Meal Pattern Requirements for CACFP Child Care Programs
October 1, 2021, through September 30, 2022
Connecticut State Department of Education

Project Director
Susan S. Fiore, M.S., R.D., Nutrition Education Coordinator

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, sex, disability, age, or reprisal or retaliation for prior civil rights activity in any program or activity conducted or funded by USDA.

Persons with disabilities who require alternative means of communication for program information (e.g. Braille, large print, audiotape, American Sign Language, etc.), should contact the Agency (State or local) where they applied for benefits. Individuals who are deaf, hard of hearing or have speech disabilities may contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program complaint of discrimination, complete the USDA Program Discrimination Complaint Form, (AD-3027) found online at: How to File a Complaint, and at any USDA office, or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by:

(1) mail: U.S. Department of Agriculture
Office of the Assistant Secretary for Civil Rights
1400 Independence Avenue, SW
Washington, D.C. 20250-9410;
(2) fax: (202) 690-7442; or
(3) email: program.intake@usda.gov.

The Connecticut State Department of Education is committed to a policy of equal opportunity/affirmative action for all qualified persons. The Connecticut Department of Education does not discriminate in any employment practice, education program, or educational activity on the basis of age, ancestry, color, criminal record (in state employment and licensing), gender identity or expression, genetic information, intellectual disability, learning disability, marital status, mental disability (past or present), national origin, physical disability (including blindness), race, religious creed, retaliation for previously opposed discrimination or coercion, sex (pregnancy or sexual harassment), sexual orientation, veteran status or workplace hazards to reproductive systems, unless there is a bona fide occupational qualification excluding persons in any of the aforementioned protected classes.

Inquiries regarding the Connecticut State Department of Education’s nondiscrimination policies should be directed to: Levy Gillespie, Equal Employment Opportunity Director/Americans with Disabilities Coordinator (ADA), Connecticut State Department of Education, 450 Columbus Boulevard, Suite 505, Hartford, CT 06103, 860-807-2071, levy.gillespie@ct.gov.

This institution is an equal opportunity provider.

About This Guide

This guide contains information and guidance on planning menus to meet the requirements of the CACFP meal patterns for children. This guide applies to CACFP child care centers, at-risk afterschool care centers, emergency shelters, and family day care homes. The CACFP meal patterns are defined by the U.S. Department of Agriculture’s USDA final rules below.

The USDA provides additional guidance on the meal pattern requirements through the CACFP policy memos on the USDA’s FNS Documents & Resources webpage.

The contents of this guide are subject to change. The CSDE will update this guide as the USDA issues additional policies and guidance for the CACFP. Please check the CSDE’s Meal Patterns for CACFP Child Care Programs webpage for the most current version. For more information, contact Susan S. Fiore, M.S., R.D., Nutrition Education Coordinator, at susan.fiore@ct.gov or 860-807-2075.

The mention of trade names, commercial products, or organizations does not imply approval or endorsement by the CSDE or the USDA.
USDA COVID-19 Waivers for the CACFP

Pursuant to the COVID-19 Child Nutrition Response Act (H.R. 6201, Title II), and the exceptional circumstances of the current COVID-19 public health emergency, the USDA Food and Nutrition Service (FNS) has established a variety of nationwide waivers to support access to nutritious meals, while enforcing recommendations from public health experts with regard to social distancing measures. For more information, visit the “Documents/Forms” section of the CSDE’s Operation of Child Nutrition Programs during Coronavirus (COVID-19) Outbreaks webpage.

Sponsors must apply to the Connecticut State Department of Education (CSDE) to implement any of the current USDA waivers. If a CACFP sponsor has received approval from the CSDE to implement any of the national waiver provisions, these approvals supersede the applicable requirements in this guide. For more information, visit the CSDE’s Operation of Child Nutrition Programs during Coronavirus (COVID-19) Outbreaks webpage.

For information on the CACFP meal pattern flexibilities for 2021-22, refer to “Meal Pattern Flexibilities during COVID-19” in section 1.
CSDE Contact Information

For questions regarding the CACFP meal patterns for children, please contact the CACFP staff in the CSDE’s Bureau of Health/Nutrition, Family Services and Adult Education.

1 — CACFP Meal Patterns for Children

The CACFP meal patterns for children are defined by the USDA’s final rule, *Child and Adult Care Food Program: Meal Pattern Revisions Related to the Healthy, Hunger-Free Kids Act of 2010* (81 FR 24348), released on April 25, 2016, and the final rule corrections (81 FR 75671), released on November 1, 2016. The updated meal pattern requirements took effect on October 1, 2017, and the requirement for grains ounce equivalents began October 1, 2021.

The CACFP meal patterns for children apply to:

- children ages 1-12;
- children ages 15 and younger of migrant workers;
- children of any age with disabilities; and
- children through age 18 in at-risk afterschool programs and emergency shelters.

Meals for infants (birth through 11 months) must follow the CACFP infant meal patterns. For more information, visit the CSDE’s Feeding Infants in CACFP Child Care Programs webpage.

The goal of the USDA’s Child Nutrition Programs is to improve and maintain children’s health and nutrition while promoting the development of good eating habits. The CACFP meal patterns are designed to meet children’s needs for calories and key nutrients. To receive reimbursement for meals and snacks served to children, CACFP facilities (child care centers, at-risk afterschool care centers, emergency shelters, and family day care homes) must provide the required food components and servings for each age group.
Age Groups

The age groups for the CACFP meal patterns for children include ages 1-2; ages 3-5; ages 6-12; and ages 13-18 in at-risk afterschool programs and emergency shelters. In April 2021, the USDA issued new guidance that emergency shelters may claim meals and snacks for participants through age 24. This provision is in effect during the current COVID-19 public health emergency. For more information, refer to USDA Memo CACFP 12-2021: Reimbursement for Meals and Snacks Served to Young Adults in the Child and Adult Care Food Program—Questions and Answers.

Reimbursable Meals

The USDA reimburses CACFP facilities for meals and snacks served to children, not for individual foods. The CACFP meal patterns for children consist of minimum daily servings of food components for each age group. Meals and snacks are eligible for USDA reimbursement when they contain the minimum serving of each required food component.

Food components and food items

A food component is one of the five food groups that comprise reimbursable meals, including milk, fruits, vegetables, grains, and meat/meat alternates. Table 1-1 summarizes the required components for the CACFP meal patterns for children.

Menu items contribute to the food components. A menu item is any planned main dish, vegetable, fruit, bread, grain, or milk; and may contribute to one or more food components. For example, a hamburger (meat/meat alternates component) on a whole-grain bun (grains component) is one menu item that contributes to two food components.

Each component has specific crediting requirements. All foods (commercial products, foods made from scratch by the CACFP facility, and foods prepared by vendors) must meet these requirements to credit as a component of reimbursable meals and snacks. For more information on the crediting requirements, refer to section 3.
Table 1-1. Required components for the CACFP meal patterns for children

<table>
<thead>
<tr>
<th>Breakfast</th>
<th>Lunch/Supper</th>
<th>Snack</th>
</tr>
</thead>
</table>
| **Three food servings**<sup>1</sup>  
• One serving of milk  
• One serving of vegetables, fruits, or both  
• One serving of grains<sup>2</sup> | **Five food servings**<sup>1</sup>  
• One serving of milk  
• One serving of meat/meat alternates  
• One serving of vegetables<sup>3</sup>  
• One serving of fruits  
• One serving of grains | **Choose two of five food servings**<sup>1,4</sup>  
• One serving of milk  
• One serving of meat/meat alternates  
• One serving of vegetables  
• One serving of fruits  
• One serving of grains |

1. A serving is the specified amount for each age group in the CACFP meal patterns.
2. Meat/meat alternates may substitute for the entire grains component at breakfast up to three times per week. For more information, refer to “Meat/meat alternates at breakfast” in section 3.
3. Vegetables may substitute for the entire fruits component at lunch and supper. If the meal includes two servings of vegetables, they must be two different kinds. For more information, refer to “Substituting vegetables for fruits at lunch” in section 3.
4. Snack must include two of the five components.

**Additional foods**

CACFP menus may include additional foods or larger servings beyond the minimum requirements. Menu planners should consider the appropriateness of additional foods based on the nutrition needs of each age group.

Young children have small appetites and might not consume the nutritious meal components if the CACFP menu includes additional foods. However, older children might need larger servings to meet their nutritional needs. For example, a breakfast menu that contains ½ cup of oatmeal, ½ cup of blueberries, and 1 cup of milk meets the minimum servings for ages 6-12. This menu may be adequate for a 6-year-old, but a 12-year-old might need a larger serving (such as 1 cup of oatmeal) or an additional food item (such as another serving of fruit).

When menus include additional foods, the CSDE encourages CACFP facilities to choose nutrient-dense foods that are appropriate to the nutrition needs of each age group. Examples include vegetables; fruits; whole grains; low-fat and nonfat milk products; legumes; and lean meats, fish, poultry.
Some additional foods do not credit toward the CACFP meal patterns and cannot be served, or should be served only in moderation. For more information, refer to “Noncreditable Foods” in section 3.

CACFP Meal Patterns for Children

The following pages include the CACFP meal patterns for breakfast (table 1-2), lunch and supper (table 1-3), and snack (table 1-4). A handout of the CACFP meal patterns for children is available on the CSDE’s Meal Patterns for CACFP Child Care Programs webpage.

Refer below for important menu planning notes

**Menu planning notes for breakfast**

1 Breakfast must include the minimum serving of all three components. Use the USDA’s *Food Buying Guide for Child Nutrition Programs* (FBG) to determine the amount of purchased food that meets the requirements. Commercial processed foods not listed in the FBG require a Child Nutrition (CN) label or product formulation statement (PFS) to document crediting information. For more information, refer to the CSDE’s resources, *Using Child Nutrition (CN) Labels in the CACFP*, *Using Product Formulation Statements in the CACFP*, *Accepting Processed Product Documentation in the CACFP*, and *Crediting Commercial Meat/Meat Alternate Products in the CACFP*; and visit the “Crediting Commercial Processed Products” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage. Foods made from scratch must have a recipe that documents the crediting information per serving. For more information, visit the “Crediting Foods Prepared on Site” section of the CSDE’s Crediting Foods in CACFP Child Care Programs Programs webpage.
Table 1-2. CACFP breakfast meal pattern for children, continued

Menu planning notes for breakfast, continued

2 This age group applies only to at-risk afterschool programs and emergency shelters. Larger portions may be needed to meet the nutritional needs of children ages 13-18. Milk must be unflavored whole milk for age 1 and unflavored low-fat (1%) or fat-free milk for ages 2 and older. Flavored fat-free milk may be served to ages 6 and older, but the USDA’s CACFP Best Practices recommends serving only unflavored milk. For more information, visit the “Milk Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

3 The vegetables component includes fresh vegetables, frozen vegetables, canned vegetables, rehydrated dried vegetables (PFS required), and pasteurized 100 percent full-strength vegetable juice. A serving of cooked vegetables must be drained. Vegetables credit based on volume (cups), except raw leafy greens such as lettuce and spinach credit as half the volume served, e.g., 1 cup of lettuce credits as ½ cup of the vegetables component. The USDA’s CACFP Best Practices recommends that CACFP menus include at least one serving per week of dark green vegetables, red and orange vegetables, beans and peas (legumes), starchy vegetables, and other vegetables. For more information, refer to the CSDE’s resource, Vegetable Subgroups in the CACFP, and visit the “Vegetables Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

4 Pasteurized full-strength juice credits as either the vegetables component or fruits component at only one meal or snack per day. Juice includes fruit and vegetable juice, frozen pops made from 100 percent juice, pureed fruits and vegetables in smoothies, and juice from canned fruit in 100 percent juice. For more information, refer to the CSDE’s resources, Crediting Juice in the CACFP and Crediting Smoothies in the CACFP. The USDA’s CACFP Best Practices recommends serving whole fruits (fresh, frozen, canned, and dried) more often than juice.

5 The fruits component includes fresh fruit, frozen fruit, canned fruit, dried fruit, and pasteurized 100 percent full-strength fruit juice. Serve canned fruit in juice, water, or light syrup. The creditable serving of canned fruit in 100 percent juice may include the juice but cannot include water or syrup. Fruits credit based on volume (cups), except dried fruits credit as twice the volume served, e.g., ¼ cup of raisins credits as ½ cup of the fruits component. For more information, visit the “Fruits Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

6 To credit as the grains component, a whole grain, enriched grain, bran, or germ must be the first ingredient or the greatest ingredient by weight. For information on identifying creditable grains, refer to the CSDE’s resources, How to Identify Creditable Grains in the CACFP, Crediting Whole Grains in the CACFP, and Crediting Enriched Grains in the CACFP, and visit the “Grains Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
Menu planning notes for breakfast, continued

8 At least one serving per day must be WGR. The USDA’s CACFP Best Practices recommends at least two servings of WGR grains per day. WGR foods for the CACFP contain at least 50 percent whole grains and the remaining grain ingredients are enriched, bran, or germ. For more information, refer to the CSDE’s resource, Meeting the Whole Grain-rich Requirement for the CACFP, and visit the “Whole Grain-rich Requirement” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

9 Grain-based desserts cannot credit. Examples include cookies, piecrusts in sweet pies, doughnuts, cereal bars, granola bars, sweet rolls, pastries, toaster pastries, cake, and brownies. Sweet crackers such as graham crackers and animal crackers are not grain-based desserts. However, the CSDE recommends not serving sweet crackers more than twice per week between all meals and snacks. For more information, visit the USDA’s webpage, Grain-based Desserts in the CACFP.

10 Meat/meat alternates may substitute for the entire grains component at breakfast up to three times per week. A 1-ounce serving of the meat/meat alternates component substitutes for 1 ounce equivalent of the grains component. For more information, visit the USDA’s webpage, Serving Meat and Meat Alternates at Breakfast, and the “Meat/Meat Alternates Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

11 Ounce equivalents apply effective October 1, 2021. Grains must meet the required weights (groups A-E) or volumes (groups H-I) in Grain Ounce Equivalents for the CACFP, or provide the minimum creditable grains per serving. For more information, refer to the CSDE’s resource, Calculation Methods for Grains Ounce Equivalents for the CACFP, and visit the “Serving Size for Grains” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

12 Breakfast cereals cannot contain more than 6 grams of sugars per dry ounce (no more than 21.2 grams of sucrose and other sugars per 100 grams of dry cereal). For more information, refer to the CSDE’s resource, Crediting Breakfast Cereals in the CACFP.

13 Examples of cereal grains include amaranth, barley, buckwheat, cornmeal, corn grits, kasha, millet, oats, quinoa, wheat berries, and rolled wheat.

Refer to next page for important menu planning notes
Table 1-3. CACFP lunch and supper meal pattern for children, continued

Menu planning notes for lunch and supper

1. Lunch and supper must include the minimum serving of all five components. Use the USDA’s Food Buying Guide for Child Nutrition Programs (FBG) to determine the amount of purchased food that meets the requirements. Commercial processed foods not listed in the FBG require a CN label or PFS to document crediting information. For more information, refer to the CSDE’s resources, Using Child Nutrition (CN) Labels in the CACFP, Using Product Formulation Statements in the CACFP, Accepting Processed Product Documentation in the CACFP, and Crediting Commercial Meat/Meat Alternate Products in the CACFP; and visit the “Crediting Commercial Processed Products” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage. Foods made from scratch must have a recipe that documents the crediting information per serving. For more information, visit the “Crediting Foods Prepared on Site” section of the CSDE’s Crediting Foods in CACFP Child Care Programs Programs webpage.

2. This age group applies only to at-risk afterschool programs and emergency shelters. Larger portions may be needed to meet the nutritional needs of children ages 13-18.

3. Milk must be unflavored whole milk for age 1 and unflavored low-fat (1%) or fat-free milk for ages 2 and older. Flavored fat-free milk may be served to ages 6 and older, but the USDA’s CACFP Best Practices recommends serving only unflavored milk. For more information, visit the “Milk Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

4. The meat/meat alternates component must be served in a main dish, or a main dish and one other food item. A serving is the edible portion of cooked lean meat, poultry, or fish, e.g., cooked lean meat without bone, breading, binders, fillers, or other ingredients. Commercial processed products require a CN label or PFS to credit. For more information, refer to the CSDE’s resources, Crediting Commercial Meat/Meat Alternates in the CACFP and Crediting Deli Meats in the CACFP; and visit the “Meat/Meat Alternates Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage. The USDA’s CACFP Best Practices recommends serving only lean meats, nuts, and legumes; limiting processed meats to one serving per week; and serving only low-fat or reduced-fat natural cheese.

5. Surimi seafood is a pasteurized, ready-to-eat, restructured seafood product usually made from pollock (fish). A CN label or manufacturer’s PFS is required to credit surimi differently.

6. APPs must meet the requirements in appendix A of the CACFP regulations (7 CFR 226). Tofu must contain at least 5 grams of protein in 2.2 ounces (weight) or ¼ cup (volume). For more information, refer to the CSDE’s resources, Requirements for Alternate Protein Products in the CACFP and Crediting Tofu and Tofu Products in the CACFP. A 1-ounce serving of tempeh credits as 1 ounce of the meat/meat alternates component if the product’s ingredients include only soybeans (or other legumes), water, tempeh culture, and for some varieties, vinegar, seasonings, and herbs. Tempeh products that contain other ingredients require a CN label or PFS to document crediting information.
### Table 1-3. CACFP lunch and supper meal pattern for children, continued

**Menu planning notes for lunch and supper, continued**

7. Legumes (cooked dry beans and peas) credit as either the meat/meat alternates component or the vegetables component, but not both in the same meal. For more information, refer to the CSDE’s resource, *Crediting Legumes in the CACFP*.

8. Creditable nuts and seeds include almonds, Brazil nuts, cashews, filberts, macadamia nuts, peanuts, pecans, walnuts, pine nuts, pistachios, and soy nuts. Nuts and seeds cannot credit for more than half of the meat/meat alternates component at lunch/supper. They must be combined with another meat/meat alternate to meet the total requirement. **Note:** Children younger than 4 are at the highest risk of choking. The USDA recommends that any nuts or seeds served to young children are in a prepared food, and are ground or finely chopped. For more information, refer to the CSDE’s resource, *Crediting Nuts and Seeds in the CACFP*.

9. Yogurt and soy yogurt cannot contain more than 23 grams of total sugars per 6 ounces (no more than 3.83 grams per ounce). For more information, refer to the CSDE’s resource, *Crediting Yogurt in the CACFP*.

10. The vegetables component includes fresh vegetables, frozen vegetables, canned vegetables, rehydrated dried vegetables (PFS required), and pasteurized 100 percent full-strength vegetable juice. A serving of cooked vegetables must be drained. Vegetables credit based on volume (cups), except raw leafy greens such as lettuce and spinach credit as half the volume served, e.g., 1 cup of lettuce credits as ½ cup of the vegetables component. The USDA's *CACFP Best Practices* recommends that CACFP menus include at least one serving per week of dark green vegetables, red and orange vegetables, beans and peas (legumes), starchy vegetables, and other vegetables. For more information, refer to the CSDE’s resource, *Vegetable Subgroups in the CACFP*, and visit the “Vegetables Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

11. Pasteurized full-strength juice credits as either the vegetables component or fruits component at only one meal or snack per day. Juice includes fruit and vegetable juice, frozen pops made from 100 percent juice, pureed fruits and vegetables in smoothies, and juice from canned fruit in 100 percent juice. For more information, refer to the CSDE’s resources, *Crediting Juice in the CACFP* and *Crediting Smoothies in the CACFP*. The USDA’s *CACFP Best Practices* recommends serving whole fruits (fresh, frozen, canned, and dried) more often than juice.

12. Vegetables can substitute for the entire fruits component at lunch and supper. If lunch or supper includes two servings of vegetables, they must be different kinds.

13. The fruits component includes fresh fruit, frozen fruit, canned fruit, dried fruit, and pasteurized 100 percent full-strength fruit juice. Serve canned fruit in juice, water, or light syrup. The creditable serving of canned fruit in 100 percent juice may include the juice but cannot include water or syrup. Fruits credit based on volume (cups), except dried fruits credit as twice the volume served, e.g., ¼ cup of raisins credits as ½ cup of the fruits component. For more information, visit the “Fruits Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
Table 1-3. CACFP lunch and supper meal pattern for children, continued

Menu planning notes for lunch and supper, continued

To credit as the grains component, a whole grain, enriched grain, bran, or germ must be the first ingredient or the greatest ingredient by weight. For information on identifying creditable grains, refer to the CSDE’s resources, *How to Identify Creditable Grains in the CACFP*, *Crediting Whole Grains in the CACFP*, and *Crediting Enriched Grains in the CACFP*, and visit the “Grains Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

At least one serving per day must be WGR. The USDA’s *CACFP Best Practices* recommends at least two servings of WGR grains per day. WGR foods for the CACFP contain at least 50 percent whole grains and the remaining grain ingredients are enriched, bran, or germ. For more information, refer to the CSDE’s resource, *Meeting the Whole Grain-rich Requirement for the CACFP*, and visit the “Whole Grain-rich Requirement” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

Grain-based desserts cannot credit. Examples include cookies, piecrusts in sweet pies, doughnuts, cereal bars, granola bars, sweet rolls, pastries, toaster pastries, cake, and brownies. Sweet crackers such as graham crackers and animal crackers are not grain-based desserts. However, the CSDE recommends not serving sweet crackers more than twice per week between all meals and snacks. For more information, visit the USDA’s webpage, *Grain-based Desserts in the CACFP*.

Ounce equivalents apply effective October 1, 2021. Grains must meet the required weights (groups A-E) or volumes (groups H-I) in *Grain Ounce Equivalents for the CACFP*, or provide the minimum creditable grains per serving. For more information, refer to the CSDE’s resource, *Calculation Methods for Grains Ounce Equivalents for the CACFP*, and visit the “Serving Size for Grains” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

Breakfast cereals cannot contain more than 6 grams of sugars per dry ounce (no more than 21.2 grams of sucrose and other sugars per 100 grams of dry cereal). For more information, refer to the CSDE’s resource, *Crediting Breakfast Cereals in the CACFP*.

Examples of cereal grains include amaranth, barley, buckwheat, cornmeal, corn grits, kasha, millet, oats, quinoa, wheat berries, and rolled wheat.

Refer to next page for important menu planning notes.
Table 1-4. CACFP snack meal pattern for children, continued

Menu planning notes for snack

1 Snack must include the minimum serving of two of the five components. Only one of the two components may be a creditable beverage, such as milk or juice. The USDA’s CACFP Best Practices recommends serving a vegetable or fruit for at least one of the two required snack components. Use the USDA’s Food Buying Guide for Child Nutrition Programs (FBG) to determine the amount of purchased food that meets the requirements. Commercial processed foods not listed in the FBG require a CN label or PFS to document crediting information. For more information, refer to the CSDE’s resources, Using Child Nutrition (CN) Labels in the CACFP, Using Product Formulation Statements in the CACFP, Accepting Processed Product Documentation in the CACFP, and Crediting Commercial Meat/Meat Alternate Products in the CACFP; and visit the “Crediting Commercial Processed Products” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage. Foods made from scratch must have a recipe that documents the crediting information per serving. For more information, visit the “Crediting Foods Prepared on Site” section of the CSDE’s Crediting Foods in CACFP Child Care Programs Program webpage.

2 This age group applies only to at-risk afterschool programs and emergency shelters. Larger portions may be needed to meet the nutritional needs of children ages 13-18.

3 Milk must be unflavored whole milk for age 1 and unflavored low-fat (1%) or fat-free milk for ages 2 and older. Flavored fat-free milk may be served to ages 6 and older, but the USDA’s CACFP Best Practices recommends serving only unflavored milk. For more information, visit the “Milk Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

4 A serving is the edible portion of cooked lean meat, poultry, or fish, e.g., cooked lean meat without bone, breading, binders, fillers, or other ingredients. Commercial processed products require a CN label or PFS to credit. For more information, refer to the CSDE’s resources, Crediting Commercial Meat/Meat Alternates in the CACFP and Crediting Deli Meats in the CACFP; and visit the “Meat/Meat Alternates Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage. The USDA’s CACFP Best Practices recommends serving only lean meats, nuts, and legumes; limiting processed meats to one serving per week; and serving only low-fat or reduced-fat natural cheese.

5 Surimi seafood is a pasteurized, ready-to-eat, restructured seafood product usually made from pollock (fish). A CN label or manufacturer’s PFS is required to credit surimi differently.

6 APPs must meet the requirements in appendix A of the CACFP regulations (7 CFR 226). Tofu must contain at least 5 grams of protein in 2.2 ounces (weight) or ¼ cup (volume). For more information, refer to the CSDE’s resources, Requirements for Alternate Protein Products in the CACFP and Crediting Tofu and Tofu Products in the CACFP. A 1-ounce serving of tempeh credits as 1 ounce of the meat/meat alternates component if the product’s ingredients include only soybeans (or other legumes), water, tempeh culture, and for some varieties, vinegar, seasonings, and herbs. Tempeh products that contain other ingredients require a CN label or PFS to document crediting information.
Table 1-4. CACFP snack meal pattern for children, continued

Menu planning notes for snack, continued

7 Legumes (cooked dry beans and peas) credit as either the meat/meat alternates component or the vegetables component, but not both in the same snack. For more information, refer to the CSDE’s resource, *Crediting Legumes in the CACFP*.

8 Creditable nuts and seeds include almonds, Brazil nuts, cashews, filberts, macadamia nuts, peanuts, pecans, walnuts, pine nuts, pistachios, and soy nuts. **Note:** Children younger than 4 are at the highest risk of choking. The USDA recommends that any nuts or seeds served to young children are in a prepared food, and are ground or finely chopped. For more information, refer to the CSDE’s resource, *Crediting Nuts and Seeds in the CACFP*.

9 Yogurt and soy yogurt cannot contain more than 23 grams of total sugars per 6 ounces (no more than 3.83 grams per ounce). For more information, refer to the CSDE’s resource, *Crediting Yogurt in the CACFP*.

10 The vegetables component includes fresh vegetables, frozen vegetables, canned vegetables, rehydrated dried vegetables (PFS required), and pasteurized 100 percent full-strength vegetable juice. A serving of cooked vegetables must be drained. Vegetables credit based on volume (cups), except raw leafy greens such as lettuce and spinach credit as half the volume served, e.g., 1 cup of lettuce credits as ½ cup of the vegetables component. The USDA’s *CACFP Best Practices* recommends that CACFP menus include at least one serving per week of dark green vegetables, red and orange vegetables, beans and peas (legumes), starchy vegetables, and other vegetables. For more information, refer to the CSDE’s resource, *Vegetable Subgroups in the CACFP*, and visit the “Vegetables Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

11 Pasteurized full-strength juice credits as either the vegetables component or fruits component at only one meal or snack per day. Juice includes fruit and vegetable juice, frozen pops made from 100 percent juice, pureed fruits and vegetables in smoothies, and juice from canned fruit in 100 percent juice. For more information, refer to the CSDE’s resources, *Crediting Juice in the CACFP* and *Crediting Smoothies in the CACFP*. The USDA’s *CACFP Best Practices* recommends serving whole fruits (fresh, frozen, canned, and dried) more often than juice.

12 The fruits component includes fresh fruit, frozen fruit, canned fruit, dried fruit, and pasteurized 100 percent full-strength fruit juice. Serve canned fruit in juice, water, or light syrup. The creditable serving of canned fruit in 100 percent juice may include the juice but cannot include water or syrup. Fruits credit based on volume (cups), except dried fruits credit as twice the volume served, e.g., ¼ cup of raisins credits as ½ cup of the fruits component. For more information, visit the “Fruits Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
### Table 1-4. CACFP snack meal pattern for children, continued

**Menu planning notes for snack, continued**

13 To credit as the grains component, a whole grain, enriched grain, bran, or germ must be the first ingredient or the greatest ingredient by weight. For information on identifying creditable grains, refer to the CSDE’s resources, *How to Identify Creditable Grains in the CACFP, Crediting Whole Grains in the CACFP*, and *Crediting Enriched Grains in the CACFP*, and visit the “Grains Component” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

14 At least one serving per day must be WGR. The USDA’s *CACFP Best Practices* recommends at least two servings of WGR grains per day. WGR foods for the CACFP contain at least 50 percent whole grains and the remaining grain ingredients are enriched, bran, or germ. For more information, refer to the CSDE’s resource, *Meeting the Whole Grain-rich Requirement for the CACFP*, and visit the “Whole Grain-rich Requirement” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

15 Grain-based desserts cannot credit. Examples include cookies, piecrusts in sweet pies, doughnuts, cereal bars, granola bars, sweet rolls, pastries, toaster pastries, cake, and brownies. Sweet crackers such as graham crackers and animal crackers are not grain-based desserts. However, the CSDE recommends not serving sweet crackers more than twice per week between all meals and snacks. For more information, visit the USDA’s webpage, *Grain-based Desserts in the CACFP*.

16 Ounce equivalents apply effective October 1, 2021. Grains must meet the required weights (groups A-E) or volumes (groups H-I) in *Grain Ounce Equivalents for the CACFP*, or provide the minimum creditable grains per serving. For more information, refer to the CSDE’s resource, *Calculation Methods for Grains Ounce Equivalents for the CACFP*, and visit the “Serving Size for Grains” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

17 Breakfast cereals cannot contain more than 6 grams of sugars per dry ounce (no more than 21.2 grams of sucrose and other sugars per 100 grams of dry cereal). For more information, refer to the CSDE’s resource, *Crediting Breakfast Cereals in the CACFP*.

18 Examples of cereal grains include amaranth, barley, buckwheat, cornmeal, corn grits, kasha, millet, oats, quinoa, wheat berries, and rolled wheat.
Overview of CACFP Meal Pattern Requirements

This section summarizes the requirements for the CACFP meal patterns. For information on the required records for documenting meal pattern compliance, refer to section 2. For detailed guidance on the crediting requirements for each food component, refer to section 3.

Breakfast

- **Required components:** Breakfasts must include one serving of the milk component; one serving of vegetables, fruits, or both; and one serving of the grains component. The serving offered for each component must be at least the minimum quantity for each age group in the CACFP breakfast meal pattern (refer to table 1-2 in this section).

- **Breakfast cereals:** CACFP facilities must document whether cooked and RTE breakfast cereals are WGR, enriched, or fortified. This information may be listed on the CACFP menu, daily production record, or other menu documentation such as a list of all cereals served in CACFP meals and snacks. For more information, refer to “Required Documentation for Grains” in “Part B: WGR Requirement” of section 3.

- **Cereal with milk:** The menu must list the specific type of cereal as one component (e.g., “whole-grain granola”) and the specific type of fluid milk as another (e.g., “unflavored low-fat milk”). “Cereal with milk” does not indicate that the breakfast menu provides the required amount of cereal or the required amount and appropriate type of milk.

- **Juice and fruit:** CACFP facilities must document the specific types of juices and fruits served. For example, indicate “orange juice” instead of “juice,” and “banana or diced peaches” instead of “fresh fruit choice.” This information may be listed on the CACFP menu, daily production record, or other menu documentation such as a list of all types of juices and fruits served in CACFP meals and snacks.

- **Juice limit:** If the breakfast menu credits juice as the vegetables and fruits component, juice cannot credit as the fruits component or vegetables component at lunch, supper, or snack. For more information, refer to “Juice limit” in section 3.

- **Substituting meat/meat alternates for grains:** The meat/meat alternates component may substitute for the entire grains component at breakfast up to three times per week. A 1-ounce serving of the meat/meat alternates component substitutes for one serving of the grains component. For more information, refer to “Meat/Meat Alternates at Breakfast” in section 3.
• **Water availability:** Water must be available during the meal service but cannot be offered in place of the required food components. For more information, refer to “Water Availability” in section 4.

**Lunch and supper**

• **Required components:** Lunches and suppers must include one serving of the milk component, one serving of the meat/meat alternates component, one serving of the vegetables component, one serving of the fruits component (or vegetable substitutions), and one serving of the grains component. The serving offered for each component must be at least the minimum quantity in the CACFP lunch meal pattern (refer to table 1-3 in this section).

• **Substituting vegetables for fruits:** The vegetables component may substitute for the fruits component at any lunch or supper. Lunch and supper menus must include one serving of the vegetables component and one serving of the fruits component, or two different servings of the vegetables component. For more information, refer to “Substituting Vegetables for Fruits at Lunch and Supper” in section 3.

• **Vegetables and fruits:** CACFP facilities must document the specific types of vegetables and fruits served. For example, indicate “garden salad with lettuce, cucumbers, carrots, and tomatoes” instead of “salad,” and “fresh fruit salad (apples, oranges, bananas, and strawberries)” instead of “fruit salad.” This information may be listed on the CACFP menu, daily production record, or other menu documentation such as a list of all types of vegetables and fruits served in CACFP meals and snacks.

• **Water availability:** Water must be available during the meal service but cannot be offered in place of the required food components. For more information, refer to “Water Availability” in section 4.
Snack

- **Required components:** Snacks must include two of the five components. A snack that contains two foods from the same component is not reimbursable, e.g., orange juice (fruits component) and applesauce (fruits component). However, a snack that contains orange juice (fruits component) and carrot sticks (vegetables component) is reimbursable because it contains two different components. The serving offered for each component must be at least the minimum quantity in the CACFP meal pattern (refer to table 1-4 in this section).

- **Best practice for vegetables and fruits:** Snack menus should include a vegetable or fruit as often as possible. The USDA’s *CACFP Best Practices* recommends making at least one of the two required snack components a vegetable or a fruit.

- **Beverage limit:** If the snack menu includes a creditable beverage (milk or juice), the other snack component cannot be a beverage. The snack menu cannot include juice when milk is the only other snack component.

- **Offering milk with yogurt:** If the snack menu includes milk, the other snack component should not be yogurt. The CSDE recommends this practice to increase nutrient variety.

- **Offering more than two food items:** If the snack menu includes more than two different food items, at least two food items must meet the required food components and servings. An example is a snack that contains yogurt (meat/meat alternates component), strawberries (fruits component), and granola (grains component). The snack menu or other documentation must clearly indicate which items contribute to the CACFP meal pattern, and the offered serving size.

- **Offering a noncreditable food:** A snack menu that includes a noncreditable food must also contain the minimum required serving of at least two components. For example, a snack of strawberry gelatin (noncreditable food), whole-grain crackers (grains component), and unflavored low-fat milk (milk component) contains three food items, but only two components. To be reimbursable, this snack menu must provide the minimum serving of both milk and crackers.

- **Water availability:** Water must be available during the snack service but cannot be offered in place of the required food components. Water should be offered as a beverage when the snack menu does not include milk or juice. For more information, refer to “Water Availability” in section 4.

For additional guidance, visit the USDA’s Serving Snacks in the CACFP webpage.
Meal pattern documentation

CACFP facilities must maintain appropriate documentation to indicate that meals and snacks served to children meet the CACFP meal pattern and crediting requirements.

- **Menu**: All sites must have a written CACFP menu to document that meals and snacks provide the required components and quantities for each age group. For more information, refer to “Menus” in section 2.

- **Production records**: CACFP child care centers that operate under the National School Lunch Program (NSLP) must have a daily production record on file for all CACFP meals and snacks. The production record must include all meal components and menu items including all meal choices, food components, types of milk, leftovers, substitutions, and all other food items such as condiments and other noncreditable foods. For more information, refer to “Production Records” in section 2.

- **Commercial foods**: Child Nutrition (CN) labels or production formulation statement (PFS) forms must be on file to document the meal pattern contribution of all commercial foods served in CACFP menus, such as entrees, grains, and vegetables and fruits with added ingredients, e.g., coleslaw, potato salad, and carrot-raisin salad. CN labels are available only for main dish entrees that contribute to the meat/meat alternates component. However, they usually indicate the contribution of other meal components that are part of these products, such as grains, vegetables, and fruits. For more information, refer to “Child Nutrition (CN) Labels” and “Product Formulation Statements” in section 2.

- **Foods prepared from scratch**: CACFP facilities must maintain recipes on file to document the meal pattern contribution of all foods prepared from scratch. Vendors that prepare foods for CACFP facilities must also be able to document the CACFP meal pattern contribution of their recipes. Examples of foods prepared from recipes include entrees, grains (such as pancakes, muffins, and breads), and vegetables and fruits with added ingredients, e.g., coleslaw, potato salad, and carrot-raisin salad. For more information, refer to “Standardized Recipes” in section 2.

- **Alternate protein products (APPs)**: CACFP facilities must maintain documentation on file to indicate that APPs meet the requirements in appendix A of the CACFP regulations (7 CFR 226). For more information, refer to “Crediting Alternate Protein Products (APPs)” in section 3 and the CSDE’s resource, Requirements for Alternate Protein Products in the CACFP.
• **Breakfast cereals:** CACFP facilities must maintain documentation on file to indicate that all breakfast cereals meet the CACFP sugar limit (no more than 6 grams of sugars per dry ounce) and that compliance was determined using one of the USDA’s three allowable methods. For more information, refer to “Crediting Criteria for Breakfast Cereals” in section 3 and the CSDE’s resource, *Crediting Breakfast Cereals in the CACFP.*

• **Tofu and tofu products:** CACFP facilities must maintain documentation on file to indicate that tofu and tofu products contain at least 5 grams of protein in 2.2 ounces (weight) or ¼ cup (volume). For more information, refer to “Crediting Commercial Tofu and Tofu Products” in section 3 and the CSDE’s resource, *Crediting Tofu and Tofu Products in the CACFP.*

• **WGR foods:** CACFP facilities must maintain documentation on file to indicate that WGR foods were identified using one of the USDA’s six allowable methods for determining compliance with the WGR criteria. For more information, refer to “WGR requirement” in section 3 and the CSDE’s resource, *Meeting the Whole Grain-rich Requirement for the CACFP.*

• **Yogurt:** CACFP facilities must maintain documentation on file to indicate that all yogurt and soy yogurt products meet the CACFP sugar limit (no more than 3.83 grams of sugars per ounce). For more information, refer to “Crediting Yogurt and Soy Yogurt” in section 3 and the CSDE’s resource, *Crediting Yogurt in the CACFP.*
Meal Modifications for Children with Special Dietary Needs

CACFP facilities must comply with the federal nondiscrimination laws and requirements for meal modifications for children with special dietary needs. These requirements are summarized below. For detailed guidance, refer to the CSDE’s guide, *Accommodating Special Diets in CACFP Child Care Programs*, and visit the CSDE’s Special Diets in CACFP Child Care Programs webpage.

Children with a disability

The USDA requires reasonable meal modifications on a case-by-case basis for children whose disability restricts their diet, based on a medical statement signed by a recognized medical authority. “Case-by-case basis” means that the meal modifications are specific to the individual medical condition and dietary needs of each child.

The Connecticut State Department of Public Health defines a recognized medical authority as a state-licensed health care professional who is authorized to write medical prescriptions under state law. This includes licensed physicians (doctors of medicine or osteopathy), physician assistants, and advanced practice registered nurses (APRN). The CSDE’s medical statements and accompanying instructions and guidance are available in the “Medical Statements for CACFP Child Care Programs” section of the CSDE’s Special Diets in CACFP Child Care Programs webpage.

Children without a disability

The USDA allows, but does not require, meal modifications for children whose special dietary needs do not constitute a disability. Examples of optional modifications include requests related to religious or moral convictions, general health concerns, and personal food preferences, such as parents who prefer that their children eat a gluten-free diet or organic foods because they believe it is healthier. CACFP facilities may choose to make these accommodations on a case-by-case basis. Meal modifications for children without disabilities must comply with the CACFP meal patterns.
Choking Prevention for Young Children

Children younger than age 4 are at the highest risk of choking. CACFP facilities should consider children’s ages and developmental readiness when deciding what foods to offer in CACFP menus. This consideration is especially important when serving young children or children with a disability. Serve foods in the appropriate sizes, shapes, and textures to reduce choking risks. Avoid serving foods that are as wide around as a nickel, which is about the size of a young child’s throat. For additional guidance, visit the “Choking Prevention” section of the CSDE’s Food Safety for Child Nutrition Programs webpage.

Foods that are choking risks
While nearly any food can cause choking in children, foods that are the same size and shape as a child’s airway pose the greatest risk. For example, peanuts may block the lower airway. A chunk of hot dog or a whole grape may completely block the upper airway. Foods likely to cause choking come in many shapes, sizes, and textures. These include foods that are round, tube-shaped, small, hard, thick, sticky, smooth, slippery, or easily molded to stick to the airway.

Table 1-5. Common foods that may cause choking

<table>
<thead>
<tr>
<th>Firm, smooth, or slippery foods that slide down the throat before chewing, such as:</th>
<th>Small, dry, or hard foods that are difficult to chew and easy to swallow whole, such as:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Whole grapes, cherries, berries, melon balls, and cherry/grape tomatoes</td>
<td>• Cooked or raw whole-kernel corn</td>
</tr>
<tr>
<td>• Hot dogs and similarly shaped foods, including sausages, meat sticks, and cheese sticks (even when cut into round slices)</td>
<td>• Raw green peas</td>
</tr>
<tr>
<td>• Peanuts, seeds, and nuts</td>
<td>• Peanuts, nuts, and seeds, e.g., sunflower or pumpkin seeds</td>
</tr>
<tr>
<td>• Whole beans</td>
<td>• Plain wheat germ</td>
</tr>
<tr>
<td>• Hard or round candy, jelly beans</td>
<td>• Whole-grain kernels such as rice or wheat berries</td>
</tr>
</tbody>
</table>

1 Small, dry, or hard foods that are difficult to chew and easy to swallow whole, such as:

- Popcorn
- Hard pretzels and pretzel chips
- Potato chips, corn chips, and similar snack foods
- Small pieces of raw vegetables, e.g., raw carrot rounds, baby carrots, string beans, celery, and other raw or partially cooked hard vegetables
- Apples or other hard pieces of raw fruit, especially those with hard pits or seeds
- Cooked or raw whole-kernel corn
- Raw green peas
- Peanuts, nuts, and seeds, e.g., sunflower or pumpkin seeds
- Plain wheat germ
- Whole-grain kernels such as rice or wheat berries
- Crackers or breads with seeds, nut pieces, or whole-grain kernels
- Ice cubes
### Table 4. Common foods that may cause choking, continued

Sticky or tough foods that do not break apart easily and are hard to remove from the airway, such as:

- Chunks or spoonfuls of peanut butter or other nut and seed butters
- Large, hard pieces of uncooked dried fruits or vegetables
- Tough meat or large chunks of meat
- Large chunks of cheese, especially string cheese
- Fish with bones
- Marshmallows
- Chewing gum
- Chewy fruit snacks
- Caramels, gum drops, and gummy candies, or other gooey or sticky candy

1 These foods do not credit in the CACFP meal patterns.

---

**Safe preparation and serving techniques to reduce choking risks**

CACFP facilities can help reduce the risk of choking by avoiding high-risk foods; changing the shape, size, and texture of foods before offering them to children; and serving certain foods in small, manageable bites. CACFP facilities should use the techniques below to prepare foods that are easy for young children to chew and swallow.

- Cook foods until soft enough to pierce easily with a fork.
- Cut soft food into thin slices or small pieces no larger than ½ inch.
- Cut tube-shaped foods like hot dogs or string cheese into short strips instead of round pieces.
- Remove all bones from fish, chicken, and meat before cooking or serving.
- Grind up tough meats and poultry.
- Cook foods such as carrots and celery until slightly soft, then cut into short strips instead of round pieces.
- Mash or puree foods until soft.
- Remove seeds, pits, and tough skins/peels from fruits and vegetables.
- Cut round foods such as grapes, cherries, berries, and melon balls in half lengthwise, and then cut into smaller pieces no larger than ½ inch.
- Grate or thinly slice cheeses.
- Chop peanuts, nuts, and seeds finely, or grind before adding to prepared foods.
• Spread nut and seed butters thinly on other foods (such as toast and crackers) crackers. Use only creamy, not chunky, nut and seed butters.

• Avoid serving foods that are as wide around as a nickel, which is about the size of a young child’s throat.

• Serve shredded carrots and chopped tomatoes instead of baby carrots and cherry tomatoes.

**Menu Planning Resources**

The resources and websites below provide information and guidance on planning meals and snacks to meet the CACFP meal patterns for children. For detailed information on crediting foods in the CACFP meal patterns, visit the CSDE’s [Crediting Foods in CACFP Child Care Programs](https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-CACFP-Child-Care-Programs/Related-Resources#BiteSize) webpage. For a comprehensive list of resources with guidance on meeting the CACFP meal pattern and crediting requirements, refer to the CSDE’s resource, [Resources for the CACFP Meal Patterns](https://portal.ct.gov/SDE/Nutrition/Food-Safety-for-Child-Nutrition-Programs/Documents#ChokingPrevention).

Meal Pattern Flexibilities during COVID-19

Due to the current COVID-19 pandemic, the USDA is allowing CACFP sponsors to request specific changes to the meal patterns for school year (SY) 2021-22. USDA’s memo, COVID-19: Child Nutrition Response #91: Nationwide Waiver to Allow Specific Meal Pattern Flexibility in the Child and Adult Care Food Program for School Year 2021, allows CACFP sponsors to request a waiver if they cannot meet the following CACFP meal pattern requirements:

- at least one serving of grains per day, across all eating occasions, must be WGR;
- crediting of grains by ounce equivalents must be fully implemented by October 1, 2021; and
- flavored milk for ages 6 and older must be fat-free. **Note:** This waiver request does not apply to children ages 5 and younger in the CACFP.

Sponsors must apply to the CSDE to implement any meal pattern changes. If approved by the CSDE, this waiver approval remains in effect through June 30, 2022.

The USDA expects that CACFP sponsors will use these flexibilities only as needed. The CSDE and USDA strongly encourage and expect operators of the Child Nutrition Programs to maintain and meet the meal patterns to the greatest extent possible, as optimal nutrition is even more critical for children during the current COVID-19 public health crisis.

For more information, visit the “How To” section of the CSDE’s Operation of Child Nutrition Programs during Coronavirus (COVID-19) Outbreaks webpage.
2 — Menu Records

CACFP facilities must be able to document that CACFP meals and snacks provide the required food components and quantities. Without appropriate documentation, foods and beverages cannot credit toward reimbursable meals and snacks. The CSDE will disallow reimbursement for noncompliant meals and snacks in the CACFP.

CACFP facilities should ensure that all appropriate staff are aware of the documents needed to demonstrate the menu’s compliance with the CACFP meal patterns. Staff must also understand how to complete and maintain appropriate documentation.

Family day care home sponsors must provide training, early monitoring, and technical assistance to ensure that new providers are able to serve reimbursable meals and snacks. CACFP regulations do not allow grace periods for new day care homes that are not meeting the CACFP meal patterns in the early months of participation. While serving meals with missing components or insufficient portion sizes might not rise to the level of serious deficiency for new homes, family day care sponsors must always disallow ineligible meals.

Table 2-1 summarizes the required documentation for CACFP meal pattern compliance. CACFP facilities must maintain these records on file for the CSDE’s Administrative Review of the CACFP.

<table>
<thead>
<tr>
<th>Table 2-1. Documentation for CACFP meal pattern compliance</th>
</tr>

</tr>
<tr>
<td>Child Nutrition (CN) labels</td>
</tr>
<tr>
<td>Product formulation statement (PFS) forms</td>
</tr>
<tr>
<td>Nutrition information (Nutrition Facts labels and ingredients) ²</td>
</tr>
</tbody>
</table>

¹ Production records are not required in the CACFP unless a CACFP child care center follows the NSLP meal pattern. However, the CSDE encourages CACFP facilities to use production records because they provide appropriate documentation that meals and snacks comply with the CACFP meal patterns.

² Many commercial products require nutrition information to determine crediting information.

³ The CSDE strongly encourages the use of standardized recipes to ensure that menus provide the correct CACFP food components and servings.
CACFP Menus

CACFP facilities must develop menus that represent the actual food components served for each meal and snack claimed for CACFP reimbursement. The menu must identify the date of the meal service and all food items served, including the type of milk and which grain products are WGR. Cycle menus or menus developed in advance of the meal service must specify the month and day, and indicate any menu substitutions that occur. For more information, refer to “Using cycle menus” in this section.

Each CACFP facility must have a written “menu of record” on file to document the specific meal pattern components served to all enrolled children each day. The CACFP facility must maintain all menus on file with other required CACFP records in accordance with the CACFP regulations (7 CFR 226.10(d)).

Menu forms

The menu form is an important tool to help CACFP facilities comply with the CACFP meal patterns for children. Using an appropriate menu form helps to ensure that meals and snacks include the required food components and servings. When reviewing CACFP menus for meal pattern compliance, CSDE staff cannot determine if meal components are offered unless they are indicated on the menu.

The CSDE strongly discourages CACFP facilities from using a blank calendar as a menu form because the menu planner might omit food components or provide insufficient servings. This could result in noncompliant menus. Meals with missing food components or insufficient servings are not reimbursable in the CACFP.

The CSDE has a variety of sample CACFP weekly menu forms to help menu planners include the required food components and servings. These menu forms are available under “Menu Forms for CACFP Child Care Programs” in the “Documents/Forms” section of the CSDE’s Meal Patterns for CACFP Child Care Programs webpage. CACFP facilities may adapt these forms to meet individual program needs. Different menu formats should contain appropriate guidance regarding the required food components and servings for each meal and snack served to each age group.
Using cycle menus
The CSDE strongly encourages CACFP facilities to use cycle menus for CACFP meals and snacks. A cycle menu is series of menus planned for a specific period (such as four weeks) with a different menu for each day. Cycle menus can help CACFP facilities comply with the meal pattern requirements, increase variety, control food cost, control inventory, and save time.

The CSDE recommends that cycle menus include at least four weeks. This increases the variety of meals and snacks offered, and ensures that children are not served the same combination of foods too often.

The ICN’s Cycle Menus for Child Care: Preschoolers features four seasonal four-week cycle menus for preschoolers. For more information on cycle menus, refer to the Institute of Child Nutrition’s (ICN) online learning course, CARE Connection – Planning Cycle Menus in Child Care, and the CSDE’s Resource List for Menu Planning and Food Production in Child Nutrition Programs.

Sample CACFP menus
The CSDE has sample cold and hot breakfast menus, cold and hot lunch menus, and snack menus that provide meal and snack ideas for children in child care programs. These sample menus are available in the “Sample Menus for CACFP Child Care Programs” section of the CSDE’s Meal Patterns for CACFP Child Care Programs webpage. The servings in these menus are for ages 3-5 and can be adjusted for other ages. Each menu contains at least the minimum required food components and servings. Some menus include additional components or exceed the minimum serving requirements.

The type of foods purchased, and the recipes and preparation techniques used by the CACFP facility, determine whether local menus meet the CACFP meal patterns for children. CACFP facilities should use the FBG to determine the amount of purchased food that meets the required serving for each meal pattern component. For more information, refer to “Food Buying Guide for Child Nutrition Programs” in this section.

The CSDE encourages CACFP facilities to evaluate their menus for compliance with the Connecticut Child Care Nutrition Standards (CCNCS). For more information, refer to the CSDE’s Action Guide for Child Care Nutrition and Physical Activity Policies. For resources on menu planning, refer to “Menu Planning Resources” in this section and the CSDE’s Resource List for Menu Planning and Food Production in Child Nutrition Programs. Additional resources are available in the “Menu Planning for CACFP Child Care Programs” section of the CSDE’s Meal Patterns for CACFP Child Care Programs webpage.
Production Records

The USDA regulations require that CACFP facilities must document compliance with the CACFP meal patterns for children, and maintain records of food purchases. Production records are not required, except for CACFP child care centers that follow the NSLP meal pattern. However, the CSDE encourages all CACFP facilities to use production records because they provide appropriate documentation that meals and snacks meet the CACFP meal patterns.

Production records are working tools that outline the type and quantity of foods that need to be purchased and available for the meal service. They document that CACFP sites serve reimbursable meals and snacks. Production records also provide valuable information to help CACFP facilities with menu planning, forecasting products and amounts, purchasing foods, controlling waste, and identifying acceptable menu items. Table 2-2 summarizes what production records should include and when CACFP staff should complete the information.

CACFP facilities that do not use production records should develop an alternate system to document the amount of purchased foods and the serving sizes provided for each meal and snack. Menu planners should use the FBG to determine how many servings a specific quantity of food will provide. In addition, all CACFP facilities must maintain the required CACFP crediting documentation for commercial products and foods made from scratch. This includes the planned menu, standardized recipes, CN labels, PFS forms, and documentation to reflect any substitutions to the planned menu.
### Table 2-2. Information to include on production records

<table>
<thead>
<tr>
<th>Complete before meal service</th>
<th>Complete after meal service</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Name of site</td>

</tr>
<tr>
<td>noncreditable foods (e.g., condiments)</td>
<td>• Number of nonreimbursable meals served, e.g., meals for CACFP staff and incomplete meals</td>
</tr>
<tr>
<td>• Recipe name and number, or product name and code</td>
<td>served to children</td>
</tr>
<tr>
<td>• Planned serving size and number of servings for reimbursable</td>
<td></td>
</tr>
<tr>
<td>meals for each age group, and, if applicable, nonreimbursable</td>
<td></td>
</tr>
<tr>
<td>meals, e.g., meals for CACFP staff and incomplete meals served</td>
<td></td>
</tr>
<tr>
<td>to children</td>
<td></td>
</tr>
</tbody>
</table>

1 Food service staff should record temperatures throughout the meal service to ensure that hot foods are held at 140 °F or above and cold foods at held at 41 °F or below. For additional guidance, visit the CSDE’s Food Safety for Child Nutrition Programs webpage.
Sample production records

The CSDE’s sample production records listed below help CACFP facilities document compliance with the CACFP meal patterns for children.

- CACFP Child Care Menu Production Record for AM and PM Snack
- CACFP Child Care Menu Production Record for AM, PM, and Evening Snack for Emergency Shelters
- CACFP Child Care Menu Production Record for AM Snack, Lunch, and PM Snack
- CACFP Child Care Menu Production Record for Any Meal
- CACFP Child Care Menu Production Record for At-Risk Snack and Supper
- CACFP Child Care Menu Production Record for Breakfast and PM Snack
- CACFP Child Care Menu Production Record for Breakfast, AM Snack, and PM Snack
- CACFP Child Care Menu Production Record for Breakfast, Lunch, and Supper for Emergency Shelters
- CACFP Child Care Menu Production Record for Breakfast, Lunch, and Snack

These forms are available in the “Production Records for CACFP Child Care Programs” section of the CSDE’s Meal Patterns for CACFP Child Care Programs webpage. CACFP facilities may adapt these forms to meet individual program needs.

Guidance for completing production records

Production records must be completed correctly to provide accurate documentation of reimbursable meals. When using production records, CACFP facilities should ensure that staff:

- complete all information and check for missing or incomplete information;
- record the information legibly, i.e., handwriting can be read;
- use the proper weight or volume measure for the serving of each food item, e.g., cups for fruits and vegetables (refer to “Volume versus Weight” below);
- enter the number of servings, pounds, cans, or pieces (not the number of portions prepared) in the column for the total quantity of food used;
- list the type of milk served;
- list all condiments;
- list portion sizes accurately and check that they are the same as what is actually served to children;
- list all items prepared for the meal, including alternate meal choices, if available;
- record the “planned” servings;
- list nonreimbursable meals and snacks separately from reimbursable meals and snacks;
- list any unplanned amounts of food added during the meal service;
• indicate if any substitutions are made or leftovers are used; and
• use a production record for each site.

CACFP facilities should maintain production records on file with other CACFP documentation. The CSDE will review menu documentation (including production records, if available) during the Administrative Review of the CACFP.

Volume versus weight

The amounts listed in menu documentation records must reflect the servings required by the CACFP meal patterns. The CACFP meal patterns indicate the servings of the food components by weight (ounces) or volume (fluid ounces). For example, the servings for the vegetables component and fruits component are indicated by volume (cups). The servings of most foods in the meat/meat alternates component are indicated by weight (ounces), but volume is required for some foods such as peanut butter (tablespoons), cottage cheese (cups), and legumes (cups).

Volume and weight measurements are not the same. Volume is the amount of space an ingredient occupies in a measuring container. Volume measures include teaspoon, tablespoon, fluid ounce, cup, pint, quart, and gallon.

A common issue with menu documentation records is listing incorrect serving sizes, e.g., listing the serving for a fruit or vegetable as “4 ounces” instead of “½ cup.” This does not indicate that the serving meets the meal pattern requirements because these two measurements are not the same.

The weight of a specific volume of food varies depending on the density of the food. For example, ½ cup of lettuce weighs less than ½ cup of cooked butternut squash; and 1 cup of whole-grain flaked cereal weighs less than 1 cup of baked beans. For many foods, a specific measure of volume does not equal the same measure of weight. There are some exceptions, such as yogurt (a ½-cup serving of yogurt equals 4 ounces by weight) and certain types of canned fruits and vegetables (refer to the FBG).

Menu planners should use the FBG to determine the amount of a food that meets the required meal pattern serving, and must ensure that menu documentation records reflect this amount. For example, the servings of vegetables, fruits, peanut butter, and legumes must be listed by volume, not weight. For more information, refer to “Food Buying Guide for Child Nutrition Programs” in this section.
For information on weights and measures, refer to the Institute of Child Nutrition’s (ICN) handout, *Basics at a Glance*, and visit the “Weights and Measures” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

**Resources for production records**

The websites and resources below provide guidance on developing and using production records.

- Basics at a Glance (ICN): [https://theicn.org/icn-resources-a-z/basics-at-a-glance/](https://theicn.org/icn-resources-a-z/basics-at-a-glance/)

- Production Records for CACFP Child Care Programs (CSDE webpage): [https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-CACFP-Child-Care-Programs/Documents#ProductionRecords](https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-CACFP-Child-Care-Programs/Documents#ProductionRecords)

- Using Production Records in the CACFP (CSDE): [https://portal.ct.gov/-/media/SDE/Nutrition/CACFP/Forms/ProdRecord/ProductionRecordsCACFP.pdf](https://portal.ct.gov/-/media/SDE/Nutrition/CACFP/Forms/ProdRecord/ProductionRecordsCACFP.pdf)

The CSDE’s resource, *Using Production Records in the CACFP*, summarizes the guidance for using production records in the CACFP.
Standardized Recipes

When a CACFP facility prepares food on site, a recipe must be available to document the amount of each meal component per serving. For example, if a menu for ages 3-5 at lunch offers macaroni and cheese as the meat/meat alternates component and grains component, the CACFP facility must have a recipe on file to indicate that each serving contains 1½ ounces of cheese and ¼ cup of whole-grain or enriched pasta.

Foods made from scratch include:

- foods that are prepared from scratch using a recipe, such as cornbread, coleslaw, potato salad, soup, lasagna, chicken stir-fry, and casseroles; and
- foods that require some additional processing by adding other ingredients after purchasing. Examples include making rice or pasta with butter, sautéing vegetables in oil, adding dressing to salad, assembling a sandwich, adding eggs and oil to a muffin mix, and reconstituting canned soup with milk.

The CSDE strongly encourages the use of standardized recipes to ensure that menus provide the correct CACFP food components and portions. The USDA defines a standardized recipe as one that has been tried, adapted, and retried several times for use by a given foodservice operation and has been found to produce the same good results and yield every time when the exact procedures are used with the same type of equipment and the same quantity and quality of ingredients.

Standardized recipes are not required for commercial foods when the CACFP facility does not add any ingredients after purchasing. Examples include fruits and vegetables (fresh, canned, and frozen); breads, rolls, and baked products; and other commercially prepared products such as entrees, soups, and side dishes.

Benefits of standardized recipes

In addition to documenting the meal pattern contribution, standardized recipes provide many other benefits. Standardized recipes ensure:

- consistent food quality;
- predictable yield;
- consistent nutrient content;
- customer satisfaction;
- food cost control;
- efficient purchasing procedures;
- inventory control;
Menu Records

- labor cost control;
- increased employee confidence;
- reduced recordkeeping; and
- successful completion of the CSDE’s Administrative Review of the CACFP.

Information to include on standardized recipes
CACFP facilities may standardize their own local recipes or use existing standardized recipes such as the USDA’s recipes. Standardized recipes should include the following:

- recipe name that describes the recipe;
- recipe number that is unique to each recipe;
- recipe category classification, e.g., main dish, grains, and vegetables;
- recipe yield (weight and/or volume and number of servings), i.e., the amount produced when production is complete;
- ingredients used;
- ingredient amounts per yield, i.e., the quantity (weight or volume) of all ingredients for each yield, such as 50 servings or 100 servings;
- preparation equipment and utensil, such as pans, steamers and mixers;
- food safety Critical Control Points (CCPs), i.e., time and temperature critical limits for each step of preparing, holding, serving, and storing (refer to the CSDE’s Food Safety for Child Nutrition Programs webpage);
- cooking time and temperature, as required (refer to the CSDE’s Food Safety for Child Nutrition Programs webpage);
- serving size (the weight and/or volume of the single portion size);
- serving utensils such as scoops, ladles, and spoodles; and
- meal pattern component contributions per serving, e.g., fruits component, vegetables component, grains component, and meats/meat alternates component.

The CSDE’s Standardized Recipe Form for the CACFP provides a template for creating standardized recipes. For more information, refer to “Determining Food Yields and Crediting” in this section and the resources below.

Vendor-prepared foods
Vendors that prepare foods for CACFP facilities must have a standardized recipe that documents the meal pattern contribution per serving. CACFP facilities are responsible for reviewing the crediting information to ensure that it is accurate.
Resources for standardized recipes
The websites and resources below assist CACFP facilities with developing and using standardized recipes.

- Child Nutrition Recipe Box (ICN): https://theicn.org/cnrb/
- Child Nutrition Sharing Site (ICN and USDA): https://theicn.org/cnss/resources/
- Recipe Analysis Workbook (RAW) of the FBG (USDA): https://foodbuyingguide.fns.usda.gov/
Note: CACFP facilities must ensure that local menus comply with the CACFP meal patterns. When using non-USDA recipes and menus, menu planners should check these resources for compliance with the CACFP meal patterns and adapt as needed.

Crediting Documentation for Commercial Products

CACFP facilities must be able to document the meal pattern contribution of commercial processed foods served in CACFP meals and snacks. For example, to credit a breaded chicken patty product as the meat/meat alternates component and grains component for ages 3-5 at lunch, the manufacturer’s documentation must indicate that one serving of the product contains 1½ ounces of cooked chicken and ½ serving of WGR or enriched breading.

The only acceptable types of documentation for commercial processed foods are:

- the original CN label from the product carton or a photocopy or photograph of the CN label shown attached to the original product carton; or
- a PFS signed by an official of the manufacturer stating the amount of each meal pattern component contained in one serving of the product.

The CSDE will review product documentation during the Administrative Review of the CACFP.

Commercial processed products without a CN label or PFS cannot credit in CACFP meals and snacks.
Table 2-3 compares the criteria for CN labels and PFS forms. Only CN labels provide a guarantee of the product’s contribution to the USDA’s meal patterns for the Child Nutrition Programs. CACFP facilities must check the crediting information on the PFS form for accuracy prior to using the product in reimbursable meals and snacks.

</tr>
</tbody>
</table>

For additional guidance on accepting product documentation, refer to the CSDE’s resource, *Accepting Processed Product Documentation in the CACFP*, and visit the “Credit Commercial Processed Products in CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
Child Nutrition (CN) Labels

The USDA’s CN Labeling Program is a voluntary federal labeling program for the Child Nutrition Programs. A CN label statement clearly identifies the contribution of a commercial product toward the meal pattern requirements, based on the USDA’s evaluation of the product’s formulation. CN labeling provides a warranty that the product contributes to the meal pattern requirements, as printed on the label.

CN labels are available only for main dish entrees that contribute to the meat/meat alternates component of the USDA’s meal patterns for the Child Nutrition Programs, such as beef patties, cheese or meat pizzas, meat or cheese and bean burritos, egg rolls, and breaded fish portions. However, CN labels will usually indicate the contribution of other meal components that are part of these products. For example, CN-labeled pizza may list contributions to the meat/meat alternates, grains, and vegetables components; and CN-labeled breaded chicken nuggets may list contributions to the meat/meat alternates and grains components.

Table 2-4. Sample CN label

<table>
<thead>
<tr>
<th>CN Label</th>
<th>Chicken Stir-Fry Bowl</th>

</tbody>
</table>

The CN Logo is the box with "CN" on each side, surrounding the meal pattern contribution statement. It is one of the four integral parts of a label (product name, ingredient statement, CN Logo, and inspection legend). All four parts must be on the product carton for the CN label to be valid.
Resources for CN labels

The resources below provide additional information on CN labels.

- Bite Size: Meeting the CACFP Meal Patterns for Children – Module 2: Documentation (CSDE training webinar):
  https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-CACFP-Child-Care-Programs/Related-Resources#BiteSize

- Child Nutrition (CN) Labeling Program (CSDE):

- CN Labeling Program (USDA website):
  https://www.fns.usda.gov/cn/labeling-program

- USDA Memo SP 11-2015 (v2), CACFP 10-2015 and SFSP 13-2015: CN Labels Copied with a Watermark Acceptable Documentation:
  https://www.fns.usda.gov/cn-labels-copied-watermark-acceptable-documentation

The USDA’s Authorized Labels and Manufacturers webpage lists approved CN-labeled products and manufacturers.
Product Formulation Statements

A PFS is a document developed by manufacturers that provides specific information about how a product credits toward the USDA’s meal patterns for Child Nutrition Programs. It generally includes a detailed explanation of what the product contains and indicates the amount of each ingredient in the product by weight. The information on a PFS can vary among manufacturers. The USDA does not monitor PFS forms for compliance with the product’s actual formulation or stated contribution to the meal pattern requirements.

To document meal pattern crediting information, the PFS must:

- list the product name, product code, serving size, and creditable ingredients;
- indicate how the product credits toward the USDA’s meal pattern requirements;
- document how the manufacturer obtained the crediting information by citing specific Child Nutrition Program resources or regulations such as the FBG and USDA’s policy on crediting foods (such as the USDA’s policy memos for the CACFP and Food and Nutrition Service (FNS) instructions for Child Nutrition Programs); and
- be prepared on company letterhead with the signature of a company official and the date of issue. The signature can be handwritten, stamped, or electronic.

All creditable ingredients in the PFS must match a description in the FBG. The USDA’s CN Labeling website provides sample PFS templates for the meat/meat alternates, vegetables, fruits, and grains components. If the PFS does not meet these requirements, the CACFP facility cannot accept it, and the product cannot credit in CACFP meals and snacks.

Unlike a CN label, a PFS does not provide any warranty against audit claims for reimbursable meals and snacks. CACFP facilities must check the crediting information on the PFS for accuracy prior to including the product in reimbursable meals and snacks; and if needed, request supporting documentation from the manufacturer. This documentation must be maintained on file for the CSDE’s Administrative Review of the CACFP.
USDA’s PFS forms for the CACFP

The USDA’s Food Manufacturers/Industry website provides sample PFS templates for the meat/meat alternates, vegetables, fruits, and grains components. The PFS forms that apply to the CACFP are listed below.

- **Grains**: Product Formulation Statement for Documenting Grains in Child Nutrition Programs (USDA):

- **Grains (completed sample)**: Product Formulation Statement for Documenting Grains in Child Nutrition Programs (USDA):

- **Meat/Meat Alternates**: Product Formulation Statement (Product Analysis) for Meat/Meat Alternate (M/MA) Products in Child Nutrition Programs (USDA):

- **Vegetables and Fruits**: Product Formulation Statement for Documenting Vegetables and Fruits in the Child and Adult Care Food Program, Summer Food Service Program, and NSLP Afterschool Snacks (USDA):

Resources for PFS forms

The resources below provide information on the requirements for PFS forms.

- **Bite Size**: Meeting the CACFP Meal Patterns for Children – Module 2: Documentation (CSDE training webinars):
  https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-CACFP-Child-Care-Programs/Related-Resources#BiteSize

- **Reviewer’s Checklist for Evaluating Manufacturer Product Formulation Statements (Product Analysis) for Meat/Meat Alternate (M/MA) Products**:

- **Using Product Formulation Statements in the CACFP (CSDE)**:

- **Tips for Evaluating a Manufacturer’s Product Formulation Statement (USDA)**:
Additional documentation resources are available in the “Crediting Commercial Processed Products in CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

**Nutrition Information**

In addition to CN labels and PFS forms, nutrition information helps menu planners to determine if certain commercial products credit toward the CACFP meal patterns. Nutrition information is also required to meet the USDA requirements to provide reasonable meal modifications for participants whose children restricts their diet.

**Determining crediting information**

For many commercial products, menu planners must review the Nutrition Facts label and ingredients to determine crediting information. The examples below show when nutrition information is required to credit commercial products toward the CACFP meal patterns.

- **Crediting breakfast cereals and yogurt:** The CACFP meal patterns require a sugar limit for breakfast cereals and yogurt. Menu planners must review the Nutrition Facts label for these foods to determine whether the amount of sugars per serving complies with the CACFP sugar limit. For more information, refer to “Sugar limit for yogurt” and “Sugar limit for breakfast cereals” in section 3.

- **Crediting deli meats and hotdogs:** Deli meats, hotdogs, and similar foods that contain binders and extenders (but are not CN labeled) require a PFS to determine crediting information. The ingredients statement indicates if a product contains added liquids, binders, and extenders. This alerts the menu planner that a PFS is required to determine the correct crediting information for the product. For more information, refer to “Liquids, binders, and extenders” in section 3.

- **Crediting tempeh:** To credit as 1 ounce equivalent of the meat/meat alternates component, tempeh ingredients must be limited to soybeans (or other legumes), water, tempeh culture, and for some varieties, vinegar, seasonings, and herbs. If a tempeh product contains other ingredients, CACFP facilities must obtain a CN label or PFS to document crediting. Menu planners must read the ingredients statement to determine if tempeh products contain additional ingredients. For more information, refer to “Crediting Tempeh” in section 3.
• **Crediting commercial tofu products**: To credit as 1 ounce equivalent of the meat/meat alternates component, commercial tofu products and tofu and other soy products must contain at least 5 grams of protein in 2.2 ounces (weight) or ¼ cup (volume). Menu planners must review the Nutrition Facts label to determine the amount of protein per serving. For more information, refer to “Crediting Tofu and Tofu Products” in section 3.

• **Crediting commercial grain products**: To credit as 1 ounce equivalent of the grains component, a commercial grain product must meet the specific weight for the appropriate grain group in the USDA Exhibit A chart (refer to the CSDE’s resource, *Grain Ounce Equivalents for the CACFP*). Menu planners must review the Nutrition Facts label to determine the manufacturer’s serving weight, which is required to determine the ounce equivalents contribution of the serving. For more information, refer to “Part C: Grain Ounce Equivalents” in section 3.

• **Crediting commercial WGR grain products**: To credit as a WGR food, commercial grain products must contain a whole grain as the first ingredient or the greatest ingredient by weight. Menu planners must read the ingredients statement to determine if a whole grain is the first ingredient. For more information, refer to “Part B: Whole Grain-rich Criteria” in section 3.

• **Crediting commercial smoothies**: Commercial smoothies that contain dietary supplements (such as whey protein powder) or herbal supplements (such as gingko biloba, ginseng, and echinacea) do not credit in the CACFP meal patterns. Menu planners must read the ingredients statement to determine if commercial smoothies contain these ingredients. For more information, refer to “Commercial smoothies” in section 3.

These examples are not all-inclusive.

**Making meal modifications**
CACFP facilities will need to review nutrition when planning meal modifications for children with special dietary concerns, such as food allergies, lactose intolerance, and celiac disease. In addition, the USDA considers providing nutrition information for foods served in CACFP meals and snacks to be part of reasonable accommodations for special diets. The CACFP facility is responsible for making nutrition information for CACFP meals and snacks available to children (when age appropriate), parents or guardians, medical professionals, and appropriate staff, as needed. For information on the requirements for meal modifications, refer to the CSDE’s guide, *Accommodating Special Diets in CACFP Child Care Programs*, and visit the CSDE’s Special Diets in CACFP Child Care Programs webpage.
Determining Food Yields and Crediting

Yield refers to the amount (weight, volume, or number of servings) of a product at the completion of the preparation process. For example, 10 pounds of raw ground beef might yield 8 pounds after cooking; 5 pounds of fresh carrots might yield 3½ pounds after peeling and trimming; a vegetable soup recipe might yield 2 gallons after cooking, and a muffin recipe might yield 24 servings after baking. Yield affects how a product or recipe credits toward the CACFP meal patterns.

The yield of a product or recipe depends on the type of food and the preparation process. Processed fruits and vegetables yield less than the purchased amount due to peeling and trimming. Raw meats yield less than the purchased amount because moisture and fat are lost in the cooking process. Rice and pasta yield more than the purchased (dry) amount because water is absorbed during the cooking process.

The USDA’s FBG is the definitive resource for determining yields and crediting information for the Child Nutrition Programs. CACFP facilities should ensure that menu planners use this resource to plan CACFP meals and snacks.

Food Buying Guide for Child Nutrition Programs

The USDA’s Food Buying Guide for Child Nutrition Programs (FBG) provides yield information for common types and customary sizes of milk, meat/meat alternates, vegetables, fruits, and grains, including commercially available foods and USDA Foods. The FBG helps menu planners determine:

- a food’s specific contribution toward the meal pattern requirements;
- how many servings a specific quantity of food will provide;
- what quantity of raw product will provide the amount of ready-to-cook food in a recipe; and
- how much food to buy.

The FBG helps menu planners determine how recipes and purchased foods contribute to the CACFP meal patterns. For example, menu planners can use the FBG to determine how much raw broccoli provides 50 servings of ½ cup of cooked vegetable or how much uncooked brown rice provides 100 servings of ½ cup of cooked rice. This information is essential for documenting compliance with the CACFP meal patterns.
In addition to the printable version, the FBG also includes several online tools for menu planners. These include the Exhibit A Grains Tool, the FBG Interactive Web-based Tool, and the Recipe Analysis Workbook. The resources below provide guidance on using the FBG.

**Determining in-house product yields**

The yield information provided in the FBG represents average yields based on research conducted by the USDA. Many factors affect yield, including:

- the quality and condition of the food purchased;
- storage conditions and handling;
- the equipment used in preparation;
- cooking method and time;
- the form in which the food is served, e.g., whether potatoes are mashed, fried, or baked; and
- the serving utensils and portion control methods used.

If a food service operation consistently obtains a higher or lower yield for a product than the yield listed in the FBG, the CACFP facility should conduct an in-house yield study to determine the actual number of portions of a specified size that the product provides. In-house yields are also required for products not listed in the FBG. The CSDE allows CACFP facilities to use in-house that are properly documented and follow the CSDE’s yield study procedures.

**Yield study procedures**

CACFP facilities can use the procedures below to determine and document in-house yields for food products.

1. Select a day when the product is served on the menu. Use at least four separate samples of the product to determine yields. A “sample” is the product pack unit, such as number 10 cans or 5-pound bags. If the food service operation uses more samples, the yield data will be more accurate.
2. For the best yield estimate, at least two people should independently portion and count the samples. Each person completes half of the samples. For example, with a sample of four cans, each person works alone to measure and count the servings from two cans.

3. Select the appropriate measuring utensil for the portion size being served, such as a number 16 scoop/disher or ½-cup measuring spoon. For information on measuring utensils, refer to the ICN’s Basics at a Glance Portion Control Poster and visit the “Weights and Measures” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

4. Fill the measuring utensil level to the top of the measure.

5. Carefully count and document the number of portions in each sample.

6. Add the total number of servings from each of the samples.

7. Divide the total number of servings by the number of samples to get the average number of servings per sample.

8. Complete the CSDE’s Yield Study Data Form for Child Nutrition Programs and maintain on file for review by the CSDE staff during the Administrative Review of the CACFP.

For additional assistance with yield studies, contact the CSDE’s CACFP staff.
3 — Meal Components

Each food component of the USDA’s CACFP meal patterns has specific criteria for determining how foods credit toward reimbursable meals and snacks. All foods (commercial products, foods made from scratch, and foods prepared by vendors) must meet these requirements to credit as a component of reimbursable meals and snacks.

The menu planning guidance in this section assists CACFP facilities with meeting the crediting requirements for the five food components of the CACFP meal patterns. These components include milk, meat/meat alternates, vegetables, fruits, and grains. For additional guidance on crediting foods, visit the “Documents/Forms” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

Creditable Foods

Creditable foods are foods and beverages that count toward the meal patterns for reimbursable meals and snacks in the USDA Child Nutrition Programs. The USDA considers the following factors when determining whether a food credits:

- nutrient content;
- function in a meal;
- regulations concerning the USDA Child Nutrition Programs (quantity requirements and definition);
- the Food and Drug Administration’s (FDA) standards of identity;
- the USDA’s standards for meat and meat products; and
- administrative policy decisions on the crediting of particular foods.
Meal Components

Minimum creditable amounts

Each component requires a minimum amount to credit toward the CACFP meal patterns. A food item must include at least the minimum creditable amount. Food items that contain less than the minimum amount do not credit.

- **Milk component**: The minimum creditable amount is the full serving of fluid milk. For smoothies only, the minimum creditable amount is ¼ cup. If the amount of milk in a smoothie is less than the full serving, the meal or snack must include the additional amount of milk required to provide the full serving for each age group.

- **Meat/meat alternates component**: The minimum creditable amount is ¼ ounce. At lunch and supper, the meat/meat alternates component must be served in a main dish, or in a main dish and one other food item. For more information, refer to “Main Dish Requirement for Lunch and Supper” in the “Meat/Meat Alternates Component” section.

- **Vegetables component**: The minimum creditable amount is ⅛ cup. Smaller amounts of vegetables used for flavorings or garnishes do not credit. The CACFP menu may include more than one food item to meet the full serving of the vegetable component for each age group, as long as each food item contains at least ⅛ cup of vegetable.

- **Fruits component**: The minimum creditable amount is ⅛ cup. Smaller amounts of fruits used for flavorings or garnishes do not credit. The CACFP menu may include more than one food item to meet the full serving of the fruits component for each age group, as long as each food item contains at least ⅛ cup of fruit.

- **Grains component**: The minimum creditable amount is ¼ ounce equivalent effective. The CACFP menu may include more than one food item to meet the full serving of the grains component for each age group, as long as each food item contains at least ¼ ounce equivalent.

If a food item provides at least the minimum creditable amount of a component, but less than the full-required serving, the CACFP menu must include additional foods from that component to provide the full serving for each age group. For example, the lunch meal pattern for ages 3-5 requires ¼ cup of the vegetables component. If a food item provides ⅛ cup of vegetables, the lunch menu must include another food item with ⅛ cup of vegetables to provide the full vegetables component for ages 3-5.
**Requirement for visible components**

The USDA requires that foods must be visible (recognizable) to credit toward the CACFP meal patterns. For example, CACFP facilities cannot credit peanut butter in smoothies; pureed tofu in soups; applesauce in muffins; and pureed fruits and vegetables in entrees and other foods.

The intent for this requirement is to ensure that children can easily identify the foods in CACFP menus. The nutrition education aspect of the Child Nutrition Programs includes the goal of helping children recognize the food groups that contribute to healthy meals and snacks.

The USDA allows some exceptions to this requirement, including yogurt blended in fruit or vegetable smoothies, pureed fruits and vegetables in smoothies, and pasta made with 100 percent vegetable flours. In addition, CACFP facilities may credit foods with pureed vegetables that also contain at least ⅛ cup of visible creditable vegetables. For example, a serving of macaroni and cheese that contains ⅛ cup of diced butternut squash (visible) and ⅛ cup of pureed carrots (not visible) credits as ¼ cup of vegetables.

For more information, refer to “Yogurt in smoothies” and “Crediting Legume Flour Pasta Products as Meat/Meat Alternates” in the “Meat/Meat Alternates Component” section; “Crediting Fruit and Vegetable Smoothies” and “Crediting Pureed Fruits” in the “Fruits Component” section; and “Crediting Pureed Vegetables” and “Crediting Pasta Products Made of Vegetable Flour” in the “Vegetables Component” section.

**Resources for creditable foods**

The websites and resources below address the requirements for crediting foods in the USDA’s CACFP meal patterns. For a list of resources with guidance on meeting the CACFP meal pattern and crediting requirements, refer to the CSDE’s Resources for the CACFP Meal Patterns.

- Crediting Foods in CACFP Child Care Programs (CSDE):

  https://portal.ct.gov/SDE/Nutrition/FNS-Instructions-for-Child-Nutrition-Programs

For additional guidance on the USDA’s requirements for the CACFP, visit the CSDE’s Laws and Regulations for Child Nutrition Programs webpage.
Noncreditable Foods

Noncreditable foods are foods and beverages that cannot credit toward the meal patterns for the USDA Child Nutrition Programs. Noncreditable foods include foods and beverages that do not belong to the five meal pattern components. Examples include potato chips, pudding, ice cream, gelatin, cream cheese, bacon, condiments (e.g., syrup, jam, ketchup, mustard, mayonnaise, and butter), and water. They also foods and beverages in amounts too small to credit, such as 1 tablespoon of applesauce or ⅛ ounce of cheese (refer to “Minimum creditable amounts” in this section).

Examples of noncreditable foods for each meal pattern component are listed in Section 3. For more examples, refer to the CSDE’s resource, Noncreditable Foods in CACFP Child Care Programs.

CACFP facilities may serve noncreditable foods in addition to the meal components to add variety, help improve acceptability in the meal, and satisfy appetites. Examples include maple syrup on pancakes, salad dressing on tossed greens, and condiments such as ketchup or mustard on sandwiches and other entrees.

To ensure that CACFP meals and snacks meet children’s nutritional needs, the CSDE encourages CACFP facilities to use discretion when serving noncreditable foods. Noncreditable foods typically contain few nutrients and are higher in added sugars, saturated fats, and sodium. Menu planners should read labels, be aware of the ingredients in foods, and limit the frequency and amount of less nutritious choices.

The USDA’s CACFP Best Practices recommends that CACFP menus avoid noncreditable foods that are sources of added sugars. Examples include sweet toppings (e.g., honey, jam, and syrup), mix-in ingredients sold with yogurt (e.g., honey, candy, and cookie pieces), and sugar-sweetened beverages (e.g., fruit drinks and sodas).

CACFP funds cannot be used to purchase noncreditable foods, except for condiments served with creditable foods, and herbs and spices used to prepare and enhance the flavor of meals. For example, CACFP funds cannot be used to purchase grain-based desserts, gelatin, pudding, or canned cream soups.
Milk Component

Milk must be pasteurized, meet all state and local requirements, and contain vitamins A and D at levels specified by the FDA. The CACFP meal patterns require different types of milk fat content for each age group, based on the recommendations of the Dietary Guidelines for Americans.

Serving Size for Milk

The CACFP meal patterns require a serving of fluid milk at breakfast, lunch and supper. A serving of milk may be one of the two required snack components. Meals and snacks with breakfast cereals may include fluid milk as a beverage, on cereal, or both. Table 3-1 summarizes the required servings of the milk component for each age group and meal.

<table>

</tr>
</tbody>
</table>

¹ This age group applies only to at-risk afterschool programs and emergency shelters.
² Only one snack component can be a creditable beverage. Milk cannot be served when juice is the only other snack component.
Allowable Types of Milk

The CACFP meal patterns for children require unflavored whole milk for age 1, and unflavored low-fat (1%) milk or unflavored fat-free milk for ages 2 and older. Flavored fat-free milk may be served to ages 6 and older, but the USDA’s CACFP Best Practices recommends serving only unflavored milk.

Other allowable types of milk include pasteurized:

- lactose-reduced and lactose-free milk;
- acidified milk;
- cultured milk; and
- cultured buttermilk.

CACFP facilities may serve any of these types of milk, as long as they meet the fat content and flavor restrictions for each age group. Table 3-2 summarizes the allowable types of milk for each age group in the CACFP meal patterns for children. For additional guidance, visit the USDA’s Serving Milk in the CACFP webpage.

CACFP facilities cannot serve milk that does not comply with the required fat content of the CACFP meal patterns. For example, low-fat milk, fat-free milk, and reduced-fat milk cannot be served to 1-year-olds; and whole milk and reduced-fat milk cannot be served to ages 2 and older.

If a child has a disability that requires milk with a fat content that is different from the CACFP meal patterns, the CACFP facility must make the substitution prescribed in the medical statement signed by a recognized medical authority. For more information, refer to “Meal Modifications for Children with Special Dietary Needs” in section 1.

1 This age group applies only to at-risk afterschool programs and emergency shelters.
2 Unflavored whole milk and unflavored reduced-fat milk can be served only during a one-month transition period when switching a 24-month-old child from whole milk to low-fat or fat-free milk. For more information, refer to “Transitioning from Whole Milk to Low-fat or Fat-free Milk” in this section.
3 Flavored milk for ages 6 and older must be fat-free. The USDA’s CACFP Best Practices recommends serving only unflavored milk.

### Change to flavored milk requirement

A decision in April 2020 by the U.S. District Court for the District of Maryland cancelled the USDA’s 2018 final rule, *Child Nutrition Programs: Flexibilities for Milk, Whole Grains, and Sodium Requirements* (83 FR 63775), and eliminates the previously approved meal pattern flexibility that allowed flavored low-fat milk for ages 6 and older. Therefore, flavored milk must be fat-free. For more information, review question 7 in USDA Memo SP 24-2020, CACFP 13-2020 and SFSP 13-2020: Questions and Answers for the Child Nutrition Programs during School Year 2020-21 – #5.
Waiver for flavored milk during COVID-19

During the current COVID public health emergency, the USDA is allowing several flexibilities for the CACFP meal patterns, including a waiver of the requirement that low-fat milk must be unflavored. CACFP facilities that cannot meet the requirement that flavored milk must be fat-free may request a waiver from the CSDE to serve flavored low-fat milk through June 30, 2022. For more information, refer to “Meal Pattern Flexibilities during COVID-19” in section 1.

This flexibility applies only to ages 6 and older. Flavored milk cannot be served to children ages 5 and younger.

Additional Milk Requirements for Public Schools

Child care centers that operate in public schools must meet additional state requirements for the milk component. Milk sold anywhere on school premises in Connecticut public schools must comply with the state beverage requirements of Section 10-221q of the Connecticut General Statutes (C.G.S.). The state beverage requirements apply to milk sold as part of, and separately from, reimbursable meals and snacks.

The state beverage statute requires that milk cannot contain more than 4 grams of sugars per ounce. Products that meet the federal and state requirements for milk are on list 16 on the CSDE’s List of Acceptable Foods and Beverages webpage, which includes brand-specific lists of foods that meet the Connecticut Nutrition Standards and beverages that meet the requirements of the state beverage statute. For more information on the state beverage statute, visit the CSDE’s Beverage Requirements webpage.

Transitioning from Breastmilk or Infant Formula to Whole Milk

Breastmilk is allowed at any age in the CACFP meal patterns. Iron-fortified infant formula does not meet the fluid milk requirement of the CACFP meal patterns for children. However, meals that contain an allowable iron-fortified infant formula are reimbursable for a one-month transition period when children ages 12 to 13 months are weaning (transitioning) from infant formula to whole cow’s milk.

When a child is weaned from formula (or breastmilk) to cow’s milk, it is common practice to provide the infant with both foods at the same meal. A small amount of whole milk is added
to the iron-fortified infant formula, and gradually increased over time. This eases the transition by helping the infant to accept some of the new food.

**Breastmilk past age 1**

Breastmilk is allowed as the milk component in the CACFP meal patterns for children at any age. CACFP facilities may claim reimbursement for meals and snacks when a parent provides expressed breastmilk or a mother breastfeeds her child on site.

Breastmilk may be served in combination with other types of milk. For meals and snacks to be reimbursable, the combined amount of breastmilk and milk must provide the minimum serving for each age group. For example, the CACFP breakfast meal pattern requires ½ cup of unflavored low-fat or fat-free milk for age 2. If a mother provides ¼ cup of expressed breastmilk, the CACFP facility must serve ¼ cup of unflavored low-fat or fat-free milk to make up the difference and meet the minimum ½-cup milk requirement.

The breastmilk and milk do not need to be mixed in the same cup; they may be served separately. The CACFP facility must provide all other required meal components for the meal or snack to be reimbursable.

**Transitioning from Whole Milk to Low-fat or Fat-free Milk**

The USDA allows CACFP facilities to serve unflavored reduced-fat milk and unflavored whole milk during a one-month transition period when a 24-month-old child is switching from whole milk to low-fat or fat-free milk. The steps below can help ease a child’s transition to low-fat or fat-free milk.

1. Add a small amount of reduced-fat milk to whole milk.
2. Gradually change to low-fat or fat-free milk mixed with whole milk.
3. Decrease the amount of whole milk over time so the entire serving is low-fat or fat-free milk by the end of the one-month transition period.

The CACFP meal patterns for children do not allow whole milk for ages 2 and older.

**Menu Documentation for Milk**

CACFP menus must document the type of milk served to each age group. For example, the menu should state “unflavored low-fat milk” instead of “low-fat milk,” and “unflavored fat-free milk” instead of “fat-free milk.”
Meal Components

Milk

Milk Substitutes for Children without Disabilities

CACFP facilities may choose, but are not required, to offer one or more allowable milk substitutes for children whose special dietary needs do not constitute a disability. The two types of allowable substitutes for children without disabilities include:

- nondairy milk substitutes that meet the USDA’s nutrition standards for fluid milk substitutes (refer to table 3-1); and
- lactose-reduced or lactose-free milk with the appropriate fat content for each age group.

CACFP facilities cannot offer any other beverages (including water and juice) as a choice instead of milk for reimbursable meals. Juice and water are never allowable milk substitutes for children without disabilities.

Parents or guardians must submit a written request for a nondairy milk substitute for their child. A medical statement signed by a recognized medical authority is not required. For more information, refer to the CSDE’s resource, Allowable Milk Substitutes for Children without Disabilities in the CACFP, and the CSDE’s guide, Accommodating Special Diets in CACFP Child Care Programs.

A written request is not required for lactose-reduced or lactose-free milk. CACFP facilities may offer lactose-free and lactose-reduced milk as a substitute for regular milk at any time. For more information, refer to “Lactose-reduced and lactose-free milk” in this section.

USDA’s nutrition standards for fluid milk substitutes

CACFP facilities that choose to offer a milk substitute as part of reimbursable meals for children without disabilities must use products that meet the USDA’s nutrition standards for fluid milk substitutes. Table 3-3 summarizes these requirements. CACFP facilities cannot offer any other nondairy milk substitutes.

Menu planners cannot determine if a product meets the USDA’s nutrition standards for fluid milk substitutes by reading the product’s packaging. The Nutrition Facts label lists only a few of the nine nutrients required by the USDA for allowable fluid milk substitutes. To determine if a product meets the USDA’s nutrition standards, CACFP facilities must obtain documentation from the manufacturer that includes the nutrition information for all nine nutrients.

</table>

¹ The FDA labeling laws require manufacturers to round nutrition values to the nearest 5 percent. The unrounded minimum DV is 27.6% for calcium, 22.2% for phosphorus, 9.97% for potassium, 25.88% for riboflavin, and 18.33% for vitamin B12. Source: How to Determine if a Soy-Based Beverage Meets the Nutrient Requirements to Qualify as an Authorized Milk Substitute in WIC, USDA Food and Nutrition Services (FNS) Office of Research, Nutrition, and Analysis (ORNA), 2006.

Additional nondairy milk substitute requirements for public schools

Child care centers that operate in public schools must meet additional state requirements for the nondairy milk substitutes. Nondairy milk substitutes sold anywhere on school premises in Connecticut public schools must comply with the state beverage requirements of C.G.S. Section 10-221q. The state beverage requirements apply to nondairy milk substitutes sold as part of, and separately from, reimbursable meals and snacks.

Products that meet the federal and state requirements for nondairy milk substitutes are in list 17 on the CSDE’s List of Acceptable Foods and Beverages webpage. For more information, refer to the CSDE’s resource, Allowable Milk Substitutes for Children without Disabilities in the CACFP, and the CSDE’s guide, Accommodating Special Diets in CACFP Child Care Programs.
Lactose-free and lactose-reduced milk

Children who cannot digest the lactose found in regular milk may be able to drink lactose-free (e.g., Lactaid) or lactose-reduced milk. These types of milk are regular fluid milk modified by the addition of lactase enzymes to reduce or eliminate the lactose (milk sugar). Lactose-reduced milk has part of the lactose removed, while lactose-free milk has all of the lactose removed.

A written request from parents/guardians is not required for lactose-reduced or lactose-free milk. The CSDE encourages CACFP facilities to make lactose-reduced or lactose-free milk available to children as needed.

In addition to meeting the CACFP meal patterns, lactose-reduced and lactose-free milk sold in Connecticut public schools must comply with the sugar limit of the state beverage requirements (C.G.S. Section 10-221q.). List 16 of the CSDE’s List of Acceptable Foods and Beverages webpage includes lactose-reduced and lactose-free milk that meets the federal and state requirements. CACFP facilities in public schools cannot offer lactose-reduced and lactose-free milk that does not meet the state requirements, either as part of or separately from reimbursable meals and snacks. For more information, refer to “State Requirements for Milk in CACFP Child Care Centers in Public Schools” in this section.

Crediting Milk in Smoothies

Unflavored low-fat milk or fat-free milk served in smoothies credits as the milk component. For smoothies only, the minimum creditable amount of milk is ¼ cup. If a smoothie contains less than the full serving of milk, the CACFP menu must include the additional amount of milk to provide the full milk component. For more information on crediting smoothies, refer to “Crediting Smoothies” in the “Fruits Component” section.
Milk in Prepared Foods

Only fluid milk meets the USDA’s definition for milk and the FDA’s standard of identity for milk. The CACFP meal patterns for children require fluid milk as a beverage.

Milk does not credit when cooked in cereals, puddings, cream sauces, or other foods. For example, milk does not credit when used to make quiche or macaroni and cheese.

Foods made from milk (such as cheese, yogurt, and ice cream) cannot credit as the milk component. For information on crediting cheese and yogurt as meat/meat alternates, refer to the “Meat/Meat Alternates Component” section.

Noncreditable Foods in the Milk Component

Examples of foods that do not credit as the milk component include, but are not limited to:

- for age 1, unflavored or flavored reduced fat (2%) milk; unflavored or flavored low-fat (1%) milk, and unflavored or flavored fat-free milk;
- for ages 2-5, unflavored or flavored whole milk, unflavored or flavored reduced fat (2%) milk, flavored fat-free milk, and flavored low-fat (1%) milk;
- for ages 6 and older, unflavored or flavored whole milk, unflavored or flavored reduced fat (2%) milk, and flavored low-fat (1%) milk;
- nondairy milk substitutes that do not meet the USDA’s nutrition standards for fluid milk substitutes, e.g., rice milk, almond milk, and cashew milk;
- milk that is cooked or baked in prepared foods, such as cereals, puddings, and cream sauces;
- nutrition supplement beverages, such as Abbott’s Pediasure; and
- powdered milk beverages, such as Nestle’s NIDO.

For more information, refer to “Noncreditable Foods” in the beginning of section 3 and the CSDE’s resource, Noncreditable Foods in CACFP Child Care Programs.
Keeping Milk Cold

Implementing procedures to keep milk cold is important for food safety and helps make milk more appealing to children. Milk must be kept at 40°F or below, but tastes best at 35°F. CACFP facilities should develop procedures to maintain milk at 35°F during all points of the meal service (receiving, storing, and serving).

New England Dairy’s Keep Milk Cold webpage contains resources to help staff serve cold milk. The U.S. Dairy has a Milk Quality Checklist that helps programs evaluate their current practices and implement procedures for keeping milk cold.
Resources for Crediting Milk

The resources below assist menu planners with crediting the milk component in the CACFP meal patterns.

- Bite Size: Meeting the CACFP Meal Patterns for Children – Module 3: Milk Component (CSDE training webinar): https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-CACFP-Child-Care-Programs/Related-Resources#BiteSize
- Food Buying Guide Section 5: Yield Table for Milk (USDA): https://foodbuyingguide.fns.usda.gov/files/Reports/USDA_FBG_Section5_MilkYieldTable.pdf

For additional crediting resources, visit the “Milk Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
Meal Components

Milk
Meat/Meat Alternates Component

Meats include cooked lean meat, poultry, and fish. Meat alternates are foods that provide a similar protein content to meat, such as alternate protein products (APPs), cheese, eggs, cooked dry beans or peas (legumes), nuts and seeds and their butters, yogurt, soy yogurt, tofu, and tempeh. Legumes credit as the vegetables component or the meat/meat alternates component, but not both in the same meal.

The USDA’s CACFP Best Practices recommends serving only lean meats, nuts, and legumes; limiting processed meats to one serving per week; and serving only low-fat or reduced-fat natural cheese.

Some meat/meat alternates may be choking hazards for young children. Examples include nuts and seeds, e.g., peanuts, almonds and sunflower or pumpkin seeds; chunks or spoonfuls of peanut butter or other nut and seed butters; tough meat or large chunks of meat; fish with bones; and large chunks of cheese, especially string cheese.

Consider children’s ages and developmental readiness when deciding what meat/meat alternates to offer in CACFP menus. Preparation techniques to reduce the risk of choking include cutting tube-shaped foods like hot dogs or string cheese into short strips instead of round pieces; removing all bones from fish, chicken, and meat before cooking or serving; grinding up tough meats and poultry; chopping peanuts, nuts, and seeds finely, or grinding before adding to prepared foods; and spreading nut and seed butters thinly on other foods (such as toast and crackers). For additional guidance, refer to “Choking Prevention” in section 1.
Meal/Meat Alternates versus Protein

It is important to note that the CACFP meal patterns require a specific amount of the meat/meat alternates component, not a specific amount of protein. The terms “protein” and “meat/meat alternates” are often used interchangeably, but they are not the same. “Meat/meat alternates” refers to the meal component of the USDA meal patterns for the Child Nutrition Programs. “Protein” refers to one of the key nutrients found in meats and meat alternates.

Except for commercial tofu and tofu products, protein content is not an indicator that a commercial product credits as the meat/meat alternates component because the grams of protein listed on the product’s Nutrition Facts label do not correspond to the ounces of the meat/meat alternates component contained in the product. A serving of meat or meat alternate contains other components in addition to protein, such as water, fat, vitamins, and minerals. Protein is also found in varying amounts in other ingredients (such as cereals, grains, and many vegetables) that may be part of a commercial meat or meat alternate product.

Menu planners cannot use the Nutrition Facts label or ingredients statement to determine the amount of the meat/meat alternates component in a commercial product. The only exception is commercial tofu and tofu products, which must contain at least 5 grams of protein in a 2.2-ounce serving by weight. For more information, refer to “Crediting Commercial Tofu and Tofu Products” in this section.

To credit as the meat/meat alternates component, commercial products that are processed or contain added ingredients (such as pizza, chicken nuggets, veggie burgers, and cheese ravioli) require a CN label or PFS to document the amount of the meat/meat alternates component per serving. For more information, refer to “Crediting Meat/Meat Alternates in Commercial Products” in this section.
Serving Size for Meat/Meat Alternates

The CACFP meal patterns for children require a serving of the meat/meat alternates component at lunch and supper. The meat/meat alternates component is not required at breakfast but may substitute for the entire grains component up to three times per week (refer to “Meat/Meat Alternates at Breakfast” in this section). A serving of meat/meat alternates may be one of the two required snack components. Table 3-4 summarizes the required servings of the meat/meat alternates component for each age group and meal.

<table>
<thead>

1 This age group applies only to at-risk afterschool programs and emergency shelters.
2 The meat/meat alternates component is not required at breakfast, but may substitute for the entire grains component up to three times per week. For more information, refer to “Meat/Meat Alternates at Breakfast” in this section.

Menu planners should consult the USDA’s FBG to determine the crediting information for foods in the meat/meat alternates component (refer to “Food Buying Guide for Child Nutrition Programs” in section 2). A 1-ounce serving of the meat/meat alternates component equals:

- 1 ounce of lean meat, poultry, or fish;
- 3 ounces of surimi;
- 1 ounce of natural cheese, e.g., Colby, Monterey Jack, and Swiss or process cheese, e.g., American (reduced-fat or low-fat recommended for ages 2 and older);
- ¼ cup of cottage cheese (reduced-fat or low-fat recommended for ages 2 and older);
- 2 ounces of cheese food/spread or cheese substitute;
- ¼ cup of cooked beans and peas (legumes), e.g., kidney beans, chickpeas (garbanzo beans), lentils, and split peas;
- ½ large egg;
- 2 tablespoons of nut or seed butters, e.g., peanut butter, almond butter, cashew butter and sunflower seed butter;
1. 1 ounce of nuts or seeds, e.g., almonds, Brazil nuts, cashews, filberts, macadamia nuts, peanuts, pecans, pine nuts, pistachios, soy nuts, and walnuts;
2. ½ cup of yogurt or soy yogurt (unflavored or flavored) containing no more than 23 grams of sugars per 6 ounces (3.83 grams per ounce);
3. 1 ounce of tempeh that contains specific ingredients (refer to “Crediting Tempeh” in this section);
4. 2.2 ounces (weight) or ¼ cup (volume) of tofu and other soy products containing at least 5 grams of protein; and
5. 1 ounce of APP that meets the USDA’s APP requirements (refer to “Crediting Alternate Protein Products (APPs)” in this section).

Meeting the required meat/meat alternates servings
The amounts in the meat/meat alternates component refer to the edible portion of cooked lean meat, poultry, or fish, e.g., cooked lean meat without bone, breading, binders, extenders, or other ingredients. The Dietary Guidelines for Americans indicates that lean meat and poultry contains less than 10 grams of fat, no more than 4.5 grams of saturated fat, and less than 95 milligrams of cholesterol per 100 grams and per labeled serving size, based on the USDA’s definitions for food label use. Examples include 95 percent lean cooked ground beef, beef top round steak or roast, beef tenderloin, pork top loin chop or roast, pork tenderloin, ham or turkey deli slices, skinless chicken breast, and skinless turkey breast.

The serving must contain the appropriate edible portion of meat/meat alternates, excluding any other ingredients. For example, to credit as 1½ ounces of the meat/meat alternates component, tuna salad must contain 1½ ounces of tuna fish, before added ingredients such as mayonnaise, celery, and seasonings.

The minimum creditable amount for the meat/meat alternates component is ¼ ounce equivalent. Meats and meat alternates offered in amounts less than ¼ ounce equivalent do not credit.

When crediting menu items toward the meat/meat alternates component, menu planners must round down to the nearest ¼ ounce. For example, a standardized recipe or commercial product that contains 0.9 ounces of cooked chicken per serving credits as 0.75 ounces of the meat/meat alternates component.
CACFP facilities must obtain crediting documentation for commercial products that are processed or contain added ingredients, such as pizza, chicken nuggets, and cheese ravioli. This documentation must state the amount of the meat/meat alternates component per serving. For example, to credit a commercially prepared cheese pizza as 1½ ounces of the meat/meat alternates component, the product’s CN label or PFS must indicate that the serving contains 1½ ounces of cheese. For more information, refer to “Documentation for Commercial Products” in section 2 and the CSDE’s resource, Accepting Processed Product Documentation in the CACFP.

**Main Dish Requirement for Lunch and Supper**

At lunch and supper, the meat/meat alternates component must be served in a main dish, or in a main dish and one other food item. The main dish is generally considered the main food item in the menu, which is complemented by the other food items.

For example, a lunch or supper menu for ages 3-5 could provide the required 1½ ounces of the meat/meat alternates component from a sandwich containing 1½ ounces of tuna; or a sandwich containing 1 ounce of tuna served with soup that contains ⅛ cup of legumes (½ ounce of meat/meat alternates).

CACFP facilities cannot serve the daily meat/meat alternates component for lunch or supper in more than two food items.

**Requirement for recognizable main dish**

Foods that are not a recognizable main dish do not credit toward the meat/meat alternates component. For example, CACFP facilities cannot credit peanut butter in a muffin or smoothie, pureed beans in a spice cake, or blended soft tofu in soup. The USDA’s intent for this requirement is to ensure that CACFP menus offer meat/meat alternates in a form that is recognizable to children. For more information, refer to “Requirement for visible components” at the beginning of section 3.

The USDA allows two exceptions to the requirement for a recognizable main dish: yogurt blended in fruit or vegetable smoothies and pasta made with 100 percent legume flours.

- Yogurt blended in fruit or vegetable smoothies credits as the meat/meat alternates component. Other meat/meat alternates (such as peanut butter) served in smoothies do not credit. For more information, refer to “Yogurt in smoothies” in this section and “Crediting Fruit and Vegetable Smoothies” in the “Fruits Component” section.
• Pasta made with 100 percent legume flours may credit as the meat/meat alternates component if the menu also includes an additional meat or meat alternate, such as tofu, cheese, or meat. For more information, refer to “Crediting Legume Flour Pasta Products as Meat/Meat Alternates” in this section.

**Meat/Meat Alternates at Breakfast**

The meat/meat alternates component is not required at breakfast. The menu planner may choose to substitute the meat/meat alternates component for the entire grains component up to three times per week. This provision applies regardless of the number of days in the week. For example, the menu planner could choose to substitute the meat/meat alternates component for the entire grains component three times during a three-day week or three times during a five-day week.

A 1-ounce serving of the meat/meat alternates component substitutes for 1 ounce equivalent of the grains component. For example, the breakfast meal pattern for ages 6-12 requires 1 ounce equivalent of the grains component. Examples of substitutes for the entire grains component for this age group include 2 tablespoons of peanut butter, 1 ounce of cheese, ½ of a large egg, or ½ cup of yogurt.

The USDA’s Serving Meat and Meat Alternates at Breakfast webpage contains handouts, training slides, and webinars in English and Spanish with additional guidance on serving the meat/meat alternates component in CACFP breakfast menus.

**Crediting Alternate Protein Products (APPs)**

APPs are generally single ingredient powders (such as soy flours, soy concentrates, soy isolates, whey protein concentrate, whey protein isolates, and casein) that are added to foods. Examples of foods that might contain added APPs include beef patties, beef crumbles, pizza topping, meat loaf, meat sauce, taco filling, burritos, and tuna salad.

APPs must meet the USDA’s requirements specified in appendix A of the CACFP regulations (7 CFR 226). CACFP facilities must have documentation on file to indicate that APPs comply with these requirements. For more information on crediting APPs, refer to the CSDE’s resource, Requirements for Alternate Protein Products in the CACFP, and the USDA’s resource, Questions and Answers on Alternate Protein Products.
Crediting Cheeses

The USDA recommends serving only low-fat or reduced-fat cheeses (for ages 2 and older) and choosing natural cheeses. Natural cheeses are produced directly from milk, such as cheddar, Colby, Monterey Jack, mozzarella, Muenster, provolone, Swiss, feta, and brie. Natural cheeses also include pasteurized blended cheeses made by blending one or more different kinds of natural cheeses.

Natural cheeses do not include pasteurized process cheeses such as American cheese, pasteurized process cheese food, pasteurized process cheese spread, and pasteurized process cheese products. Imitation cheese and cheese products do not credit as the meat/meat alternates component in the CACFP meal patterns.

Large chunks of cheese (such as cheese cubes or string cheese) may be a choking hazard for young children. Grate or thinly slice cheese to reduce the risk of choking. For additional guidance, refer to “Choking Prevention” in section 1.

For commercial products that contain cheese (such as lasagna or macaroni and cheese), SFAs must document the serving size with a CN label or PFS. For more information, refer to “Crediting Documentation for Commercial Products” in section 2.
Table 3-5 shows the amount of different types of cheeses required to credit as 1 ounce of the meat/meat alternates component.

<table>
<thead>
<tr>
<th>Type of cheese</th>
<th>Meat/meat alternates contribution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Natural cheese, e.g., cheddar and Swiss</td>
<td>1 ounce</td>
</tr>
<tr>
<td>Grated cheese, e.g., Parmesan or Romano</td>
<td>1 ounce (⅜ cup)</td>
</tr>
<tr>
<td>Process cheese, e.g., American</td>
<td>1 ounce</td>
</tr>
<tr>
<td>Cottage or ricotta cheese</td>
<td>¼ cup</td>

<td>2 ounces</td>
</tr>
<tr>
<td>Process cheese spread</td>
<td>2 ounces</td>
</tr>
<tr>
<td>Process cheese substitute, cheese food substitute, or process cheese spread substitute</td>
<td>2 ounces</td>
</tr>
</tbody>
</table>

1 Cheese substitutes include reduced fat, low fat, nonfat, and lite versions of cheese substitute, cheese food substitute, and cheese spread substitute. These foods must meet the FDA’s standard of identity for substitute foods and must be labeled as “cheese substitute,” “cheese food substitute,” or “cheese spread substitute.” The FDA’s standard of identity requires that a cheese substitute is not nutritionally inferior to the standardized cheese for which it is substituting.
Crediting Deli Meats, Hot Dogs, and Sausage

CACFP facilities must ensure that the serving of a commercial meat product provides the amount of the meat/meat alternates component being credited. The amount that provides 1 ounce of the meat/meat alternates component depends on the product’s ingredients.

- **100 percent meat**: Products that are 100 percent meat without added liquids (such as water or broth), binders, or extenders credit on an ounce-per-ounce basis (actual serving weight). For example, 1 ounce of deli meat that is 100 percent meat credits as 1 ounce of the meat/meat alternates component.

- **Added liquids, binders, and extenders**: Products with added liquids, binders, and extenders credit based on the percentage of meat in the product formula. A 1-ounce serving of these products does **not** credit as 1 ounce of the meat/meat alternates component. Crediting depends on the amount of meat per serving, excluding added ingredients. For example, one brand of deli meat might require 1.6 ounces to credit as 1 ounce of the meat/meat alternates component, while another brand might require 2.3 ounces to credit as 1 ounce of the meat/meat alternates component.

Products with added liquids, binders, and extenders cannot credit as the meat/meat alternates component without a CN label or PFS stating the amount of the meat/meat alternates component per serving. Menu planners must review product labels and ingredients to determine if commercial products contain added liquids, binders, and extenders. CACFP facilities must obtain appropriate crediting documentation for all meats with added liquids, binders, and extenders. Acceptable documentation includes a CN label or a manufacturer’s PFS stating the amount of the meat/meat alternates component contained in one serving of the product. The USDA’s Authorized Labels and Manufacturers webpage lists approved CN-labeled products and manufacturers. For more information, refer to “Child Nutrition (CN) Labels” and “Product Formulation Statements” in section 2.

Hotdogs and other tube-shaped meats may be choking hazards for young children. Cut hot dogs into short strips instead of round pieces. Consider children’s ages and developmental readiness when deciding whether to offer hot dogs in CACFP menus. For additional guidance, refer to “Choking Prevention” in section 1.
### Liquids, binders, and extenders

Table 3-6 lists examples of ingredients that are binders and extenders. The ingredients statements below show examples of turkey breast products that contain added liquid, binders, and extenders.

- **Ingredients:** Turkey breast, *water, modified cornstarch*, contains less than 2% of sodium lactate, salt, sugar, sodium phosphates, *carrageenan*, natural flavor, sodium diacetate, potassium chloride, sodium ascorbate, sodium nitrite, caramel color.

- **Ingredients:** Turkey breast meat, *turkey broth*, contains 2% or less salt, sugar, *carrageenan*, sodium phosphate, sodium acetate, sodium diacetate, flavoring.

1 Binders and extenders are defined by the USDA’s regulations for the Food Safety and Inspection Service (FSIS) (9 CFR 318.7).

2 Products may contain these ingredients if they meet the USDA’s APP requirements. For more information, refer to “Crediting Alternate Protein Products (APPs)” in this section.

For more information, refer to “Documentation for Commercial Products” in section 2 and the CSDE’s resources, *Crediting Deli Meats in the CACFP, Crediting Commercial Meat/Meat Alternate Products in the CACFP, Using Child Nutrition (CN) Labels in the CACFP*, and *Using Product Formulation Statements in the CACFP*.
Developing recipes for deli meats
Different brands and types of deli meat credit differently. To ensure proper crediting, CACFP facilities should develop recipes for menu items that contain deli meats, such as sandwiches and other entrees.

The CACFP facility’s recipes should indicate the deli meat’s contribution to the meat/meat alternates component based on a specific weight of a specific brand. For ease of portioning, round up the weight of the deli meat in the recipe to the nearest measure. For example, the recipe should list 1.2 ounces as 1.25 ounces, and 1.6 ounces as 1.75 ounces.

If a CACFP facility makes the same food item using different brands of deli meats that credit differently, the recipe should include the specific weight of each brand. For example, if a child care center makes a turkey sandwich using either ABC brand turkey breast or XYZ brand turkey breast, the recipe should include the required weight of ABC brand and the required weight of XYZ brand. Alternatively, the child care center could develop a separate turkey sandwich recipe for each brand of deli meat.

For information on standardized recipes, refer to “Standardized Recipes” in section 2.
Crediting Dried Meat, Poultry, and Seafood Products

Shelf-stable, dried and semi-dried meat, poultry, and seafood (such as jerky or summer sausage) credit as the meat/meat alternates component. The USDA indicates that these products are most useful in meals served off-site, such as during field trips or picnics. However, CACFP facilities may also credit these products in meals served on site.

Crediting of dried meat, poultry, and seafood products must follow the same crediting principles used for all other products made from meat, poultry, or seafood. CACFP facilities must obtain a CN label or manufacturer’s PFS to document the product’s meal pattern contribution. The FBG does not include crediting information for dried meat, poultry, or seafood products because industry production standards for these products vary widely. Menu planners must evaluate the dried meat product’s PFS to ensure that it complies with the USDA’s crediting principles below.

1. The creditable meat ingredient listed on the product’s PFS must match or have a similar description as the ingredient listed in the product’s ingredients statement. For example, the dried beef stick below lists “Ground beef (not more than 30% fat” as the first ingredient. This product’s PFS must also list the crediting information for “Ground beef (not more than 30% fat).”

   - Ingredients: *Ground beef (not more than 30% fat)*, water, salt, less than 2% brown sugar, spices, monosodium glutamate, sugar, flavorings, sodium nitrate.

2. The creditable meat ingredient listed on the product’s PFS must have a similar description to a food item in the FBG. For the example above, “Ground beef (not more than 30% fat” matches the description for “Beef, Ground, fresh or frozen, Market Style, no more than 30% fat (Like IMPS #136), cooked lean meat” on page 1-17 of the FBG.

3. The creditable amount cannot exceed the finished weight of the product, i.e., the cooked weight ready for serving. For example, a 1-ounce serving of beef jerky cannot credit for more than 1 ounce of the meat/meat alternates component.

Ground pork and beef ingredients must include the percent fat because the fat content has a direct correlation to the cooking yield. To credit in Child Nutrition Programs, the fat content of ground beef or ground pork in dried meat products cannot exceed 30 percent. Products that do not indicate the fat percentage do not credit.
For example, the dried pork stick below does not credit as the meat/meal alternates component because the creditable ingredients (pork) does not list the fat percentage, and does not match a description in the FBG.

- Ingredients: Pork, cane sugar, garlic (garlic, citric acid, ascorbic acid), contains 2% or less of: Spanish smoked paprika (paprika, rosemary extract), sea salt, natural flavors, sherry wine vinegar, red pepper chili flakes, celery powder, in collagen casing.

For information on CN labels and PFS forms, refer to “Child Nutrition (CN)” labels and “Product Formulation Statements” in section 2.

For information on CN labels and PFS forms, refer to “Documentation for Commercial Products” in section 2. The requirements for crediting dried meat are summarized in USDA Memo SP 21-2019, CACFP 08-2019 and SFSP 07-2019: Crediting Shelf-Stable, Dried and Semi-Dried Meat, Poultry, and Seafood Products in the Child Nutrition Programs. For additional guidance on crediting dried meat products, watch the USDA’s webinar, Moving Forward: Update on Food Crediting in Child Nutrition Programs with Guidance for Dried Meat Products.

Dried meat products (such as jerky) may be choking hazards for young children. Consider children’s ages and developmental readiness when deciding whether to offer dried meat products in snack menus. For additional guidance, refer to “Choking Prevention” in section 1.

**Crediting Eggs**

Only whole eggs are creditable. Half of a large egg credits as 1 ounce of the meat/meat alternates component. Liquid egg substitutes are not whole eggs and are not creditable. Egg whites do not credit if served without the yolks.
Crediting Legumes as Meat/Meat Alternates

Legumes include cooked dry beans and peas, such as black beans, black-eyed peas (mature, dry), edamame (soybeans), garbanzo beans (chickpeas), kidney beans, lentils, navy beans, soybeans, split peas, and white beans. Legumes may credit as either the meat/meat alternates component or the vegetables component, but one serving cannot credit as both components in the same meal or snack. Menu planners must determine in advance how to credit legumes in CACFP menus.

Legumes may credit as either component in different meals. For example, refried beans may credit as the meat/meat alternates component at one lunch and as the vegetables component at another lunch. If a meal includes two servings of legumes, the menu planner may choose to credit one serving as the meat/meat alternates component and one serving as the vegetables component. For example, a lunch or supper menu includes chili with kidney beans and a salad with garbanzo beans. The menu planner may credit the garbanzo beans as the vegetables component and the kidney beans as the meat/meat alternates component.

Legumes credit as the meat/meat alternates component based on volume. A ¼-cup serving (4 tablespoons) of legumes credits as 1 ounce of the meat/meat alternates component. The minimum creditable amount of legumes is 1 tablespoon.

The serving size refers to the amount of cooked legumes excluding other ingredients, such as the sauce and pork fat in baked beans. For example, to credit baked beans as 1 ounce equivalent of the meat/meat alternates component, the serving must contain ¼ cup of beans, not including the sauce and pork fat. For guidance on how to calculate the contribution of legumes in a recipe, refer to the CSDE’s resource, *Crediting Legumes in the CACFP.*

Table 3-7 shows the meat/meat alternates contribution (ounce equivalents) for different amounts of cooked legumes.
Table 3-7. Meat/meat alternates contribution of cooked legumes

<td>2 ounce equivalents</td>
</tr>
</tbody>
</table>

For information on crediting legumes as vegetables, refer to “Crediting Legumes as Vegetables” in the “Vegetables Component” section.

**Crediting roasted or dried legumes as meat/meat alternates**

Roasted or dried legumes (such as roasted soybeans or roasted chickpeas) credit as the meat/meat alternates component the same as nuts and seeds, which credit based on weight (ounces). A 1-ounce serving of roasted or dried legumes provides 1 ounce of the meat/meat alternates component.

Roasted or dried legumes may be choking hazards for young children. Consider children’s ages and developmental readiness when deciding whether to offer roasted or dried legumes in CACFP menus. For additional guidance, refer to “Choking Prevention” in section 1.

At lunch and supper, roasted or dried legumes cannot credit for more than half of the meat/meat alternates component; they must be combined with another food from the meat/meat alternates component to meet the full serving for each age group. For more information, refer to “Main Dish Requirement for Lunch and Supper,” “Minimum creditable amounts,” and “Crediting Nuts and Seeds” in this section.
For information on crediting roasted or dried legumes as the vegetables component, refer to “Crediting Roasted or Dried Legumes as Vegetables” in the “Vegetables Component” section.

**Resources for legumes**

The recipes and resources below assist CACFP facilities with incorporating legumes into CACFP meals and snacks.

- Beans (ICN Child Nutrition Sharing Site):
  [https://theicn.org/cnss/menu-planning/beans/](https://theicn.org/cnss/menu-planning/beans/)

- Beans and Peas are Unique Foods (USDA):

- Recipes for Healthy Kids: Cookbook for Child Care Centers (USDA):

- Recipes for Healthy Kids: Cookbook for Homes (USDA):

For additional resources, refer to “Resources for standardized recipes” in section 2 and “Legumes (Dried Beans and Peas)” in the CSDE’s *Resource List for Menu Planning and Food Production in Child Nutrition Programs*. 
Crediting Legume Flour Pasta Products as Meat/Meat Alternates

Pasta products made of 100 percent legume flours (such as chickpea flour or lentil flour) credit as the meat/meat alternates component. However, the legume flour pasta must be offered with an additional meat/meat alternate, such as tofu, cheese, or meat. The USDA’s intent for this requirement is to ensure that CACFP menus offer meat/meat alternates in a form that is recognizable to children. For more information, refer to “Requirement for visible components” at the beginning of section 3.

Table 3-8 shows the meat/meat alternates contribution (ounce equivalents) for different amounts of 100 percent legume pasta. A ¼-cup serving of cooked legume flour pasta credits as 1 ounce of the meat/meat alternates component.

<table>
<thead>
<tr>
<th>Serving size</th>
<th>Meat/meat alternates contribution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 tablespoon</td>
<td>¼ ounce (minimum creditable amount)</td>
</tr>
<tr>
<td>⅛ cup</td>
<td>½ ounce</td>
</tr>
<tr>
<td>⅜ cup</td>
<td>¾ ounce</td>
</tr>
<tr>
<td>¼ cup</td>
<td>1 ounce</td>
</tr>
<tr>
<td>½ cup</td>
<td>2 ounces</td>
</tr>
</tbody>
</table>

Alternatively, CACFP facilities may credit legume flour pasta using the bean flour yield information on page C-1 of the FBG’s Appendix C, or with appropriate documentation on the manufacturer’s PFS. For more information, refer to “Product Formulation Statements” in section 2 and the USDA’s resources, Product Formulation Statement (Product Analysis) for Meat/Meat Alternate (M/MA) Products in Child Nutrition Programs and Tips for Evaluating a Manufacturer’s PFS.

Pasta made of 100 percent legumes may also credit as the vegetables component, but cannot credit as both the vegetables component and meat/meat alternates component in the same meal. For more information, refer to “100 percent vegetable flours crediting as a vegetable” in the Vegetables section.
The requirements for crediting pasta products made of vegetable flours are summarized in USDA Memo SP 26-2019, CACFP 13-2019 and SFSP 12-2019: *Credit Pasta Products Made of Vegetable Flour in the Child Nutrition Programs*.

**Crediting Meat/Meat Alternates in Combination Entrees**

Combination entrees (such as tacos, lasagna, and chicken stir-fry) contain more than one food component. For example, beef lasagna contains the grains component (pasta), the meat/meat alternates component (ground beef and cheese), and the vegetables component (tomato sauce). Most combination entrees cannot be separated (such as pizza or a burrito) or are not intended to be separated (such as hamburger on a bun or turkey sandwich).

For foods made from scratch, CACFP facilities must have a recipe that documents the amount of meat/meat alternates per serving, based on the yields listed in the FBG. For more information, refer to “Standardized Recipes” and “Food Buying Guide for Child Nutrition Programs” in section 2.

For commercial products, CACFP facilities must obtain a CN label (if available) or a PFS stating the amount of the meat/meat alternates component per serving. CACFP facilities are responsible for checking the manufacturer’s PFS for accuracy prior to including the combination entree in CACFP meals and snacks. For more information, refer to “Documentation for Commercial Products” in section 2.
Crediting Meat/Meat Alternates in Commercial Products

To credit as the meat/meat alternates component, commercial products that are processed or contain added ingredients (such as pizza, chicken nuggets, and cheese ravioli) require documentation stating the amount of the meat/meat alternates component per serving. For example, to credit a commercial breaded chicken patty as 1½ ounces of the meat/meat alternates component, the product’s CN label or PFS must state that one serving of the product contains 1½ ounces of cooked chicken. Commercial products cannot credit as the meat/meat alternates component without this documentation.

CACFP facilities must have a CN label or manufacturer’s PFS to document the meal pattern contribution of all commercial meat/meat alternate products used in CACFP menus. Commercial products without this documentation cannot credit in CACFP meals and snacks. For more information, refer to “Documentation for Commercial Products” in section 2.

The CSDE’s resource, *Crediting Commercial Meat/Meat Alternate Products in the CACFP*, summarizes the requirements for crediting commercial meat/meat alternates in the CACFP.
Crediting Nut and Seed Butters

Creditable nut and seed butters include almond butter, cashew nut butter, peanut butter, sesame seed butter, soy nut butter, and sunflower seed butter. Reduced-fat peanut butter credits if it meets the FDA’s standards of identity for peanut butter (21 CFR 164.150), which requires that products contain at least 90 percent peanuts.

Chunks or spoonfuls of nut or seed butters may be choking hazards for young children. Consider children’s ages and developmental readiness when deciding whether to offer nut or seed butters in CACFP menus. Use only creamy peanut butter (not chunky) and spread thinly to reduce the risk of choking. For additional guidance, refer to “Choking Prevention” in section 1.

The serving for nut and seed butters is based on volume (tablespoons). Two tablespoons of a nut or seed butter credit as 1 ounce of the meat/meat alternates component. Table 3-9 shows the meat/meat alternates contribution for different amounts of nut and seed butters.

<table>
<thead>
<tr>
<th>Serving size</th>
<th>Meat/meat alternates contribution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 tablespoon</td>
<td>¼ ounce (minimum creditable amount)</td>
</tr>
<tr>
<td>2 tablespoons (¼ cup)</td>
<td>¼ ounce</td>
</tr>
<tr>
<td>3 tablespoons</td>
<td>½ ounce</td>
</tr>
<tr>
<td>4 tablespoons (⅛ cup)</td>
<td>1 ounce</td>
</tr>
<tr>
<td>5 tablespoons</td>
<td>1½ ounces</td>
</tr>
<tr>
<td>6 tablespoons (⅜ cup)</td>
<td>2 ounces</td>
</tr>
</tbody>
</table>

Note: A 1-ounce serving (weight) of a nut or seed butter does not provide 1 ounce equivalent of the meat/meat alternates component. To portion nut and seed butters by weight, food service staff must use the appropriate weight conversion listed in the FBG. The FBG indicates that 1.1 ounces of a nut or seed butter credits as 1 ounce equivalent of the meat/meat alternates component. For more information, refer to “Volume versus weight” in section 2.
Considerations for serving size

Menu planners should consider the appropriateness of the serving size for nut and seed butters. It may be unreasonable to provide the full serving of a nut or seed butter in one menu item, such as a peanut butter sandwich. For example, the lunch and supper meal pattern for ages 6-12 requires 4 tablespoons (¼ cup) of peanut butter to provide 2 ounces of the meat/meat alternates component. This is a large amount for two slices of bread.

The CSDE recommends providing a smaller portion of peanut butter and supplementing with another food from the meat/meat alternates component to provide the full serving. For example, the CACFP lunch meal pattern for ages 3-5 requires 1½ ounces of the meat/meat alternates component, which equals 3 tablespoons of peanut butter. A lunch or supper menu could provide 1½ ounces of meat/meat alternates from a sandwich containing 1½ tablespoons of peanut butter (¼ ounce of meat/meat alternates) served with ¾ cup of yogurt (¼ ounce of meat/meat alternates).

For more information on crediting nut and seed butters, refer to the CSDE’s resource, *Crediting Nuts and Seeds in the CACFP*.

Crediting Nuts and Seeds

Creditable nuts and seeds include almonds, Brazil nuts, cashews, filberts, macadamia nuts, peanuts, pecans, walnuts, pine nuts, pistachios, and soy nuts. Acorns, chestnuts, and coconuts do not credit.

Roasted or dried soybeans credit the same as soy nuts. However, fresh soybeans (edamame) are legumes and credit as the vegetables component.

Nuts and seeds may be choking hazards for young children. Consider children’s ages and developmental readiness when deciding whether to offer nuts or seeds in snack menus. The USDA recommends that any nuts or seeds served to young children are in a prepared food and are ground or finely chopped. For additional guidance, refer to “Choking Prevention” in section 1.

At lunch and supper, nuts and seeds cannot credit for more than half of the meat/meat alternates component for each age group. Menu planners must combine nuts and seeds with
another food from the meat/meat alternates component to meet the full requirement. The example below illustrates this requirement.

- The CACFP lunch and supper meal pattern for ages 6-12 requires 2 ounces of the meat/meat alternates component. A lunch or supper for this age group cannot contain more than 1 ounce of nuts or seeds. The menu must also include 1 ounce of another meat/meat alternate, such as ½ cup of yogurt, 1 ounce of cooked lean meat, 1 ounce of cheese, ¼ cup of cottage cheese, ¼ cup of cooked legumes, or half of a large egg.

For more information, refer to “Minimum creditable amounts” in the beginning of section 3 and the CSDE’s resource, Crediting Nuts and Seeds in the CACFP.

Crediting Surimi Seafood

Surimi seafood is a pasteurized, ready-to-eat, restructured seafood product usually made from pollock (fish). Surimi seafood is available in many forms and shapes, including chunks, shredded, and flaked. It does not require additional preparation. Surimi seafood can be incorporated into a variety of menu items, such as seafood salads, sushi-style rolls, sandwiches, tacos, and ramen.

The amount of fish in surimi varies depending on the manufacturer and product. Surimi seafood may contain as little as one-third seafood ingredient, and may include other creditable food ingredients. A 3-ounce serving of surimi credits as 1 ounce of the meat/meat alternates component. Table 3-10 shows the meat/meat alternates contribution for different amounts of surimi seafood.

<table>
<thead>
<tr>
<th>Serving size</th>
<th>Meat/meat alternates contribution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.0</td>
<td>¼ ounce (minimum creditable amount)</td>
</tr>
<tr>
<td>2.0</td>
<td>½ ounce</td>
</tr>
<tr>
<td>3.0</td>
<td>1 ounce</td>
</tr>
<tr>
<td>4.4</td>
<td>1½ ounces</td>
</tr>
<tr>
<td>6.0</td>
<td>2 ounces</td>
</tr>
</tbody>
</table>

1 The crediting ratio for surimi seafood differs based on portion size due to USDA rounding rules that require rounding down to the nearest 0.25 ounce.
To credit surimi seafood differently from the amounts in table 3-10, CACFP facilities must obtain a CN label or manufacturer’s PFS that documents how the crediting is determined. For example, a manufacturer’s PFS might document that 1 ounce of a surimi seafood product credits as ½ ounce of the meat/meat alternates component. For more information, refer to “Documentation for Commercial Products” in section 2.

The requirements for crediting surimi are summarized in USDA Memo SP 24-2019, CACFP 11-2019 and SFSP 10-2019: Crediting Surimi Seafood in the Child Nutrition Programs. For additional guidance on crediting surimi, refer to the USDA’s webinar, Additional Meat/Meat Alternate Options for CNPs: Crediting Tempeh and Surimi.

**Crediting Tempeh**

Tempeh is a highly nutritious fermented soybean cake traditionally made from whole soybeans. Tempeh may be used as a meat alternate in a variety of recipes, including stir-fries, sandwiches, and salads.

A 1-ounce serving of tempeh credits as 1 ounce of the meat/meat alternates component. This method of crediting applies only to tempeh products whose ingredients are limited to soybeans (or other legumes), water, tempeh culture, and for some varieties, vinegar, seasonings, and herbs. If a tempeh product contains other ingredients, CACFP facilities must obtain a CN label or PFS to document crediting. For more information, refer to “Documentation for Commercial Products” in section 2.

Varieties of tempeh that include other creditable foods as ingredients (such as brown rice, sunflower seeds, sesame seeds, flax seed, and vegetables) may also credit as the meat/meat alternates component, grains component, and vegetables component. To credit in the CACFP meal patterns, a product must provide the minimum creditable quantities, i.e., ¼ ounce of meat/meat alternates, ¼ ounce equivalent of grains, and ¼ cup of vegetables. CACFP facilities must obtain a CN label or manufacturer’s PFS to document how much tempeh and other creditable foods these products contain.

The requirements for crediting tempeh are summarized in USDA Memo SP 25-2019, CACFP 12-2019 and SFSP 11-2019: Crediting Tempeh in the Child Nutrition Programs. For additional guidance on crediting tempeh, refer to the USDA’s webinar, Additional Meat/Meat Alternate Options for CNPs: Crediting Tempeh and Surimi.
Crediting Tofu and Tofu Products

Commercial tofu and tofu products must meet the two criteria below to credit as the meat/meat alternates component.

1. The product must be easily recognizable as a meat substitute. Examples include tofu burgers and tofu sausage. For more information, refer to “Requirement for visible components” at the beginning of section 3.

2. The tofu ingredient must contain at least 5 grams of protein in a 2.2-ounce serving by weight (¼ cup volume equivalent).

CACFP facilities must maintain documentation on file to indicate that tofu products comply with these requirements. For information on how to calculate the grams of protein per serving, refer to the CSDE’s resource, Crediting Tofu and Tofu Products in the CACFP.
Crediting Yogurt and Soy Yogurt

Commercial yogurt and soy yogurt credit as the meat/meat alternates component. Yogurt may be unflavored or flavored; sweetened or unsweetened; whole-fat, low-fat, or nonfat; and may contain added fruit, either blended or on the bottom. Yogurt must meet the Food and Drug Administration’s (FDA) standard of identity for yogurt (21 CFR 131.200), low-fat yogurt (21 CFR 131.203), or nonfat yogurt (21 CFR 131.206).

Serving size for yogurt

The serving size for yogurt is based on volume (cups) or weight (ounces) and is the same for all types, flavors, and fat contents. A ½-cup serving (volume) or 4 ounces (weight) credits as 1 ounce of the meat/meat alternates component in the CACFP meal patterns. Table 3-11 shows the meat/meat alternates contribution for different amounts of yogurt.

<table>
<thead>
<tr>
<th>Serving size</th>
<th>Meat/meat alternates contribution</th>
</tr>
</thead>
<tbody>
<tr>
<td>⅛ cup or 1 ounce</td>
<td>¼ ounce (minimum creditable amount)</td>

<tr>
<td>¼ cup or 2 ounces</td>
<td>½ ounce</td>
</tr>
<tr>
<td>½ cup or 4 ounces</td>
<td>1 ounce</td>
</tr>
<tr>
<td>¾ cup or 6 ounces</td>
<td>1½ ounces</td>
</tr>
<tr>
<td>1 cup or 8 ounces</td>
<td>2 ounces</td>
</tr>
</tbody>
</table>

Sugar limit for yogurt

Yogurt and soy yogurt must meet the CACFP sugar limit of no more than 23 grams of total sugars per 6 ounces (no more than 3.83 grams of sugars per ounce). Yogurt and soy yogurt used in smoothies made on site by CACFP facilities must also meet this requirement. CACFP facilities must maintain documentation on file to indicate that yogurt and soy yogurt served in CACFP meals and snacks comply with the sugar limit. For guidance on how to determine if a product complies with the sugar limit, refer to “Resources for crediting yogurt” in this section.

The CSDE encourages menu planners to read labels and choose products without artificial and nonnutritive sweeteners (e.g., aspartame, acesulfame potassium, sucralose, and stevia), and sugar alcohols. These products are often labeled as “light” or “lite.”
Meal Pattern Requirements for CACFP Child Care Programs

Connecticut State Department of Education
November 2021

3 | Meal Components

Meat/Meat Alternates

Yogurt in smoothies

Yogurt or soy yogurt that meets the sugar limit may credit as the meat/meat alternates component when used as an ingredient in a smoothie. A ½-cup serving of yogurt credits as 1 ounce of the meat/meat alternates component. CACFP facilities must document the amount of yogurt per serving with a standardized recipe for smoothies made on site, and a CN label or PFS for commercial products. For more information, refer to “Standardized Recipes” and “Documentation for Commercial Products” in section 2.

The addition of yogurt to a smoothie is not a substitution for fluid milk. Fluid milk must be offered at breakfast, lunch, and supper to meet the milk component requirement of the CACFP meal patterns. For more information on smoothies, refer to “Crediting Fruit and Vegetable Smoothies” in the “Fruits Component” section.

Noncreditable yogurt

Drinkable or squeezable yogurt and frozen yogurt do not credit in the CACFP meal patterns. The FDA’s definition and standard of identity requires that yogurt must be “coagulated,” not liquid. The FDA does not have a standard of identity for frozen yogurt. Homemade yogurt does not credit for food safety reasons. Yogurt-flavored products (such as yogurt bars and yogurt-covered fruit or nuts) do not meet the FDA’s definition and standard of identity for yogurt, and do not credit in the CACFP meal patterns.

Resources for crediting yogurt

The resources below assist menu planners with crediting yogurt as the meat/meat alternates component in the CACFP meal patterns.

- Calculating Sugar Limits for Yogurt in the CACFP – Handouts in English and Spanish (USDA):

- Choose Yogurts that are Lower in Sugar – Handouts, training slides, and webinars in English and Spanish (USDA):
  https://www.fns.usda.gov/tn/choose-yogurts-are-lower-sugar

- Crediting Smoothies in the CACFP (CSDE):
  https://portal.ct.gov/-/media/SDE/Nutrition/CACFP/Crediting/CreditSmoothiesCACFP.pdf

- Crediting Yogurt in the CACFP (CSDE):
  https://portal.ct.gov/-/media/SDE/Nutrition/CACFP/Crediting/CreditYogurtCACFP.pdf

Noncreditable Foods in the Meat/Meat Alternates Component

Examples of foods that do not credit as the meat/meat alternates component include, but are not limited to:

- bacon;
- commercial canned soups, e.g., beef barley, beef noodle, turkey or chicken noodle, and turkey or chicken rice;
- cream cheese;
- drinkable yogurt;
- egg whites;
- frozen yogurt;
- imitation cheese;
- products made with tofu that are not easily recognized as meat substitutes;
- sour cream;
- tofu that contains less than 5 grams of protein in 2.2-ounce serving by weight; and
- yogurt or soy yogurt that contains more than 3.83 grams of sugars per ounce.

For more information, refer to “Noncreditable foods” in the beginning of section 3 and the CSDE’s resource, Noncreditable Foods in CACFP Child Care Programs.

Menu planners should use the FBG to identify foods that credit as the meat/meat alternates component. For more information, refer to “Food Buying Guide for Child Nutrition Programs” in this section.
Resources for Crediting Meat/Meat Alternates

The resources below assist menu planners with crediting foods as the meat/meat alternates component in the CACFP meal patterns.

For additional crediting resources, visit the “Meat/Meat Alternates Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
3 | Meal Components

Meat/Meat Alternates
Vegetables Component

The vegetables component includes fresh, frozen, canned, and rehydrated dried vegetables; and pasteurized full-strength vegetable juice. Menu planners should consult the USDA’s FBG to determine the crediting information for specific vegetables. The USDA’s CACFP Best Practices recommends that CACFP menus include at least one serving per week of dark green vegetables, red and orange vegetables, beans and peas (legumes), starchy vegetables, and other vegetables. For more information, refer to the CSDE’s resource, Vegetable Subgroups in the CACFP.

The USDA’s CACFP Best Practices also recommends incorporating seasonal and locally produced foods into meals. For more information, visit the USDA’s Farm to Preschool webpage, the CSDE’s Farm to School webpage, and the University of Connecticut’s Put Local on Your Tray webpage.

Some vegetables may be choking hazards for young children. Examples include cooked or raw whole-kernel corn, and small pieces of raw vegetables, e.g., raw green peas, whole beans, raw carrot rounds, baby carrots, string beans, celery, and other raw or partially cooked hard vegetables. Consider children’s ages and developmental readiness when deciding what vegetables to offer in CACFP menus. Preparation techniques to reduce the risk of choking include cooking until soft, and cutting, dicing, or shredding into small pieces. For additional guidance, refer to “Choking Prevention” in section 1.
Serving Size for Vegetables

The CACFP meal patterns for children require a serving of the vegetables component at lunch and supper. At breakfast, vegetables and fruits are one component and may include a serving of vegetables, fruits, or both. A serving of vegetables may be one of the two required snack components.

Table 3-12 summarizes the required servings of the vegetables component for each age group and meal.

<table>
<thead>
<tr>
<th>Meal</th>
<th>Ages 1-2</th>
<th>Ages 3-5</th>
<th>Ages 6-12</th>
<th>Ages 13-18 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Breakfast</td>
<td>¼ cup</td>
<td>¼ cup</td>
<td>½ cup</td>
<td>½ cup</td>
</tr>
<tr>
<td>Lunch and supper</td>
<td>⅛ cup</td>
<td>¼ cup</td>
<td>½ cup</td>
<td>½ cup</td>
</tr>
<tr>
<td>Snack</td>
<td>½ cup</td>
<td>½ cup</td>
<td>¾ cup</td>
<td>½ cup</td>
</tr>
</tbody>
</table>

1 This age group applies only to at-risk afterschool programs and emergency shelters.
2 Vegetables and fruits are one component and may include vegetables, fruits, or both.

The amounts for the vegetables component refer to the edible portion after any applicable preparation techniques, such as peeling, trimming, and cooking. All vegetables credit based on volume (cups) with the exceptions below.

- Raw leafy greens credit as half the volume served (refer to “Crediting Raw Leafy Greens” in this section).
- Dried or dehydrated vegetables (such as potato flakes and dried soup mix) credit based on the amount of vegetables per serving in the rehydrated volume (refer to “Crediting Dried Vegetables” in this section).

Menu planners should consult the USDA’s FBG to determine the number of servings that a specific quantity of vegetables provides. For more information, refer to “Food Buying Guide for Child Nutrition Programs” in section 2.
Meeting the required vegetable servings
CACFP facilities may choose to serve a combination of several vegetables to meet the daily requirement, as long as each serving contains at least \( \frac{1}{8} \) cup of vegetables (refer to “Minimum creditable amounts” in the beginning of section 3). For example, a lunch or supper menu for ages 6-12 could meet the required \( \frac{1}{2} \)-cup serving of the vegetables component with \( \frac{1}{2} \) cup of broccoli, or \( \frac{1}{4} \) cup of broccoli and \( \frac{1}{4} \) cup of carrots. Servings that contain less than \( \frac{1}{8} \) cup of vegetables do not credit.

If a menu item contains less than the full serving of the vegetables component, the meal must include additional vegetables to meet the full serving for each age group. For example, the lunch and supper meal pattern for ages 3-5 requires \( \frac{1}{4} \) cup of the vegetables component. If a menu item contains \( \frac{1}{8} \) cup of vegetables, the menu planner must include another menu item with at least \( \frac{1}{8} \) cup of vegetables to provide the full serving for ages 3-5.

When crediting menu items toward the vegetables component, menu planners must **round down** to the nearest \( \frac{1}{8} \) cup. For example, a standardized recipe or commercial product that contains 2 \( \frac{1}{2} \) tablespoons of corn per serving credits as 2 tablespoons (\( \frac{1}{8} \) cup) of the vegetables component.

Substituting Vegetables for Fruits at Lunch and Supper
Vegetables can replace the fruits component at any lunch. Lunches and suppers can contain one serving of the vegetables component and one serving of the fruits component, or two different servings of the vegetables component. For example, menu planners may choose to substitute vegetables for the fruits component on Monday and Friday, or every day of the week. Lunches and suppers cannot contain two servings of only the fruits component.

Crediting Canned Vegetables
Canned vegetables must be drained. A serving of canned vegetables cannot include the packing liquid, such as water or sauce. For example, to credit as \( \frac{1}{2} \) cup of the vegetables component, a \( \frac{1}{2} \)-cup serving of canned peas cannot include the water in which it is packed, and a \( \frac{1}{2} \)-cup serving of baked beans cannot include the sauce in which it is packed. The serving must contain \( \frac{1}{2} \) cup of vegetables **before** any added liquid.
3 | Meal Components

Vegetables

**Crediting Dried Vegetables**

Dried or dehydrated vegetables (such as potato flakes and dried soup mix) credit as the vegetables component based on their rehydrated volume. Dried vegetables used for seasonings (such as dried onion and dried parsley) do not credit in the CACFP meal patterns.

The FBG lists yields for some dehydrated vegetables, such as pinto beans, refried beans, onions, bell peppers, potatoes, seaweed, and sweet potatoes. Dried vegetables not listed in the FBG require a PFS to determine crediting information. The PFS must provide specific documentation on the amount of vegetables per serving in the rehydrated volume. Menu planners should check the accuracy of the PFS prior to including foods with dehydrated vegetables in reimbursable meals and snacks. For more information, refer to “Documentation for Commercial Products” in section 2.

**Determining rehydrated volume**

The rehydration volume of dried vegetables often varies from brand to brand. Menu planners must use the procedure below to determine the hydrated volume for each brand of dehydrated product.

1. Rehydrate (add water or liquid to) a purchase unit of the dehydrated vegetable according to the manufacturer’s directions. If the container does not include directions, request rehydration directions from the manufacturer.

2. Measure the rehydrated volume.

3. Measure the number of ¼-cup servings of rehydrated product provided by one purchase unit.

4. Keep records on file as verification. Records should include information on the size of the purchase unit, the number of ¼-cup servings of rehydrated product per purchase unit, the name of the manufacturer, and the manufacturer’s directions for rehydrating the product.

For more information, refer to “Determining in-house product yields” in section 2.
Crediting Hominy as Vegetables

Hominy is a traditional food in Mexican and Native American cultures that is commonly served as a vegetable or milled grain product, e.g., hominy grits. Hominy is made from whole kernels of maize (dried field corn) that have been soaked in an alkaline solution (nixtamalized). This process removes the hull and germ, causes the corn to puff up to about double its normal size, and increases the bioavailability of certain nutrients, such as calcium and niacin.

Hominy is available dried and in a fully cooked canned form. Drained canned hominy or cooked whole hominy (from dried hominy) credits toward the vegetables component as a starchy vegetable. For example, ¼ cup of canned drained hominy credits as ¼ cup of the starchy vegetables subgroup. As a reminder, the CACFP meal patterns do not require vegetable subgroups. However, the USDA’s CACFP Best Practices recommends providing at least one serving of each vegetable subgroup per week.

For information on crediting hominy as the grains component, refer to “Crediting Hominy as Grains” in the “Grains Component” section.

Crediting Legumes as Vegetables

Legumes credit as the vegetables component or the meat/meat alternates component, but not both in the same meal or snack. The menu planner must determine in advance how to credit legumes in a meal. For information on crediting legumes as the meat/meat alternates component, refer to “Crediting Legumes as Meat/Meat Alternates” in the “Meat/Meat Alternates Component” section.

Legumes credit as the vegetables component based on the volume (cups) served. For example, ½ cup of kidney beans credits as ½ cup of the vegetables component.

A serving of cooked legumes must contain the minimum required amount of beans, excluding other ingredients such as sauce and pork fat. For example, ½ cup of baked beans that contains ¼ cup of sauce and pork fat credits as ¾ cup of the vegetables component. For more information, refer to “Vegetables with Added Ingredients” in this section.
Meal Components

Vegetables

A menu item must provide at least ⅛ cup of legumes to credit toward part of the vegetables component. If the amount is less than the full CACFP serving, the meal or snack must include additional vegetables to meet the full serving for each age group. For more information, refer to “Minimum creditable amounts” in the beginning of section 3 and “Serving Size for Vegetables” in this section.

**Note:** Peanuts are legumes that credit only as the meat/meat alternates component. For more information, refer to “Nuts and Seeds” in the “Meat/Meat Alternates” section.

**Crediting roasted or dried legumes as vegetables**

Roasted or dried legumes, such as chickpeas and soybeans, credit as the vegetables component based on the volume (cups) served. For example, ¼ cup of roasted or dried legumes credits as ¼ cup of the vegetables component.

The USDA recommends that menu planners use discretion when offering snack-type legumes (such as individually wrapped soy nuts) as part of reimbursable meals, due to their perception as snack foods. While these types of products credit in CACFP meals, they may be better suited for meals served off site, such as bagged lunches for field trips.

Considerations for serving roasted or dried legumes are similar to nuts. Roasted or dried legumes may be choking hazards for young children. Consider children’s ages and developmental readiness when deciding whether to offer roasted or dried legumes in CACFP menus. For additional guidance, refer to “Choking Prevention” in section 1.

For information on crediting roasted or dried legumes as the meat/meat alternates component, refer to “Crediting roasted or dried legumes as meat/meat alternates” in the “Meat/Meat Alternates Component” section.

**Crediting legumes in recipes as vegetables**

A recipe must provide at least ⅛ cup of legumes per serving to credit toward the vegetables component. The menu planner must determine the recipe’s crediting information for the vegetables component by dividing the total volume (cups) of beans in the recipe by the number of servings, then rounding down to the nearest ⅛ cup. For guidance on how to calculate the contribution of legumes in a recipe, refer to the CSDE’s resource, *Crediting Legumes in the CACFP*. 

For more information on the requirements, refer to the Connecticut State Department of Education’s resource, Meal Pattern Requirements for CACFP Child Care Programs.
Crediting Mixed Vegetables at Lunch and Supper

The CACFP meal patterns allow vegetables to substitute for the fruits component at any lunch or supper. Vegetable mixtures (such as carrots, peas, and corn; three-bean salad; and a California mix of broccoli, cauliflower, and carrots) may credit toward both the vegetables component and the fruits component, if the mixture contains at least ⅛ cup each of two different kinds of vegetables.

For example, a lunch or supper menu for ages 3-5 includes a vegetable mixture of ¼ cup of broccoli and ¼ cup of cauliflower. Since vegetables may substitute for the fruits component at lunch and supper, the menu planner may choose to credit the broccoli as the full vegetables component (¼ cup), and use the cauliflower to replace the full fruits component (¼ cup). The cauliflower provides the minimum ¼-cup serving for the fruits component.

The crediting of mixed vegetables depends on whether the menu planner knows the amount of each type of vegetable in the mixture. If the menu planner does not know the quantities of the different vegetables in a mix (such as frozen mixed carrots and peas), the vegetable mixture credits as one serving of vegetables and cannot credit as the fruit component. In this case, the lunch or supper menu would require either a serving of the fruits component, or another serving of vegetables substituted for the fruits component. For more information, refer to “Substituting Vegetables for Fruits at Lunch” in this section.
Meal Components

3 | Meal Components

Vegetables

Crediting Pasta Products Made of Vegetable Flour

Pasta products made of vegetable flours credit as the vegetables component if they meet the specific requirements in USDA Memo SP 26-2019, CACFP 13-2019 and SFSP 12-2019: Crediting Pasta Products Made of Vegetable Flour in the Child Nutrition Programs. These requirements are summarized below.

Pasta made of 100 percent legumes may also credit as the meat/meat alternates component, but cannot credit as the vegetables component and the meat/meat alternates component in the same meal. For more information, refer to “Crediting Legume Flour Pasta Products as Meat/Meat Alternates” in the Meat/Meat Alternates section.

Crediting vegetable flours as vegetables

Pasta made of one or more 100 percent vegetable flours credits toward the vegetables component, even when it is not served with another recognizable vegetable. These products credit the same as vegetables, e.g., ½ cup of pasta made of 100 percent vegetable flour credits as ½ cup of the vegetables component. The ingredients statements below show examples of pasta products that contain 100 percent vegetable flours.

- Ingredients: Red lentil flour.
- Ingredients: Green lentils, cauliflower, parsnips.

Crediting vegetable flours from one vegetable subgroup

Pasta products made of one or more vegetable flours from one vegetable subgroup may credit toward the appropriate vegetable subgroup. For example, pasta made of 100 percent red lentil flour credits as ½ cup of the legumes subgroup.

The CACFP meal patterns do not require vegetable subgroups. However, the USDA’s CACFP Best Practices recommends providing at least one serving of each vegetable subgroup per week.

Pasta made of 100 percent legumes may also credit as the meat/meat alternates component, but cannot credit as the legumes subgroup and the meat/meat alternates component in the same meal. For more information, refer to “Crediting Legume Flour Pasta Products as Meat/Meat Alternates” in the Meat/Meat Alternates section.
Crediting vegetable flours with other non-vegetable ingredients

Pasta products made of vegetable flour with other non-vegetable ingredients may credit toward the vegetables component (or in the case of 100 percent legume pasta, the meat/meat alternates component) with a PFS that details the actual volume of vegetable flour per serving. This crediting does not apply to grain-based pasta products that contain small amounts of vegetable powder for color, such as spinach pasta or sun-dried tomato pasta.

The ingredients statement below shows an example of a pasta product that does not credit toward the vegetables component. This product contains dried spinach in an amount that is too small to credit.

- Ingredients: Semolina (wheat), durum flour (wheat), *dried spinach*, niacin, ferrous sulfate (iron), thiamin mononitrate, riboflavin, folic acid.

The example below shows an ingredients statement for a vegetable pasta product that contains dried vegetables (carrot, tomato, and spinach) and other non-vegetable ingredients.

- Ingredients: Semolina (wheat), durum flour (wheat), *dried carrots, dried tomato, dried spinach*, niacin, ferrous sulfate (iron), thiamin mononitrate, riboflavin, folic acid.

This product might credit toward the vegetables component depending on the amount of dried carrots, dried tomato, and dried spinach per serving. The CACFP facility must obtain a PFS from the manufacturer to determine the crediting information for this product.

Signage and staff training for vegetable flour pastas

The USDA encourages CACFP facilities to provide information that helps children understand what foods are in their meals and snacks. For example, if meal includes 100 percent chickpea pasta as the vegetables component, the menu could list chickpea pasta with a symbol showing it to be part of the vegetables component (not the grains component) of the meal.

Menu planners should also inform serving staff when meals include pasta made with vegetable flours, so they are aware of how these foods contribute to the CACFP meal patterns.
Crediting Pureed Vegetables

Pureed vegetables must be visible to credit in the CACFP meal patterns. Examples include pureed foods made from one vegetable such as tomato sauce, split pea soup, mashed potatoes, mashed sweet potatoes, and pureed butternut squash. For more information, refer to “Requirement for visible components” at the beginning of section 3.

Foods that contain pureed vegetables that are not visible (such as pureed carrots in macaroni and cheese) cannot credit as the vegetables component unless they also provide at least ⅛ cup of visible creditable vegetables. For example, a serving of macaroni and cheese that contains ⅛ cup of diced butternut squash (visible) and ⅛ cup of pureed carrots (not visible) credits as ¼ cup of the vegetables component.

Pureed vegetables credit based on the volume (cups) after pureeing. For example, to determine the volume of pea puree obtained from 1 cup of green peas, food service staff would puree the whole peas and measure the resulting amount of puree. Pureed vegetables typically have a smaller volume than the whole vegetable pieces. For more information, refer to “Determining in-house product yields” in section 2.

CACFP facilities must document crediting information with a standardized recipe or PFS. For more information, refer to “Standardized Recipes” and “Documentation for Commercial Products” in section 2.

Pureed vegetables do not credit when used to improve the nutrient profile of a food. For example, pureed legumes in brownies cannot credit toward the legumes subgroup or the meat/meat alternates component, and pureed sweet potatoes in a spice cake cannot credit toward the vegetables component. The USDA emphasizes the importance of the nutrition education aspect of the CACFP, which includes the goal of helping children easily recognize the key food groups that contribute to a healthy meal.
Crediting Raw Leafy Greens

Raw leafy greens credit as half the volume served. For example, ½ cup of raw leafy greens credits as ¼ cup of the vegetables component. Examples of raw leafy greens include kale, greens (e.g., beet, collard, mustard, and turnip), spinach, arugula, and lettuce such as iceberg, romaine, Boston, Bibb, red leaf, and spring mix.

Cooked leafy greens (such as spinach and kale) and roasted or dried leafy greens (such as roasted kale) credit based on the volume served. For example, ½ cup of cooked spinach or roasted kale credits as ¼ cup of the vegetables component.

Crediting Soups

Vegetable soups made from scratch credit based on the amount of vegetables contained in one serving. CACFP facilities must document this information with a standardized recipe based on the yields listed in the FBG. For more information, refer to “Standardized Recipes” and “Food Buying Guide for Child Nutrition Programs” in section 2.

Creditable commercial vegetable soups include lentil, pea, and bean (legumes); minestrone; tomato; tomato with other basic components such as rice; vegetable (contains only vegetables); and vegetable with other basic components such as meat or poultry. The FBG indicates that a 1-cup serving of a commercial legume soup credits as ½ cup of vegetables, and a 1-cup serving of commercial vegetable soup credits as ¼ cup of vegetables. The serving refers to the amount of the cooked soup, e.g., heated canned or frozen ready-to-serve soup, reconstituted dried soup, and reconstituted condensed soup.

Commercial beef barley soup, chicken or turkey noodle soup, chicken or turkey rice soup, and cream vegetable soups (such as cream of broccoli and cream of mushroom) do not credit in the CACFP meal patterns.

Menu planners should consider the appropriateness of the serving size for children. The large serving of a commercial soup needed to provide the full vegetables component might be unreasonable, especially for younger children. For example, to provide ¼ cup of the vegetables component for ages 6-12 at snack requires 3 cups of a commercial vegetable soup and 1½ cups of a commercial legume soup. For additional guidance, refer to the CSDE’s resource, Crediting Soups in the CACFP.
Considerations for size of serving container

The served portion of soup (commercial or made from scratch) must be sufficient to provide the amount of each component being credited toward the meal patterns. Menu planners should consider the size of the container used to serve the soup. A 1-cup container (8 fluid ounces) does not provide 1 cup of soup unless it is completely filled to the top, which is impractical.

To avoid spilling and ensure that the served portion meets the meal pattern requirements, the container should be larger than the planned serving size of soup. For example, CACFP facilities could use a 10-fluid ounce bowl to hold 8 fluid ounces (1 cup) of soup and a 6-fluid ounce bowl to hold 4 fluid ounces (½ cup) of soup.

Crediting Vegetable and Fruit Mixtures

Mixtures of vegetables and fruits may credit toward both the vegetables component and fruits component if the serving contains at least ⅛ cup of visible vegetables and at least ⅛ cup of visible fruits.

For example, a carrot-raisin salad that contains ½ cup of carrots and ¼ cup of raisins credits as ½ cup of the vegetables component and ¼ cup of the fruits component. Dried fruits credit as twice the volume served. For more information, refer to “Crediting Dried Fruits” in the “Fruits Component” section.
Crediting Vegetable Juice

Vegetable juice must be pasteurized 100 percent full-strength juice or a combination of vegetable and fruit juices. It can be fresh, frozen, or made from concentrate. The name of the full-strength juice on the label must include one of the following terms: “juice,” “full-strength juice,” “100 percent juice,” “reconstituted juice,” or “juice from concentrate.”

Pasteurized full-strength juice credits as the vegetables component or fruits component at only one CACFP meal or snack per day.

For more information, refer to “Juice limit” in the “Fruits Component” section, and the CSDE’s resource, Crediting Juice in the CACFP.

Crediting Vegetables in Combination Foods

Combination foods (such as pizza, lasagna, chili, vegetable egg rolls, hummus, and chicken-vegetable stir-fry) contain more than one food component. For example, cheese pizza contains the grains component (crust), the meat/meat alternates component (cheese), and the vegetables component (tomato sauce).

The visible vegetable portion of a combination food credits based on the amount of vegetables per serving. For more information, refer to “Requirement for visible components” at the beginning of section 3.

For foods made from scratch, CACFP facilities must have a recipe that documents the cups of vegetables per serving, based on the yields listed in the FBG. For more information, refer to “Standardized Recipes” and “Food Buying Guide for Child Nutrition Programs” in section 2.

For commercial products, CACFP facilities must obtain a CN label (if the vegetables are part of a main dish entree that contributes to the meat/meat alternates component) or a PFS stating the specific contribution of vegetables. CACFP facilities are responsible for checking the manufacturer’s PFS for accuracy prior to including commercial products in CACFP meals and snacks. For more information, refer to “Documentation for Commercial Products” in section 2.
Crediting Vegetables with Added Ingredients

If a commercial product or CACFP recipe contains added ingredients (such as mayonnaise, yogurt, sugar, molasses, salad dressing, or breading), only the vegetable portion credits toward the CACFP meal patterns.

For example, to credit coleslaw as ½ cup of the vegetables component, the serving must contain ½ cup of shredded cabbage and carrots, before added ingredients such as mayonnaise, sugar, and spices. Other examples of vegetables with added ingredients include tossed salad with dressing and croutons; potato salad; sweet potato casserole with marshmallows; mashed potatoes made with butter and milk; baked beans with sauce; carrot-raisin salad; breaded vegetables; and vegetables with cheese.

CACFP facilities must document the amount of vegetables per serving with a recipe for foods made from scratch (based on the vegetable yields listed in the FBG) or a PFS for commercial products. CACFP facilities are responsible for checking the manufacturer’s PFS for accuracy prior to including commercial products in CACFP meals and snacks. For more information, refer to “Standardized Recipes,” “Food Buying Guide for Child Nutrition Programs,” and “Documentation for Commercial Products” in section 2.

Recipes and PFS forms are not required for vegetables without added ingredients, such as whole or cut-up fresh vegetables, canned vegetables, and frozen vegetables.
**Noncreditable Foods in the Vegetables Component**

Examples of foods that do not credit as the vegetables component include, but are not limited to:

- chili sauce;
- dehydrated vegetables used for seasoning;
- cream vegetable soups, e.g., cream of broccoli and cream of mushroom;
- home-canned products (for food safety reasons);
- ketchup;
- pickle relish; and
- snack-type foods made from vegetables, such as potato chips.

For more information, refer to “Noncreditable Foods” in the beginning of section 3 and the CSDE’s resource, *Noncreditable Foods in CACFP Child Care Programs*.

---

Menu planners should use the FBG to identify foods that credit as the vegetables component. For more information, refer to “Food Buying Guide for Child Nutrition Programs” in this section.

For additional crediting resources, visit the “Vegetables Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
3. Meal Components

Vegetables
Fruits Component

The fruits component includes fresh, frozen, canned, and dried fruits; and pasteurized full-strength fruit juice. The USDA’s *CACFP Best Practices* encourages CACFP facilities to:

- serve a variety of fruits and choose whole fruits (fresh, canned, dried, or frozen) more often than juice;
- make at least one of the two required snack components a vegetable or a fruit, and
- incorporate seasonal and locally produced foods into meals.

For information on farm to school, visit the USDA’s *Farm to Preschool* webpage, the CSDE’s *Farm to School* webpage, and the University of Connecticut’s *Put Local on Your Tray* webpage.

Some fruits may be choking hazards for young children. Examples include whole grapes, berries, melon balls, apples and other hard pieces of raw fruit; and dried fruits. Consider children’s ages and developmental readiness when deciding what fruits to offer in CACFP menus. Preparation techniques to reduce the risk of choking include cooking until soft, and cutting, dicing, or shredding into small pieces. For additional guidance, refer to “Choking Prevention” in section 1.
Serving Size for Fruits

The CACFP meal patterns for children require a serving of the fruits component at lunch and supper. A serving of fruit may be one of the two required snack components. Table 3-13 summarizes the required servings of the fruits component for each age group and meal.

**Table 3-13. Required servings of the fruits component**

<table>
<thead>
<tr>
<th>Meal</th>
<th>Ages 1-2</th>
<th>Ages 3-5</th>
<th>Ages 6-12</th>
<th>Ages 13-18</th>
</tr>
</thead>
<tbody>
<tr>
<td>Breakfast ²</td>
<td>¼ cup</td>
<td>¼ cup</td>
<td>½ cup</td>
<td>½ cup</td>
</tr>
<tr>
<td>Lunch and supper ³</td>
<td>⅛ cup</td>
<td>¼ cup</td>
<td>½ cup</td>
<td>½ cup</td>
</tr>
<tr>
<td>Snack ⁴</td>
<td>½ cup</td>
<td>½ cup</td>
<td>¾ cup</td>
<td>½ cup</td>
</tr>
</tbody>
</table>

1. This age group applies only to at-risk afterschool programs and emergency shelters.
2. Vegetables and fruits are one component and may include vegetables, fruits, or both.
3. Vegetables may substitute for the full fruits component at any lunch or supper.
4. Juice cannot be served when milk is the only other snack component. Only one snack component can be a creditable beverage such as juice, a fruit smoothie, or milk.

The amounts for the fruits component refer to the edible portion after any applicable preparation techniques, such as peeling, removing seeds and pits, and cooking. All fruits credit based on volume (cups) except for dried fruits, which credit as twice the volume served. For more information, refer to “Crediting Dried Fruits” in this section.

Menu planners should consult the USDA’s FBG to determine the number of servings provided by a specific quantity of fruit. For more information, refer to “Food Buying Guide for Child Nutrition Programs” in section 2.

All fruits credit based on volume (cups) except for dried fruits, which credit as twice the volume served (refer to “Crediting Dried Fruits” in this section). The menu planner may choose to serve one fruit or a combination of several fruits to meet the full serving for each age group. For example, a lunch or supper menu for ages 3-5 can meet the required ¼-cup serving of the fruits component with ¼ cup of peaches, or ⅛ cup of peaches and ⅛ cup of applesauce. For more information, refer to “Minimum creditable amounts” at the beginning of section 3.

Menu planners should consult the USDA’s FBG to determine the number of servings provided by a specific quantity of fruit. For more information, refer to “Food Buying Guide for Child Nutrition Programs” in section 2.
Meeting the required fruit servings

CACFP facilities may choose to serve a combination of several fruits to meet the daily requirement, as long as each serving contains at least \( \frac{1}{8} \) cup of fruit (refer to “Minimum creditable amounts” in the beginning of section 3). For example, a lunch or supper menu for ages 3-5 could meet the required \( \frac{1}{4} \)-cup serving of the fruits component with \( \frac{1}{8} \) cup of peaches and \( \frac{1}{8} \) cup of applesauce. Servings that contain less than \( \frac{1}{8} \) cup of fruit do not credit.

If a menu item contains less than the full serving of the fruits component, the meal must include additional fruit to meet the full serving for each age group. For example, the lunch and supper meal pattern for ages 6-12 requires \( \frac{1}{2} \) cup of the fruits component. If a menu item contains \( \frac{1}{4} \) cup of fruit, the menu planner must include another menu item with at least \( \frac{1}{4} \) cup of fruit to provide the full serving for ages 6-12.

When crediting menu items toward the fruits component, menu planners must **round down** to the nearest \( \frac{1}{8} \) cup. For example, a standardized recipe or commercial product that contains 2½ tablespoons of strawberries per serving credits as 2 tablespoons (\( \frac{1}{8} \) cup) of the fruits component.

Crediting Canned Fruits

The CACFP meal patterns allow canned fruit in juice, water, or syrup. Canned fruits in heavy syrup have a higher added sugar content than other types of canned fruits. The USDA recommends choosing fruits canned in juice, water, or light syrup.

A serving of canned fruit may include the 100 percent juice in which the fruit is packed, but cannot include water or syrup. For example, \( \frac{1}{2} \) cup of canned peaches in juice credits as \( \frac{1}{2} \) cup of the fruits component. However, \( \frac{1}{2} \) cup of canned peaches in syrup does not credit as \( \frac{1}{2} \) cup of the fruits component. The menu planner can credit only the amount of peaches without the syrup.

The juice from canned fruit counts toward the juice limit if the menu planner credits the juice toward the fruits component (refer to “Juice limit” in this section). For example, if canned pears in juice credit as the fruits component at lunch, juice cannot credit as the fruits component or the vegetables component at any other CACFP meal or snack that same day.
3 | Meal Components

Fruits

Juice from canned fruit does not count toward the juice limit if the juice is planned as an extra noncreditable food. For example, the juice from canned fruit does not count toward the juice limit if food service personnel portion ½ cup of canned fruit in a 5½-ounce container, and then add the juice after measuring the full ½-cup serving of fruit.

**Crediting Coconut**

Fresh and frozen coconut credit as the fruits component based on the volume served. For example, ⅛ cup of fresh or frozen coconut credits as ⅛ cup of the fruits component. Dried coconut credits the same as other dried fruits (twice the volume served). For example, ⅛ cup of dried coconut credits as ¼ cup of the fruits component. For more information, refer to “Crediting Dried Fruits” in this section.

Coconut is high in calories and saturated fat, and should be limited in CACFP menus. Coconut flour, coconut oil, and coconut milk do not credit.

Juices labeled as 100 percent juice, including coconut water, credit toward the fruits component based on the volume served. Menu planners must count coconut water with all other juices toward the juice limit. For more information, refer to “Coconut water” and “Juice limit” in this section.

The requirements for crediting coconut are summarized in USDA Memo SP 34-2019, CACFP 15-2019 and SFSP 15-2019: *Crediting Coconut, Hominy, Corn Masa, and Masa Harina in the Child Nutrition Programs:*

**Crediting Dried Fruits**

Dried fruits (such as raisins, apricots, dried cherries, dried cranberries, dried blueberries, mixed dried fruit, and dried coconut) credits as twice the volume served. For example, ¼ cup of raisins credits as ½ cup of the fruits component. This crediting requirement does not apply to dried fruits in amounts less than ⅛ cup (the minimum creditable amount). For example, ⅛/16 cup (1 tablespoon) of raisins does not credit as ⅛ cup fruit.

Dried fruits may be choking hazards for young children. Consider children’s ages and developmental readiness when deciding whether to offer dried fruits in snack menus. For additional guidance, refer to “Choking Prevention” in section 1.
Manufacturers sometimes process dried fruits with added sugar to keep the fruit pieces separated. The CSDE encourages menu planners to read labels and choose dried fruit without added sweeteners, including sugars and nonnutritive sweeteners, e.g., aspartame, acesulfame potassium, sucralose, and stevia.

**Crediting Fresh Fruits**

Some fresh fruits may be choking hazards for young children. Examples include whole grapes, berries, melon balls, and apples and other hard pieces of raw fruit. Consider children’s ages and developmental readiness when deciding what fresh fruits to offer in CACFP menus. Preparation techniques to reduce the risk of choking include removing seeds and hard pits, cooking until soft, and cutting, dicing, or shredding into small pieces. For additional guidance, refer to “Choking Prevention” in section 1.

The crediting contribution of one piece of fresh fruit (whole or cut-up) varies depending on the type and size, and ranges from ¼ cup to 1¼ cups. For example, the FBG indicates that:

- one 60-count plum, one 88-count peach, and one clementine each credit as ⅜ cup of fruit;
- one 100-120-count banana, one 150-count pear, one 80-count peach, one 138-count orange, and one 45-count plum each credit as ½ cup of fruit;
- one 113-count and 125-count orange each credit as ¾ cup of fruit;
- one size 56-64 nectarine, one size 56 peach, and one 120-count pear each credit as ¾ cup of fruit; and
- one 125-138-count apple credits as 1 cup of fruit.

Menu planners must ensure that an individual piece of fresh fruit (whole or cut-up) provides the correct serving for each meal and snack. If the amount is less than the full serving of the fruits component, the CACFP menu must include additional fruit to provide the full serving. The examples below illustrate this requirement.

- The breakfast meal pattern for ages 3-5 and 6-12 (and ages 13-18 in at-risk afterschool programs and emergency shelters) requires ½ cup of fruits, vegetables, or both. One 120-count tangerine credits as ⅜ cup of fruit, which does not provide the full-required serving. To credit as the full component, the breakfast menu must include an additional ⅛ cup of fruits or vegetables.
• The snack meal pattern for ages 6-12 (and ages 13-18 in at-risk afterschool programs and emergency shelters) requires ¾ cup of the fruits component. One 100-120-count banana credits as ½ cup of fruit, which does not provide the full-required serving. To credit as the full fruits component, the snack menu must include an additional ¼ cup of the fruits component.

Table 3-14 lists the FBG’s meal pattern contribution for some fresh fruits, and the additional amount needed to provide a ½-cup or ¾-cup serving.

<table>

1 Consider children’s ages and developmental readiness when deciding what fruits to offer. Prepare all fruits to reduce the risk of choking. For more information, refer to “Choking Prevention” in section 1.

2 A ½-cup serving of the fruits component is required at breakfast for ages 6-12 (and ages 6-18 in at-risk afterschool programs and emergency shelters); and at snack for ages 1-5, if fruit is one of the two required snack components.

3 At lunch, supper, and snack, the additional amount can be from the same fruit or a different fruit. At breakfast, the additional amount can be from the same fruit, a different fruit, or a vegetable.

4 At snack, the serving size of the fruits component is ¾ cup for ages 6-12 (and ages 6-18 in at-risk afterschool programs and emergency shelters).
Crediting Frozen Fruits

A serving of thawed frozen fruit (such as frozen strawberries) may include the thawed juice. The USDA recommends limiting frozen fruits with added sugars.

Crediting Fruits in Commercial Products

Commercial products that contain at least $\frac{1}{8}$ cup of one or more visible fruits (such as mixed berries in a yogurt-fruit parfait) credit based on the amount (cups) of fruit per serving. For more information, refer to “Requirement for visible components” in the beginning of section 3 and “Documentation for Commercial Products” in section 2.

To credit in the CACFP meal patterns, commercial products must have a CN label or PFS that documents the amount of fruits per serving. CACFP facilities are responsible for checking the PFS for accuracy prior to including commercial products in CACFP meals and snacks. For more information, refer to “Requirement for visible components” in the beginning of section 3 and “Documentation for Commercial Products” in section 2.

Crediting Fruits in Grain-Based Desserts

The visible fruit portion of grain-based desserts (such as fruit crisp, fruit pies, and fruit turnovers) credits based on the amount of fruit in the serving, excluding the grain portion (such as crisp topping and piecrust). For example, a fruit turnover that contains $\frac{1}{2}$ cup of apples credits as $\frac{1}{2}$ cup of the fruits component. For more information, refer to “Requirement for visible components” at the beginning of section 3.

The grain portion of grain-based desserts (such as piecrust and cobbler or crisp topping) does not credit as the grains component in the CACFP meal patterns (refer to “Grain-based desserts” in the “Grains Component” section). The large amount of a grain-based dessert needed to provide the required serving of fruit might be unreasonable, especially for younger children.

For foods made from scratch, CACFP facilities must have a recipe that documents the cups of fruit per serving, based on the yields listed in the FBG. For commercial products, CACFP facilities must obtain a manufacturer’s PFS stating the amount of fruits per serving. CACFP facilities are responsible for checking the manufacturer’s PFS for accuracy prior to including commercial products in CACFP meals and snacks. For more information, refer to

The USDA recommends limiting sweetened fruit to help reduce children’s consumption of added sugars and help children develop a taste preference for unsweetened fruit.

**Crediting Fruits in Yogurt**

Fruits in commercial yogurt products (blended, mixed, or on top) do not credit as the fruits component. Menu planners may credit fruits offered as a separate component, such as ½ cup of blueberries in a yogurt-fruit parfait.

**Crediting Fruits with Added Ingredients**

If a commercial product or CACFP recipe contains added ingredients (such as yogurt, mayonnaise, sugar, butter, sauce, or toppings), only the fruit portion credits toward the CACFP meal patterns. For example, to credit Waldorf salad as ½ cup of the fruits component, the serving must contain ½ cup of fruit (e.g., diced apples, grapes, and raisins), before added ingredients such as mayonnaise, sugar, and spices. Other examples of fruits with added ingredients include yogurt-fruit parfaits; carrot-raisin salad; cottage cheese mixed with crushed pineapple; and baked apples.

CACFP facilities must document the amount of fruits per serving with a recipe for foods made from scratch (based on the yields listed in the FBG) or a PFS for commercial products. CACFP facilities are responsible for checking the manufacturer’s PFS for accuracy prior to including commercial products in CACFP meals and snacks. For more information, refer to “Standardized Recipes,” “Food Buying Guide for Child Nutrition Programs,” and “Documentation for Commercial Products” in section 2.

Recipes and PFS forms are not required for fruits without added ingredients, such as whole or cut-up fresh fruits; canned fruits in juice, water, or light syrup; frozen fruits; and dried fruits.
Crediting Fruit Juice

Juice must be pasteurized 100 percent full-strength juice or a combination of fruit and vegetable juices. The name of the full-strength juice on the label must include one of the following terms: “juice,” “full-strength juice,” “100 percent juice,” “reconstituted juice,” or “juice from concentrate.” The statements “natural” and “organic” do not indicate that a juice is full strength.

Juice may be fresh, frozen, or made from concentrate; and may be served liquid or frozen, e.g., full-strength frozen juice pops. For more information, refer to the CSDE’s resources, Crediting Juice in the CACFP and Crediting Smoothies in the CACFP.

The USDA recommends serving whole fruits (fresh, frozen, canned, and dried) more often than juice. Juice does not provide the same nutritional benefits as whole fruits and vegetables, which contain fiber, fewer calories, and more nutrients.

Juice concentrates

Juice concentrates credit only when reconstituted with water to 100 percent full-strength juice and served in the form of juice. Foods made with juice concentrate, such as gelatin or sherbet, do not credit as juice because they are no longer in the form of juice.

Juice made from concentrate is reconstituted with a volume of water that is several times the amount of the juice concentrate. A typical reconstitution ratio might be three parts water to one part concentrate, but this ratio may vary for different juice products.

Commercial juice products made from concentrate will list “water” as the first ingredient, followed by the type of juice concentrate, for example, “water, orange juice concentrate” and “filtered water, grape juice concentrate.” Juice made from concentrate that is labeled “100 percent juice” credits when the SFA follows the manufacturer’s specific instructions for reconstituting.
Juice blends
Juice blends must be a combination of full-strength (100 percent) fruit juices, full-strength vegetable juices, or full-strength fruit and vegetable juices. At lunch, fruit and vegetable juice blends credit based on the first juice ingredient. If the first juice ingredient is fruit juice, the product credits as the fruits component. If the first juice ingredient is vegetable juice, the product credits as the vegetables component. The ingredients statement below shows an example of a vegetable and fruit juice blend.

- Ingredients: *Reconstituted vegetable juice blend (water and concentrated juices of sweet potatoes, purple carrots, carrots)*, reconstituted fruit juices (water and concentrated juices of apples, white grapes, cranberries, blackberries), contains less than 2% of: natural flavoring, citric acid, lemon juice.

This product credits as the vegetables component because the first ingredient is a reconstituted vegetable juice blend.

Frozen 100 percent juice products
Frozen 100 percent fruit juice products (such as full-strength frozen juice pops) credit based on the fluid volume prior to freezing. CACFP facilities must request a PFS from the manufacturer to document this information. For more information, refer to “Product Formulation Statements” in section 2. Frozen fruit juice must meet the same requirements as juice, and counts toward the juice limit. For more information, refer to “Juice limit” in this section.

Apple cider
Apple cider credits as the fruits component if it is pasteurized 100 percent full-strength juice. Pasteurized juice has been heat-treated to kill harmful bacteria. CACFP facilities cannot serve unpasteurized apple cider or any other types of unpasteurized juices. Apple cider must meet the same requirements as juice, and counts toward the juice limit. For more information, refer to “Juice limit” in this section.

Coconut water
Fruit juices labeled as 100 percent juice, including coconut water, credit toward the fruits component based on the volume served. Coconut water must meet the same requirements as juice, and counts toward the juice limit. For more information, refer to “Juice limit” in this section.
Juice ingredients
All pasteurized 100 percent juices meet the USDA’s requirements for the fruits component, but their ingredients may vary among manufacturers. The FDA’s labeling regulations allow 100 percent juice with added ingredients to be labeled “100% juice.” Therefore, some 100 percent juices contain added ingredients such as artificial flavors, artificial colors (e.g., red 40, blue 1, yellow 5 and 6, and titanium dioxide), preservatives (e.g., sodium benzoate and potassium sorbate), flavor enhancers (e.g., ethyl maltol), and emulsifiers or thickeners (e.g., glycerol esters of wood rosin and xanthan gum). The CSDE encourages menu planners to read product ingredients statements and choose 100 percent juice without these added ingredients.

Juice limit
Pasteurized full-strength juice credits as the vegetables component or fruits component at only one CACFP meal or snack per day. The daily juice limit includes all sources of 100 percent juice, such as fruit and vegetable juice; frozen pops made from 100 percent juice; pureed fruits and vegetables in smoothies; and juice from canned fruit in 100 percent juice.

Drained canned fruit and canned fruit in light syrup or water do not count toward the juice limit. For more information, refer to “Crediting Canned Fruits” in this section.

If a CACFP meal or snack includes any type of juice as the fruits component or vegetables component, juice cannot credit as the fruits component or vegetables component at any other meal or snack that same day.

The examples below illustrate how the juice limit applies.

- The lunch and supper meal pattern requires a serving of the fruits component and a serving of the vegetables component. Lunch or supper menus cannot offer a smoothie and juice as the only two servings of fruits and vegetables because both credit as juice. For example, the lunch menu cannot offer a strawberry smoothie as the fruits component and tomato juice as the vegetables component. At least one of the required servings of the vegetables component or fruits component must be a whole fruit or vegetable (i.e., fresh, frozen, canned, or dried).
• If the breakfast menu includes juice as the fruits component, juice cannot credit as either the vegetables component or fruits component at lunch, supper, or snack that same day.

• If the lunch menu includes canned fruit in juice as the fruits component, juice cannot credit as the fruits component or vegetables component at breakfast, supper, or snack that same day.

• If the snack menu includes a smoothie made with pureed peaches as the fruits component, juice cannot credit as the fruits component or vegetables component at breakfast, lunch, or supper that same day. Pureed fruits and vegetables in smoothies credit only as juice in the CACFP meal patterns. For more information, refer to “Crediting Smoothies” in this section.

Offering juice as an extra menu item
CACFP facilities may choose to offer juice as an extra menu item that does not credit toward the CACFP meal patterns. However, the USDA encourages CACFP facilities to limit juice in CACFP menus to ensure that meals and snacks meet children’s nutrition needs.

The USDA’s CACFP Best Practices recommends serving a variety of fruits and choosing whole fruits (fresh, canned, dried, or frozen) more often than juice.
Crediting Pureed Fruits

Pureed fruits in foods must be visible (recognizable) to credit in the CACFP meal patterns. Pureed foods made from one fruit (such as applesauce) are visible creditable fruits. For more information, refer to “Requirement for visible components” at the beginning of section 3.

Foods made with pureed fruits cannot credit as the fruits component unless they also provide an adequate amount of a visible creditable fruit. For example, a fruit sauce on pancakes must contain at least ¼ cup of visible fruit to credit as the fruits component.

Pureed fruits credit based on the volume (cups) after pureeing. Crediting information must be documented with a standardized recipe or PFS. For more information, refer to “Standardized Recipes” and “Documentation for Commercial Products” in section 2.

Crediting Smoothies

Pureed fruits and vegetables in smoothies credit only as juice toward the vegetables component or fruits component. Crediting is based on the volume (cups) of pureed fruits and vegetables per serving. For example, a smoothie that contains ½ cup of pureed strawberries credits as ½ cup of fruit juice.

Smoothies that contain a mix of pureed fruits and vegetables, or that contain 100 percent fruit and vegetable juice blends, credit as the fruits component if fruit juice or fruit puree is the predominant ingredient. If vegetable juice or vegetable puree is the predominant ingredient, the smoothie credits as the vegetables component.

For smoothies made from scratch, CACFP facilities must have a standardized recipe to document the amount of pureed fruits and vegetables (and any other creditable components) per serving. For more information, refer to “Documentation for Commercial Products” in section 2.
Juice limit for smoothies
Pureed fruits and vegetables in smoothies must meet the same requirements as juice, and count toward the juice limit. Juice credits as the vegetables component or fruits component at only one CACFP meal or snack per day. For example, if the menu planner credits pureed fruit in a smoothie as the fruits component at breakfast, juice cannot credit as the fruits component or the vegetables component at lunch, supper, or snack that same day.

In addition, lunch and supper cannot contain a smoothie and juice as the only servings of the fruits component and vegetables component. For example, the lunch menu cannot offer a strawberry smoothie as the fruits component and vegetable juice as the vegetables component because both credit as juice. For more information, refer to “Juice limit” in this section and the CSDE’s resources, Crediting Juice in the CACFP and Crediting Smoothies in the CACFP.

Mixed fruits and vegetables in smoothies
Smoothies that contain a mix of pureed fruits and vegetables, or 100 percent fruit and vegetable juice blends, credit based on the greatest fruit or vegetable ingredient. For commercial products, the smoothie credits as the fruits component if the first juice ingredient is fruit juice. If the first juice ingredient is vegetable juice, the product credits as the vegetables component. For smoothies made on site, if fruit juice is the greatest juice ingredient in the standardized recipe, the smoothie credits as the fruits component. If the greatest juice ingredient is vegetable juice, the smoothie credits as the vegetables component.
Commercial smoothies
Commercial smoothies credit the same as smoothies made on site. Product formulation and labeling can vary greatly because commercial smoothies do not have an FDA standard of identity. To credit commercial smoothies in CACFP meals and snacks, CACFP facilities must obtain a PFS (or CN label, if available) stating the amount of all creditable ingredients per serving, such as pureed fruits and vegetables, juice, yogurt, and milk.

- **Crediting pureed vegetables/fruits:** Commercial smoothies made with pureed fruits/vegetables credit only as juice toward the fruits and vegetables component. Crediting is based on the volume of fruits/vegetables after pureeing and before freezing. The product label must include a statement regarding the “percent juice content,” which is required by the Food and Drug Administration (FDA) for beverages made with fruit/vegetable juice or puree. For example, an 8-fluid ounce smoothie made from fruit puree labeled with “contains 50% juice” credits as 4 fluid ounces (1/2 cup) of juice. CACFP facilities may need to obtain a PFS from the manufacturer to document the amount of pureed fruit in the product.

Concentrated fruit puree and concentrated juice are added sugars. They do not credit in smoothies unless they are reconstituted to full-strength fruit puree or full-strength juice.

- **Crediting milk:** Milk credits as the milk component when used as an ingredient in commercial smoothies. The product documentation must attest that commercial mixes with milk are made using ingredients that meet federal, state, and local definitions for fluid milk.

- **Crediting yogurt:** Yogurt or soy yogurt that meets the CACFP sugar limit credits as the meat/meat alternates component when used as an ingredient in commercial smoothies. The product documentation must attest that commercial mixes with yogurt are made in compliance with the federal definition for yogurt.

The addition of yogurt to a smoothie is not a substitution for fluid milk in the CACFP meal patterns. Fluid milk must be offered in all meals to meet the milk component requirement.
• **Limit for crediting amount:** The total creditable amount in a commercial smoothie cannot exceed the volume served. For example, ½ cup of a commercial smoothie cannot credit as 1 cup of juice.

• **Recommended smoothie limit:** The USDA recommends not offering smoothies at more than one CACFP meal or snack per day.

• **Noncreditable commercial smoothies:** Probiotic dairy drinks, drinkable yogurt, and yogurt drinks are not smoothies, and do not credit in the CACFP meal patterns. Commercial smoothies that contain dietary supplements (such as whey protein powder) or herbal supplements (such as ginkgo biloba, ginseng, and echinacea) do not credit in the CACFP meal patterns.

CACFP facilities must refer to the product’s PFS to check for 1) volumes of pureed fruits and vegetables prior to freezing; and 2) documentation that milk and yogurt (if included) meet the CACFP meal pattern requirements.

Commercial smoothies cannot credit in CACFP meals and snacks without a PFS (or a CN label for commercial fruit and vegetable smoothies that contain yogurt). CACFP facilities must review PFS forms for accuracy. For more information, refer to “Documentation for Commercial Products” in section 2.

### Crediting considerations for smoothies

Menu planners should consider the crediting requirements below when including smoothies in CACFP meals and snacks. The USDA recommends not offering smoothies at more than one meal or snack per day.

• **Breakfast:** Pureed fruits and vegetables in smoothies may credit as juice toward the entire vegetables and fruits component, if the serving provides the full-required amount. For example, a serving of smoothie that contains ½ cup of pureed mangoes and carrots credits as the full fruits component at breakfast for ages 3-5, ages 6-12, and ages 13-18 in emergency shelters and at-risk afterschool care centers. If the smoothie contains less than the full-required amount, the breakfast menu must include additional vegetables and fruits to meet the full requirement.
• **Lunch and supper:** The CACFP lunch and supper meal pattern requires a serving of vegetables and a serving of fruits. Menu planners cannot offer a smoothie and juice as the only two servings of vegetables and fruits at lunch or supper. Both foods credit as juice and would therefore exceed the juice limit. At least one of the required lunch/supper servings of the vegetables component and fruits component must be a whole fruit or vegetable (fresh, frozen, canned, or dried).

• **Snack:** The CACFP snack meal pattern requires two of the five components. Pureed fruits and vegetables in smoothies may credit as either the entire fruits component or the entire vegetables component, but not both in the same snack. Smoothies containing juice and milk may credit as either juice or milk, but not both in the same snack. If the amount of milk or juice in the smoothie is less than the full serving, the snack menu must include additional foods to provide the full component. The snack menu cannot include juice (including pureed fruits and vegetables in smoothies) when milk is the only other snack component.

The examples below illustrate these requirements for ages 3-5. The required servings for this age group are ½ cup of milk, ½ ounce of meat/meat alternates, ½ cup of vegetables, ½ cup of fruits, and ½ ounce equivalent of grains.

- A smoothie recipe contains ½ cup of pureed fruit (credits as fruit juice) and ½ cup of unflavored low-fat milk per serving. The menu planner may choose to credit the smoothie as either the full fruits component or the full milk component, but not both in the same snack. To be reimbursable, the snack must include the full serving of a second component that is not juice, fruit, or milk (i.e., meat/meat alternates, grains, or vegetables). For example, the snack menu could include a 1-ounce whole-grain corn muffin (grains component) as the second component.

- A smoothie recipe contains ½ cup of pureed fruit (credits as fruit juice) and ¼ cup of milk per serving. The pureed fruit provides the full fruits component. However, the milk cannot credit as the full milk component because it is less than ½ cup. To be reimbursable, the snack must include the full serving of a second component that is not juice, fruit, or milk (i.e., meat/meat alternates, grains, or vegetables). For example, the snack menu could include ½ cup of diced cucumbers (vegetables component) as the second component.

**Note:** The smoothies in these examples cannot credit as the milk component for age 1 because the CACFP meal patterns require whole milk for age 1.
The CSDE’s resource, *Crediting Smoothies in the CACFP*, summarizes the requirements for crediting smoothies in CACFP meals and snacks. For additional guidance, review USDA Memo SP 40-2019, CACFP 17-2019 and SFSP 17-2019: *Smoothies Offered in the Child Nutrition Programs*.

**Noncreditable Foods in the Fruits Component**

Examples of foods that do not credit as the fruits component include, but are not limited to:

- fruit snacks (e.g., fruit roll-ups, fruit leathers, fruit wrinkles, fruit twists, and yogurt-covered fruit snacks);
- banana chips;
- home-canned products (for food safety reasons);
- jams, jellies, and preserves; and
- juice drinks that are not 100 percent juice such as grape juice drink, orange juice drink, pineapple-grapefruit drink, cranberry juice cocktail, and lemonade.

For more information, refer to “Noncreditable foods” in the beginning of section 3 and the CSDE’s resource, *Noncreditable Foods in CACFP Child Care Programs*.

Menu planners should use the FBG to identify foods that credit as the fruits component. For more information, refer to “Food Buying Guide for Child Nutrition Programs” in this section.

**Resources for Crediting Fruits**

The resources below assist menu planners with crediting foods as the fruits component in the CACFP meal patterns.

For additional crediting resources, visit the “Fruits Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
Grains Component

The grains component for the CACFP meal patterns includes a variety of products, such as:

- breads, biscuits, bagels, rolls, tortillas, and muffins;
- snack products, such as crackers (including sweet crackers, such as animal crackers and graham crackers), hard pretzels, hard breadsticks, tortilla chips; and popcorn;
- cereal grains, such as buckwheat, brown rice, bulgur, and quinoa;
- RTE breakfast cereals, such as puffed cereals, round or flaked cereals, and granola;
- cooked breakfast cereals (instant and regular), such as oatmeal, farina, and cream of wheat;
- bread products used as an ingredient in another menu item, such as combination foods, e.g., breading on fish or poultry and pizza crust in pizza; and
- pasta products, such as macaroni, spaghetti, noodles, orzo, and couscous.

To credit as the grains component in the CACFP meal patterns, grain menu items must contain whole grains, enriched grains, bran, or germ as the greatest ingredient by weight. CACFP menus must include at least one serving of whole grain-rich (WGR) grains per day, between all meals and snacks served to children. Products that are 100 percent whole grain, such as whole-wheat bread and brown rice, provide the best nutrition and should be served most often.

Some grains may be choking hazards for young children. Examples include plain wheat germ; whole-grain kernels such as rice or wheat berries; crackers or breads with seeds, nut pieces, or whole-grain kernels such as wheat berries; breakfast cereals that contain nuts, whole-grain kernels, and hard chunks (such as granola); and popcorn. Consider children’s ages and developmental readiness when deciding what grains to offer in CACFP menus. For additional guidance, refer to “Choking Prevention” in section 1.
This section includes three parts to assist menu planners with determining if foods credit as the grains component:

- Part A: Grain Crediting Requirements;
- Part B: WGR Requirement; and
- Part C: Serving Size for Grains.

**Grain-based Desserts**

Grain-based desserts cannot credit as the grains component in the CACFP meal patterns. Examples of grain-based desserts include breakfast bars, brownies, cakes (including cupcakes and coffee cakes), cereal bars, cinnamon rolls, cinnamon streusel quick breads, cookies (all kinds, including vanilla wafers), doughnuts, gingerbread, granola bars, ice cream cones, marshmallow cereal treats, pastries (such as cinnamon buns, Danish, sweet buns, sweet rolls, and eclairs) piecrusts in sweet pies (e.g., apple, coconut, blueberry, and pecan), sweet biscotti (such as those made with fruits, chocolate, or icing) sweet bread pudding, sweet croissants (e.g. chocolate filled), sweet scones (e.g., blueberry, raisin, and orange cranberry), rice pudding, and toaster pastries.

Menu planners should not rely on a product’s name to determine if it is grain-based dessert because cookies and similar grain-based desserts do not have an FDA standard of identity. Manufacturers sometimes use terms in their product names or labels that might be misleading, such as “breakfast rounds” for oatmeal raisin cookies, “breakfast bars” for cereal bars, and “super stars” for doughnut holes.

Grain-based desserts do not include sweet crackers (such as graham crackers and animal crackers), muffins, quick breads, e.g., banana bread and zucchini bread (except for cinnamon streusel), cornbread, pancakes, waffles, French toast, savory scones (such as cheese and herb), and piecrusts in entrees such as quiche, meat pies, and chicken potpie.

As a best practice, the USDA encourages CACFP menus to limit sweet crackers (such as graham crackers and animal crackers) because of their higher sugar content. The CSDE recommends not serving sweet crackers more than twice per week between all meals and snacks served in the CACFP facility.

CACFP facilities may choose to serve grain-based desserts as an additional food item that does not credit toward the CACFP meal patterns. Examples include serving cake or cookies at
special celebrations. However, the USDA encourages CACFP facilities to use discretion when serving noncreditable foods and beverages (refer to “Noncreditable foods” at the beginning of section 3).

**Resources for grain-based desserts**

The resources below provide guidance on the CACFP requirements for grain-based desserts.

- Bite Size: Meeting the CACFP Meal Patterns for Children – Module 7A: Grains Component Crediting Requirements (CSDE training webinar): https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-CACFP-Child-Care-Programs/Related-Resources#BiteSize

- USDA Memo CACFP 09-2018: Grain Requirements in the Child and Adult Care Food Program; Questions and Answers: https://fns-prod.azureedge.net/sites/default/files/cacfp/CACFP09_2018os.pdf
Part A: Grain Crediting Requirements

This section addresses the crediting requirements for the grains component of the CACFP meal patterns. All grain items served in CACFP menus must comply with these requirements, including commercial grain products and grain foods made from scratch.

Creditable Grains

To credit as the grains component, a grain product or recipe must contain a creditable grain as the primary (greatest) ingredient by weight. Creditable grains include whole grains, enriched grains, bran, and germ. For information on identifying whole and enriched grains, refer to the CSDE’s resources, Crediting Whole Grains in the CACFP and Crediting Enriched Grains in the CACFP. For guidance on the steps for identifying creditable grains, refer to the CSDE’s resource, How to Identify Creditable Grains in the CACFP.

This section summarizes the different crediting requirements for commercial grain products, commercial combination foods, cooked breakfast cereals, RTE breakfast cereals, and grain foods made from scratch.

Groups A-E and H-I refer to the grain groups in the USDA’s Exhibit A chart. For more information, refer to “Part C: Serving Size for Grains” in this section.
Part A: Grain Crediting Requirements

Crediting Criteria for Commercial Grain Products

Commercial grain products in groups A-E (baked goods, such as breads, rolls, muffins, crackers, and waffles) and group H (pasta and cereal grains, such as quinoa, rice, and millet) credit as the grains component if a creditable grain is the first ingredient, or water is the first ingredient and a creditable grain is the second ingredient. The ingredients statements below show examples of creditable commercial grain products.

- **Ingredients:** *Enriched wheat flour (flour, niacin, reduced iron, thiamine mononitrate, riboflavin, folic acid)*, canola and/or sunflower oil, salt, contains 2% or less of: yeast, nonfat milk, sugar, baking soda, monocalcium phosphate, paprika, spices, celery, onion powder.

- **Ingredients:** Water, *whole-wheat flour*, yeast, wheat gluten, contains less than 2% of each of the following: soybean oil, sugar, salt, calcium propionate (preservative), fumaric acid, baking soda, monocalcium phosphate, calcium sulfate, ammonium sulfate.

- **Ingredients:** Water, *enriched flour (wheat flour, niacin, reduced iron, vitamin B1 [thiamin mononitrate], vitamin B2 [riboflavin], folic acid), whole-wheat flour*, vegetable oil (soybean, palm, and/or canola oil), egg whites, *wheat bran*, sugar, contains 2% or less of leavening (baking soda, sodium aluminum phosphate, monocalcium phosphate), salt, malt flavoring, whey, soy lecithin.

The CSDE’s resource, *Meeting the Whole Grain-rich Requirement for the CACFP*, provides more examples of how to determine if commercial grain products are creditable. Menu planners may use the CSDE’s Excel worksheet, *Child Care Worksheet 1: Crediting Commercial Grains in the CACFP*, to determine if commercial grain products comply with the CACFP crediting and WGR criteria. For more information, refer to “Grain Crediting Worksheets” in this section.

**Multiple creditable grains in commercial grain products**

If a creditable grain is not the first ingredient, but the commercial grain product contains more than one creditable grain, the CACFP facility must obtain a PFS from the manufacturer to determine crediting information. To credit in the CACFP meal patterns, the product’s PFS must document that the **combined weight** of all creditable grains in the product is the greatest ingredient by weight. For information on PFS forms, refer to “Product Formulation Statements” in section 2.
Part A: Grain Crediting Requirements

Crediting Criteria for Breakfast Cereals

Breakfast cereals that contain nuts, whole-grain kernels such as wheat berries, and hard chunks (such as granola) may be choking hazards for young children. Consider children’s ages and developmental readiness when deciding what types of breakfast cereals to offer in CACFP menus. For additional guidance, refer to “Choking Prevention” in section 1.

RTE breakfast cereals in group I (such as puffed cereals, round or flaked cereal, and granola) and cooked breakfast cereals in group H (including instant and regular, such as oatmeal, farina, and cream of wheat) credit as the grains component if 1) the first ingredient is a creditable grain or the cereal is fortified; and 2) the cereal contains no more than 6 grams of sugars per dry ounce.

Fortified breakfast cereals have nutrients added by the manufacturer that were not originally present or are at higher levels than originally present. Fortified breakfast cereals typically contain the five enrichment nutrients plus other vitamins and minerals. Different cereal brands may list different fortification nutrients. Manufacturers may choose which additional nutrients to use for fortification. The USDA does not specify a minimum number of nutrients or a minimum percentage for the level of fortification for breakfast cereals in Child Nutrition Programs. If a breakfast cereal is fortified, it does not need to be enriched.

The ingredients statement below shows an example of a creditable cooked breakfast cereal. While the first ingredient (wheat farina) is not a creditable grain, this cereal credits because it is fortified.

- Ingredients: Wheat farina, calcium carbonate, ferric orthophosphate (source of iron), niacinamide (vitamin B3), pyridoxine hydrochloride (vitamin B6), folic acid, thiamin mononitrate (vitamin B1) riboflavin (vitamin B2).
Meal Pattern Requirements for CACFP Child Care Programs • Connecticut State Department of Education • November 2021

Part A: Grain Crediting Requirements

The ingredients statement below shows an example of a creditable RTE breakfast cereal. The first ingredient (whole-grain oat flour) is a creditable grain and the cereal is fortified.

- Ingredients: Whole-grain oat flour, sugar, corn flour, whole-wheat flour, rice flour, salt, calcium carbonate, disodium phosphate, reduced iron, niacinamide, zinc oxide, BHT (a preservative), thiamin mononitrate, pyridoxine hydrochloride, riboflavin, folic acid.

The CSDE’s resource, Crediting Breakfast Cereals in the CACFP, provides examples of how to determine if breakfast cereals are creditable. Menu planners may use the CSDE’s Excel worksheets, Child Care Worksheet 2: Crediting Ready-to-eat (RTE) Breakfast Cereals in the CACFP and Child Care Worksheet 3: Crediting Cooked Breakfast Cereals in the CACFP, to determine if breakfast cereals comply with the CACFP crediting and WGR criteria. For more information, refer to “Grain Crediting Worksheets” in this section.

Sugar limit for breakfast cereals

The CACFP meal patterns for children require that breakfast cereals cannot contain more than 6 grams of sugars per dry ounce (no more than 21.2 grams of sucrose and other sugars per 100 grams of dry cereal). The sugar limit applies only to breakfast cereals as purchased. CACFP facilities may choose to add toppings to breakfast cereals to increase their appeal. However, the USDA strongly encourages CACFP facilities to offer healthy toppings for breakfast cereals, such as fruit instead of sugar. Minimizing sweet toppings will help reduce consumption of added sugars, which contribute calories without essential nutrients.

The USDA allows three different methods to determine if a breakfast cereal complies with the sugar limit. The CSDE’s resource, Crediting Breakfast Cereals in the CACFP, summarizes these methods. The USDA’s Choose Breakfast Cereals that are Lower in Sugar webpage contains handouts, training slides, and webinars in English and Spanish with additional guidance on evaluating the sugar content of breakfast cereals.

The CSDE recommends that menu planners refer to the sugar content of breakfast cereals before reviewing the ingredients statement for creditable grains. If a breakfast cereal exceeds the sugar limit, it cannot credit in the CACFP meal patterns, even if it contains creditable grains or is WGR.
Crediting Criteria for Commercial Combination Foods

Commercial combination foods that contain a grain portion from groups A-E (such as pizza crust in pizza and baked fish coated with breadcrumbs) or groups H-I (such as noodles in lasagna and baked chicken coated with crushed cereal flakes) credit as the grains component if the first grain ingredient is a creditable grain. The ingredients statement below shows an example for breaded chicken nuggets.

- Ingredients: Boneless, skinless chicken breast with rib meat, water, whole-wheat flour, contains 2% or less of the following: dried garlic, dried onion, salt, sea salt, soybean oil, spice, sugar, torula yeast, turmeric, yeast, yeast extract. Breading set in vegetable oil.

This product credits toward the grains component because the first grain ingredient (whole-wheat flour) is a creditable grain.

Separate grain portion in commercial combination foods

A commercial combination food that lists the ingredients for the grain portion separately credits as the grains component if a creditable grain is the first ingredient in the grain portion, or water is the first ingredient in the grain portion and a whole grain is the second ingredient in the grain portion.

The ingredients statement below shows an example for cheese ravioli. This product credits toward the grains component because the first ingredient (whole-wheat flour) in the pasta (grain portion) is a creditable grain.

- Ingredients: Filling: Fat-free ricotta cheese (whey, skim milk [made from nonfat dry milk powder], vinegar, xanthan gum, carrageenan), water, egg, low moisture part skim mozzarella cheese (cultured part skim milk, salt, enzymes), whey protein isolate, sodium caseinate, Romano cheese made from cow’s milk (cultured milk, salt, enzymes), bleached wheat flour, garlic salt (salt, dehydrated garlic), salt, corn starch, sugar, dehydrated garlic. Pasta: Whole-wheat flour, enriched durum wheat flour (wheat flour, niacin, ferrous sulfate, thiamin mononitrate, riboflavin, folic acid), water, egg.
Grains

Part A: Grain Crediting Requirements

Multiple creditable grains in commercial combination foods
If a creditable grain is not the first ingredient, but the grain portion of a combination food contains more than one creditable grain, the CACFP facility must obtain a PFS from the manufacturer to determine crediting information. To credit in the CACFP meal patterns, the product’s PFS must document that the combined weight of all creditable grains in the grain portion of the product is the greatest ingredient by weight in the grain portion.

For information on PFS forms, refer to “Product Formulation Statements” in section 2. For examples of how to determine if commercial combination foods are creditable, refer to the CSDE’s resource, Meeting the Whole Grain-rich Requirement for the CACFP.

Crediting Criteria for Foods Made from Scratch
Grain foods made from scratch (such as breads, rolls, muffins, waffles, and pancakes) credit as the grains component if a creditable grain is the greatest ingredient by weight in the recipe, or the combined weight of all creditable grains is the greatest ingredient by weight in the recipe.

Combination foods made from scratch (such as pizza, lasagna, and breaded chicken) credit as the grains component if a creditable grain is the greatest grain ingredient by weight in the recipe, or the combined weight of all creditable grains is the greatest grain ingredient by weight in the recipe.

The CSDE’s resource, Meeting the Whole Grain-rich Requirement for the CACFP, provides examples of how to determine if grain foods made from scratch are creditable. Menu planners may use the CSDE’s Excel worksheets, Child Care Worksheet 4: Crediting Family-size Recipes for Grains in the CACFP or Child Care Worksheet 5: Crediting Quantity Recipes for Grains in the CACFP, to determine if grain foods made from scratch comply with the CACFP crediting and WGR criteria. For more information, refer to “Grain Crediting Worksheets” in this section.

CACFP facilities must have a recipe on file that documents the crediting information for foods prepared from scratch. For more information, refer to “Standardized Recipes” in section 2.
Part A: Grain Crediting Requirements

Crediting Corn Masa, Masa Harina, Corn Flour, and Cornmeal

Corn ingredients credit as the grains component if they are whole grain, enriched, or nixtamalized. Nixtamalization is the process of soaking and cooked dried corn in an alkaline (slaked lime) solution. This process results in a product with nutrition content similar to whole-grain corn.

Nixtamalized corn is used to make hominy, masa harina (corn flour), corn masa (dough from masa harina), and certain types of cornmeal. Masa harina is used for making corn products such as tortillas, tortilla chips, and tamales.

Methods for identifying nixtamalized corn

CACFP facilities may use the two methods below to identify commercial products made with nixtamalized corn.

1. **Corn is treated with lime:** If the ingredients statement indicates that the corn is treated with lime (such as “ground corn with trace of lime” and “ground corn treated with lime”), the corn ingredient is nixtamalized. The ingredients statements below show examples of commercial nixtamalized corn products. These products credit as 100 percent whole grains.

   - Ingredients: *Corn masa flour*, water, contains 2% or less of: cellulose gum, guar gum, amylase, propionic acid, benzoic acid, and phosphoric acid (to maintain freshness).
   - Ingredients: *Whole-white corn*, vegetable oil (contains soybean, corn, cottonseed, and/or sunflower oil), salt, *lime/calcium hydroxide* (processing aid).
   - Ingredients: *Limed whole-grain white corn*, palm oil, salt, TBHQ (preservative).

   If the ingredients statement does not provide sufficient information (such as “cornmeal” and “yellow corn flour”), CACFP facilities must obtain a PFS from the manufacturer stating that ingredients are whole grain, enriched, or nixtamalized. For information on PFS forms, refer to “Product Formulation Statements” in section 2.
Part A: Grain Crediting Requirements

2. **Product includes FDA-approved whole grain health claim:** If a commercial product made with corn includes one of two FDA-approved whole grain health claims on its packaging, the corn in the product is nixtamalized and the product provides at least 50 percent whole grain. These health claims are not common.

   - **Low-fat claim:** “Diets rich in whole grain foods and other plant foods and low in total fat, saturated fat, and cholesterol, may reduce the risk of heart disease and certain cancers.”

   - **Moderate-fat claim:** “Diets rich in whole grain foods and other plant foods, and low in saturated fat and cholesterol, may help reduce the risk of heart disease.”

**Crediting Hominy as Grains**

Hominy is a traditional food in Mexican and Native American cultures that is commonly served as a vegetable or milled grain product, e.g., hominy grits. Hominy is made from whole kernels of maize (dried field corn) that have been soaked in an alkaline solution (nixtamalized). This process removes the hull and germ, causes the corn to puff up to about double its normal size, and increases the bioavailability of certain nutrients, such as calcium and niacin.

Hominy is available dried and in a fully cooked canned form. Dried hominy is cooked the same as dried beans (legumes). Hominy offered in a dried, milled form (such as grits) credits as a whole grain. A ½-cup serving of cooked hominy grits or 1 ounce (28 grams) of dry hominy grits credits as one serving of the grains component.

For information on crediting hominy as the vegetables component, refer to “Crediting Hominy as Vegetables” in the “Vegetables” section.
Part A: Grain Crediting Requirements

Crediting Popcorn

Popcorn credits as a whole-grain food. Three cups (1 ounce) serving of plain popped popcorn credit as 1 ounce equivalent of the grains component. The minimum creditable amount is ¾ cup (¼ ounce equivalent). Table 3-15 summarizes the grains contribution of popped popcorn.

<table>
<thead>
<tr>
<th>Cups (popped)</th>
<th>Weight (popped)</th>
<th>Grains contribution</th>
</tr>
</thead>
<tbody>
<tr>
<td>¾ cup</td>
<td>0.25 ounces or 7 grams</td>

</tr>
<tr>
<td>1½ cups</td>
<td>0.5 ounces or 14 grams</td>
<td>½ ounce equivalent</td>
</tr>
<tr>
<td>2¼ cups</td>
<td>0.75 ounces or 21 grams</td>
<td>¾ ounce equivalent</td>
</tr>
<tr>
<td>3 cups</td>
<td>1 ounce or 28 grams</td>
<td>1 ounce equivalent</td>
</tr>
</tbody>
</table>

Crediting considerations for popcorn

For developmentally ready children, menu planners should consider the crediting requirements below when including popcorn in CACFP meals and snacks.

- Consider the appropriateness of the serving size for each age group. It may be unreasonable to provide the full serving of the grains component from popcorn, due to the large volume required for crediting. The CSDE recommends providing a smaller serving of popcorn and supplementing with another food from the grains component. For example, a snack mix that contains 1½ cups of popcorn (½ ounce equivalent) and ½ cup of enriched or WGR round cereal (½ ounce equivalent) credits as 1 ounce equivalent of the grains component.

Popcorn may be a choking hazard for young children. Consider children’s ages and developmental readiness when deciding whether to offer popcorn in snack menus. For additional guidance, refer to “Choking Prevention” in section 1.
Part A: Grain Crediting Requirements

- Foods that contain popcorn as an ingredient (such as a popcorn snack mix or popcorn balls) require documentation to determine the crediting information. CACFP facilities must obtain a PFS for commercial products and a standardized recipe for foods prepared from scratch. For more information, refer to “Product Formulation Statements” and “Standardized Recipes” in section 2.

- Popcorn sometimes includes ingredients and toppings such as salt, caramel, cheese, and butter. The USDA strongly encourages healthier alternatives, such as seasoning the popcorn with herb blends or serving fresh, plain popcorn.

- Popcorn that is an ingredient in grain-based desserts does not credit in the CACFP meal patterns. For more information, refer to “Grain-based Desserts” in this section.

The requirements for crediting popcorn are summarized in USDA Memo SP 23-2019, CACFP 10-2019 and SFSP 09-2019: Crediting Popcorn in the Child Nutrition Programs.
Noncreditable Foods in the Grains Component

Examples of foods that do not credit as the grains component include, but are not limited to:

- commercial products that do not contain a whole grain, enriched grain, bran, or germ as the first ingredient (excluding water);
- recipes that do not contain a whole grain, enriched grain, bran, or germ as the greatest grain ingredient by weight;
- noncreditable ingredients such as oat fiber, corn fiber, wheat starch, corn starch, and modified food starch (including potato, legume, and other vegetable flours);
- breakfast cereals that contain more than 6 grams of sugars per ounce; and
- grain-based desserts such as brownies, cookies, cake, coffee cake, doughnuts, cereal bars, granola bars, breakfast bars, sweet rolls, pastries, toaster pastries, sweet scones (e.g., blueberry, raisin, and orange cranberry), piecrusts in sweet pies (e.g., apple and pecan), rice pudding, and sweet bread pudding. For more information, refer to “Grain-based Desserts” in this section.

For more information, refer to “Noncreditable Foods” in the beginning of section 3 and the CSDE’s resource, Noncreditable Foods in CACFP Child Care Programs.

Menu planners should use the FBG to identify foods that credit as the grains component. For more information, refer to “Food Buying Guide for Child Nutrition Programs” in this section.
Grain Crediting Worksheets

The CSDE’s CACFP crediting worksheets for child care programs are listed below. These worksheets evaluate grain-based foods for compliance with the CACFP crediting, WGR, and serving requirements.

- Child Care Worksheet 1: Crediting Commercial Grains in the CACFP
- Child Care Worksheet 2: Crediting Ready-to-eat (RTE) Breakfast Cereals in the CACFP
- Child Care Worksheet 3: Crediting Cooked Breakfast Cereals in the CACFP
- Child Care Worksheet 4: Crediting Family-size Recipes for Grains in the CACFP
- Child Care Worksheet 5: Crediting Quantity Recipes for Grains in the CACFP

These crediting worksheets are available in the “CSDE Crediting Worksheets for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

Resources for Crediting Grains

The resources below assist menu planners with identifying foods that credit as the grains component in the CACFP meal patterns for children.

For additional crediting resources, visit the “Grains Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
Part B: WGR Requirement

“Whole grain-rich” means a food that contains at least 50 percent whole grains and the remaining grain ingredients are enriched, bran, or germ. All WGR foods credit in the CACFP meal patterns, but not all creditable grains are WGR. The WGR criteria are different for commercial products and foods made from scratch. This section summarizes these requirements.

Menu Planning Considerations

CACFP menus must include at least one serving of WGR grains per day, between all meals and snacks served to children. The USDA’s \textit{CACFP Best Practices} recommends at least two servings of WGR grains per day. CACFP facilities may serve a WGR food at any meal or snack.

- If the CACFP facility serves only one CACFP meal per day (breakfast, lunch, or supper), the grain served at that meal must be WGR.

- If the CACFP facility serves only breakfast and chooses to substitute meat/meat alternates for the grains component at breakfast (allowed up to three times per week), a WGR food is not required.

- The grains component is not required at snack, but may be served as one of the two required snack components. If the CACFP facility serves only snack and offers a grain as one of the two snack components, the grain must be WGR.

The WGR requirement applies to the CACFP, not to each child. If the CACFP facility serves more than one meal, and two different groups of children are at each meal (such as one group of children at breakfast and another group of children at lunch), only one meal must contain a WGR food.

The USDA strongly encourages CACFP facilities to vary the meals and snacks that include a WGR item. For example, the CACFP menu could include whole-grain toast at breakfast on Monday and brown rice at lunch on Tuesday. This helps to ensure that all children are served a variety of whole grains, and benefit from the important nutrients these foods provide.
Overview of Rule of Three

The USDA allows six methods for determining if grain foods meet the preschool WGR criteria. The Rule of Three is the most commonly used method for commercial products.

The CSDE’s resource, *Meeting the Whole Grain-rich Requirement for the CACFP*, provides guidance on all six methods and includes examples of evaluating grain products for compliance with the Rule of Three WGR criteria.

The Rule of Three reviews the product’s ingredients statement and looks at the first three grain ingredients. The Rule of Three requirements apply only to commercial grain products, commercial combination foods, and cooked breakfast cereals. **Note:** The Rule of Three does not apply to RTE breakfast cereals in group I, such as puffed cereals, flaked or round cereals, and granola.

The Rule of Three requires that the first ingredient (excluding water) is a whole grain, and the next two grain ingredients (if any) are creditable grains. When reviewing a commercial product’s ingredients statement for compliance with the Rule of Three criteria, the following requirements apply:

- A *whole grain* must be the first ingredient, and may be the second or third grain ingredients;
- An *enriched grain* may be the second or third grain ingredients;
- *Bran* and *germ* may be the second or third grain ingredients; and
- Noncreditable grains cannot be any of the first three grain ingredients. Examples of noncreditable grains for the CACFP meal patterns include legume flours, corn flour, corn grits, farina, malted barley flour, milled corn, nut or seed flours, oat fiber, potato flour, potato starch, rice, soy fiber, soy flakes, wheat flour, and yellow corn flour. For additional examples and more information, refer to the CSDE’s resource for the CACFP, *Meeting the Whole Grain-rich Requirement for the CACFP*.

If a food meets the Rule of Three, the menu planner does not need to check any other grain ingredients further down on the ingredients statement.

The Rule of Three WGR criteria are different for commercial grain products, commercial combination foods, cooked breakfast cereals, RTE breakfast cereals, and foods made from scratch. These requirements are summarized below.
Rule of Three WGR Criteria for Commercial Grain Products

Under the Rule of Three, commercial grain products in groups A-E (baked goods, such as breads, rolls, muffins, crackers, waffles, and pancakes) and group H (pasta and cereal grains, such as quinoa, rice, and millet) are WGR if they meet the following criteria: 1) a whole grain is the first ingredient (or water is the first ingredient and a whole grain is the second ingredient); 2) the second grain ingredient (if any) is whole, enriched, bran, or germ; and 3) the third grain ingredient (if any) is whole, enriched, bran, or germ.

The ingredients statements below show examples of commercial grain products that meet the Rule of Three WGR criteria.

- **Ingredients:** *Whole-wheat flour*, sugar, wheat gluten. Contains 2% or less of each of the following: honey, salt, yeast, molasses, diacetyl tartaric acid esters of mono-diglycerides (datem), ascorbic acid, mono-and diglycerides, l-cysteine, enzymes.

- **Ingredients:** Water, *whole-wheat flour*, yeast, wheat gluten, contains less than 2% of each of the following: soybean oil, sugar, salt, calcium propionate (preservative), fumaric acid, baking soda, monocalcium phosphate, calcium sulfate, ammonium sulfate.

- **Ingredients:** *Whole-wheat flour, enriched flour (wheat flour, niacinamide, reduced iron, thiamin mononitrate [vitamin B1], riboflavin [vitamin B2], folic acid)*, soybean oil with TBHQ for freshness, salt, contains 2% or less of corn syrup, baking soda, yeast, soy lecithin.
Part B: WGR Requirement

Multiple whole grains in commercial grain products

If a whole grain is not the first ingredient, but the grain product contains more than one whole grain, the CACFP facility must obtain a PFS from the manufacturer stating the combined weight of all whole grains. The ingredients statement below shows an example.

- Ingredients: Unbleached enriched wheat flour [flour, malted barley flour, reduced iron, niacin, thiamin mononitrate (vitamin B1), riboflavin (vitamin B2), folic acid], water, whole-wheat flour, whole oats, sugar, yeast, soybean oil, salt.

To meet the WGR criteria, the product’s PFS must document that the combined weight of the two whole grains (whole-wheat flour and whole oats) is more than the weight of the first ingredient (unbleached enriched wheat flour). For information on PFS forms, refer to “Product Formulation Statements” in section 2.

Rule of Three WGR Criteria for Cooked Breakfast Cereals

Under the Rule of Three, cooked breakfast cereals (instant and regular, such as oatmeal, cream of wheat, and farina) are WGR if they meet the following criteria: 1) the first ingredient is a whole grain; 2) the next two grain ingredients (if any) are whole, enriched, bran, or germ; and 3) the cereal contains no more than 6 grams of sugars per dry ounce. For more information, refer to “Sugar limit for breakfast cereals” in this section.

The ingredients statement below shows an example of a cooked 100 percent whole-grain cereal.

- Ingredients: Whole-grain rolled oats, sugar, natural flavors, salt.

To credit as the grains component, this cereal must also comply with the CACFP sugar limit. For more information, refer to “Sugar limit for breakfast cereals” in “Part A: Grain Crediting Requirements.”

For examples of how to determine if cooked breakfast cereals are WGR, refer to the CSDE’s resource, Crediting Breakfast Cereals in the CACFP. Menu planners may use the CSDE’s Excel worksheet, Child Care Worksheet 3: Crediting Cooked Breakfast Cereals in the CACFP, to determine if cooked breakfast cereals comply with the CACFP crediting and WGR criteria. For more information, refer to “Grain Crediting Worksheets” in this section.
WGR Criteria for RTE Breakfast Cereals

The Rule of Three does not apply to RTE breakfast cereals. RTE breakfast cereals are WGR if they meet the following criteria: 1) the first ingredient is a whole grain; 2) the cereal is fortified; and 3) the cereal contains no more than 6 grams of sugars per dry ounce. For more information, refer to “Sugar limit for breakfast cereals” in “Part A: Grain Crediting Requirements.”

The ingredients statement below shows an example of a whole-grain fortified RTE breakfast cereal that meets the WGR criteria.

- Ingredients: Whole-grain oat flour, sugar, corn flour, whole-wheat flour, rice flour, salt, calcium carbonate, disodium phosphate, reduced iron, niacinamide, zinc oxide, BHT (a preservative), thiamin mononitrate, pyridoxine hydrochloride, riboflavin, folic acid.

To credit as the grains component, this cereal must also comply with the CACFP sugar limit. For more information, refer to “Sugar limit for breakfast cereals” in “Part A: Grain Crediting Requirements.”

For examples of how to determine if RTE breakfast cereals are WGR, refer to the CSDE’s resource, Crediting Breakfast Cereals in the CACFP. Menu planners may use the CSDE’s Excel worksheet, Child Care Worksheet 2: Crediting Ready-to-eat (RTE) Breakfast Cereals in the CACFP, to determine if RTE breakfast cereals comply with the CACFP crediting and WGR criteria. For more information, refer to “Grain Crediting Worksheets” in this section.
Part B: WGR Requirement

Rule of Three WGR Criteria for Commercial Combination Foods

Under the Rule of Three, commercial combination foods that contain a grain portion from groups A-E (such as pizza crust in pizza and baked fish coated with breadcrumbs) or groups H-I (such as noodles in lasagna and baked chicken coated with crushed cereal flakes) are WGR if they meet the following criteria: 1) a whole grain is the first ingredient (or water is the first ingredient and a whole grain is the second ingredient); 2) the second grain ingredient (if any) is whole, enriched, bran, or germ; and 3) the third grain ingredient (if any) is whole, enriched, bran, or germ.

The ingredients statement below shows an example of breaded chicken nuggets.

- Ingredients: Boneless, skinless chicken breast with rib meat, water, whole-wheat flour, contains 2% or less of the following: dried garlic, dried onion, salt, sea salt, soybean oil, spice, sugar, torula yeast, turmeric, yeast, yeast extract. Breading set in vegetable oil.

This product meets the Rule of Three WGR criteria because whole-wheat flour is the first and only grain ingredient.

Separate grain portion in commercial combination foods

A commercial combination food that lists the ingredients for the grain portion separately is WGR if it meets the following criteria: 1) a whole grain is the first ingredient in the grain portion (or water is the first ingredient and a whole grain is the second ingredient); 2) the second grain ingredient in the grain portion (if any) is whole, enriched, bran, or germ; and 3) the third grain ingredient in the grain portion (if any) is whole, enriched, bran, or germ.

The ingredients statement below shows an example of a breaded chicken patty that lists the grain portion separately.

- Ingredients: Chicken, water, salt and natural flavor. Breadcr with: white whole-wheat flour, water, salt, enriched yellow corn flour, dried onion, dried garlic, dried yeast, brown sugar, extractives of paprika, and spices. Breading set in vegetable oil.

This product meets the Rule of Three WGR criteria because the first grain ingredient in the breading (grain portion) is a whole grain, and the second and only other grain ingredient is an enriched grain.
Multiple whole grains in commercial combination foods

If a whole grain is not the first ingredient, but the grain portion of the combination food contains more than one whole grain, the CACFP facility must obtain a PFS from the manufacturer to determine crediting information. The ingredients statement below shows an example. This breaded chicken patty with breading (grain portion) contains enriched flour as the first ingredient, but it also contains two whole grains.

- Ingredients: Chicken, water, salt and natural flavor. Breaded with: unbleached enriched wheat flour [flour, malted barley flour, reduced iron, niacin, thiamin mononitrate (vitamin B1), riboflavin (vitamin B2), folic acid], water, whole-wheat flour, whole oats, dried onion, dried garlic, dried yeast, brown sugar, extractives of paprika, and spices. Breading set in vegetable oil.

To meet the WGR criteria, the product’s PFS must document that the combined weight of the two whole grains (whole-wheat flour and whole oats) in the grain portion (breading) is the greatest ingredient by weight in grain portion. For information on PFS forms, refer to “Product Formulation Statements” in section 2.

Rule of Three WGR Criteria for Grain Foods Made from Scratch

Grain foods made from scratch (such as breads, rolls, muffins, waffles, and pancakes) are WGR if a whole grain is equal to or more than the combined weight of all other creditable grains in the recipe, or the combined weight of all whole grains is equal to or more than the combined weight of all other creditable grains in the recipe. The examples below are recipes that meet the CACFP WGR criteria.

- A muffin recipe contains 2 pounds of whole-wheat flour and 2 pounds of enriched flour. This recipe is WGR because the weight of the whole grain and enriched flour are equal.

- A bread recipe contains ¼ pound of whole-grain flour, ½ pound of rolled oats, and 1 pound of enriched flour. This recipe is WGR because the combined weight (1¼ pounds) of the two whole grains (whole-grain flour and rolled oats) exceeds the weight of the enriched flour.

For examples of how to determine if grain foods made from scratch are WGR, refer to the CSDE’s resource, *Meeting the Whole Grain-rich Requirement for the CACFP.*
Part B: WGR Requirement

Rule of Three WGR Criteria for Combination Foods Made from Scratch

The Rule of Three WGR criteria apply only to the grain portion of combination foods made from scratch. Examples of combination foods that contain a grain portion from groups A-E include pizza crust in pizza and baked fish coated with breadcrumbs. Examples of combination foods that contain a grain portion from groups H-I include noodles in lasagna and baked chicken coated with crushed cereal flakes.

The grain portion of a recipe for a combination food is WGR if the combined amount of whole grains in the grain portion is equal to or more than the combined amount of all other creditable grains in the grain portion.

Menu planners must review recipes to determine if the grain portion credits as WGR or enriched grains.

Required Documentation for Grains

CACFP facilities must maintain documentation on file to indicate that grain products and recipes comply with the CACFP crediting and WGR requirements. Acceptable documentation for commercial products includes CN labels (if the grain portion is part of a meat/meat alternate) and PFS forms. Recipes are required for foods made from scratch. The CSDE will review this documentation as part of the Administrative Review of the CACFP. For more information, refer to “Documentation for Commercial Products” in section 2.

The CSDE recommends that CACFP menus include information about the type of grain items served for each meal and snack. This helps to document meal pattern compliance and provide information for children and families. For example, the menu planner could list:

- “whole-wheat bread,” “whole grain-rich bread,” or “enriched white bread” instead of “bread;”
- “brown rice” or “enriched rice” instead of “rice;”
- “enriched spaghetti” instead of “spaghetti;”
- “whole-corn tortilla” instead of “tortilla;” and
- “fortified whole-grain cereal” instead of “breakfast cereal.”
Part B: WGR Requirement

Other acceptable methods for indicating which grains on CACFP menus are WGR include using abbreviations, such “WW bread” for whole-wheat bread or “WGR blueberry muffin” for a WGR blueberry muffin; symbols to indicate WGR foods; or a check box to signify that a food is WGR. When the menu includes abbreviations or symbols, CACFP facilities should include information on what they mean.

CACFP facilities should indicate the crediting and WGR information for the grains component on the daily production record (if used), or provide other menu documentation, such as:

- a binder of nutrition information for commercial products that includes Nutrition Facts labels and ingredients statements;
- a list of all grain products served and whether they are WGR (including 100 percent whole grain products), enriched, or fortified (breakfast cereals only);
- recipes for foods made from scratch; and
- CN labels and PFS forms for commercial foods.

CACFP facilities must also maintain documentation on file to indicate that all breakfast cereals meet the CACFP sugar limit. Documentation should include the products’ Nutrition Facts label and the CACFP facility’s calculation showing that the cereal contains no more than 6 grams of sugars per dry ounce. For more information, refer to “Sugar limit for breakfast cereals” in “Part A: Grain Crediting Requirements.”
Part B: WGR Requirement

Resources for WGR Criteria

The resources below assist menu planners with identifying foods that meet the CACFP WGR criteria.

- **Bite Size: Meeting the CACFP Meal Patterns for Children – Module 7B: Grains Component Whole Grain-rich Requirement (CSDE training webinar):**
  https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-CACFP-Child-Care-Programs/Related-Resources#BiteSize

  https://www.fns.usda.gov/tn/identifying-whole-grain-rich-foods-cacfp

- **Is My Recipe Whole Grain-Rich in the CACFP? – Handouts in English and Spanish (USDA):**
  https://www.fns.usda.gov/tn/my-recipe-whole-grain-rich-cacfp

- **Meeting the Whole Grain-rich Requirement for the CACFP (CSDE):**

For additional resources, visit the “Grains Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

Waiver for WGR Requirement during COVID-19

During the current COVID public health emergency, the USDA is allowing several flexibilities for the CACFP meal patterns, including a waiver of the requirement that at least one serving of grains per day must be WGR. CACFP facilities that cannot meet the WGR requirement may request a waiver from the CSDE. If approved by the CSDE, this waiver is in effect through June 30, 2022. For more information, refer to “Meal Pattern Flexibilities during COVID-19” in section 1.
Part C: Serving Size for Grains

The required quantities for the grains component are in ounce equivalents. The CACFP meal patterns for children require a serving of the grains component at breakfast, lunch, and supper. A serving of the grains component may be one of the two required snack components. Table 3-16 summarizes the required servings of the grains component for each age group and meal.

<table>
<thead>
<tr>
<th>Meal</th>
<th>Ages 1-2</th>
<th>Ages 3-5</th>
<th>Ages 6-12</th>
<th>Ages 13-18</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>Snack</td>
<td>½ ounce equivalent</td>
<td>½ ounce equivalent</td>
<td>1 ounce equivalent</td>
<td>1 ounce equivalent</td>
</tr>
</tbody>
</table>

1 This age group applies only to at-risk afterschool programs and emergency shelters.

Meeting the Required Grain Servings

Menu planners may choose to serve one grain or a combination of several grains to meet the minimum daily requirement, as long as each serving contains at least ¼ ounce equivalent of grains (refer to “Minimum creditable amounts” in the beginning of section 3). For example, a lunch or supper menu for ages 6-12 could provide the required 1 ounce equivalents of the grains component from ½ cup of brown rice (1 ounce equivalent), or ¼ cup of brown rice (½ ounce equivalent) and a ½-ounce whole-grain roll (½ ounce equivalent). Servings that contain less than ⅛ ounce equivalent of grains do not credit.

If a menu item contains less than the full serving of the grains component, the meal must include additional grains to meet the full serving for each age group. For example, the breakfast meal pattern for ages 3-5 requires ½ ounce equivalent of the grains component. If a
menu item contains $\frac{1}{4}$ ounce equivalent of grains, the menu planner must include another menu item with at least $\frac{1}{4}$ ounce equivalent of grains to provide the full serving for ages 3-5.

When crediting menu items toward the grains component, menu planners must **round down** to the nearest $\frac{1}{4}$ ounce equivalent. For example, a standardized recipe or commercial product that contains 0.49 ounce equivalent of grains per serving credits as 0.25 ounce equivalent of the grains component.

**USDA’s Exhibit A Chart**

The USDA’s document, *Exhibit A: Grain Requirements for Child Nutrition Programs*, summarizes the grain ounce equivalents for nine groups (A-I) of creditable grain foods. Each group contains products with similar grain content.

The amount of a creditable grain food that provides 1 ounce equivalent varies because different types of foods contain different amounts of creditable grains. For example, to credit as 1 ounce equivalent of the grains component, a roll must weigh 28 grams (1 ounce), a corn muffin must weigh 34 grams (1.2 ounces), and a blueberry muffin must weigh 55 grams (2 ounces). The minimum amount that credits toward the grains component is $\frac{1}{4}$ ounce equivalent.

The USDA’s Exhibit A quantities for the grains component are not the same for all Child Nutrition Programs. The CSDE’s resource, *Grain Ounce Equivalents for the CACFP*, lists the Exhibit A ounce equivalents that apply to the CACFP meal patterns. Groups F and G do not have minimum amounts because grain-based desserts do not credit as the grains component in the CACFP meal patterns. For more information, refer to “Grain-based Desserts” in this section.
Grains

Part C: Serving Size

Methods to Determine Grain Ounce Equivalents

The USDA allows two methods for determining the grain servings of a creditable grain product or recipe. CACFP facilities may use either method, but must document the crediting information for commercial products and recipes for foods made from scratch. These methods are summarized below. For detailed guidance, refer to the CSDE’s resource, Calculation Methods for Grain Ounce Equivalents in the CACFP.

Method 1: Weight or volume (USDA’s Exhibit A chart)

Method 1 uses the USDA’s chart, Exhibit A: Grain Requirements for Child Nutrition Programs (Exhibit A) to determine the required weight (groups A-E) or volume (groups H-I) for the grain group where the product belongs.

- **Groups A-E** include baked goods, such as crackers, animal and graham crackers, breads, rolls, taco shells, muffins, waffles, and pancakes. The amount that provides 1 ounce equivalent ranges from 22 grams (0.8 ounce) for foods in group A to 69 grams (2.4 ounces) for foods in group E.

- **Group H** includes cereal grains, such as pasta, cooked breakfast cereals, and other cereal grains, e.g., amaranth, barley, buckwheat, cornmeal, corn grits, farina, kasha, millet, oats, quinoa, wheat berries, and rolled wheat. These foods require ½ cup cooked or 28 grams (1 ounce) dry to credit as 1 ounce equivalent of the grains component. **Note:** Cereal grains typically credit based on the cooked serving, but menu planners may choose to credit cereal grains using the dry uncooked weight. For guidance on crediting cooked breakfast cereals, refer to the CSDE’s resource, Crediting Breakfast Cereals in the CACFP.

Dry cereal grains used as an ingredient in a recipe (such as rolled oats in bread) require 16 grams of creditable grains to credit as 1 ounce equivalent of the grains component.

- **Group I** includes RTE cold breakfast cereals. These foods require 1 ounce (28 grams) to credit as 1 ounce equivalent of the grains component. A 1-ounce serving equals 1 cup of flaked or round cereal, 1½ cups of puffed cereal, and ¼ cup of granola. For guidance on crediting RTE breakfast cereals, refer to the CSDE’s resource, Crediting Breakfast Cereals in the CACFP.
3 | Meal Components

Grains

Part C: Serving Size

Method 1 is used for all commercial grain products. This method may also be used for recipes if the CACFP facility knows the weight (grams or ounces) of the prepared (cooked) serving.

Menu planners can use the USDA’s online Exhibit A Grains Tool to determine a product’s grain servings, and the required amount to obtain a specific meal pattern contribution. For more information, refer to the USDA’s webinars, Exhibit A Grains Tool to the Rescue and How to Maximize the Exhibit A Grains Tool.

Method 2: Creditable grains

Method 2 determines the ounce equivalents for creditable grain products and recipes by calculating the total weight (grams) of creditable grains per serving. The grams of creditable grains are obtained from the commercial product’s PFS or calculated from the grain quantities in the SFA’s recipe.

- To credit as 1 ounce equivalent of the grains component, foods in groups A-E of the USDA’s Exhibit A chart must contain **16 grams** of creditable grains and foods in groups H-I must contain **28 grams** of creditable grains.

- To credit as 1 ounce equivalent of the grains component, foods in groups A-E of the USDA’s Exhibit A chart must contain **8 grams** of creditable grains and foods in groups H-I must contain **14 grams** of creditable grains.

For commercial products, method 2 requires a PFS from the manufacturer that documents the weight of the creditable grains per serving. This information cannot be determined from the product’s Nutrition Facts label or packaging. For more information, refer to “Documentation for Commercial Products” in section 2.

For foods made from scratch, method 2 requires a standardized recipe that lists the weight of each creditable grain ingredient. If the recipe lists grain ingredients only by volume (e.g., cups and quarts), the SFA must calculate the equivalent weight (grams) for each grain ingredient. For more information, refer to “Standardized Recipes” in section 2.
When method 2 is required for commercial products

CACFP facilities may need to obtain additional information to determine the crediting information for some commercial grain products. A PFS is required for commercial products when any of the following situations apply:

- a creditable grain is not the first ingredient, but the product contains more than one creditable grain;
- a combination food that contains a grain portion is not CN labeled;
- the manufacturer claims that the product’s serving size is less than the required weight or volume in the USDA’s Exhibit A chart;
- the product is not listed in the USDA’s Exhibit A chart, or
- the menu planner wants to credit the products as a WGR food but the first ingredient is a flour blend of whose and enriched grains. For information on crediting foods with flour blends, refer to the CSDE’s guide for the CACFP, *Meeting the Whole Grain-rich Requirement for the CACFP*.

For additional guidance on each situation, refer to the CSDE’s resource, *Calculation Methods for Grain Ounce Equivalents in the CACFP*.

If the manufacturer will not supply a PFS, or the PFS does not provide the appropriate documentation, the product cannot credit as the grains component in CACFP meals and snacks.

The CSDE will review crediting documentation during the Administrative Review of the CACFP. For more information, refer to “Documentation for Commercial Products” in section 2.
Crediting Considerations for Grain Servings

Bread is in group B of the USDA’s Exhibit A chart and requires 1 ounce (28 grams) to credit as 1 ounce equivalent of the grains component. When crediting bread toward the grains component, menu planners must round down the ounce equivalents per slice to the nearest ¼ ounce equivalent (refer to “Meeting the Required Grain Servings” in this section).

Crediting one slice of bread

The weight of one slice of bread varies between different types of bread products. For many products, one slice of bread weighs more or less than 1 ounce. To determine the ounce equivalents contribution of one slice of bread, menu planners must check the serving size and weight on the Nutrition Facts label. If the serving contains more than one slice, the weight per slice must be determined by dividing the serving weight by the number of slices per serving.

- **Example.** The serving size for a multigrain bread is 2 slices and weighs 44 grams. Each slice of bread weighs 22 grams. Since 22 grams is less than 28 grams, one slice of bread does not credit as 1 ounce equivalent of the grains component.

  To determine the ounce equivalents per slice, divide the grams per slice by 28. For this multigrain bread, 22 grams divided by 28 grams equals 0.78 ounce equivalent, which rounds down to 0.75 ounce equivalent of the grains component.

Crediting sandwiches with two slices of bread

The ounce equivalents contribution of a sandwich is determined by adding the weight of both slices together before rounding down to the nearest ¼ ounce equivalent. For example, a sandwich contains two slices of WGR bread that each weigh 26 grams. To determine the ounce equivalents per sandwich, multiply 26 grams by 2, which equals 52 grams; divide by 28, which equals 1.86 ounce equivalents; then round down to nearest ¼ ounce equivalent, which equals 1.75 ounce equivalents.

If the menu planner rounds down the weight of each slice first, the crediting is incorrect. This equals 1.5 ounce equivalents per sandwich (26 grams divide by 28 equals 0.93, which rounds down to 0.75 ounce equivalent per slice).
Resources for Grain Ounce Equivalents

The resources below assist menu planners with determining the amount of a product or recipe that provides a serving of the grains component in the CACFP meal patterns.

Waiver for Ounce Equivalents during COVID-19

During the current COVID public health emergency, the USDA is allowing several flexibilities for the CACFP meal patterns, including a waiver of the requirement that ounce equivalents must be implemented by October 1, 2021. CACFP facilities that cannot meet the ounce equivalents may request a waiver from the CSDE. If approved by the CSDE, this waiver is in effect through June 30, 2022. For more information, refer to “Meal Pattern Flexibilities during COVID-19” in section 1.
4 – Meal Service

This section addresses the meal service requirements for the CACFP, including meal schedules, family-style meal service, children’s intent to participate in the meal service, water availability, meals consumed off site, offer versus serve (OVS), and family-provided foods for medical reasons.

Meal Schedules

The USDA’s regulations for the CACFP (7 CFR 226) do not require a specific mealtime or amount of time between meals. However, CACFP facilities should schedule meal services to ensure good nutrition practices and minimize food waste. Generally, most children need to eat about three hours after their last meal. Young children may need to eat more frequently. The CSDE recommends that child care programs follow the guidelines below.

- Schedule meal and snack periods at appropriate times that are not too close together or too far apart, e.g., at least two but no more than three hours apart. When the time span is too short, children will not be hungry. When the time span is too long, children can experience hunger symptoms (such as fatigue, irritability, inability to concentrate, weakness, and stomach pains) that can interfere with daily activities and learning.

- Offer food at least every three hours so that children’s hunger does not overwhelm their ability to self-regulate food intake.

- To encourage meal consumption and improve children’s behavior, schedule mealtimes after structured physical activity or active play.

- Provide adequate time to allow all children to eat and socialize. Scheduled mealtimes should provide children with at least 20 minutes to eat breakfast or snack, and at least 30 minutes to eat lunch or supper, after the children are sitting at the table. CACFP facilities should adjust these times as needed to ensure that all children have enough time to eat until they are no longer hungry.

CACFP facilities should consider the appropriate timing and scheduling of meals and snacks.
that best meet children’s nutrition needs. For additional guidance, refer to the “Meal Schedules” section of the CSDE’s Action Guide for Child Care Nutrition and Physical Activity Policies.

Meal schedules for at-risk afterschool programs
If an at-risk afterschool program serves both supper and snack, the CSDE requires minimum times between meal services. At-risk suppers and snacks must be served after the end of the school day, but may be served at any point during the afterschool program. If snack is served first, at least 2 hours must elapse between snack and supper. If supper is served first, at least 2½ hours must elapse between supper and snack.

Family-style Meal Service
The goal of the CACFP is to provide nutritious meals to young children and help them establish good eating habits at a young age. Family-style meal service enhances this goal by establishing a pleasant eating environment that supports and promotes mealtimes as a learning experience. It encourages supervising adults to set a personal example and provide educational activities that are centered on foods. The USDA and the CSDE strongly encourage family-style meal service in all CACFP child care programs.

Family style is an optional type of meal service that allows children to serve themselves from communal platters or bowls of food with assistance, if needed, from supervising adults who sit with the children. This approach allows children to identify and be introduced to new foods, new tastes, and new menus; while developing a positive attitude toward healthy foods, sharing in group eating situations, and developing good eating habits. Family-style meal service also helps young children develop motor skills and the dexterity and hand strength needed to serve foods.

Unlike other types of meal service (such as cafeteria lines, vended meals, and pre-plated service), family-style meals allow some latitude in the initial serving sizes because additional servings of each food are readily available at each table, and more can be served at any time. When a complete family-style service is not possible or practical, it may be useful to offer some meal components in a family-style manner, particularly when serving smaller children or introducing a new food item.

Table 4-1 compares the requirements and best practices for pre-plated or unitized meals and family-style meals.
### Table 4-1. Comparison of meal service methods for the CACFP

**Pre-plated or unitized meal service:** The minimum portion sizes of all meal pattern components are pre-plated or packaged as a unit.

| Requirements | • The meal or snack must provide the minimum portion size of all required components at the same time. |
| Best practices | • Prepare plates and cups before children are seated.  
• Measure out portions with appropriate serving utensils, e.g., scoops (dishers) and serving spoons. For more information, visit the “Portion Control” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.  
• Provide supervising adults with appropriate training and guidance to ensure portions meet the minimum requirements. Examples of resources include the CACFP meal patterns, crediting guides, completed menu forms, production records, and standardized recipes. See section 5 for resources. |

**Family-style meal service:** Children serve themselves from common platters of food with assistance, if needed, from supervising adults who sit with the children.

| Requirements | • Foods must be served in communal bowls or dishes.  
• The minimum portion sizes of prepared foods and milk must be available for each child at the table, and supervising adults who eat with the children.  
• Children must be allowed to serve the food components themselves, with the exception of beverages such as milk and juice.  
• Supervising adults are responsible for actively encouraging (but not requiring) each child to serve themselves the full-required portion. If a child refuses or takes less than the full-required portion, the supervising adult should offer the component to the child again. |
| Best practices | • Place components in communal bowls or dishes on the table before children are seated.  
• Use appropriately sized bowls, dishes, and serving utensils (such as tongs or spoons) for children to serve themselves.  
• Serve milk in child-sized pitchers.  
• Have staff sit with the children and assist with serving. |
Requirements for family-style meal service

CACFP facilities that implement family-style meal service must follow the guidelines below to ensure compliance and eligibility for reimbursement.

- **Offering minimum portions**: A sufficient amount of prepared food and the appropriate type of milk must be placed on each table to provide the full serving (minimum meal pattern amount) of each food component for all children at the table, and to accommodate supervising adults who eat with the children. The examples below illustrate this requirement.

  - A child care center provides the required ¼-cup serving of the fruits component for ages 3-5 at lunch from ¼ cup of sliced apples. If a supervising adult sits with three four-year-olds, at least ¼ cup of sliced apples must be available for each person. Therefore, the communal serving plate or bowl on the table must contain at least 1 cup of apple slices.

  - The CACFP breakfast and lunch meal patterns for ages 3-5 require ¾ cup of unflavored low-fat or fat-free milk. If a supervising adult sits with three four-year-olds, at least ¼ cup of milk must be available for each person. Therefore, the pitcher on the table must contain at least 3 cups of milk; or that amount must be readily available nearby. If the required amount of milk makes the pitcher too heavy for young children, the pitcher can initially contain less milk, as long as the remaining required quantity is readily available nearby.

- **Offering food components**: Family-style meal service allows children to make choices in selecting foods and the size of initial servings. Supervising adults should initially offer all children the full serving of each food component. Children should be encouraged to take the full serving, but they are not required to self-serve or consume the full serving. CACFP facilities may still claim the meal for reimbursement if a child refuses a component, or takes a smaller amount of a component. Supervising adults should encourage additional portions and selections to meet the full-required serving, as appropriate.
• **Self-service:** Children must be allowed to serve themselves in family-style meal service. Supervising adults may assist young children who are unable to serve themselves. Supervising adults who choose to serve beverages to the children must serve the required minimum quantity to each child. For example, children ages 3-5 must be served ¾ cup of milk at breakfast, lunch, and supper.

• **Role of supervising adults:** During the course of the meal, the supervising adults are responsible for actively encouraging each child to accept service of the full-required portion of each food component. For example, if a child initially refuses a food component or does not accept the full-required portion, the supervising adult should offer the food component to the child again.

• **Second meals and servings:** Second meals and second servings cannot be claimed for reimbursement.

Meals that follow these guidelines are reimbursable, even if supervising adults do not eat with the children. However, the CSDE strongly encourages CACFP facilities to assist in the development of healthy eating practices by ensuring that supervising adults eat with the children and model healthy eating behaviors.
Resources for family-style meal service

The resources below provide more information on family-style meal service in the CACFP.

- Meal Service in CACFP Child Care Programs (CSDE’s Meal Patterns for CACFP Child Care Programs webpage):
  https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-CACFP-Child-Care-Programs/Related-Resources#MealService

- Nutrition and Wellness Tips for Young Children: Supplement E: Support for Family Style Meals (USDA):
  https://fns-prod.azureedge.net/sites/default/files/tn/Supplement_E.PDF

- The Basic Guide to Family Style Dining – Part 1 (ICN):

- USDA Memo CACFP 05-2017: Offer Versus Serve and Family Style Meals in the Child and Adult Care Food Program:

OVS is allowed only for at-risk afterschool centers. For more information, refer to “OVS in CACFP at-risk afterschool centers” in this section.

For additional resources, visit the “Meal Service in CACFP Child Care Programs” section of the CSDE’s Meal Patterns for CACFP Child Care Programs webpage.
**Intent to Participate in the Meal Service**

For CACFP facilities to claim meals and snacks for reimbursement, children must participate in the meal service or have the intent to participate in the meal service. A child who makes no attempt (i.e., has no intent) to join other children at the meal or snack cannot be included in the reimbursable meal count, even if he or she was asked by the supervising adult to participate.

The CACFP regulations do not allow for reimbursement of ordered or plated meals. If a CACFP facility uses pre-plated meals or supervising adults serve the children, it may be difficult to judge the child’s intent to participate in the meal service.

If a child refuses a meal that is pre-plated or served by a staff member, the CACFP facility cannot claim the meal for reimbursement. The child must show intent to eat, such as coming willingly to the table; helping himself or herself to food, or asking to be served; and attempting to eat the meal. The child does not have to eat the meal for the CACFP facility to claim reimbursement, but the child must demonstrate the **intent** to eat.

When a child who clearly has no intent to participate is forced to come to the table or forced to put food on his or her plate, the CACFP facility cannot claim the meal for reimbursement. A child may not have the intent to participate in a meal for many reasons, such as behavior issues or being sick, tired, angry, or upset.

The scenarios in table 4-2 illustrate the principle of a child’s intent to eat and when CACFP facilities can claim CACFP meals and snacks.
### Table 4-2. Examples of child’s intent to eat

<table>
<thead>
<tr>
<th>Scenario</th>
<th>Can the CACFP facility claim the meal?</th>
</tr>
</thead>
<tbody>
<tr>
<td>A child typically chooses not to participate in the meal service. A teacher forces the child to come and sit at the table, and serves the child some food. The child does not eat.</td>
<td>No. The CACFP facility cannot claim the meal for reimbursement because the child has not chosen (i.e., has no intent) to participate in the meal. Since the teacher knows this child typically does not eat, it would be clear that the child did not intend to participate in the meal. If the child willingly comes to the table, chooses to take a serving of food, but then does not eat, the meal is reimbursable. In this case, the child has the intent to eat, even if he or she did not follow through.</td>
</tr>
<tr>
<td>A child who normally participates in the meal service comes to the table then chooses not to take any food.</td>
<td>No. The CACFP facility cannot claim the meal for reimbursement because the child has chosen not to participate.</td>
</tr>
<tr>
<td>At snack time, a child is crying and upset over an altercation with another child. The teacher asks her to come to the table but she refuses.</td>
<td>No. The CACFP facility cannot claim the meal for reimbursement because the child has chosen not to participate.</td>
</tr>
<tr>
<td>A child willingly comes to the table at mealtime. He helps himself to several meal components, takes one bite, and then stops eating because he does not feel well.</td>
<td>Yes. The CACFP facility may claim the meal for reimbursement because the child chose to participate and had the intent to eat, even though he changed his mind when he did not feel well.</td>
</tr>
<tr>
<td>A child gets sick just before lunch. She is lying on a cot, waiting for her parent to pick her up.</td>
<td>No. The CACFP facility cannot claim the meal for reimbursement because the child does not have the intent to participate in the meal.</td>
</tr>
</tbody>
</table>
Water Availability

USDA Memo CACFP 20-2016: Water Availability in the Child and Adult Care Food Program summarizes the requirements for water availability in the CACFP. The Healthy Hunger-Free Kids Act requires that CACFP facilities must make drinking water available to children, as nutritionally appropriate. Throughout the day, water must be made available to children to drink upon their request. Children are not required to take water.

CACFP facilities may also choose to make water available for children to self-serve, for example:

• providing disposable cups near sinks that are available to children, with a step stool if children are unable to reach the sink; and

• providing covered water pitchers and disposable cups if water fountains are not available.

While drinking water must be made available to children during mealtimes, this does not mean that CACFP facilities must serve water with the meal. CACFP facilities must have water readily available nearby to provide to children upon request; however, water is not required to be on the table.

If safe water is not readily available in a facility, purchasing water for children is a reasonable and allowable cost for CACFP facilities. However, purchasing water for consumption by adults or CACFP facility employees is not an allowable cost.
Considerations for serving water
CACFP facilities must consider the guidelines and requirements below when serving water in the CACFP.

- Caregivers should not serve young children too much water before and during mealtimes. Excess water may reduce the amount of food and milk that children consume at mealtimes.

- Water is not a meal pattern component and is not part of reimbursable meals. CACFP facilities cannot offer water as a choice instead of milk.

- If the snack menu includes juice or milk as one of the two required snack components, CACFP facilities cannot offer water as a choice instead of juice or milk.

- Serve water at snack when the snack menu does not include milk or juice.

- Outside of mealtimes, offer water instead of sweetened beverages such as juice drinks, soda, and sports drinks. The CSDE recommends not serving these types of sweetened beverages in child care programs. For more information, refer to the CSDE’s guide, *Action Guide for Child Care Nutrition and Physical Activity Policies*.

For more information and resources, visit the “Water Availability” section of the CSDE’s Meal Patterns for CACFP Child Care Programs webpage.
Meals Consumed Off Site

CACFP facilities receive reimbursement for meals and snacks that meet the meal patterns, and are served to children on the premises. A meal consumed off site is not reimbursable because a child who has left the premises is no longer participating in the activities of the institution.

If a child leaves the meal service early, uneaten meal or snack components cannot be packed “to go.” By leaving the facility and consuming the food off site, the child is not participating in the meal or snack service with the rest of the group. CACFP facilities cannot claim these meals and snacks for reimbursement.

The CACFP is a congregate feeding program intended to provide meals that are consumed on site unless children are on an approved field trip. Meals served on field trips are reimbursable if they meet the CACFP meal patterns and are served and consumed as part of a related function of the CACFP facility.

Waiver for non-congregate meals during COVID-19

During the current COVID public health emergency, the USDA’s nationwide waivers allow several flexibilities for the CACFP, including a waiver of the requirement for congregate meals. Non-congregate meal service is addressed in USDA memo COVID-19: Child Nutrition Response #87: Nationwide Waiver to Allow Non-Congregate Meal Service for School Year 2021-2022.

The USDA recognizes that in this public health emergency, waiving the congregate meal requirement is vital to ensure appropriate safety measures for providing meals and snacks, such as supporting social distancing during mealtimes. Non-congregate feeding flexibilities also allow child care operators to provide meal pick-up options and facilitate grab-and-go meals for children on site.

CACFP sponsors must request the non-congregate waiver from the CSDE. If approved by the CSDE, this waiver is in effect through June 30, 2022. For more information, refer to “USDA Nationwide Waivers for COVID-19” in the “About this Guide” section.
Offer versus Serve

The option to implement offer versus serve (OVS) applies only to CACFP at-risk afterschool programs. OVS is an optional approach to menu planning and meal service that allows children to decline some of the foods offered in a reimbursable breakfast, lunch, or supper. OVS cannot be implemented at snack.

Generally, OVS is not appropriate for young children because it may interfere with CACFP nutrition goals and the CACFP facility’s efforts to introduce new foods to children. The USDA encourages CACFP institutions to consider using family-style meal service as a way to provide younger children some choice in the types and amounts of food selected. For more information, refer to “Family-style Meal Service” in this section.

At-risk afterschool programs that choose to implement OVS must notify the CSDE and receive approval prior to beginning implementation.

OVS in CACFP at-risk afterschool centers

Table 4-3 summarizes the OVS requirements for CACFP meals in at-risk afterschool centers.

- For a reimbursable breakfast, the CACFP center must offer at least four food items and the child must select at least three food items.
- For a reimbursable lunch or supper, the CACFP center must offer all five food components and the child must select at least three food components.

For more information on OVS, refer to the CSDE’s resource, Offer versus Serve in At-risk Afterschool Centers, and the USDA’s resource, Offer Versus Serve in the CACFP.
Table 4-3. OVS requirements for CACFP meals in at-risk afterschool centers

<table>
<thead>
<tr>
<th>Meal</th>
<th>CACFP facility must offer</th>
<th>Child must select</th>
</tr>
</thead>
</table>
| Breakfast    | A least four food items from three food components¹  
1. One serving of milk ², ³  
2. One serving of vegetables and fruits  
3. One serving of grains  
4. One serving of meat/meat alternates or one additional serving of fruits, vegetables, or grains | At least three food items    |
| Lunch and supper | Five components ¹  
1. One serving of milk ³  
2. One serving of fruits  
3. One serving of vegetables  
4. One serving of grains  
5. One serving of meat/meat alternates | At least three food components |

¹ The serving for each component must be at least the minimum required quantities in the CACFP meal patterns for children. For more information, refer to section 1.
² The four food items cannot include two servings of milk.
³ Milk must be unflavored whole milk for age 1 and unflavored low-fat or fat-free milk for ages 2 and older. For more information, refer to “Allowable Types of Milk” in section 3.
Family-provided Meal Components for Medical Reasons

The CACFP regulations (7 CFR 26.20(g)(ii)) allow parents and guardians to supply one or more meal pattern components for medical reasons, when the child has a disability that restricts their diet, and the family-provided components are based on a medical statement signed by a recognized medical authority. The CACFP facility must provide at least one required component, and the child must receive all required components.

To claim these meals for reimbursement, the CACFP facility must:

- submit a specific written request to the CSDE (refer to “CSDE Contact Information” at the beginning of this guide);
- detail the child’s medical issue in the request and attach a copy of the medical statement signed by the child’s recognized medical authority;
- indicate the food or beverage items to be provided by the parent or guardian; and
- include a statement of assurance that the CACFP facility will serve all other required meal components.

If the request is approved, the CSDE will issue a written response for the acceptable family-provided meal components. This approval applies only to the individual child, and must be maintained on file with the child’s other medical records.

CACFP facilities that implement this option should have policies in place to address food safety standards for family-provided components, including:

- clearly labeling all foods with the child’s name, date, and type of food;
- storing foods at an appropriate temperature until they are eaten; and
- prohibiting children from sharing foods with other children.

When determining whether to allow foods brought from home, CACFP facilities must consider food safety issues and the liability that might arise if a child gets a foodborne illness. Connecticut’s Public Health Code 19-13-B42 applies to all foods served in child care centers and emergency shelters, regardless of whether they are prepared on site or brought from home. For information on Connecticut’s food safety requirements, visit the CSDE’s Food Safety for Child Nutrition Programs webpage.

For information on the USDA’s requirements for meal modifications, refer to the CSDE’s guide, Accommodating Special Diets in CACFP Child Care Programs.
5 — Resources

This section includes links to resources and websites that assist CACFP facilities with meeting the CACFP meal patterns and crediting requirements. Topics include crediting and meal pattern components, CSDE guides and resource lists, meal patterns and menu planning, and USDA regulations and policy.

More links to information on the federal and state requirements and guidance for the CACFP are available on the CSDE’s Program Guidance for CACFP Child Care Programs webpage. For a list of resources on the CACFP meal patterns and crediting requirements, refer to the CSDE’s resource, Resources for the CACFP Meal Patterns.

Glossary

added sugars: Sugars and syrups added to foods in processing or preparation, as opposed to the naturally occurring sugars found in foods like fruits, vegetables, grains, and dairy products. Names for added sugars include brown sugar, corn sweetener, corn syrup, dextrose, fructose, fruit juice concentrates, glucose, high-fructose corn syrup, honey, invert sugar, lactose, malt syrup, maltose, molasses, raw sugar, sucrose, sugar, and syrup.

Administrative Review (AR): A periodic review of an institution’s operations of the Child Nutrition Programs, conducted by the Connecticut State Department of Education to monitor performance and assess compliance with all USDA regulations.

alternate protein products (APPs): APPs are generally single ingredient powders that are added to foods. Examples include soy flours, soy concentrates, soy isolates, whey protein concentrate, whey protein isolates, and casein. APPs include vegetable protein products. The USDA has specific requirements for the crediting of APPs in Child Nutrition Programs. For more information, refer to “Crediting Alternate Protein Products (APPs)” in section 3 and the CSDE’s resource, Requirements for Alternate Protein Products in the CACFP.

artificial sweeteners: Ingredients with little or no calories used as sugar substitutes to sweeten foods and beverages. Artificial sweeteners are hundreds of times sweeter than sugar. Common artificial sweeteners include acesulfame potassium (Acesulfame-K, Sunett, Sweet & Safe, Sweet One), aspartame (Nutrasweet, Equal), neotame, saccharin (Sweet and Low, Sweet Twin, Sweet ‘N Low Brown, Necta Sweet), sucralose (Splenda), and tagatose. These nonnutritive sweeteners are calorie-free, except for aspartame, which is very low in calories. For more information, refer to “nonnutritive sweeteners” in this section.

beans and peas (legumes): Refer to “legumes” in this section.

bran: The seed husk or outer coating of cereal grains such as wheat, rye, and oats. Examples include oat bran, wheat bran, corn bran, rice bran, and rye bran. Bran is a creditable grain in the CACFP meal patterns but is not a whole grain.

CACFP facilities: Child care centers, family day care homes, emergency shelters, and at-risk afterschool programs that participate in the USDA’s Child and Adult Care Food Program.
CACFP meal patterns for children: The required food components and minimum serving sizes that facilities participating in the CACFP must provide to receive federal reimbursement for meals and snacks served to children. The CACFP meal patterns for children apply to children ages 1-12; children ages 15 and younger of migrant workers; children of any age with disabilities; and children through age 18 in at-risk afterschool programs and emergency shelters. For more information, refer to section 1 and the CSDE’s resource, *CACFP Meal Patterns for Children*.

CACFP meal patterns for infants: The required food components and minimum serving sizes that facilities participating in the CACFP must provide to infants from birth through 11 months to receive federal reimbursement for meals and snacks served to infants. For more information, refer to the CSDE’s resource, *CACFP Infant Meal Pattern*, and the USDA’s guide, *Feeding Infants in the Child and Adult Care Food Program*; and visit the CSDE’s *Feeding Infants in CACFP Child Care Programs* webpage.

CACFP sponsor: A public or private nonprofit organization that is entirely responsible for the administration of the CACFP in one or more day care homes, child care centers, emergency shelters, at-risk afterschool care centers, or adult day care centers. In some situations, for-profit institutions may also be eligible to participate in the CACFP. For more information, refer to Section 226.2 of the CACFP regulations (7 CFR 226).

cereal grains: The seeds that come from grasses. Cereal grains can be whole grain (such as amaranth, barley, buckwheat, corn, millet, oats, quinoa, rice, rolled wheat, rye, sorghum, triticale, wheat, and wheat berries) or enriched (such as enriched cornmeal, corn grits, and farina).

Child and Adult Care Food Program (CACFP): The USDA’s federally assisted meal program providing nutritious meals and snacks to children in child care centers, family day care homes, and emergency shelters, and snacks and suppers to children participating in eligible at-risk afterschool care programs. The CACFP also provides meals and snacks to adults who receive care in nonresidential adult day care centers. For more information, visit the USDA’s *CACFP* webpage and the CSDE’s *CACFP* webpage.

Child Nutrition (CN) label: A statement that clearly identifies the contribution of a food product toward the USDA’s meal patterns, based on the USDA’s evaluation of the product’s formulation. Products eligible for CN labels include main dish entrees that contribute to the meat/meat alternates component of the meal pattern requirements, e.g., beef patties, cheese or meat pizzas, meat or cheese and bean burritos, egg rolls, and breaded fish portions. The CN label will usually indicate the contribution of other meal components (such as vegetables, grains, and fruits) that are part of these products. For more information, refer to “Child Nutrition (CN) Labels” in section 2 and the CSDE’s resource, *Using Child Nutrition (CN) Labels in the CACFP*, and visit the USDA’s *Child Nutrition (CN) Labeling* webpage.
**Child Nutrition Programs:** The USDA’s federally funded programs that provide nutritious meals and snacks to children, including the National School Lunch Program (NSLP), School Breakfast Program (SBP), Afterschool Snack Program (ASP), Special Milk Program (SMP), Summer Food Service Program (SFSP), Seamless Summer Option (SSO) of the NSLP, Fresh Fruit and Vegetable Program (FFVP), and Child and Adult Care Food Program (CACFP). The CACFP also provides nutritious meals and snacks to the frail elderly in adult day care centers. For more information, visit the CSDE’s [Child Nutrition Programs webpage](#).

**combination foods:** Foods that contain more than one food component, such as pizza, burritos, and smoothies made with milk and fruit. For example, macaroni and cheese contains pasta (grains) and cheese (meat/meat alternate). Combination foods generally cannot be separated (such as pizza and burritos) or are not intended to be separated (such as a hamburger on a bun or turkey sandwich).

**Connecticut Child Care Nutrition Standards (CCCNS):** The CSDE’s recommended guidelines for the nutritional content of all foods and beverages served throughout the child care environment, including CACFP meals and snacks, celebrations and any other activities where foods and beverages are provided by the child care program or families. The CCCNS reflects current nutrition science and national health recommendations, and promotes whole or minimally processed nutrient-rich foods that are low in fat, added sugars, and sodium. For more information, refer to the CSDE’s guide, *Action Guide for Child Care Nutrition and Physical Activity Policies*.

**creditable food:** A food or beverage that counts toward the meal pattern requirements for a reimbursable meal or snack in the USDA Child Nutrition Programs. For more information, visit the “Documents/Forms” section of the CSDE’s [Crediting Foods in CACFP Child Care Programs webpage](#).

**cycle menu:** A series of menus planned for a specific period of time, with a different menu for each day. Cycle menus can help CACFP facilities to increase variety, control food cost, and save time. For more information, refer to “Using cycle menus” in section 2.

**deep-fat frying:** Cooking by submerging food in hot oil or other fat. The CACFP meal patterns prohibit deep-fat frying foods on site.

**Dietary Guidelines for Americans:** A federal document that provides science-based advice for Americans ages 2 and older to promote health and reduce risk for chronic diseases through diet and physical activity. The U.S. Department of Health and Human Services and the U.S. Department of Agriculture jointly publish the *Dietary Guidelines* every five years. This document forms the basis of federal food, nutrition education and information programs. For more information, visit the [Dietary Guidelines for Americans webpage](#).
disability: A condition in which a person has a physical or mental impairment that substantially limits one or more major life activities, has a record of such an impairment, or is regarded as having such an impairment. For more information, refer to the CSDE’s guide, Accommodating Special Diets in CACFP Child Care Programs.

edible portion: The portion of a food that can actually be eaten after the nonedible parts are removed, for example, cooked lean meat without bone, and fruit without seeds or pits.

endosperm: The soft, white inside portion of the whole-grain kernel. The endosperm contains starch, protein, and small amounts of B vitamins.

enriched grains: Refined grains (such as wheat, rice, and corn) and grain products (such as cereal, pasta, and bread) that have some vitamins and minerals added to replace the nutrients lost during processing. The five enrichment nutrients are added within limits specified by the FDA, and include thiamin (B₁), riboflavin (B₂), niacin (B₃), folic acid, and iron. For more information, refer to the CSDE’s resource, Crediting Enriched Grains in the CACFP.

enrichment: Adding back nutrients (usually vitamins or minerals) originally present in a food that were lost during processing. Enrichment nutrients are added back in approximately the same levels as were originally present in the food. For more information, refer to “enriched grains” in this section.

Exhibit A chart: A USDA chart that indicates the required weight (groups A-G) or volume (groups H-I) for a grain food to provide 1 ounce equivalent (NSLP and SBP) or 1 serving (ASP) of the grains component. This chart may be used for commercial grain products and for standardized recipes that indicate the weight of the prepared (cooked) serving. The required amounts for the grains component are not the same for all Child Nutrition Programs. The CSDE’s resource, Grain Ounce Equivalents for the CACFP, lists the Exhibit A grain servings that apply to the CACFP meal patterns. For more information, refer to the USDA’s Exhibit A: Grain Requirements for Child Nutrition Programs.

family-style meal service: A method of meal service that allows children to serve themselves from common platters of food with assistance from supervising adults, if needed. For more information, refer to “Family-style Meal Service” in section 4.

flour: Finely ground and sifted wheat or other grains such as rye, corn, rice, or buckwheat.

fluid milk substitutes: Nondairy beverages (such as soy milk) that can be used as a substitute for fluid milk in the USDA Child Nutrition Programs. For reimbursable meals and snacks, nondairy beverages served to children without disabilities must comply with the USDA nutrition standards for milk substitutes. For more information, refer to “USDA’s nutrition standards for fluid milk substitutes” in section 3 and the CSDE’s resource, Allowable Milk Substitutes for Children without Disabilities in the CACFP.
**food components:** The five food groups that comprise reimbursable meals in the USDA Child Nutrition Programs, including milk, fruits, vegetables, grains, and meat/meat alternates. For information on the individual food components, refer to section 3 and visit the “Documents/Forms” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

**food item:** A specific food offered within the food components that comprise reimbursable meals in the USDA’s Child Nutrition Programs. A food item may contain one or more food components or more than one serving of a single component. For example, an entree could provide 1 ounce equivalent of the grains component and 1 ounce of the meat/meat alternates component; and a 2-ounce whole grain or enriched bagel could provide 2 ounce equivalents of the grains component.

**food-based menu planning:** A type of menu planning for the USDA’s Child Nutrition Programs that uses a meal pattern with specific food components in certain amounts based on specific age/grade groups. For more information, refer to “food components” in this section and the meal patterns in section 1.

**fortification:** Adding nutrients (usually vitamins or minerals) that were not originally present in a food or beverage or adding nutrients at levels that are higher than originally present. Fortification is used for naturally nutrient-rich products based on scientifically documented health needs (e.g., fortifying milk with vitamin D to increase the body’s absorption of calcium), or to enhance the perceived nutritional value of products with little or no natural nutritional value, e.g., an “energy” bar made from processed flour that is fortified with multiple vitamins and minerals. Fortification nutrients are added to products in varying amounts, from small percentages up to amounts greater than recommended intakes.

**fruits component:** The meal component of the USDA meal patterns that is comprised of fruits (fresh, frozen, canned, and dried) and pasteurized full-strength juice. Up to half of the weekly fruit offerings may be in the form of full-strength juice. For more information, refer to “Fruits Component” in section 3 and visit the “Fruits Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

**full component:** The daily quantity designated by the menu planner (no less than the established minimum) to meet the required weekly ranges.

**full serving:** See “full component” in this section.
full-strength fruit or vegetable juice: An undiluted product obtained by extraction from sound fruit. Full-strength juice may be fresh, canned, frozen or reconstituted from concentrate and may be served in either liquid or frozen state. The name of the full-strength fruit juice on the label must include one of the following terms: “juice,” “full-strength juice,” “100 percent juice,” “reconstituted juice,” or “juice from concentrate.” Note: The CACFP meal patterns allow pasteurized full-strength juice to credit as either the vegetables component or fruits component at only one CACFP meal or snack per day. For more information, refer to “Juice limit” in section 3 and the CSDE’s resource, Crediting Juice in the CACFP.

germ: The vitamin-rich sprouting section of the whole-grain kernel. Germ is a creditable grain in the CACFP meal patterns, but is not a whole grain.

grains component: The meal component of the USDA meal patterns that is comprised of cereal grains and products made from their flours. To credit as the grains component, grain foods be whole grain-rich or enriched. Breakfast cereals must be whole grain-rich, enriched, or fortified. For more information, refer to “Grains Component” in section 3 and visit the “Grains Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

Hazard Analysis Critical Control Points (HACCP): A preventative food safety program to control food safety hazards during all aspects of food service operations. HACCP reduces the risk of foodborne hazards by focusing on each step of the food preparation process from receiving to service.

homeny: A traditional food in Mexican and Native American cultures that is commonly served as a vegetable or milled grain product, e.g., hominy grits. Hominy is made from whole kernels of maize (dried field corn) that have been soaked in an alkaline solution (nixtamalized). This process removes the hull and germ, causes the corn to puff up to about double its normal size, and increases the bioavailability of certain nutrients, such as calcium and niacin. For more information, refer to “nixtamalization” in this section and “Crediting Hominy as Vegetables” and “Crediting Hominy as Grains” in section 3.

juice drink: A product resembling juice that contains full-strength juice along with added water and possibly other ingredients, such as sweeteners, spices, or flavorings. Juice drinks do not credit toward the meal pattern requirements.

lactose: The naturally occurring sugar found in milk. Lactose contains glucose and galactose. For more information, refer to “simple carbohydrates (sugars) in this section.

lean meat and poultry: Defined by the Dietary Guidelines for Americans as meat and poultry that contains less than 10 grams of fat, no more than 4.5 grams of saturated fat, and less than 95 milligrams of cholesterol per 100 grams and per labeled serving size, based on the USDA’s definitions for food label use. Examples include 95 percent lean cooked ground beef, beef top
round steak or roast, beef tenderloin, pork top loin chop or roast, pork tenderloin, ham or turkey deli slices, skinless chicken breast, and skinless turkey breast.

**legumes:** Plants that grow in pods. Legumes include pulses, which are the edible dried seeds of plants in the legume family, such as beans, lentils, chickpeas, and split peas. Pulses include all beans, peas, and lentils cooked from dry, canned, or frozen, such as kidney beans, pinto beans, black beans, pink beans, black-eyed peas, garbanzo beans (chickpeas), split peas, pigeon peas, mung beans, and lentils. The meal patterns for Child Nutrition Programs allow legumes to credit as either the meat/meat alternates component or the vegetable component. For more information, refer to “Crediting Legumes as Meat/Meat Alternates” and “Crediting Legumes as Vegetables” in section 3.

**main dish:** The main dish is generally considered the main food item in the menu, which is complemented by the other food items. Examples of main dish items include pizza, chicken stir-fry, and chef’s salad with ham, hard-boiled egg, and cheese.

**masa harina:** Corn flour used for making corn products such as tortillas, tortilla chips, and tamales. Masa harina is nixtamalized and credits as a whole grain. For more information, refer to “nixtamalization” in this section and “Crediting Corn Masa, Masa Harina, Corn Flour, and Cornmeal” in section 3.

**meal pattern:** The required food components and minimum servings that CACFP facilities must provide to receive federal reimbursement for meals and snacks served to children. For more information, refer to the CACFP breakfast, lunch and supper, and snack meal patterns in section 1.

**meal:** A grain made by coarsely grinding corn, oats, wheat, or other grains. Whole grain, enriched, or fortified meal credits toward the grains component of the USDA’s meal patterns.

**meals:** See “reimbursable meals” in this section.

**meat alternates:** Foods that provide similar protein content to meat. Meat alternates include alternate protein products, cheese, eggs, cooked dry beans or peas, nuts and seeds and their butters (except for acorn, chestnut and coconut), tofu and other soy products containing at least 5 grams of protein in 2.2 ounces (weight) or ¼ cup (volume), tempeh, and yogurt (unflavored or flavored) containing no more than 23 grams of sugars per 6 ounces. For more information, refer to “Meat/Meat Alternates Component” in section 3 and visit the “Meat/Meat Alternates Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
Glossary

meat/meat alternates component: The meal component of the USDA meal patterns that includes meats (e.g., beef, poultry, and fish) and meat alternates, such as eggs, cheese, yogurt, beans and peas (legumes) nuts, and seeds. For more information, refer to “Meat/Meat Alternates Component” in section 3 and visit the “Meat/Meat Alternates Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

medical statement: A document that identifies the specific medical conditions and appropriate dietary accommodations for children with special dietary needs. For more information, refer to the CSDE’s guide, Accommodating Special Diets in CACFP Child Care Programs, and visit the CSDE’s Special Diets in CACFP Child Care Programs webpage.

menu item: Any planned main dish, vegetable, fruit, bread, grain or milk that is part of the reimbursable meal. Menu items consist of food items.

menu of record: The official menu that documents exactly what is served each day in the CACFP facility. This provides a record of the meal pattern components and portion sizes served to all enrolled children and infants, and provides documentation for the number of CACFP meals claimed for reimbursement.

milk component: The meal component of the USDA meal patterns that includes pasteurized fluid milk that meets the fat content and flavor requirements of the USDA regulations. The milk component also includes fluid milk substitutes that meet the USDA’s nutrition standards for fluid milk substitutes. For more information, refer to “Milk Component” in section 3 and visit the “Milk Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

MyPlate: Released in June 2011, MyPlate is the USDA’s food guidance system to translate the Dietary Guidelines for Americans into a healthy eating plan. MyPlate emphasizes consuming more fruits, vegetables, whole grains, and low-fat dairy. For more information, visit the USDA’s Choose MyPlate website.

National School Lunch Program (NSLP): The USDA’s federally assisted meal program operating in public and nonprofit private schools, and residential child care institutions. The NSLP provides nutritionally balanced, low-cost or free lunches to children each school day. It was established under the National School Lunch Act, signed by President Harry Truman in 1946. For more information, visit the CSDE’s National School Lunch Program webpage.
natural cheese: Cheese that is produced directly from milk, such as cheddar, Colby, Monterey Jack, mozzarella, muenster, provolone, Swiss, feta, and brie. Natural cheese also includes pasteurized blended cheese made by blending one or more different kinds of natural cheese. Natural cheeses do not include pasteurized process cheese (e.g., American), pasteurized process cheese food, pasteurized process cheese spread, or pasteurized process cheese products. For more information, refer to “Crediting Cheeses” in section 3.

nixtamalization: A process in which dried corn is soaked and cooked in an alkaline (slaked lime) solution. This process increases the bioavailability of certain nutrients and provides a nutritional profile similar to whole-grain corn. Nixtamalized corn is used to make hominy, masa harina (corn flour), corn masa (dough from masa harina), and certain types of cornmeal. Nixtamalized corn credits as a whole grain. For more information, refer to “Crediting Corn Masa, Masa Harina, Corn Flour, and Cornmeal” in section 3.

noncreditable foods: Foods and beverages that do not contribute toward the meal patterns for the USDA’s Child Nutrition Programs. Noncreditable foods and beverages are either in amounts too small to credit (i.e., foods and beverage that do not provide the minimum creditable amount of a food component), or they do not fit into one of the meal pattern components. For more information, refer to the CSDE’s resource, Noncreditable Foods in CACFP Child Care Programs.

noncreditable grains: Grain ingredients and products that do not contribute toward the grains component of the CACFP meal patterns. Examples include fiber and modified food starch (including potato, legume, and other vegetable flours). For a list of noncreditable grains, refer to the CSDE’s resource, Meeting the Whole Grain-rich Requirement for the CACFP.

nonnutritive sweeteners: Ingredients with no calories used as sugar substitutes to sweeten foods and beverages. Nonnutritive sweeteners can be 200 to 600 times sweeter than sugar. They include artificial sweeteners such as acesulfame-potassium, neotame, saccharin, and sucralose and “natural” sweeteners such as stevia (e.g., Rebiana, Rebaudioside A, Truvia, PureVia, and SweetLeaf). For a list of artificial sweeteners, refer to “artificial sweeteners” in this section.
nutrient-dense foods: Foods and beverages that provide vitamins, minerals, and other substances that contribute to adequate nutrient intakes or may have positive health effects, and contain little or no solid fats, added sugars, refined starches, or sodium. Ideally, these foods and beverages are also in forms that retain naturally occurring components, such as dietary fiber. Examples include all vegetables, fruits, whole grains, seafood, eggs, beans and peas, unsalted nuts and seeds, fat-free and low-fat dairy products, and lean meats and poultry (when prepared with little or no added solid fats, sugars, refined starches, and sodium). The term “nutrient dense” indicates the nutrients and other beneficial substances in a food have not been “diluted” by the addition of calories from added solid fats, sugars, or refined starches, or by the solid fats naturally present in the food.

nutrient-rich foods: See “nutrient-dense foods” in this section.

nutrition standards for fluid milk substitutes: The nutrition requirements for nondairy beverages (such as soy milk) used as fluid milk substitutes in the USDA Child Nutrition Programs. The USDA requires that any fluid milk substitutes are nutritionally equivalent to cow’s milk and meet the following nutrients based on a 1-cup serving (8 fluid ounces): 276 milligrams (mg) of calcium; 8 grams (g) of protein; 500 international units (IU) of vitamin A; 100 IU of vitamin D; 24 mg of magnesium; 222 mg of phosphorus; 349 mg of potassium; 0.44 mg of riboflavin; and 1.1 micrograms (mcg) of vitamin B-12. For more information, refer to “USDA’s Nutrition Standards for Fluid Milk Substitutes” in section 3 and the CSDE’s resource, Allowable Milk Substitutes for Children without Disabilities in the CACFP.

offer versus serve (OVS): An optional approach to menu planning and meal service that allows children to decline some of the foods offered in a reimbursable breakfast, lunch, or supper. OVS is not allowed in the CACFP, except for at-risk afterschool programs and CACFP facilities that serve meals prepared by a school food authority (SFA) participating in the National School Lunch (NSLP) and School Breakfast Programs (SBP). OVS is not allowed at snack. For more information, refer to “Offer versus Serve” in section 4.

ounce equivalent: A weight-based unit of measure for the grains component in the CACFP meal patterns (effective October 1, 2021) that accounts for dry versus cooked grains. An ounce equivalent of the grains component is less than a measured ounce for some grain foods (such as pretzels, breadsticks, and crackers), equal to a measured ounce for some grain foods (such as bagels, biscuits, bread, rolls, cereal grains, and RTE breakfast cereals), and more than a measured ounce for some grain foods (such as muffins and pancakes). For more information, refer to the CSDE’s resource, Grain Ounce Equivalents for the CACFP.

point-of-service (POS) meal count: The point in the food service operation where a determination can accurately be made that a reimbursable free, reduced-price, or paid lunch has been served to an eligible child.
potable water: Water that is safe for human consumption.

pre-fried foods: Commercially prepared foods such as meats, poultry, fish, and vegetables that are fried by the manufacturer during preparation. These foods are usually cooked by the food service operation in the oven or microwave. Pre-fried foods include refrigerated or frozen items that are breaded or battered, most frozen potato products, and most frozen products described as “crispy” or “crunchy.” Examples include chicken nuggets, chicken patties, fish sticks, french fries, tater tots, hash browns, and onion rings.

primary grain ingredient: The greatest grain ingredient by weight. For commercial grain foods, this is the first ingredient (excluding water) listed in the product’s ingredients statement. For commercial combination foods that contain a grain portion, this is the first grain ingredient (excluding water) listed in the product’s ingredients statement. For commercial combination foods that contain a grain portion listed separately, this is the first ingredient (excluding water) listed in the grain portion of the product’s ingredients statement. For more information, refer to “Grains Component” section 3.

product fact sheet: See “product specification sheet” in this section.

product formulation statement (PFS): An information statement obtained from the manufacturer that provides specific information about how a product credits toward the USDA meal pattern requirements, and documents how this information is obtained citing Child Nutrition Program resources or regulations. All creditable ingredients in this statement must match a description in the USDA’s Food Buying Guide for Child Nutrition Programs. The PFS must be prepared on company letterhead with the signature of a company official and the date of issue. Unlike a CN label, a PFS does not provide any warranty against audit claims. The CACFP facility must check the manufacturer’s crediting information for accuracy prior to including the product in reimbursable meals and snacks. For more information, refer to “Product Formulation Statements” in section 2 and the CSDE’s resources, Using Product Formulation Statements in the CACFP and Accepting Processed Product Documentation in the CACFP.

product specification sheet: Manufacturer sales literature that provides various information about the company’s products. These materials do not provide the specific crediting information that is required on a product formulation statement, and cannot be used to determine a product’s contribution toward the USDA meal pattern components.

production record: A working tool that outlines the type and quantity of foods used to prepare CACFP meals and snacks. Production records demonstrate how meals contribute to the required food components, food items or menu items for each day of operation. Production records are only required for CACFP child care centers that follow the NSLP meal pattern. However, the CSDE encourages all CACFP facilities to use production records because they provide appropriate documentation that meals and snacks meet the CACFP meal patterns. For more information, refer to “Production Records” in section 2.
Glossary

**pulses:** The edible dry seeds from legumes, such as beans, lentils, chickpeas, and split peas. For more information, refer to “legumes” in this section.

**recognizable food item:** A food that is visible in the offered meal or snack, and allows students to identify the food groups and amounts recommended for consumption at mealtime. Foods must be recognizable to credit in the CACFP meal patterns. The USDA allows some exceptions, such as yogurt blended in fruit or vegetable smoothies, pureed fruits and vegetables in smoothies, and pasta made with 100 percent vegetable flours. For more information, refer to “Yogurt in smoothies” and “Crediting Legume Flour Pasta Products as Meat/Meat Alternates” in the “Meat/Meat Alternates Component” section; “Crediting Fruit and Vegetable Smoothies” and “Crediting Pureed Fruits” in the “Fruits Component” section; and “Crediting Pureed Vegetables” and “Crediting Pasta Products Made of Vegetable Flour” in the “Vegetables Component” section.

**recognized medical authority:** A state-licensed health care professional who is authorized to write medical prescriptions under state law and is recognized by the State Department of Public Health (DPH). In Connecticut, recognized medical authorities include physicians, physician assistants, doctors of osteopathy, and advanced practice registered nurses (APRNs), i.e., nurse practitioners, clinical nurse specialists, and certified nurse anesthetists who are licensed as APRNs. For more information, refer to the CSDE’s guide, *Accommodating Special Diets in CACFP Child Care Programs*.

**refined grains:** Grains that have been processed to remove the bran and germ, making the product less nutritious than whole grains. Refined grains may or may not be enriched. For more information, refer to “enriched grains” in this section.

**reimbursable meals:** Meals and snacks that meet the meal pattern requirements of the USDA regulations, and are eligible for USDA funds. Reimbursable meals contain the minimum serving of each required food component.

**School Breakfast Program (SBP):** The USDA’s federally assisted meal program operating in public and nonprofit private schools, and residential child care institutions. The SBP provides nutritionally balanced, low-cost or free breakfasts to children each school day. The program was established under the Child Nutrition Act of 1966 to ensure that all children have access to a healthy breakfast at school to promote learning readiness and healthy eating behaviors. For more information, visit the CSDE’s School Breakfast Program webpage.

**school food authority (SFA):** The governing body that is responsible for the administration of one or more schools and that has the legal authority to operate the school meals programs in those schools.
serving size or portion: The weight, measure, or number of pieces or slices of a food or beverage. For meals to be reimbursable, CACFP facilities must provide the minimum servings specified in the CACFP meal patterns.

simple carbohydrates (sugars): Carbohydrates consisting of one sugar (e.g., fructose and galactose) or two sugars (e.g., lactose, maltose, and sucrose). Sugars can be naturally present in foods (such as the fructose in fruit or the lactose in milk) or added to foods (such as sucrose or table sugar). Foods that naturally contain simple carbohydrates (such as fruits, milk, and milk products, and some vegetables) also contain vitamins and minerals. Foods that contain large amounts of added sugars (such as cookies, candy, pastries, sweetened baked goods, regular soft drinks, and other sweetened drinks) provide calories with few, if any, nutrients. For more information, refer to “added sugars” in this section.

standard of identity: The mandatory government requirements that determine what a food product (like whole-wheat bread) must contain or may contain to be marketed under a certain name in interstate commerce. These standards protect consumers by ensuring that a label accurately reflects what is inside. For example, mayonnaise is not an imitation spread, and ice cream is not a similar, but different, frozen dessert. The USDA develops standards for meat and poultry products. The FDA develops standards for other food products.

standardized recipe: A recipe that a given food service operation has tested and adapted for use. This recipe produces the same good results and yield every time when the exact procedures are used with the same type of equipment, and the same quantity and quality of ingredients. Standardized recipes include specific information such as ingredients, weights and measures, preparation directions, serving directions, yield, and portion size. For more information, refer to “Standardized Recipes” in section 2 and the CSDE’s resource, "Standardized Recipe Form for the CACFP."

sucrose: Another name for table sugar. Sucrose contains glucose and fructose. For more information, refer to “simple carbohydrates (sugars) in this section.

sugar alcohols (polyols): A type of carbohydrate used as sugar substitutes to sweeten foods and beverages. Sugar alcohols are incompletely absorbed and metabolized by the body, and contribute fewer calories than most sugars. They also perform other functions such as adding bulk and texture to foods. Common sugar alcohols include sorbitol, mannitol, xylitol, maltitol, maltitol syrup, lactitol, erythritol, isomalt, and hydrogenated starch hydrolysates (HSH). Products with sugar alcohols are often labeled “sugar free.” Large amounts of sugar alcohols may cause bloating, gas, or diarrhea. For more information, refer to “nonnutritive sweeteners” in this section.

sugars: See “added sugars” and “simple carbohydrates” in this section.

supplements: Reimbursable snacks served in the CACFP.
Glossary

**surimi:** Pasteurized, ready-to-eat, restructured seafood product usually made from pollock (fish). A 3-ounce serving of surimi credits as 1 ounce of the meat/meat alternates component. For more information, refer to “Crediting Surimi” in section 3.

**tempeh:** A highly nutritious fermented soybean cake traditionally made from whole soybeans. 1-ounce serving of tempeh credits as 1 ounce of the meat/meat alternates component. This method of crediting applies only to tempeh products whose ingredients are limited to soybeans (or other legumes), water, tempeh culture, and for some varieties, vinegar, seasonings, and herbs. For more information, refer to “Crediting Tempeh” in section 3.

**USDA Foods:** Foods available to the USDA Child Nutrition Programs through the CSDE Food Distribution Program. For more information, visit the USDA’s Food Distribution Programs webpage, and visit the CSDE’s Food Distribution Program webpage.

**vegetable subgroups:** The five categories of vegetables within the vegetables food group that are recommended by the Dietary Guidelines for Americans. The subgroups include dark green, red/orange, beans and peas (legumes), starchy, and other vegetables. The CACFP meal patterns do not require vegetable subgroups. However, the USDA’s CACFP Best Practices recommends providing at least one serving of each vegetable subgroup per week. For more information, refer to the CSDE’s resource, Vegetable Subgroups in the CACFP.

**vegetables component:** The meal component of the USDA meal patterns that is comprised of vegetables (fresh, frozen, canned, and dried) and pasteurized full-strength juice. Vegetable juice cannot exceed half of the weekly vegetable offerings. For more information, refer to “Vegetables Component” in section 3 and visit the “Vegetables Component for CACFP Child Care Programs” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.

**wheat bread:** Bread that often has wheat flour or enriched wheat flour (not whole-wheat flour) as an ingredient. Wheat bread is not whole grain unless it is labeled “whole-wheat bread.” Wheat bread is low in fiber unless the manufacturer has added fiber.

**whole foods:** Foods that are unprocessed or minimally processed, and do not contain added ingredients such as fat, sugars, and sodium.

**whole fruits and vegetables:** Fresh, frozen, canned, and dried fruits and vegetables that are unprocessed or minimally processed, and do not contain added ingredients such as fat, sugars, or sodium.
**whole grain-rich (WGR):** For the CACFP, WGR foods contain at least 50 percent whole grains and the remaining grain ingredients are enriched, bran, or germ. For more information, refer to “Part B: WGR Requirement” in section 3, and the CSDE’s resource, *Meeting the Whole Grain-rich Requirement for the CACFP.* **Note:** This definition applies only to the CACFP. The WGR definition for school nutrition programs is different.

**whole grains:** Grains that consist of the entire kernel, including the starchy endosperm, the fiber-rich bran, and the nutrient-rich germ. All grains start out as whole grains, but many are processed to remove the bran and germ, which also removes many of the nutrients. Whole grains are nutrient rich, containing vitamins, minerals, fiber, antioxidants, and health-enhancing phytonutrients such as lignans and flavonoids. Examples of whole grains include whole wheat, whole oats, oatmeal, whole-grain cornmeal, brown rice, whole rye, whole barley, wild rice, buckwheat, and bulgur (cracked wheat). For more information, refer to the CSDE’s resource, *Crediting Whole Grains in the CACFP.*

**whole-grain flour:** Flour made by grinding the entire whole-grain kernel, including the fiber-rich bran, nutrient-rich germ, and starchy endosperm. Flour or meal that does not contain all parts of the grain is not whole grain, e.g., degermed corn, milled rice, and wheat flour.

**whole-wheat bread:** Bread that contains the whole grain, including the fiber-rich bran, nutrient-rich germ, and starchy endosperm. Whole-wheat flour will be listed as the first grain ingredient.
