Gramophone, Film, Typewriter by Friedrich Kittler
Both a technical history and theoretical discussion of emergent media from the late nineteenth century to the present. Kittler pulls from and applies works from science, art, literature, and philosophy.

The Information by James Gleick
A book of science history, which synthesizes and covers the genesis of our current information age. Gleick’s book is a slightly more accessible response to Kittler’s approach.
Relational Aesthetics and Postproduction by Nicolas Bourriaud
These two companion texts are works of philosophy in which Bourriaud argues for a framework for the arts outside of the commodity structure, but rather as a social, interdisciplinary, and inherently sharing enterprise, in which authorship and ownership are becoming more suspect in the midst of internet, remix, and information culture.

The Practice of Everyday (Media) Life by Lev Manovich
An essay by a prominent art and cultural theorist, which critiques our current age of media consumption in regards to the freedoms and restrictions that the internet generates as a social environment. The title is a reference to a prior work of philosophy by Michel de Certeau, “The Practice of Everyday Life.”

Practices of Looking by Sturken & Cartwright
A comprehensive overview of various texts and discussions involving visual culture and technology. It is a common textbook for introducing established visual cultural methods and arguments.

New Media Art by Mark Tribe and Reena Jana
This text focuses on New Media art as a specific art historical movement, and explores technologies, themes, and common tactics, such as appropriation, collaboration, identity, and privacy, from the standpoint of artistic expression.

Visual Culture Reader by Nicholas Mirzoeff
A comprehensive textbook, often taught along with “Practices of Looking,” which addresses visual cultural literacy through writings from philosophy, art, cinema, and advertising.
