Full-strength fruit juice credits as the fruits component and full-strength vegetable juice credits as the vegetables component in the NSLP, SBP, and SSO meal patterns for grades K-12. Juice must be pasteurized full-strength 100 percent fruit juice, vegetable juice, or a combination of fruit and vegetable juices. The name of the full-strength fruit juice on the label must include one of the following terms: “juice,” “full-strength juice,” “100 percent juice,” “reconstituted juice,” or “juice from concentrate.” The statements “natural” and “organic” do not indicate that a juice is full strength.

The USDA recommends serving whole fruits and vegetables (fresh, frozen, canned, and dried) more often than juice. Juice does not provide the same nutritional benefits as whole fruits and vegetables, which contain fiber, fewer calories, and more nutrients.

Crediting Juice Concentrates

Juice concentrates credit only when reconstituted with water to 100 percent full-strength juice and served in the form of juice. Foods made with juice concentrate, such as gelatin or sherbet, do not credit as juice because they are no longer in the form of juice.

Juice made from concentrate is reconstituted with a volume of water that is several times the amount of the juice concentrate. A typical reconstitution ratio might be three parts water to one part concentrate, but this ratio may vary for different juice products. Commercial juice products
made from concentrate will list “water” as the first ingredient followed by the type of juice concentrate, for example, “water, orange juice concentrate” and “filtered water, grape juice concentrate.” Juice made from concentrate that is labeled “100 percent juice” credits when school food authorities (SFAs) follow the manufacturer’s specific instructions for reconstituting.

**Crediting Juice Blends**

Juice blends must be a combination of full-strength (100 percent) fruit juices, full-strength vegetable juices, or full-strength fruit and vegetable juices. At lunch, fruit and vegetable juice blends credit based on the first juice ingredient. If the first juice ingredient is fruit juice, the product credits as the fruits component. If the first juice ingredient is vegetable juice, the product credits as the “other” or the “additional” vegetables requirement, depending on the needs of the menu planner. The ingredients statement below shows an example of a vegetable and fruit juice blend.

- Ingredients: Reconstituted **vegetable juice blend** (water and concentrated juices of **sweet potatoes**, **purple carrots**, carrots), reconstituted fruit juices (water and concentrated juices of apples, **white grapes**, **cranberries**, **blackberries**), contains less than 2% of: natural flavoring, citric acid, lemon juice.

This product credits as the vegetables component because the first ingredient is a reconstituted vegetable juice blend. For information on the vegetable subgroups, review the CSDE’s resource, *Vegetable Subgroups in the NSLP*.

**Crediting Frozen Juice Products**

Frozen fruit juice (such as full-strength frozen juice pops) credits based on the fluid volume prior to freezing. SFAs must request a product formulation statement (PFS) from the manufacturer to document this information. Frozen fruit juice counts toward the juice limit (see “Juice Limit” in this document).

For information on PFS forms, review the CSDE’s resources, *Product Formulation Statements*, and *Accepting Processed Product Documentation in the NSLP and SBP*; and the USDA’s PFS form, *Product Formulation Statement for Documenting Vegetables and Fruits*. For additional guidance, visit the “Crediting Commercial Processed Products for Grades K-12 in School Nutrition Programs” section of the CSDE’s Crediting Foods in School Nutrition Programs webpage.
Crediting Juice for Grades K-12 in the NSLP and SBP

Crediting Apple Cider
Apple cider credits as the fruits component if it is pasteurized 100 percent full-strength juice. Pasteurized juice has been heat-treated to kill harmful bacteria. Check labels, as some brands of apple cider are not pasteurized. SFAs cannot serve apple cider (or any other type of juice) that is not pasteurized. Apple cider is subject to the same requirements as juice, and counts toward the juice limit. For more information, see “Weekly Juice Limit at Lunch” and “Weekly Juice Limit at Breakfast” in this document.

Crediting Coconut Water
Fruit juices labeled as 100 percent juice, including coconut water, credit toward the fruits component based on the volume served. Coconut water is subject to the same requirements as juice, and counts toward the juice limit. For more information, see “Weekly Juice Limit at Lunch” and “Weekly Juice Limit at Breakfast” in this document.

Crediting Pureed Fruits and Vegetables in Smoothies
Pureed fruits and vegetables in smoothies credit only as juice in school meals and ASP snacks. Crediting is based on the volume (cups) of pureed fruits and vegetables per serving. For example, a smoothie that contains ½ cup of pureed strawberries credits as ½ cup of fruit juice. Pureed fruits and vegetables in smoothies count toward the juice limit. For more information, see “Weekly Juice Limit at Lunch” and “Weekly Juice Limit at Breakfast” in this document.

Concentrated fruit puree and concentrated juice are added sugars. They do not credit as juice unless they are reconstituted to full-strength fruit puree or full-strength juice.

SFAs must document the amount of pureed fruits and vegetables per serving with a standardized recipe for smoothies made on site. Commercial products require a PFS (or a CN label, if available, for fruit and vegetable smoothies that also contain yogurt).

For information on standardized recipes, PFS forms, and CN labels, visit the “Crediting Foods Prepared on Site for Grades K-12 in School Nutrition Programs” and “Crediting Commercial Processed Products for Grades K-12 in School Nutrition Programs” sections of the CSDE’s Crediting Foods in School Nutrition Programs webpage. The CSDE’s resource, Crediting Smoothies for Grades K-12 in the NSLP and SBP, summarizes the requirements for crediting smoothies in school meals and ASP snacks.
Crediting Juice in Canned Fruit

A serving of canned fruit may include the 100 percent juice in which the fruit is packed, but cannot include water or syrup. For example, ½ cup of canned peaches with juice credits as ½ cup of the fruits component. However, ½ cup of canned peaches with syrup does not credit as ½ cup of the fruits component because the serving does not contain ½ cup of fruit. The menu planner can credit only the amount of peaches without the syrup.

Juice from canned fruit does not count toward the juice limit if the juice is planned as an extra noncreditable food. An example is ½ cup of canned fruit portioned in a 5½-ounce container with the juice added after measuring the full ½-cup serving of fruit.

Juice Ingredients

Juice ingredients may vary among manufacturers. The Food and Drug Administration’s (FDA) labeling regulations allow 100 percent juice to contain added ingredients and still be labeled “100% juice.” Some 100 percent juices contain added ingredients such as artificial flavors, artificial colors (e.g., red 40, blue 1, yellow 5 and 6, and titanium dioxide), preservatives (e.g., sodium potassium sorbate), flavor enhancers (e.g., ethyl maltol), and emulsifiers or thickeners (e.g., glycerol esters of wood rosin and xanthan gum). The CSDE encourages menu planners to read the product’s ingredients statement and choose 100 percent juices without these added ingredients.
Weekly Juice Limit at Lunch

Fruit juice cannot exceed half of the weekly amount (cups) of fruits offered at lunch, and vegetable juice cannot exceed half of the weekly amount (cups) of vegetables offered at lunch. For example, if a five-day lunch menu for grades K-5 offers 2½ cups of the fruits component during the week, the lunch menu may offer up to 1¼ cups of juice during the week. The weekly juice limit includes all sources of 100 percent juice available to students during the week, including:

- 100 percent juice (fresh, frozen, and made from concentrate) (see “Crediting Juice Concentrates” in this document);
- frozen juice pops made from 100 percent juice (see “Crediting Frozen Juice Products” in this document);
- pureed fruits and vegetables in fruit/vegetable smoothies (see “Crediting Pureed Fruits and Vegetables in Smoothies”) in this document; and
- juice from canned fruit served in 100 percent juice (see “Crediting Juice in Canned Fruit” in this document).

Table 1 shows the weekly juice limits at lunch, based on the minimum servings of the fruits component and vegetables component in the NSLP meal pattern. If SFAs serve larger amounts of fruits and vegetables, the weekly juice limit also increases.

Juice limits for grades K-5 and 6-8

For five-day lunch menus, SFAs may offer a ½-cup portion of fruit juice twice per week and a ½-cup portion of vegetable juice three times per week. For seven-day lunch menus, SFAs may offer a ½-cup portion of fruit juice three times per week and a ½-cup portion of vegetable juice five times per week. Alternatively, SFAs may serve larger quantities of juice on one or two days if the weekly total complies with the juice limit. For example, a five-day lunch menu for grades 6-8 could offer 1 cup of fruit juice once per week instead of ½ cup of fruit juice twice per week.

Juice limits for grades 9-12

For five-day and seven-day lunch menus for grades 9-12, SFAs may offer ½ cup of fruit juice each day and ½ cup of vegetable juice each day. However, SFAs must be careful not to exceed the weekly calorie limit of the dietary specifications when offering juice daily because juice contains more calories than whole fruits and vegetables. For example, ½ cup of grape juice contains 76 calories while ½ cup of fresh grapes contains 34 calories; and 1 cup of fresh sliced peaches contains 60 calories while 1 cup of canned sliced peaches in juice contains 109 calories.
Crediting Juice for Grades K-12 in the NSLP and SBP

For information on the dietary specifications, review section 6 of the CSDE’s *Menu Planning Guide for School Meals for Grades K-12*, and visit the “Dietary Specifications (Nutrition Standards for School Meals)” section of the CSDE’s *Meal Patterns for Grades K-12 in School Nutrition Programs* webpage.

### Juice limit calculation for lunch

The weekly juice limit is based on the amount of fruits or vegetables that students are allowed to select at a given meal, regardless of the number of options or variety of fruits or vegetables available. SFAs must calculate the lunch menu's compliance with the weekly juice limit separately for fruits and vegetables.

- **Fruits component**: Divide the total amount (cups) of 100 percent fruit juice that students may select at all lunches during the week by the total amount (cups) of fruits that students may select at all lunches during the week.

- **Vegetables component**: Divide the total amount (cups) of 100 percent vegetable juice that students may select at all lunches during the week by the total amount (cups) of vegetables that students may select at all lunches during the week.

Table 2 shows a sample calculation for determining if a five-day lunch menu for grades 6-8 meets the weekly fruit juice limit.
Table 2. Calculating weekly fruit juice limit for a five-day lunch menu for grades 6-8

A lunch menu for grades 6-8 offers 1 cup of fruit daily, which provides ½ cup more than the minimum daily ¼-cup requirement for the fruits component. Students can select up to two servings from a variety of ½-cup fruit choices, including fresh fruit, drained canned fruit ¹, and 100 percent fruit juice. Cafeteria menus and signage instruct students to select two servings of fruit, or one serving of fruit and one serving of juice.² This lunch menu meets the weekly juice limit because the amount of juice (2½ cups) offered to students during the week is half of the amount of fruits (5 cups) offered to students during the week.

1. **Calculate total weekly juice offerings:**
   Multiply the total daily amount (cups) of juice that students are allowed to select by the number of days in the week.
   
   Students may select one ½-cup serving of fruit daily:
   ½ cup multiplied by 5 days equals 2½ cups.

2. **Calculate total weekly fruit offerings:**
   Multiply the total daily amount (cups) of fruit that students are allowed to select by the number of days in the week.
   
   Students may select two ½-cup servings of fruit daily (1 cup total): 1 cup multiplied by 5 days equals 5 cups.

3. **Calculate weekly percentage of juice offerings:**
   Divide A by B and multiply by 100.
   
   2½ cups divided by 5 cups equals 0.5 multiplied by 100 equals 50 percent.

4. **Are the juice offerings 50 percent or less?**
   If “yes,” the menu meets the weekly juice limit.

   ☑ Yes  ☐ No

---

¹ In this example, the canned fruit is drained and does not count toward the juice limit. If the menu planner credits the juice from canned fruit toward the fruits component, the juice must also count toward the weekly juice limit.

² Students cannot be allowed to choose more than one serving (½ cup) of juice because this would exceed the weekly juice limit.
Required Signage for Lunch and Breakfast

Cafeteria menus and signage must clearly indicate the specific amount of fruits, vegetables, and juice that students may select with each meal. For example, a menu could state “choose one fruit and one juice” or “choose up to two servings of fruit (no more than one juice).” For guidance on signage, review the CSDE’s guides, *Menu Planning Guide for School Meals for Grades K-12* and *Offer versus Serve Guide for School Meals*.

Weekly Juice Limit at Breakfast

Fruit juice together with vegetable juice (including fruit/vegetable juice blends) cannot exceed half of the total amount (cups) of fruits and vegetables offered at breakfast during the week. Table 3 shows the maximum weekly contribution of juice at breakfast, based on the minimum serving of the fruits component in the SBP meal pattern. SFAs may serve ½ cup of juice daily because the SBP meal pattern requires 1 cup of fruits daily for all grade groups. If SFAs serve larger amounts of fruits and vegetables, the weekly juice limit also increases.

<table>

<td>5 cups</td>
<td>2½ cups</td>
<td>5</td>
<td>7 cups</td>
<td>3½ cups</td>
<td>7</td>
</tr>
</tbody>
</table>

1 The SBP meal pattern does not require the vegetables component. SFAs may substitute vegetables (including juice) from the dark green, red/orange, legumes, and “other” subgroups for the fruits component at any time.

Juice limit calculation for breakfast

SFAs must calculate the breakfast menu’s compliance with the weekly juice limit by dividing the total amount (cups) of fruit juice and vegetable juice that students may select at all breakfasts during the week by the total amount (cups) of fruits (and vegetables, if offered) that students may select at all breakfasts during the week. When calculating the total amount of juice available at breakfast during the week, menu planners must include 100 percent juice (fresh, frozen, and made from concentrate), frozen juice pops made from 100 percent juice, juice in canned fruit, and pureed fruits/vegetables in smoothies. For a sample calculation, see table 2.
