Economic Release at glance: Retail Sales

Retail sales data represents total consumer purchases from retail stores. It provides valuable information about consumer spending which makes up the consumption part of GDP. The most volatile components like autos, gas prices and food prices are often removed from the report to show more underlying demand patterns as changes in sales in these categories are frequently a result of price changes. It is not adjusted for inflation. Rising retail sales indicate stronger economic growth. However, if the increase is larger than forecast, it may be inflationary. As a leading macroeconomic indicator, retail sales help gauge the pulse of an economy and its projected path toward expansion or contraction.

The Fund Management monitors and evaluates the portfolio to ensure compliance with its Investment Policy and adherence to rating agency guidelines. Below table summarizes some of the key metrics.

Rating Requirements

Weighted Average Maturity (WAM) - maximum 60 days

Weighted Average Life (WAL) - maximum 120 days
