Summer Learning Hub

#CTLEARNINGHUB

Summer can be a time for K-12 students to choose and finish their own adventure in learning. The Summer Learning Hub is a place to find one or more adventures in the form of a challenge.

These challenges give students engaging options and opportunities across many subjects. They help sharpen knowledge important for academic success in the fall.

Challenges include a mix of plugged and unplugged activities that students complete, answering questions like: What career am I most interested in? What role do I play in my community? How does my language, culture, and community help me develop an understanding of myself and the world?

Summer learning challenges are done in partnership with the local school district. Each spring, district superintendents invite students and families to learn more about the challenges to extend student learning.

Whether students enjoy reading, math, social studies, or science, the Summer Learning Hub has fun, enriching opportunities for everyone.

It doesn't matter which adventure students choose, as long as they enjoy the experience and share their learning with others.

The CSDE encourages students and families to check out all the Summer Learning Hub has to offer.
