Economic Release at Glance: Personal Consumption

The Personal Consumption Expenditure (PCE) is the component statistic for consumption in gross domestic product. It consists of the actual and imputed expenditures of households and includes data pertaining to durable and non-durable goods and services. It is essentially a measure of goods and services targeted towards individuals and consumed by individuals. The less volatile measure of the PCE price index is the core PCE (CPCE) price index which excludes the more volatile and seasonal food and energy prices. Some of the categories included in the consumption index are: food and beverages, housing, apparel, medical care, transportation, education and communication.

The Fund Management monitors and evaluates the portfolio to ensure compliance with its Investment Policy and adherence to rating agency guidelines. Below table summarizes some of the key metrics.

Rating Requirements

Weighted Average Maturity (WAM) - maximum 60 days

Weighted Average Life (WAL) - maximum 120 days
