence with on-site staffing 24 hours per day, seven days a week. In SFY 2015, 246 individuals lived in these group home settings.
- *Supervised Housing* – Services are provided in intensively managed housing where individuals live in private or shared apartments with staff co-located 24 hours per day, seven days a week. In SFY 2015, 844 individuals lived in supervised housing.

Addiction disorders

- *Long-Term Care* – A 24 hour per day, seven days a week staffed residence with a structured recovery environment providing substance abuse intermediate and long-term residential treatment or care. In SFY 2015, 1,523 individuals participated in this program.

Institutional Care Settings

Nursing Facilities

Nursing facilities provide personal and skilled nursing care 24 hours a day. This level of care is often used when an individual has a condition that requires 24-hour supervision, substantial needs based on activities of daily living (ADL) or cognitive status, inadequate informal support, or insufficient financial resources to pay for home and community-based services. In addition to serving long-term services and supports needs, nursing facilities are also relied upon for short term post-acute rehabilitation services. There are two types of nursing facilities licensed in Connecticut: chronic and convalescent nursing

³⁰ Connecticut Department of Mental Health and Addiction Services, 2015

facilities (skilled nursing facilities) and rest homes with nursing supervision (intermediate care facilities).

TABLE 3

Percent Distribution of Residents in Connecticut Nursing Facilities by Payment Source on September 30, 1995 and 2014

Payment Source	1995	2014
Medicaid	68	70
Medicare	11	16
Private Pay	20	9
Insurance	2	1
Other	< 1	2

Source: State of Connecticut Nursing Facility Registry and Connecticut Annual Nursing Facility Census, Office of Policy and Management, Policy Development and Planning Division.

On September 30, 2014, there were 24,341 individuals residing in Connecticut nursing facilities. The majority of residents were white (84 percent), female (68 percent), and without a spouse (81 percent), a profile that has remained consistent over the years. Thirteen percent of the residents were under age 65, 39 percent were between age 65 and 84 and 48 percent were age 85 or older.³¹

Connecticut had a total of 27,510 licensed nursing facility beds as of September 30, 2014. Since 1991, efforts have been made to reduce the number of residents in Connecticut’s nursing facilities by placing a moratorium on additional beds. Despite the moratorium, from 1991 to 1994, the total number of licensed beds increased from 29,391 to 32,149. This was due to the addition of beds that had been approved before the moratorium went into effect. From 1994 to 2014, the total number of licensed beds decreased by 4,639, or 14 percent.³²

In 2014, the average daily cost to a nursing facility resident paying privately in Connecticut was \$400 a day for a semi-private room, or over \$146,000 a year. Medicaid was the primary source of payment for 70 percent of nursing facility residents in

³¹ State of Connecticut Annual Nursing Facility Census, Office of Policy and Management, Policy Development and Planning Division, 2014.

³² State of Connecticut Nursing Facility Registry and Connecticut Annual Nursing Facility Census, Office of Policy and Management, Policy Development and Planning Division, 2014.

Connecticut as of September 30, 2014, with Medicare covering 16 percent and private pay covering 9 percent.³³ (Table 3)

Intermediate Care Facilities for Persons with Mental Retardation – ICF/MR

On June 30, 2015, a total of 832 people over the age of 18 in Connecticut resided in either a DDS or private provider operated ICF/MR. Of these individuals, 468 people resided in an ICF/MR operated by DDS in one of six locations throughout the state. Another 364 individuals resided in group homes operated at an ICF/MR level of care by private agencies. Of all of the people living in an ICF/MR, 404 (49 percent) were between the age of 18 and 54, 209 (21 percent) were between the ages of 55 and 64, and 211 (21 percent) were age 65 and over. At this level of care, individuals received residential and day habilitation services, prevocational services and supported employment services. All services are financed through the State Medicaid Program.³⁴

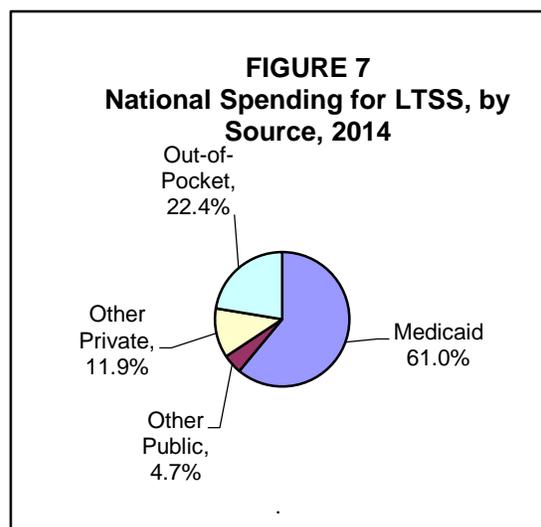

Chronic Disease Hospitals

On June 30, 2015, there were six chronic disease hospitals in Connecticut with a total of 832 beds.³⁵ These long-term hospitals provide diagnosis, care and treatment of a wide range of chronic diseases.

C. Financing

In the U.S., \$219.9 billion was spent on LTSS in 2012, representing 9.3 percent of all personal health care spending. Medicaid is the dominant source of payment for LTSS (61%), followed by out-of-pocket payments by individuals and families (22.4%). Other private and public sources cover the balance of expenditures (16.6%). Medicare plays no role in financing LTSS, since the purpose is to cover acute and post-acute medical care for people age 65 and older and for younger individuals who qualify for Social Security because of disability (Figure 7).³⁶ In addition to these expenditures is the unpaid care provided by family members and other informal caregivers.

Nationally, most LTSS spending goes to the relatively small minority of individuals in nursing facilities. In contrast, the vast majority of community residents needing LTSS receive only unpaid assistance. Furthermore, although about half of all individuals receiving LTSS are under age 65,

³³ State of Connecticut Annual Nursing Facility Census Development and Planning Division, 2014.

³⁴ Connecticut Department of Developmental Services,

³⁵ Connecticut Department of Public Health, 2015.

³⁶ National Health Policy Forum; *The Basics: National* George Washington University; March 27, 2014.

four-fifths of LTSS spending is for elderly individuals.³⁷

At the individual level, those who have sufficient income and assets are likely to pay for their LTSS needs on their own, out of their own personal resources or through a long-term care insurance policy. Medicaid will pay for those who meet the financial eligibility criteria and have limited financial resources, or deplete them paying for their care.

Medicare may pay for individuals who are eligible and require skilled or recuperative care for a short time, but do not cover individuals with stable chronic conditions. The Older Americans Act is another Federal program that helps pay for LTSS services. As financial circumstances and the need for care changes, a variety of payment sources may be used.³⁸

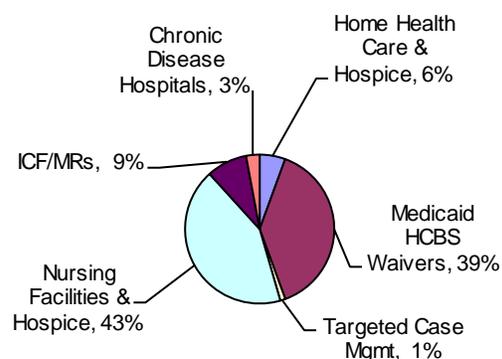

Medicaid

The Medicaid program, jointly funded by the state and federal government, is the primary payer for LTSS in the U.S. and the major public program providing coverage for nursing facility care, accounting for 61 percent of all LTSS spending in 2014 (Figure 7). Medicaid provides coverage for people who are poor and disabled. It also provides LTSS for individuals who qualify for Medicaid because they have ‘spent down’ their assets due to the high costs of such care and have become nearly impoverished. For example, many older adults become eligible for Medicaid as a result of depleting their assets to pay for nursing facility care that Medicare does not cover.

In SFY 2015, the Connecticut Medicaid program spent \$2.889 billion on LTSS. These Medicaid LTSS expenses account for 40 percent of all Medicaid spending and 15% percent of total expenditures for the State of Connecticut.³⁹

Looking at Connecticut’s expenses for Medicaid LTSS in more detail, 45 percent was spent on home and community-based services and 55 percent

FIGURE 8

³⁹Office of Policy and Management, Policy Development and Planning Division, 2015

on institutional care (Figure 8). Breaking down Medicaid home and community-based waiver services further, we see that services for individuals with developmental disabilities account for 26 percent of long-term care expenses, in contrast to thirteen percent for the Elder, Personal Care Assistance, Katie Beckett, Acquired Brain Injury, and Mental Health waivers combined. Over time, the proportion of Medicaid LTSS expenses for home and community-based services has increased from 23 percent in SFY 1996 to 45 percent in SFY 2015.

A consistent conclusion from research on Medicaid home and community-based services waivers is that these services provide savings over care in institutional settings over the long term.⁴⁰ In addition, experience from other states has shown that home and community-based services help people with disabilities stay in their homes while reducing LTSS spending. Researchers at the Institute for Health and Aging at the University of California, San Francisco, found that the growth in spending was greater for states offering limited community-based services than for states with large, well-established home and community-based programs. They conclude that while expansion of home and community-based services requires a short-term increase in spending, it is followed by a reduction in institutional spending and long-term cost savings.⁴¹

Medicare

The federal Medicare program provides health care coverage for people age 65 and older. Individuals under age 65 with disabilities are also covered, however, only after they have received Social Security disability benefits for two years. Although Medicare is the major health insurance program for older adults and certain persons with disabilities, it does not cover LTSS costs. Medicare covers medically necessary care and focuses on medical acute care, such as doctor visits, drugs, and hospital stays. Medicare covers nursing facility stays for no more than 100 days following a hospital stay of at least three days, paying for all of the first 20 days and a portion of the next 80 days. Assisted living costs are not covered. With regard to home health care, coverage is limited by type and duration. For homebound persons needing part-time skilled nursing care or physical therapy services, Medicare pays for home health care, including personal care services provided by home health aides.

Out-Of-Pocket Spending / Private Pay

Nationally in 2012, approximately 22.4 percent of spending for LTSS was paid directly by individuals (about \$49.3 billion), rendering out-of-pocket payments as the second largest source of long-term care financing (Figure 7). This includes direct payment of services as well as deductibles and co-payments for services primarily paid by another source, but does not include the uncompensated costs of informal caregivers.

⁴⁰ Julie Robison, PhD et al, *Transition from Home Care to Nursing Home: Unmet Needs in a Home- and Community-Based Program for Older Adults*, *Journal of Aging & Social Policy*, 24:251-270, 2012, pages 252-253.

⁴¹ H. Stephen Kaye et al, *Do Noninstitutional Long-Term Care Services Reduce Medicaid Spending?* *Health Affairs*, Vol. 28, No. 1, January/February, 2009, pgs 262-272.

Private Insurance Spending

In 2012, coverage from private insurance and other private spending for nursing facilities and home health services represented 11.9 percent of LTSS expenditures in the U.S. (Figure 7). Sources of private insurance include supplemental Medicare coverage (Medigap), traditional health insurance, and private long-term care insurance.

Private Long-Term Care Insurance

Long-term care insurance covers services needed by people who cannot perform every day activities on their own due to a chronic condition, limited ability to function or deterioration in mental capacity. It covers a wide range of services that include bathing, dressing, eating, using the toilet, continence, and transferring from a bed to a chair. Since individuals in need of LTSS do not usually require skilled help, the services are not generally covered by private health insurance or Medicare. Depending upon the policy, care can be provided in a variety of places, including: a person's home, a nursing facility, through community-based services (i.e., adult day care) and in a variety of assisted living settings (i.e., continuing care retirement communities, residential care homes, assisted living facilities).⁴²

In Connecticut, the number of individuals who purchased long-term care insurance in 2014 was 2,933. As of December 31, 2014, there were 106,484 Connecticut residents with a private long-term care insurance policy in force.⁴³

Connecticut Partnership for Long-Term Care⁴⁴

The Partnership is a unique alliance between State government and the private insurance industry developed to:

- Provide individuals with a way to plan for their long-term care needs without the risk of impoverishment;
- Enhance the standards of private long-term care insurance;
- Provide public education about long-term care; and
- Conserve State Medicaid funds.

The most unique aspect of a Connecticut Partnership policy is the Medicaid Asset Protection feature. This feature provides dollar for dollar asset protection: for every dollar that a Partnership policy pays out in benefits, a dollar of assets can be protected from Medicaid spend down rules. When determining Medicaid eligibility, any assets a policy holder has up to the amount the Partnership insurance policy paid in benefits will be disregarded. The Partnership Medicaid Asset Protection feature is not available under non-Partnership policies.

⁴² Connecticut Partnership for Long-Term Care, *Frequently Asked Questions*, April 2015

⁴³ Office of Policy and Management, Policy Development and Planning Division, 2015

⁴⁴ Connecticut Partnership for Long-Term Care, 2015

As of June 30, 2015, there were over 58,000 Partnership policies sold in Connecticut. Purchasers of Partnership policies range in age from 20 to 88 years old, with the average age at purchase being 57 years old. Over 2,600 Partnership policyholders have utilized benefits under their policies, with over \$219 million in benefits paid. Only 169 Partnership policyholders have accessed Medicaid utilizing the Asset Protection earned under their policies. This has helped the Partnership save the State over \$22.2 million in Medicaid long-term care funds with larger savings projected for the future.

Connecticut was the first state to implement a Partnership. From 1992, when the Partnership was first launched, through 2006, New York, Indiana and California developed similar Partnership programs. Due to changes in federal law (Deficit Reduction Act of 2005) making it easier for states to establish Partnership programs, 38 new states have developed Partnership programs. Connecticut currently has reciprocity with all the Partnership states, except California, for the granting of Medicaid Asset Protection under the program.

Older Americans Act

Another major source of federal LTSS funds is the Older Americans Act (OAA), enacted in 1965 to promote the well being of older persons and help them remain independent in their communities. The OAA provides federal funds to pay for home and community-based LTSS for older adults, generally 60 and older, and their families. States are required to target assistance to persons with the greatest social or economic need. Services funded under this Act include information and referral, counseling, outreach, congregate meal sites and home-delivered meals, transportation, long-term care ombudsman services, legal services, elderly protective services, and employment services programs for older adults.

The federal Administration for Community Living provided \$18.2 million in FFY 2015 to the State Department on Aging (SDA). Of these funds, \$14.1 million of Older Americans Act Title III dollars were distributed by formula to the Area Agencies on Aging who in turn contract with community-based organizations to provide social and nutritional services. The remaining \$4.1 million of these funds were special grants received by SDA, including State Health Insurance Program, Senior Medicare Patrol, Aging and Disability Resource Centers, Chronic Disease Self-Management Education, and Elder Abuse Prevention. Both federal and State funds for SDA provided a multitude of services to 75,144 seniors.

State Supplement Program/ Aid to the Aged, Blind and Disabled (AABD)

The State Supplement Program provides a monthly cash benefit for basic living expenses to low-income individuals who are age 65 and over, individuals who are disabled and between the ages of 18 and 64, or individuals who are blind. Benefit amounts vary based on an individual's needs and expenses. Those eligible for State Supplement benefits are also eligible for Medicaid. Those receiving a State Supplement benefit live

in a variety of settings, including their own apartments, housing for older adults or persons with disabilities, or residential care homes.

Rental Subsidies

Many individuals with disabilities need assistance with covering their rental costs if they are going to be able to live in the community. While federal Medicaid law prohibits home and community-based services waiver programs from covering the costs of room and board (room and board expenses are only covered in institutional settings under Medicaid), there are both state and federal sources of rental support in the form of Section 8 vouchers, rental subsidies in State-funded congregate facilities, the State's rental assistance program, State Supplement funds and other sources.

Veterans Affairs

The federal Department of Veterans Affairs (VA) pays for LTSS for service-related disabilities and for certain other eligible veterans, and other health programs such as nursing facility care and at-home care for aging veterans with LTSS needs. Veterans who do not have service-related disabilities but who are unable to pay for the cost of necessary care may also receive LTSS. In Connecticut, the VA funds a Veteran Directed Home and Community Based Services (VDHCBS) program through the State Department on Aging, federal Veteran's Healthcare System in West Haven and the five Area Agencies on Aging. Veterans served through this program have the opportunity to self-direct their own care and receive services in their home by the caregiver of their choice. The Sgt. John L. Levitow Veterans' Health Center at the Connecticut State Veterans' Home provides long term quality health care to veterans with chronic and disabling medical conditions. These conditions include, but are not limited to, chronic obstructive pulmonary disease (COPD), congestive heart disease (CHF), Cardiovascular Accident, Parkinson's disease, Alzheimer's disease and other dementias. The facility also provides End-of-Life care, Palliative care and Respite care. The Health Center is licensed by the Department of Public Health as a Chronic Disease Hospital and is recognized by the U.S. Department of Veterans' Affairs as a Nursing Facility.

IV. FUTURE DEMAND FOR LONG-TERM SERVICES AND SUPPORTS

A. Population and Disability Trends

Although long-term services and supports (LTSS) are needed by people of all ages and may be required as a result of a diverse array of disabilities or chronic illnesses, it is important to recognize the significant impact the aging of our society will have on the future demand for LTSS. In 1900, adults age 65 and older accounted for a little over four percent of the total U.S. population. A century later, the proportion of older adults in the U.S. population had grown to over 12 percent or 35 million. By 2030, the older adult population is expected to have grown to over 19 percent of the U.S. population, or 72 million.⁴⁵

In Connecticut over between 2013 and 2025, the total population is projected to grow by 250,953, an increase of seven percent. When looked at by age group, a different picture emerges. The percentage of individuals under age 18 will decrease by seven percent and the percent of adults between the ages of 18 and 64 will only increase by two percent. In contrast, the percent of individuals age 65 and over will increase substantially, by 51 percent, due to the aging of the Baby Boom generation (Table 4).

TABLE 4
Connecticut Population Projections: 2013 - 2025

Age Group	2013	2015	2020	2025	Pop. Growth 2013-2025	Percent Change: 2013 - 2025
<18	784,159	771,901	740,586	725,931	-58,228	-7%
18 to 64	2,235,695	2,299,631	2,313,213	2,278,484	42,789	2%
65+	521,555	583,490	673,979	787,947	266,392	51%
Total	3,541,409	3,655,022	3,727,778	3,792,362	250,953	7%

Source: Office of Policy and Management calculation based on: 1) U.S. Census 2013 American Community Survey, DPO2 and 2) Population Projections for the State of Connecticut: Statewide 2015 - 2025, developed by CT State Data Center on 11/1/2012 and custom tabulated on 7/20/15.

According to U.S. Census projections, a significant growth in the proportion of older adults in the population will occur after 2011, the year the oldest of the Baby Boom generation (those born between 1946 and 1964) turn 65. In Connecticut, between 2013 and 2025, the proportion of older adults in the population is expected to grow from 15 percent in 2013 to 18 percent in 2020, and then to 21 percent in 2025 (Table 5).

⁴⁵ U.S. Bureau of the Census; Older Population by Age Group: 1900-2050.

TABLE 5
Connecticut Population Projections,
Percent Distribution of Population by Age: 2013 – 2025

Age	2013	2015	2020	2025
Under 18	22%	21%	20%	19%
18 to 64	63%	63%	62%	60%
65+	16%	16%	18%	21%

Source: Office of Policy and Management calculation based on: 1) U.S. Census 2013 American Community Survey, DPO2 and 2) Population Projections for the State of Connecticut: Statewide 2015 - 2025, developed by CT State Data Center on 11/1/2012 and custom tabulated on 7/20/15.

In 2013, the U.S. Census estimated that there were 378,244 individuals in Connecticut with one or more disabilities (excluding individuals living in institutions). Between 2013 and 2025, this number is expected to grow by 23 percent, or 86,104 people, to an estimated 464,348.⁴⁶ However, when broken down by age, dramatically different trends appear that parallel the general population trends. The number of individuals with disabilities under age 18 is projected to decrease by almost 9 percent (-2,515) over 12 years and the number of individuals with disabilities age 18 to 64 is projected to increase by almost two percent (3,137). In contrast, the population with disabilities age 65 and older is expected to significantly increase by 85,481 or 51 percent (Table 6).

TABLE 6
Projection of Non-Institutionalized Persons with Disabilities in Connecticut by Age:
2013 – 2025

	2013	2025	2013 / 2025 Increase	Percent Increase
<i>Under 18</i>	29,374	26,859	-2,515	-8.6%
<i>18 to 64</i>	181,420	184,557	3,137	1.7%
<i>65+</i>	167,450	252,931	85,481	51.0%
Total	378,244	464,348*	86,104	22.8%

Source: Office of Policy and Management based on Sources: 1) U.S. Census Bureau, 2013 American Community Survey DP02, 2) CT Population Projections for the State of Connecticut: Statewide 2015 - 2025, developed by Connecticut State Data Center on 11/1/2012 and custom tabulated on 7/20/15.

⁴⁶ These projections are based on the 2013 Census disability data applied to State Population Projections through 2025. The Census does not tabulate disability status for individuals in institutions. Disability projections assume a constant rate of disability over time.

B. Demand for Long-Term Services and Supports

Ideally, an estimate of the future demand for LTSS in Connecticut would include all aspects of the system in a single picture, including publicly and privately financed services and formal and informal care. However, creating such a comprehensive picture is not possible without more complete data on privately financed services and the use of informal care. Short of this, what is critical in terms of public policy is an understanding of the impact of future demand on the Medicaid financed long-term community and institutional services and supports once the baby boom generation ages.

By focusing on Medicaid, what is not accounted for is the demand for LTSS among individuals who either depend upon unpaid caregivers and family, those with private long-term care insurance, those who pay out of pocket and those who depend upon other sources of federal and state funds.

TABLE 7
Connecticut Medicaid Long-Term Care Clients and Expenditures: SFY 2015

	SFY 2015 Medicaid LTC Clients, Monthly Average	SFY 2015 Medicaid LTC Expenditures
Community-based Care	27,341	\$1.311 billion
Institutional Care	18,516	\$1.643 billion
Total	45,857	\$2.954 billion

Source: Office of Policy and Management, 2015.
Does not total due to rounding

As discussed in Section III, Medicaid is the largest and most significant payer of LTSS at both the state and national level. Of the 45,857 Medicaid clients who received LTSS in Connecticut each month in SFY 2015, 60 percent received services in the community and 40 percent received care in an institutional setting (Table 7). If these ratios remain steady over the next decade and disability rates do not vary, U.S. Census Bureau disability data and population projections for Connecticut suggest that in the year 2025 there will be a 23 percent increase in individuals receiving Medicaid LTSS: an additional 6,288 Medicaid clients receiving LTSS in the community and an additional 4,259 receiving care in institutions (Table 8). To meet this additional demand for LTSS, Medicaid expenditures are expected to grow from \$2.954 billion in SFY 2015 to \$6.610 billion in 2025, assuming current ratios of institutional and community care and a five percent annual inflation rate (Table 9).

TABLE 8
Projections of Connecticut Medicaid Long-Term Care Clients by
Current and Optimal Ratios of Community and Institutional Care

Community-based Care	60%	\$2.896	\$1.585	75%	\$3.643	\$2.332
Institutional Care	40%	\$3.714	\$2.072	25%	\$2.311	\$.668
Total		\$6.610	\$3.657		\$5.954	\$3.000

Note: Expenditure projections include a 5 percent annual compound rate increase. Numbers do not total due to rounding.

Source: Office of Policy and Management, Policy and Planning Division, 2015 based on: (1) Department of Social Services Medicaid data for SFY 2013; (2) U.S. Census Bureau, 2013 American Community Survey DP02, 2) Connecticut Population Projections: Statewide 2015 - 2025, developed by Connecticut State Data Center 11/1/2012 and provided to OPM on 7/20/2015..

If current ratios of Medicaid community and institutional LTSS were to evolve over time to reflect the greater emphasis on home and community-based services achieved in other states, Connecticut could develop a LTSS system that provides community-based care to 75 percent instead of 60 percent of its Medicaid long-term care clients. If the

number of Medicaid clients receiving LTSS in 2025 reflected this optimal ratio, Connecticut could expect an additional 14,962 clients receiving community-based services and supports, and a decrease of 4,415 individuals receiving care in institutions when compared to actual 2015 levels (Table 8). By holding the number of individuals served in 2025 constant, and increasing the proportion of individuals receiving community-based care to 75 percent, Medicaid LTSS expenditures are projected to be \$5.954 billion, instead of \$6.610 billion; \$657 million less than the State might otherwise have spent (Table 9).

Total Medicaid LTSS expenditures in 2025 are projected to be lower under the optimal ratios because in general, although the same numbers of people are served, the cost of serving people at home and in the community, on average,⁴⁷ is significantly lower than serving them in institutions.

In forecasting future demand for LTSS in Connecticut, it is important to note that there are many variables that will affect these estimates, whether related to changes in public policy, demographics, medical advances, or health status. On an individual level, not all people with a disability, whether it is physical, developmental, or psychiatric, will require LTSS. Those who do need LTSS often have needs that fluctuate over time, depending on their health, the nature of their disability and personal circumstances. Individuals vary in the level of supports they need, with the majority of people requiring support with instrumental activities of daily living (IADLs), and others requiring more intense support. Furthermore, the amount and type of informal care available from family and friends will influence the amount of paid care that is required.

By way of comparison, in the U.S., Medicaid spending for community-based LTSS amounted to 34.1 percent of all expenditures for Medicaid LTSS. A comparison of states provided in Table 10 shows Oregon to have the highest proportion of Medicaid long-term spending for home and community-based services (78.3 percent) and New Jersey to be the lowest (27.4 percent). Among the states, Connecticut ranks 36th, with 43.4 percent of Medicaid LTSS expenditures for home and community-based services.^{48, 49}

⁴⁷ Although the average cost of serving people in the community is less expensive than care in institutions, this is not the case in all circumstances, such as the cost of caring at home for a person with Alzheimer's disease or other severe disabilities.

⁴⁸ Due to different methodology, this analysis calculated that the Connecticut Medicaid program spent 43.4 percent for community-based long-term services and supports in 2012, in contrast to the analysis by the CT Office of Policy and Management, which calculated a percentage of 41 percent in 2012 and 44 percent in 2015.

⁴⁹ In this analysis by Truven Health Analytics, community-based services include waivers authorized under Section 1915(c) of the Social Security Act; personal care; home health; HCBS authorized under Section 1115 or Section 1915(a) of the Social Security Act; Program of All-Inclusive Care for the Elderly (PACE); rehabilitative services; private duty nursing; state plan HCBS authorized under Section 1915(i) of the Social Security Act; self-directed personal assistance services authorized under Section 1915(j) and Section 1915 (k) of the Social Security Act. Institutional services include nursing homes; intermediate care facilities for people with mental retardation (ICF/MR); mental health facilities – regular payments; mental health facilities – disproportionate share payments.

Although no one other state’s model can be totally replicated in Connecticut, spending patterns in other states illustrate that greater ratios of home and community-based care are achievable. If Connecticut is to reach a ratio of 75 percent for community-based care sooner than 2025, balancing efforts will need to be more aggressive.

TABLE 10
Percent of Medicaid Long-Term Care Spending for
Home and Community-Based Services, FY 2012*

State	Percent	U.S. Rank
Oregon	78.3	1

C. Caregiver Supply and Demand

Informal Caregivers

Relatives, friends and other unpaid caregivers account for the vast majority of individuals providing LTSS to individuals across the lifespan. Looking at this another way, only 13 percent of people needing any type of LTSS use paid helpers in either a primary or secondary role.⁵⁰ In 2013, there were 40 million family caregivers in the U.S providing care to an adult with limitations in daily activities at any one time. Over this time, the estimated economic value of unpaid contributions from informal caregivers was approximately \$470 billion, up from an estimated \$450 billion in 2009. In fact, the

⁵⁰ H. Stephen Kay, Charlene Harrington, and Mitchell P. LaPlante; *Long-Term Care: Who Gets It, Who Provides It, Who Pays, and How Much?*; Health Affairs, Vol. 29:1; January 2010; page 15.

economic value of caregiving exceeded total Medical spending in the U.S. for both medical and LTSS. In Connecticut, in 2013, there were an estimated 459,000 caregivers at any given time, accounting for an estimated \$5.9 billion in unpaid contributions.⁵¹

Paid Direct Caregivers

While the majority of LTSS are provided by unpaid family members or other informal caregivers, paid direct caregivers form a large and growing percentage of the workforce, both in Connecticut and nationally.

Table 11
Connecticut 2010 and Projected 2020 Occupations

Occupational Title	Employment		Change	
	2010	2020	Number	Percent
Personal Care Aides	15,794	24,162	8,368	53.0%
Home Health Aides	10,533	14,343	3,810	36.2%
Registered Nurses	37,404	44,550	7,146	19.1%
Nursing Aides, Orderlies, and Attendants	13,304	25,848	2,544	10.9%

Source: Office of Policy and Management, from Connecticut Department of Labor, *Connecticut Statewide Forecast: 2010 –2020*, <http://www1.ctdol.state.ct.us/lmi/ctocgroups.asp>

Paid direct caregivers go by a number of titles, include nurse’s aides, personal care assistants and home health aides. In 2012, there were an estimated 50,000 direct-care workers in Connecticut providing daily services and supports to older adults and individual with disabilities who needed assistance with personal care and other daily

⁵¹Susan C. Reinhard et al, *Valuing the Invaluable: 2015 Update; Undeniable Progress, but Big Gaps Remain*, AARP Public Policy Institute 2015..

activities of living.⁵² Between 2012 and 2022, the demand for paid direct care workers nationally is expected to grow by 37 percent, with an increasing number, an estimated 67% in 2022, employed in community-based settings.⁵³

Current efforts to balance the institutional bias of the current long-term services and supports system are leading to a greater percentage of people receiving long-term services and supports at home. As a result, LTSS occupations in Connecticut will see double-digit figure growth between 2010 and 2020. The impact of this shift on the paid caregiver workforce in Connecticut is reflected in a predicted 53 percent rise in personal and home care aide positions and a 36.2 percent increase in home health aide positions (Table 11).

V. GOALS and RECOMMENDATIONS

A. Introduction

The goals and recommendations provided in this Plan are put forward to improve the balance of the system of long-term services and supports (LTSS) in Connecticut for individuals of all ages and across all types of disabilities and their families. In addition to two rebalancing goals, this Plan provides a set of long-term and short-term recommendations. The long-term recommendations provide a high level view of the essential components of a well balanced and person centered system of LTSS. These recommendations are reflective of a system of services and supports, and as such, must be viewed as both interrelated and interdependent. The short-term recommendations reflect strategic priorities identified for action over the next three years (2016-2018).

In 2005, a broad philosophical statement was enacted in Connecticut statute to guide policy and budget decisions. It states that *“Connecticut’s long-term care plan and policy must provide that individuals with long-term care needs have the option to choose and receive long-term care and support in the least restrictive, appropriate setting.”* This simple statement provides a larger framework for Connecticut to make the necessary changes to the laws and regulations that govern the State’s system of LTSS to make real choices for people a reality.

As Connecticut continues its work to balance its system of LTSS, progress must be made on multiple fronts. A balanced system of LTSS is one where policies, incentives and services are aligned to allow individuals with LTSS needs to live fulfilling and productive lives. Balancing the mix of home and community-based and institutional care as well as the mix of public and private resources is needed if Connecticut hopes to provide real LTSS choices for its residents and to achieve the long-standing Vision, Mission and Governing Principles put forth by this and previous Long-Term Care Plans. Over the years, Connecticut has made notable progress towards this goal, but more must be done to meet needs today as well as to anticipate the demands on the system of LTSS that will be made by the aging of the baby boom generation.

Overall, the recommendations are primarily focused on initiatives State government can undertake. While the focus of this Plan is on State government, it is important to recognize the vital role that cities, towns, the private sector and individuals and families play in the system of LTSS. Government at all levels must work in partnership with individuals, families and the private sector in order to develop a quality and effective system.

B. Goals

1. Balance the ratio of home and community-based and institutional care

GOAL #1: *Develop a system that provides for more choice and opportunities for community integration as alternatives to all institutional settings, and increases the proportion of individuals receiving Medicaid long-term home and community-based care from 60 percent in 2015 to 75 percent by 2025, requiring approximately a 1.5 percent increase in the proportion of individuals receiving Medicaid long-term services and supports in the community every year.*

Over the last decade, Connecticut has made significant progress in developing home and community-based and residential alternatives to institutional care. Examples abound. Connecticut eliminated its waiting list for home care for elders; expanded income eligibility for State-funded home care for elders; introduced subsidized assisted living in State-funded congregate facilities, HUD complexes and private pay assisted living communities; developed affordable assisted living units; increased funding and capacity for various Medicaid home and community-based services waiver programs; expanded access to personal care services for individuals eligible for Medicaid; developed a long-term services and supports website and is in the midst of a robust and ongoing effort to rebalance the system of LTSS through the Money Follows the Person Rebalancing Initiative.

In the 13 years since the establishment of the Plan's goal of improving the balance between home and community-based services and institutional care (SFY 2003 – 2015), this goal has been met, with a steady increase in the proportion of Medicaid long-term care clients served in the community of one percent a year, from 46 percent to 60 percent (Table 12). However, to meet the goal of 75 percent of Medicaid clients receiving LTSS in the community by 2025, this pace must accelerate to 1.5 percent a year.

With regard to expenditures, between SFY 2003 and SFY 2015, the proportion of Medicaid dollars for LTSS spent on services received in the community increased by one percent a year (Table 13).

TABLE 12
Proportion of Connecticut Medicaid LTSS Clients over Time

2014-2015	45%	55%	\$2.889

Source: Office of Policy and Management, Policy Development and Planning Division, 2015

If Connecticut is able to meet the goal of serving three out of every four Medicaid LTSS clients in the community, the impact on future LTSS expenditures will be significant. Additionally, Connecticut would be offering more choice to its residents. Based on U.S. Census Bureau disability data and population projections, and assuming the proportion of individuals with disabilities remains the same, it is estimated that by 2025 the number of persons with disabilities in Connecticut will grow by 86,104 or 23 percent. However, this increase is concentrated among older adults, with a 51 percent increase among individuals age 65 and older. For individuals with disabilities under age 18, an estimated 8.6 percent decrease is projected between 2013 and 2025 and for those ages 18 to 64, the number is expected to increase by only 1.7 percent. (Table 9) Assuming current ratios of community-based to institutional care, a five percent per year inflation rate and a 23 percent increase in the number of individuals with disabilities, Medicaid expenditures for LTSS are anticipated to grow from \$2.954 billion in SFY 2015 to \$6.610 billion by SFY 2025 to meet the expected increase in demand for long-term care. (Tables 7 and 9)

However, if 75 percent of Medicaid clients receive community care in 2025, these LTSS expenditures are only expected to be \$5.954 billion, which is \$657 million less than the State might otherwise have spent that year. This cost avoidance over time not only allows Connecticut to provide relief to the Medicaid budget but also allows Connecticut to meet the needs of a larger group of individuals.

This Plan takes a conservative approach to projecting the numbers of individuals with disabilities over the next fifteen years by holding the percentage of persons with disabilities constant over time. As described in Chapter IV, the percentage of older adults with disabilities has fallen over the last two decades. Experts disagree whether this decline in the rate of disability will continue or whether the expected demographic changes will overwhelm these gains. Fluctuations in either direction in the rate of disability will have an impact on the cost of providing LTSS.

2. Balancing the ratio of public and private resources

GOAL #2: Increase the proportion of costs for long-term services and supports covered by private insurance and other dedicated sources of private funds to 25 percent by 2025. Such an increase in private insurance and other sources of private funding would reduce the burden both on Medicaid and on individuals' out-of-pocket expenses. Nationally, private insurance (long-term care and other health insurance) represented 11.9 percent of spending for long-term services and supports in 2012.⁵⁴

⁵⁴ "Other dedicated sources of private funds" means private long-term care insurance, other types of private insurance and other private spending for nursing homes and home health services. It does not include "out-of-pocket" spending or informal care. Source: National Health Policy Forum; *The Basics: National Spending for Long-Term Services and Supports, 2012*; George Washington University; March 27, 2014.

Long-term services and supports is one of the most complex and difficult issues for individuals and families to understand and discuss. Many people are under the false impression that Medicare, and other health insurance programs, will cover their LTSS needs. This misunderstanding, coupled with the fact that most individuals would rather not face, or discuss, the possibility of becoming disabled and dependent, leads most people to do little or no planning for their future LTSS costs.

The lack of Medicare and health insurance coverage for LTSS, combined with the lack of planning, has created a LTSS financing system that is overly reliant on the Medicaid program. Medicaid, by default, has become the primary public program for LTSS. However, in order to access Medicaid, individuals must first impoverish themselves. Therefore, we have a system that requires individuals to spend all their savings first in order to receive government support for their ongoing needs.

In order for Connecticut residents to have real choices about what type of long-term services and supports they receive and where those services are provided, there needs to be a better balance between public and private resources. An over reliance on the Medicaid program as the primary source for LTSS financing threatens to reduce choices as budget pressures will only mount as the need for LTSS increases. Resources such as insurance benefits and other dedicated sources of private LTSS funding (i.e. reverse annuity mortgages) are needed to help balance the ratio of public and private funds in the system.

If enough individuals would plan for their LTSS needs through long-term care insurance or dedicated savings, there would be more Medicaid funding for community-based care and people would not have to deplete their assets if they required prolonged LTSS. For example, the burden for paying for LTSS on both the state Medicaid program (61 percent) and individuals paying out-of-pocket (22.4 percent) would be significantly reduced if the proportion of LTSS costs covered by private insurance (long-term care and other health insurance - 11.9 percent) successfully reached 25 percent (See Figure 7 on page 39). If these reductions in expenses were evenly divided between Medicaid and out-of-pocket costs for individuals, then Medicaid's share of the costs could be reduced by 11 percent. Using today's dollars, and a Medicaid LTSS budget of approximately \$2.956 billion, that would equate to \$325 million in annual savings. These savings could be partially allocated to the General Fund and partially used to help fund enhancements to the LTSS system, such as infrastructure and service improvements, leading to more choices for individuals and their families.

Private long-term care insurance has emerged to specifically cover the personal and custodial care services and supports that comprise most of what is referred to as LTSS, including both home-based and institutional services. However, private long-term care insurance (LTCI) has its limitations. The premium for LTCI is priced based on the purchaser's age. The older someone is the more expensive the policy. Therefore, for

many individuals who wait too long to plan for their LTSS, LTCI may not be affordable. Also, there will always be a portion of the population where LTCI is not affordable at any age.

In addition, in order to purchase LTCI an individual must generally pass a medical underwriting screen (there are some exceptions to this in large group/employer offerings). Individuals who are already in need of LTSS, or have conditions, such as Multiple Sclerosis or Parkinson's Disease, that, even if there are no symptoms at the time the individual applies for coverage, will very likely lead to needing LTSS, aren't able to purchase the coverage.

Given its limitations, private LTCI is not a panacea. However, it can play a more significant role than it does today in financing LTSS. In Connecticut, the presence of the Partnership for Long-Term Care program makes LTCI more affordable for many since they need only purchase an amount of coverage equal to the amount of assets they wish to protect.

In addition to LTCI as a planning tool, Connecticut needs to be creative in the development of other financing options that can help to balance the ratio of public and private resources in the system.

C. Long-Term Recommendations

Optimally, a robust system of LTSS that is able to maximize autonomy, choice and dignity will provide a full range of services and supports. Individuals, regardless of disability or age, should have the options that allow them to live their lives as meaningfully and productively as possible in the settings that best suit their needs and preferences, in the least restrictive environment. As in any system, all the constituent parts are interrelated and interdependent. In order to meet the growing demand for LTSS and the goals set forth in this plan, investment in the community-based infrastructure is critical. Over the long term, to realize the vision and achieve the goals set out in this plan, actions must be taken on the following fronts:

- Provide true individual choice and self-direction to all users of long-term services and supports, regardless of funding source.
- Promote efforts to enhance quality of life in various long-term services and supports settings.
- Ensure the availability of a wide array of support services for those living in the community. Ensure quality of long-term services and supports in the context of a flexible and person-centered service delivery system that acknowledges the dignity of risk.

- Provide individuals, caregivers and persons on nursing home waitlists options counseling and decision support to encourage advanced person-centered planning for long-term services and supports to prevent institutionalization and to extend the availability of private funds for care.
- Achieve greater integration and uniformity of administration of State long-term services and supports serving both older adults and people with disabilities and their families, and emphasize policies related to function as opposed to age or diagnosis.
- Encourage communities to take an active role in planning and supporting long-term services and supports for their residents.
- Address the long-term services and supports education and information needs of the Connecticut public, including specialized educational efforts to specific groups, such as baby boomers and employers.
- Address the anticipated long-term services and supports workforce shortage.
- Provide support to informal caregivers.
- Preserve and expand affordable and accessible housing for older adults and individuals with disabilities, including assisted living, residential care homes, and other supportive housing and emergency housing options for older adults.
- Encourage and enable the provider community to transform and develop services and supports that will help to achieve the goals of this Plan.
- Expand and improve employment opportunities and vocational rehabilitation for persons with disabilities and older adults.
- Support state and local efforts to improve and expand accessible, affordable, and inclusive transportation that accommodates the needs of residents, family and direct care worker companions.
- Improve quality of life and reduce utilization of long-term services and supports and health care services by focusing on health promotion and disease prevention.
- Address emergency preparedness/disaster planning for older adults and persons with disabilities.

D. Short-Term Recommendations

These short-term recommendations provide an action agenda for improving the system of long-term services and supports in Connecticut in the three years spanning 2016 through 2018. Criteria for proposing these targeted priority recommendations are that they will help to ensure the success of the system of long-term services and supports and can be acted upon in the next three years.

Programs and Services

- Adequately support and increase the number of and funding for slots of all the existing Medicaid home and community-based services waivers to meet the needs of all eligible applicants.
- Ensure access to all levels of the State-funded Connecticut Home Care Program for Elders.
- In the State-funded tiers of the Connecticut Home Care Program for Elders, eliminate or reduce the required co-payment.
- Support the continued implementation of the 1915(k) state plan option, Community First Choice.
- Identify skills needed for residents of institutions who desire to transition back to the community and provide appropriate skill training and resources.
- Expand funding for State-funded respite services, such as the Statewide Respite Program, the state-funded tiers of the Connecticut Home Care Program for Elders and the Department of Developmental Services in-home and out-of-home respite services in order to provide support to informal caregivers.
- Support family caregivers with training, respite care, mental health services and counseling, financial assistance, workplace flexibility and opportunities for workplace benefits.
- Measure the effectiveness of the new Adult Family Living model to determine future resource allocation, policy and programmatic enhancements and potential growth
- Address isolation of all older adults and individuals with disabilities living in the community. Cultivate an atmosphere in communities of diversity and inclusiveness. Also, address the impact of isolation on quality of life, abuse, neglect and exploitation.
- Strengthen the No Wrong Door system and connection between State and local services by exploring reimbursement options for assistance through the CHOICES

network, developing ongoing person-centered and options counseling training to senior centers, municipal government offices, resident service coordinators and other community agencies.

- Identify and remove barriers, such as insurance/entitlement reimbursements and licensing requirements that prevent or limit access to long-term services and supports.
- Promote coordination and service integration between physical and behavioral health providers and support the utilization of evidence based practices for providing care across the lifespan.
- Develop a pilot project focused on improving person-centered care across settings when an individual is transferred from one care setting to another.
- Address the education and training of direct care workers to include skills and competencies related to the physical, cultural, cognitive and behavioral health care needs of consumers of long-term services and supports.
- Adequately support Protective Services for the Elderly, the Office of Protection and Advocacy, the Office of the Chief State's Attorney, and other relevant agencies to identify, investigate and prosecute cases of abuse, neglect and exploitation. Support the development of multi-disciplinary teams to enhance response to abuse.
- Support a robust local long-term services and supports system to address community needs through strategic collaborations among and between other municipal departments and divisions such as parks and recreation, public health and transportation services and community leaders. Explore opportunities for regional collaboration.
- Provide advocacy and financial support for increased use of assistive technology to meet the needs of individuals within their homes and avoid or defer the need for institutionalization.
- Provide nutritional counseling and elimination of food insecurity.

Infrastructure

- Continue efforts towards greater integration of and uniformity of administration of State long-term services and supports serving both older adults and people with disabilities and their families, and emphasize policies related to function as opposed to age or diagnosis.
- Coordinate efforts among various entities impacting No Wrong Door development and monitor progress on the state's No Wrong Door endeavors.

- Continue the Balancing Incentive Program (BIP), to create infrastructure investments of a consumer friendly statewide No Wrong Door system, a conflict free case management, and a uniform assessment tool.
- With a focus upon hospital admission and discharge, use best efforts to divert individuals to an appropriate care setting of their choice.
- Address the historical fragmentation of the Medicaid home and community-based waivers, which are associated with specific age and diagnostic eligibility criteria.
- Provide timely eligibility decisions regarding eligibility in all government sponsored long-term services and supports programs. Consider development and use of a presumptive eligibility model.
- Promote more widespread adoption of telehealth and other assistive technologies to improve access to care, coordination, quality and outcomes for residents, while reducing health costs.
- Ensure the Aging and Disability Resource Center initiative under the CHOICES program continues to offer information, referral, assistance and LTSS options counseling services statewide and is integrated within the state's No Wrong Door system.
- Achieve greater integration of employment of persons with disabilities into the Money Follows the Person Rebalancing Initiative and home and community-based services.
- Support improved coordination, communication and guidance among the medical care, behavioral health and long-term services and supports systems.
 - Ensure that current and future initiatives affecting the long-term services and supports system are well coordinated and complementary.
 - Support the development of electronic health records by providers of long-term services and supports and exchange of electronic health records among providers across the Connecticut health care system to streamline care transitions, coordinate care delivery and improve quality and outcomes.
 - Support a learning collaborative approach to bring together providers across disciplines and perspectives, and to learn from older adults and individuals with disabilities.

- Develop or enhance mobility management programs to help consumers learn how to access and navigate transportation options.
- Identify funding streams to sustain coordinate, grow and make more convenient both fixed route and demand-responsive transportation options (including providing door-to-door service), and provide technical assistance to support regionalization

Financing

- Achieve adequate and sustainable provider reimbursement levels that support the cost of long-term services and supports and quality requirements for all segments of the long-term services and supports continuum in order to ensure capacity to meet the evolving needs and demographics of Connecticut residents.
- Provide greater flexibility in the budgeting and use of Medicaid funds for long-term services and supports.
- Capture and reinvest cost savings across the long-term services and supports continuum.
 - Reinvest savings resulting from Money Follows the Person, the Balancing Incentive Program and other emerging Medicaid long-term services and supports programs to enhance the availability and capacity of home and community based services.
- Explore reforming the Medicaid rate setting system to reflect quality, reimbursement related to the actual costs of care, the acuity level of the consumers and uncompensated care for all LTSS providers across the continuum consistent with long-term services and supports rebalancing, rightsizing and a range of home and community-based service initiatives.
- Explore various methods to increase the private sector's greater involvement as a payer of long-term services and supports.
 - Explore the development of tax incentives for the purchase of private long-term care insurance, including tax incentives for employer-based coverage.
- Work with the Federal government to preserve and reauthorize the Older Americans Act and preserve Social Security Act provisions for Supplemental Security Income, Social Security and Social Security Disability benefits funding, which are currently at risk.

Quality

- Enable a collaborative, flexible and efficient regulatory environment that is adaptive and receptive to individual provider’s forward thinking ideas and planning. Such an environment would encourage providers of the long-term services and supports continuum to adjust, modernize and diversify their models of care to address current and future consumer needs and expectations, which in turn should lead to higher quality care.
- The Departments of Public Health and Social Services should work together to ensure consistency among their respective regulations and oversight activities.
- Review licensing certification requirements and Probate Court protocols (currently there is no licensing for conservators or guardians) for training of community-based formal caregivers, conservators and guardians to assure that the specialized needs of the individual are met and provide training where there are gaps.
- Expand the scope of the Long-Term Care Ombudsman program to provide Ombudsman support to consumers receiving long-term services and supports regardless of setting in order to align the program with Medicaid LTSS rebalancing efforts. Additional appropriations to the Long-Term Care Ombudsman program would be necessary to expand beyond their current jurisdiction.
- Support an integrated approach to CT’s response to abuse, neglect and exploitation.
- Establish “learning collaboratives” where health care professionals come together on a regular basis for education and discussion on evidenced-based and emerging best practices in LTSS across the lifespan, in areas of both physical and behavioral health.

Housing

- Support programs that divert or transition individuals from nursing facilities or other institutions to community housing options, such as CT811.
- Develop new housing alternatives for persons with serious and persistent mental illness who do not need nursing facility level of care.
- Adopt policies that encourage incorporation of accessible housing features into new construction so that new housing can support its residents throughout the lifespan.
- Continue and expand State investment in the development of housing that is affordable and accessible for older adults and persons with disabilities.

- Encourage the growth and development of community- based service models that bring long- term services and supports to housing residents. Work with the federal government to secure at-risk housing subsidy, preservation, and development funds.

Workforce

- Develop a comprehensive and safe direct care workforce-consumer on-line matching system.
- Promote model re-training programs that allow the existing pool of institutionally- based paid direct care workers to be trained to provide services and supports in the community.
- Promote workforce training that addresses physical and mental health needs across the lifespan.
- Promote flexibility in workplace employment policies and practices to accommodate the circumstances of unpaid family caregivers.

VI. CONCLUSIONS

Over the next 10 years Connecticut will be challenged to develop a long-term services and supports (LTSS) system that is person focused and directed and provides real choices for individuals with disabilities and their families. Many uncertainties could affect the level of demand for LTSS in Connecticut. Disability rates may decline, medical technologies may reduce the incidence of certain chronic diseases, or new conditions may arise that increase the demand for LTSS. There are no guarantees. However, we do know that Connecticut residents want a system that maximizes the opportunity for all persons, regardless of age or disability, to live in the community as independently as possible. We also know that current levels of Medicaid LTSS expenditures for institutional care and the significant reliance on public funds for LTSS will not allow Connecticut to reach its goal of real LTSS choices and to adequately meet a possibly growing demand for services and supports. The time to take steps to balance the system is now. As outlined in this Plan, the shifting of the ratio of home and community-based and institutional care, coupled with a larger role for private funds in the system, will position Connecticut to be responsive to the potential LTSS needs of our citizens in the short and long-term and will help realize its goal of a system driven by choice and consumer control.
