Menu Planning Guide for Preschoolers in the National School Lunch Program, School Breakfast Program, and Afterschool Snack Program

October 1, 2019, through September 30, 2021

Connecticut State Department of Education

Project Director
Susan S. Fiore, M.S., R.D., Nutrition Education Coordinator

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, sex, disability, age, or reprisal or retaliation for prior civil rights activity in any program or activity conducted or funded by USDA.

Persons with disabilities who require alternative means of communication for program information (e.g. Braille, large print, audiotape, American Sign Language, etc.), should contact the Agency (State or local) where they applied for benefits. Individuals who are deaf, hard of hearing or have speech disabilities may contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program complaint of discrimination, complete the USDA Program Discrimination Complaint Form, (AD-3027) found online at: How to File a Complaint, and at any USDA office, or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by:

(1) mail: U.S. Department of Agriculture
    Office of the Assistant Secretary for Civil Rights
    1400 Independence Avenue, SW
    Washington, D.C. 20250-9410;
(2) fax: (202) 690-7442; or
(3) email: program.intake@usda.gov.

Inquiries regarding the Connecticut State Department of Education’s nondiscrimination policies should be directed to: Levy Gillespie, Equal Employment Opportunity Director/Americans with Disabilities Coordinator (ADA), Connecticut State Department of Education, 450 Columbus Boulevard, Suite 607, Hartford, CT 06103, 860-807-2071, levy.gillespie@ct.gov.

This institution is an equal opportunity provider.

About This Guide

The Connecticut State Department of Education’s (CSDE) guide, *Menu Planning Guide for Preschoolers in the National School Lunch Program, School Breakfast Program, and Afterschool Snack Program*, contains information and guidance on planning menus to meet the U.S. Department of Agriculture’s (USDA) meal patterns for preschoolers (ages 1-4). This guide applies to preschool meals served in the National School Lunch Program (NSLP), School Breakfast Program (SBP), and Seamless Summer Option (SSO) of the NSLP; and preschool snacks served in the Afterschool Snack Program (ASP) of the NSLP. The preschool meal patterns are defined by the USDA’s final rules below.

The USDA provides additional guidance on the meal pattern requirements through the CACFP policy memos on the USDA’s FNS Documents & Resources webpage.

The contents of this guide are subject to change. The CSDE will update this guide as the USDA issues additional policies and guidance regarding the preschool meal patterns. Please check the CSDE’s *Meal Patterns for Preschoolers in School Nutrition Programs* webpage for the most current version. For more information, contact Susan S. Fiore, M.S., R.D., Nutrition Education Coordinator, at susan.fiore@ct.gov or 860-807-2075.

The mention of trade names, commercial products, or organizations does not imply approval or endorsement by the CSDE or the USDA.
CSDE Contact Information

For questions regarding the NSLP, SBP, SSO, and ASP, please contact the school nutrition programs staff in the CSDE’s Bureau of Health/Nutrition, Family Services and Adult Education.

1 — Preschool Meal Patterns

The meal patterns for preschoolers (ages 1-4) in the National School Lunch Program (NSLP), School Breakfast Program (SBP), Afterschool Snack Program (ASP) of the NSLP, and Seamless Summer Option (SSO) of the NSLP took effect on October 1, 2017. The preschool meal patterns are the same as the Child and Adult Care Food Program (CACFP), meal patterns for children, which are defined by the USDA’s final rule, *Child and Adult Care Food Program: Meal Pattern Revisions Related to the Healthy, Hunger-Free Kids Act of 2010* (81 FR 24348), released on April 25, 2016, and the final rule corrections (81 FR 75671), released on November 1, 2016.

The USDA updated the preschool meal patterns to better align with the *Dietary Guidelines for Americans*, as required by the Healthy, Hunger-Free Kids Act (HHFKA) of 2010. The updated preschool meal patterns require more whole grains and a greater variety of vegetables and fruits; and reduce the amount of added sugars and solid fats in meals. They also better align with the Special Supplemental Nutrition Program for Women, Infants and Children (WIC) and other Child Nutrition Programs.

The goal of the USDA’s Child Nutrition Programs is to improve and maintain children’s health and nutrition while promoting the development of good eating habits. The preschool meal patterns are designed to meet children’s needs for calories and key nutrients. To receive reimbursement for meals and snacks served to children, school food authorities (SFAs) must provide the required food components in the appropriate serving for each preschool age group.

**Overview of Changes**

Effective October 1, 2017, the updated preschool meal patterns include the changes below.

- Flavored milk cannot be served to children ages 1-4.
- The grains/breads component changed to the grains component.
- At least one serving of grains per day must be whole grain-rich (WGR).
- Grain-based desserts do not credit as the grains component.
- Breakfast cereals cannot contain more than 6 grams of sugars per dry ounce.
Preschool Meal Patterns

- The required amount for the grains component changes to ounce equivalents, effective October 1, 2021 (see “Delayed Implementation of Grain Ounce Equivalents” in this section).
- Meat/meat alternates may substitute for the entire grains component at breakfast up to three times per week (see “Meat/Meat Alternates at Breakfast” in section 3).
- Tofu and soy yogurt credit as the meat/meat alternates component (see “Crediting Tofu” and “Crediting Yogurt and Soy Yogurt” in section 3).
- Yogurt and soy yogurt cannot contain more than 23 grams of sugars per 6 ounces (no more than 3.83 grams per ounce).
- Vegetables and fruits are two separate components.
- Vegetables may substitute for the entire fruits component at any lunch (see “Substituting Vegetables for Fruits at Lunch” in section 3).
- Juice may fulfill the entire vegetables component or fruits component. However, juice cannot credit as the vegetables component or fruits component at more than one preschool meal or ASP snack per day (see “Juice limit” in section 3).
- Foods cannot be deep-fat fried on site, i.e., cooked by submerging food in hot oil or other fat.

Section 3 provides detailed menu planning guidance for each food component of the preschool meal patterns.

Transition Period

SFAs were required to implement all provisions of the updated preschool meal patterns by October 1, 2017. During fiscal year 2018 (October 1, 2017, through September 30, 2018), the USDA allowed a transition period to help SFAs adjust to the updated preschool meal patterns. During this time, the USDA allowed state agencies to provide technical assistance in lieu of fiscal action when they observed violations related to the updated preschool meal patterns. For more information, see USDA Memo SP 30-2017 and CACFP 13-2017: Transition Period for the Updated Child and Adult Care Food Program Meal Patterns and the Updated National School Lunch Program and School Breakfast Program Infant and Preschool Meal Patterns.

Effective October 1, 2018, the transition period ended. USDA Memo SP 01-2019 and CACFP 01-2019: Guidance for FY19: Updated CACFP Meal Patterns and Updated NSLP and SBP Infant and Preschool Meal Patterns summarizes the requirements that state agencies must follow for SFAs that fail to meet the preschool meal patterns. The USDA NSLP regulations (7 CFR 210.18(l)(2)) indicate that in most cases, state agencies are required to provide technical assistance and allow for corrective action before fiscal action is assessed. However, the USDA indicates that state agencies must continue to take immediate fiscal action if a preschool meal or ASP snack is completely missing one or more of the required food components.
Delayed Implementation of Grain Ounce Equivalents

The USDA’s final rule from April 25, 2016, *Child and Adult Care Food Program: Meal Pattern Revisions Related to the Healthy, Hunger-Free Kids Act of 2010* (81 FR 24348), required that the amounts for the grains component change from servings to ounce equivalents on October 1, 2019. However, on September 25, 2019, the USDA released the final rule, *Delayed Implementation of Grains Ounce Equivalents in the Child and Adult Care Food Program* (84 FR 50287). This final rule delays implementation of the ounce equivalents requirement for crediting grains in the preschool meal patterns until October 1, 2021.

Age Groups

The two age groups for the preschool meal patterns include ages 1-2 and ages 3-4. When a 5-year-old is in preschool or a 4-year-old is in kindergarten, SFAs may serve the appropriate meal pattern for that grade. For example, if a 5-year-old is in preschool, the preschool meal patterns apply. If a 4-year-old is in kindergarten, the meal patterns for grades K-5 apply. For information on the meal patterns for grades K-5, visit the CSDE’s Meal Patterns for Grades K-12 in School Nutrition Programs webpage.

Serving the same foods to preschoollers and grades K-12

The preschool meal patterns are different from the meal patterns for grades K-12. SFAs must consider the different meal pattern requirements when making menu planning and purchasing decisions for school meals that are served to both groups. When SFAs serve the same foods to preschoolers and grades K-12, these foods must comply with whichever meal pattern requirements are stricter. The example below illustrate this requirement.

- The meal patterns for grades K-12 have stricter WGR criteria than the meal patterns for preschoolers. Therefore, grain foods (excluding grain-based desserts) served to both groups must comply with the WGR criteria for grades K-12. **Note:** Grain-based desserts do not credit in the preschool meal patterns. For more information, see “Grain-based desserts” in section 3.

- The preschool meal patterns require a sugar limit for yogurt and breakfast cereals, but the meal patterns for grades K-12 do not. Therefore, yogurt and breakfast cereals served to both groups must comply with the preschool sugar limits.
Preschool Meal Patterns

For more information on the differences between the meal patterns for preschoolers and grades K-12, see the CSDE’s handouts, *Comparison of Meal Pattern Requirements for Preschoolers and Grades K-12 in the NSLP and SBP* and *Comparison of ASP Meal Pattern Requirements for Preschoolers and Grades K-12*.

Preschoolers and grades K-5 eating together in the NSLP, SBP, and SSO

SFAs that serve meals to preschoolers and grades K-5 in the same service area at the same time may choose to:

- follow the grade-appropriate meal patterns for each age group (i.e., use the preschool meal patterns for ages 1-4 and the K-5 meal pattern for grades K-5); or
- serve the K-5 meal pattern to both groups.

SFAs must follow the preschool meal patterns when meals are served to preschoolers in a different area or at a different time than K-5 students. The USDA allows the option to serve the K-5 meal pattern to preschoolers only when preschoolers are co-mingled with K-5 students during the meal service. The USDA strongly encourages schools to find ways to serve grade-appropriate meals to preschoolers and grades K-5 to best address their nutritional needs. For more information, see *USDA Memo SP 37-2017: Flexibility for Co-Mingled Preschool Meals: Questions and Answers*.

Preschoolers and grades K-12 eating together in the ASP

SFAs that serve ASP snacks to preschoolers and grades K-12 in the same service area at the same time may choose to:

- follow the grade-appropriate ASP meal patterns for each grade group (i.e., use the ASP preschool meal pattern for ages 1-4 and the K-12 ASP meal pattern for grades K-12); or
- serve the K-12 ASP meal pattern to both grade groups.

SFAs must follow the ASP preschool meal pattern when ASP snacks are served to preschoolers in a different area or at a different time than K-12 students. The USDA allows the option to serve the K-12 ASP meal pattern to preschoolers only when preschoolers are co-mingled with K-12 students during the ASP snack service. The USDA strongly encourages schools to find ways to serve grade-appropriate snacks to preschoolers and grades K-12 to best address their nutritional needs.
Reimbursable Meals

The preschool meal patterns consist of minimum daily servings of food components for ages 1-2 and ages 3-4. Meals and ASP snacks served to preschoolers are eligible for USDA reimbursement when they meet the preschool meal patterns. Meals and snacks that contain foods in addition to the required food components are also reimbursable. However, menu planners must consider the appropriateness of extra foods. Preschoolers have small appetites and might not consume the nutritious meal pattern components if extra foods are offered.

The CSDE encourages SFAs to choose nutrient-dense foods for additional servings. Examples include vegetables; fruits; whole grains; low-fat and nonfat milk products; legumes; and lean meats, fish, poultry. Some additional foods do not credit toward the preschool meal patterns and cannot be served, or should only be served in moderation. For more information, see “Noncreditable Foods” in section 3.

Unlike the meal patterns for grades K-12, the preschool meal patterns do not require weekly servings of the food components or weekly dietary specifications (nutrition standards). However, they do require crediting restrictions for certain foods, such as sugar limits for breakfast cereals and yogurt. For more information, see “Nutrition Standards” in this section.

Food Components

A food component is one of the five food groups that comprise reimbursable meals, including milk, fruits, vegetables, grains, and meat/meat alternates. Menu items contribute to the food components. A menu item is any planned main dish, vegetable, fruit, bread, grain, or milk; and may contribute to one or more food components. For example, a hamburger (meat/meat alternates component) on a whole-grain bun (grains component) is one menu item that contributes to two food components. Table 1-1 indicates the required servings of each food component in the preschool meal patterns.
Table 1-1. Required servings of the food components in the preschool meal patterns

1. A serving is the specified amount for each age group in the preschool meal patterns.
2. Meat/meat alternates may substitute for the entire grains component at breakfast up to three times per week. For more information, see “Meat/meat alternates at breakfast” in section 3.
3. Vegetables may substitute for the entire fruits component at lunch. If the meal includes two servings of vegetables, they must be two different kinds. For more information, see “Substituting vegetables for fruits at lunch” in section 3.
4. Snack must include two of the five components.

**Nutrition Standards**

Unlike the meal patterns for grades K-12, the preschool meal patterns do not include weekly dietary specifications (nutrition standards) for calories, saturated fat, trans fat, and sodium. However, the preschool meal patterns require nutrition standards for some specific foods, including sugar limits for yogurt and breakfast cereals, and minimum protein requirements for tofu. For more information, see “Crediting Yogurt and Soy Yogurt,” “Crediting Criteria for Breakfast Cereals,” and “Crediting Commercial Tofu and Tofu Products” in section 3. The preschool meal patterns also prohibit deep-fat drying foods on site.
Offer versus Serve

Offer versus serve (OVS) is an optional approach to menu planning and meal service that allows children in grades K-12 to decline some of the foods offered in a reimbursable meal. The USDA does not allow OVS for preschool meals in the NSLP, SBP, and SSO, or for preschool snacks in the ASP.

Buy American

All foods sold in the USDA’s school nutrition programs must comply with the Buy American provision under the federal regulations for the NSLP (7 CFR 210.21 (d)) and SBP (7 CFR 220.16 (d)). This provision requires that schools and institutions purchase domestic commodities or products to the maximum extent practicable.

- A “domestic commodity or product” is an agricultural commodity that is produced in the United States, and a food product that is processed in the United States substantially using agricultural commodities that are produced in the United States.

- “Substantially” means that over 51 percent of the final processed product consists of agricultural commodities that were grown domestically.

There are very limited exceptions to the requirement that SFAs must purchase domestic foods. Nondomestic foods are only permitted:

- after first considering domestic alternatives; and
- when domestic foods are unavailable or prohibitively expensive.

SFAs must maintain documentation on file to indicate that any purchases of nondomestic foods meet these criteria. The CSDE’s Buy American Justification Form assists SFAs with meeting this requirement. The CSDE will review this information during the Administrative Review of the SFA’s school nutrition programs.

SFAs must ensure that all foods purchased using funds from the nonprofit school food service account comply with the Buy American provision. This includes foods that are part of reimbursable meals and competitive foods that are sold a la carte, i.e., foods and beverages sold separately from reimbursable meals. The resources below provide guidance on the Buy American provision.
Preschool Meal Patterns

The following pages include the preschool meal patterns for breakfast (table 1-2), lunch (table 1-3), and ASP snack (table 1-4), which are in effect through September 30, 2021. Effective October 1, 2021, the required amount for the grains component changes to ounce equivalents. For more information, see “Part C: Preschool Serving Size” in section 3.

Handouts of the preschool breakfast and lunch patterns are available on the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage. A handout of the ASP preschool meal pattern is available on the CSDE’s ASP webpage. For more information on the ASP preschool meal pattern requirements, see the CSDE’s guide, Afterschool Snack Program Handbook.

| Menu planning notes for breakfast |

¹ Breakfast must include the minimum serving of all three components. Use the USDA’s *Food Buying Guide for Child Nutrition Programs* (FBG) to determine the amount of purchased food that meets the requirements. For processed foods, review the product’s Child Nutrition (CN) label or product formulation statement (PFS). For more information, see the CSDE’s handouts, *Child Nutrition (CN) Labeling Program, Product Formulation Statements, Accepting Processed Product Documentation*, and *Crediting Commercial Meat/Meat Alternate Products in the NSLP and SBP*; and visit the “Crediting Commercial Processed Products” section of the CSDE’s *Meal Patterns for Preschoolers in School Nutrition Programs* webpage. Foods made on site must have a standardized recipe that documents crediting information. For more information, visit the “Crediting Foods Prepared on Site” section of the CSDE’s *Meal Patterns for Preschoolers in School Nutrition Programs* webpage.

² Flavored milk cannot be served.
Menu planning notes for breakfast, continued

3 The vegetables component includes fresh, frozen, canned, and rehydrated dried vegetables. Dried vegetables require a PFS. A serving of cooked vegetables must be drained. Vegetables credit based on volume, except raw leafy greens such as lettuce and spinach credit as half the volume served (e.g., 1 cup credits as ½ cup of vegetables), and tomato paste and puree credit based on the volume as if reconstituted (see the FBG). The USDA’s CACFP Best Practices recommends at least one serving per week of dark green vegetables, red and orange vegetables, beans and peas (legumes), starchy vegetables, and other vegetables. For more information, see the CSDE’s handout, Vegetable Subgroups in the CACFP.

4 Pasteurized full-strength juice can meet the vegetables or fruits component at only one meal or ASP snack day, between all meals and snacks served to preschoolers. Juice includes all fruit and vegetable juice, frozen pops made from 100 percent juice, pureed fruits and vegetables in smoothies, and juice from canned fruit in 100 percent juice. For more information, see the CSDE’s handouts, Crediting Juice for Preschoolers in the NSLP, SBP, and ASP and Crediting Smoothies for Preschoolers in the NSLP, SBP, and ASP.

5 The fruits component includes fresh, frozen, dried, and canned fruit. Serve canned fruit in juice, water, or light syrup. A serving of canned fruit may include the 100 percent juice in which the fruit is packed, but cannot include water or syrup. Dried fruit credits as twice the volume served, e.g., ¼ cup of raisins credits as ½ cup of the fruits component. The USDA’s CACFP Best Practices recommends serving whole fruits (fresh, frozen, canned, and dried) more often than juice.

6 To credit as the grains component, a creditable grain (whole, enriched, bran, or germ) must be the first ingredient (excluding water), or the greatest ingredient by weight. For information on identifying creditable grains, see the CSDE’s handout, How to Identify Creditable Grains for Preschoolers in the NSLP, SBP, and ASP.

7 At least one serving per day must be WGR. The USDA’s CACFP Best Practices recommends at least two servings of WGR grains per day. For the preschool meal patterns only, WGR foods contain 100 percent whole grains or contain a blend of whole grains (at least 50 percent) and enriched grains. For more information, see the CSDE’s handout, Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP.

8 Except for sweet crackers (such as graham crackers and animal crackers), grain-based desserts cannot credit. Examples include cookies, sweet pie crusts, doughnuts, cereal bars, granola bars, sweet rolls, pastries, toaster pastries, cake, and brownies. The CSDE recommends not serving sweet crackers more than twice per week between all meals and snacks. For more information, see the USDA’s handout, Grain-based Desserts in the CACFP.
Table 1-2. Preschool breakfast meal pattern (through September 30, 2021), continued

Menu planning notes for breakfast, continued

9 Meat/meat alternates may substitute for the entire grains component at breakfast up to three times per week. A 1-ounce serving of the meat/meat alternates component substitutes for 1 ounce of the grains component. For more information, see the USDA’s handout, Serving Meat and Meat Alternates at Breakfast.

10 Through September 30, 2021, grains must meet the applicable weights (groups A-E) volumes (groups H-I) in the USDA’s grain servings chart, or provide the minimum creditable grains per serving. For more information, see the CSDE’s handouts, Grain Servings for Preschoolers in the NSLP, SBP, and ASP and Calculation Methods for Grain Servings for Preschoolers in the NSLP, SBP, and ASP. Effective October 1, 2021, the required amounts for the grains component change to ounce equivalents. For more information, see the CSDE’s handout, Grain Ounce Equivalents for Preschoolers in the NSLP, SBP, and ASP.

11 Breakfast cereals cannot contain more than 6 grams of sugars per dry ounce (no more than 21.2 grams of sucrose and other sugars per 100 grams of dry cereal). For more information, see the CSDE’s handout, Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP.

12 Examples of cereal grains include amaranth, barley, buckwheat, cornmeal, corn grits, kasha, millet, oats, quinoa, wheat berries, and rolled wheat.

13 Effective October 1, 2021, the required amount for RTE breakfast cereals changes to ounce equivalents. The required volume for ages 1-4 (½ ounce equivalent) is ½ cup of flaked or round cereal, ¼ cup of puffed cereal, and ⅛ cup of granola.

See next page for important menu planning notes
Menu planning notes for lunch

1 Lunch must include the minimum serving of all five components. Use the USDA’s Food Buying Guide for Child Nutrition Programs (FBG) to determine the amount of purchased food that meets the requirements. For processed foods, review the product’s Child Nutrition (CN) label or product formulation statement (PFS). For more information, see the CSDE’s handouts, Child Nutrition (CN) Labeling Program, Product Formulation Statements, Accepting Processed Product Documentation, and Crediting Commercial Meat/Meat Alternate Products in the NSLP and SBP; and visit the “Crediting Commercial Processed Products” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage. Foods made on site must have a standardized recipe that documents crediting information. For more information, visit the “Crediting Foods Prepared on Site” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.

2 Flavored milk cannot be served.

3 A serving is the edible portion of cooked lean meat, poultry, or fish, e.g., cooked lean meat without bone, breading, binders, fillers, or other ingredients. The USDA’s CACFP Best Practices recommends serving only lean meats, nuts, and legumes; limiting processed meats to one serving per week; and serving only low-fat or reduced-fat natural cheese.

4 Surimi seafood is a pasteurized, ready-to-eat, restructured seafood product usually made from pollock (fish). A CN label or manufacturer’s PFS is required to credit surimi seafood differently than these amounts.

5 APPs must meet the requirements in appendix A of the NSLP regulations (7 CFR 210). Tofu must contain at least 5 grams of protein in 2.2 ounces (weight) or ¼ cup (volume). For more information, see the CSDE’s handouts, Requirements for Alternate Protein Products in the NSLP and SBP and Crediting Tofu and Tofu Products in the NSLP and SBP. A 1-ounce serving of tempeh credits as 1 ounce of the meat/meat alternates component if the product’s ingredients include only soybeans (or other legumes), water, tempeh culture, and for some varieties, vinegar, seasonings, and herbs. If a tempeh product contains other ingredients, a CN label or PFS is required to document crediting information.

6 Legumes (cooked dry beans and peas) credit as either the meat/meat alternates component or the vegetables component, but not both in the same meal. For more information, see the CSDE’s handout, Crediting Legumes in the NSLP and SBP.

7 Creditable nuts and seeds include almonds, Brazil nuts, cashews, filberts, macadamia nuts, peanuts, pecans, walnuts, pine nuts, pistachios, and soy nuts. Nuts and seeds cannot credit for more than half of the meat/meat alternates component. They must be combined with another meat/meat alternate to meet the total requirement. Note: Children younger than 4 are at the highest risk of choking. The USDA recommends that any nuts or seeds served to young children are in a prepared food and are ground or finely chopped. For more information, see the CSDE’s handout, Crediting Nuts and Seeds in the NSLP and SBP.
Menu planning notes for lunch, continued

8 Yogurt and soy yogurt cannot contain more than 23 grams of total sugars per 6 ounces (no more than 3.83 grams per ounce). For more information, see the CSDE’s handout, Crediting Yogurt for Preschoolers in the NSLP, SBP, and ASP.

9 The vegetables component includes fresh, frozen, canned, and rehydrated dried vegetables. Dried vegetables require a PFS. A serving of cooked vegetables must be drained. Vegetables credit based on volume, except raw leafy greens such as lettuce and spinach credit as half the volume served (e.g., 1 cup credits as ½ cup of vegetables), and tomato paste and puree credit based on the volume as if reconstituted (see the FBG). The USDA’s CACFP Best Practices recommends at least one serving per week of dark green vegetables, red and orange vegetables, beans and peas (legumes), starchy vegetables, and other vegetables. For more information, see the CSDE’s handout, Vegetable Subgroups in the CACFP.

10 Pasteurized full-strength juice can meet the vegetables or fruits component at only one preschool meal or ASP snack per day, between all meals and snacks served to preschoolers. Juice includes all fruit and vegetable juice, frozen pops made from 100 percent juice, pureed fruits and vegetables in smoothies, and juice from canned fruit in 100 percent juice. The USDA’s CACFP Best Practices recommends serving whole fruits (fresh, canned, dried, and frozen) more often than juice. For more information, see the CSDE’s handouts, Crediting Juice for Preschoolers in the NSLP, SBP, and ASP and Crediting Smoothies for Preschoolers in the NSLP, SBP, and ASP.

11 Vegetables can substitute for the entire fruits component at lunch. If lunch includes two servings of vegetables, they must be different kinds.

12 The fruits component includes fresh, frozen, dried, and canned fruit. Serve canned fruit in juice, water, or light syrup. A serving of canned fruit may include the 100 percent juice in which the fruit is packed, but cannot include water or syrup. Dried fruit credits as twice the volume served, e.g., ¼ cup of raisins credits as ½ cup of the fruits component. The USDA’s CACFP Best Practices recommends serving whole fruits (fresh, frozen, canned, and dried) more often than juice.

13 To credit as the grains component, a creditable grain (whole, enriched, bran, or germ) must be the first ingredient (excluding water), or the greatest ingredient by weight. For information on identifying creditable grains, see the CSDE’s handout, How to Identify Creditable Grains for Preschoolers in the NSLP, SBP, and ASP.

14 At least one serving per day must be WGR. The USDA’s CACFP Best Practices recommends at least two servings of WGR grains per day. For the preschool meal patterns only, WGR foods contain 100 percent whole grains or contain a blend of whole grains (at least 50 percent) and enriched grains. For more information, see the CSDE’s handout, Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP.
Menu planning notes for lunch, continued

15 Except for sweet crackers (such as graham crackers and animal crackers), grain-based desserts cannot credit. Examples include cookies, sweet pie crusts, doughnuts, cereal bars, granola bars, sweet rolls, pastries, toaster pastries, cake, and brownies. The CSDE recommends not serving sweet crackers more than twice per week between all meals and snacks. For more information, see the USDA’s handout, *Grain-based Desserts in the CACFP*.

16 Through September 30, 2021, grains must meet the applicable weights (groups A-E) volumes (groups H-I) in the USDA’s grain servings chart, or provide the minimum creditable grains per serving. For more information, see the CSDE’s handouts, *Grain Servings for Preschoolers in the NSLP, SBP, and ASP* and *Calculation Methods for Grain Servings for Preschoolers in the NSLP, SBP, and ASP*. Effective October 1, 2021, the required amounts for the grains component change to ounce equivalents. For more information, see the CSDE’s handout, *Grain Ounce Equivalents for Preschoolers in the NSLP, SBP, and ASP*.

17 Breakfast cereals cannot contain more than 6 grams of sugars per dry ounce (no more than 21.2 grams of sucrose and other sugars per 100 grams of dry cereal). For more information, see the CSDE’s handout, *Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP*.

18 Examples of cereal grains include amaranth, barley, buckwheat, cornmeal, corn grits, kasha, millet, oats, quinoa, wheat berries, and rolled wheat.

19 Effective October 1, 2021, the required amount for RTE breakfast cereals changes to ounce equivalents. The required volume for ages 1-4 (½ ounce equivalent) is ½ cup of flaked or round cereal, ¼ cup of puffed cereal, and ⅛ cup of granola.

*See next page for important menu planning notes*
Menu planning notes for snack

1. Snack must include the minimum serving of two of the five components. Only one of the two components may be a creditable beverage. The USDA’s [CACFP Best Practices](http://www.fns.usda.gov) recommends serving a vegetable or fruit for at least one snack component. Use the USDA’s [Food Buying Guide for Child Nutrition Programs](http://www.fns.usda.gov) (FBG) to determine the amount of purchased food that meets the requirements. For processed foods, review the product’s Child Nutrition (CN) label or product formulation statement (PFS). For more information, see the CSDE’s handouts, [Child Nutrition (CN) Labeling Program](http://www.fns.usda.gov), [Product Formulation Statements](http://www.fns.usda.gov), [Accepting Processed Product Documentation](http://www.fns.usda.gov), and [Crediting Commercial Meat/Meat Alternate Products in the NSLP and SBP](http://www.fns.usda.gov). Visit the “Crediting Commercial Processed Products” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage. Foods made on site must have a standardized recipe that documents crediting information. For more information, visit the “Crediting Foods Prepared on Site” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.

2. In addition to meeting the ASP meal pattern requirements, ASP snacks in public schools that choose the healthy food option of Healthy Food Certification (HFC) under Section 10-215f of the Connecticut General Statutes must comply with the Connecticut Nutrition Standards (CNS). For more information, visit the CSDE’s [HFC](http://www.fns.usda.gov), [CNS](http://www.fns.usda.gov), and [List of Acceptable Foods and Beverages](http://www.fns.usda.gov) webpages.

3. Flavored milk cannot be served.

4. A serving is the edible portion of cooked lean meat, poultry, or fish, e.g., cooked lean meat without bone, breading, binders, fillers, or other ingredients. The USDA’s [CACFP Best Practices](http://www.fns.usda.gov) recommends serving only lean meats, nuts, and legumes; limiting processed meats to one serving per week; and serving only low-fat or reduced-fat natural cheese.

5. Surimi seafood is a pasteurized, ready-to-eat, restructured seafood product usually made from pollock (fish). A CN label or manufacturer’s PFS is required to credit surimi seafood differently than these amounts.

6. APPs must meet the requirements in [appendix A](http://www.fns.usda.gov) of the NSLP regulations (7 CFR 210). Tofu must contain at least 5 grams of protein in 2.2 ounces (weight) or ¼ cup (volume). For more information, see the CSDE’s handouts, [Requirements for Alternate Protein Products in the NSLP and SBP](http://www.fns.usda.gov) and [Crediting Tofu and Tofu Products in the NSLP and SBP](http://www.fns.usda.gov). A 1-ounce serving of tempeh credits as 1 ounce of the meat/meat alternates component if the product’s ingredients include only soybeans (or other legumes), water, tempeh culture, and for some varieties, vinegar, seasonings, and herbs. If a tempeh product contains other ingredients, a CN label or PFS is required to document crediting information.

7. Legumes (cooked dry beans and peas) credit as either the meat/meat alternates component or the vegetables component, but not both in the same snack. For more information, see the CSDE’s handout, [Crediting Legumes in the NSLP and SBP](http://www.fns.usda.gov).
Menu planning notes for snack, continued

8 Creditable nuts and seeds include almonds, Brazil nuts, cashews, filberts, macadamia nuts, peanuts, pecans, walnuts, pine nuts, pistachios, and soy nuts. **Note:** Children younger than 4 are at the highest risk of choking. The USDA recommends that any nuts or seeds served to young children are in a prepared food and are ground or finely chopped. For more information, see the CSDE’s handout, *Crediting Nuts and Seeds in the NSLP and SBP*.

9 Yogurt and soy yogurt cannot contain more than 23 grams of total sugars per 6 ounces (no more than 3.83 grams per ounce). For more information, see the CSDE’s handout, *Crediting Yogurt for Preschoolers in the NSLP, SBP, and ASP*.

10 The vegetables component includes fresh, frozen, canned, and rehydrated dried vegetables. Dried vegetables require a PFS. A serving of cooked vegetables must be drained. Vegetables credit based on volume, except raw leafy greens such as lettuce and spinach credit as half the volume served (e.g., 1 cup credits as ½ cup of vegetables), and tomato paste and puree credit based on the volume as if reconstituted (see the FBG). The USDA’s *CACFP Best Practices* recommends at least one serving per week of dark green vegetables, red and orange vegetables, beans and peas (legumes), starchy vegetables, and other vegetables. For more information, see the CSDE’s handout, *Vegetable Subgroups in the CACFP*.

11 Pasteurized full-strength juice can meet the vegetables or fruits component at only one preschool meal or ASP snack per day, between all meals and snacks served to preschoolers. Juice includes all fruit and vegetable juice, frozen pops made from 100 percent juice, pureed fruits and vegetables in smoothies, and juice from canned fruit in 100 percent juice. The USDA’s *CACFP Best Practices* recommends serving whole fruits (fresh, canned, dried, and frozen) more often than juice. For more information, see the CSDE’s handouts, *Crediting Juice for Preschoolers in the NSLP, SBP, and ASP* and *Crediting Smoothies for Preschoolers in the NSLP, SBP, and ASP*.

12 The fruits component includes fresh, frozen, dried, and canned fruit. Serve canned fruit in juice, water, or light syrup. A serving of canned fruit may include the 100 percent juice in which the fruit is packed, but cannot include water or syrup. Dried fruit credits as twice the volume served, e.g., ¼ cup of raisins credits as ½ cup of the fruits component. The USDA’s *CACFP Best Practices* recommends serving whole fruits (fresh, frozen, canned, and dried) more often than juice.

13 To credit as the grains component, a creditable grain (whole, enriched, bran, or germ) must be the first ingredient (excluding water), or the greatest ingredient by weight. For information on identifying creditable grains, see the CSDE’s handout, *How to Identify Creditable Grains for Preschoolers in the NSLP, SBP, and ASP*.

14 At least one serving per day must be WGR. The USDA’s *CACFP Best Practices* recommends at least two servings of WGR grains per day. For the preschool meal patterns only, WGR foods contain 100 percent whole grains or contain a blend of whole grains (at least 50 percent) and enriched grains. For more information, see the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP*. 
| Table 1-4. Preschool snack meal pattern (through September 30, 2021), continued |

**Menu planning notes for snack, continued**

15 Except for sweet crackers (such as graham crackers and animal crackers), grain-based desserts cannot credit. Examples include cookies, sweet pie crusts, doughnuts, cereal bars, granola bars, sweet rolls, pastries, toaster pastries, cake, and brownies. The CSDE recommends not serving sweet crackers more than twice per week between all meals and snacks. For more information, see the USDA’s handout, *Grain-based Desserts in the CACFP*.

16 Through September 30, 2021, grains must meet the applicable weights (groups A-E) volumes (groups H-I) in the USDA’s grain servings chart, or provide the minimum creditable grains per serving. For more information, see the CSDE’s handouts, *Grain Servings for Preschoolers in the NSLP, SBP, and ASP* and *Calculation Methods for Grain Servings for Preschoolers in the NSLP, SBP, and ASP*. Effective October 1, 2021, the required amounts for the grains component change to ounce equivalents. For more information, see the CSDE’s handout, *Grain Ounce Equivalents for Preschoolers in the NSLP, SBP, and ASP*.

17 Breakfast cereals cannot contain more than 6 grams of sugars per dry ounce (no more than 21.2 grams of sucrose and other sugars per 100 grams of dry cereal). For more information, see the CSDE’s handout, *Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP*.

18 Examples of cereal grains include amaranth, barley, buckwheat, cornmeal, corn grits, kasha, millet, oats, quinoa, wheat berries, and rolled wheat.

19 Effective October 1, 2021, the required amount for RTE breakfast cereals changes to ounce equivalents. The required volume for ages 1-4 (½ ounce equivalent) is ½ cup of flaked or round cereal, ¼ cup of puffed cereal, and ⅛ cup of granola.
Overview of Preschool Meal Pattern Requirements

The information below summarizes the requirements for the preschool meal patterns. For information on the required menu records for documenting meal pattern compliance, see section 2. For detailed guidance on each food component, see section 3.

Breakfast

- Breakfasts must include one serving of the milk component; one serving of vegetables, fruits, or both; and one serving of the grains component. The serving offered for each component must be at least the minimum amount for each age group in the preschool breakfast meal pattern (see table 1-2 in this section).

- SFAs may substitute the meat/meat alternates component for the entire grains component at breakfast up to three times per week. A ½-ounce serving of the meat/meat alternates component substitutes for ½ serving of the grains component. For more information, see “Meat/Meat Alternates at Breakfast” in section 3.

- If the menu indicates “juice” or “fruit,” the SFA must indicate the specific varieties of juice and fruit served. This information can be listed on the preschool menu, daily production record, or other menu documentation, such as a list of all types of juice and fruit served in preschool meals and ASP snacks.

- If juice is served at breakfast, it cannot credit as the fruits component or vegetables component at lunch or ASP snack. For more information, see “Juice limit” in section 3.

- If the menu indicates “cereal,” the SFA must indicate the specific varieties (type and brand) of cooked and RTE breakfast cereals, and whether they are WGR, enriched, or fortified. Menu planners may write “WGR” next to the product name to indicate that a product is WGR. For example, “General Mills Cheerios (WGR)” or “Quaker Oatmeal (WGR).” Alternatively, SFAs may list this information on the preschool menu, daily production record, or other menu documentation such as a list of all cereals served in preschool meals and ASP snacks. For more information, see “Required Documentation for Grains” in “Part B: Preschool WGR Requirement” of section 3.

- If SFAs serve RTE breakfast cereal with milk, the menu must list the specific type of cereal as one component (e.g., “whole-grain granola”) and the specific type of fluid milk as another (e.g., “unflavored low-fat milk”). “Cereal with milk” does not indicate that the SFA is serving each age group an appropriate amount of RTE breakfast cereal or an appropriate amount or type of milk.
• SFAs must make water available during the preschool breakfast meal service, but cannot offer water in place of the required food components. For more information, see “Water Availability” in section 4.

Lunch

• Lunches must include one serving of the milk component, one serving of the meat/meat alternates component, one serving of the vegetables component, one serving of the fruits component (or vegetable substitutions), and one serving of the grains component. The serving for each component must be at least the minimum amount in the preschool lunch meal pattern (see table 1-3 in this section).

• SFAs may substitute vegetables for the entire fruits component at any lunch. Lunch menus must include one serving of the vegetables component and one serving of the fruits component, or two different servings of the vegetables component. For more information, see “Substituting Vegetables for Fruits at Lunch” in section 3.

• If the lunch menu lists “salad,” SFAs must provide a specific description of the type of salad on the preschool menu, daily production record, or other menu documentation such as a list of all types of salads served in preschool meals and ASP snacks. Examples include carrot-raisin salad; garden salad with lettuce, cucumbers, carrots, and tomatoes; and fresh fruit salad with apples, oranges, bananas, and strawberries. Note: Raw leafy greens credit as half the volume served. For more information, see “Crediting Raw Leafy Greens” in section 3.

• SFAs must make water available during the preschool lunch meal service, but cannot offer water in place of the required food components. For more information, see “Water Availability” in section 4.
Snack

- Snacks must include two of the five components. The serving for each component must be at least the minimum amount in the ASP preschool meal pattern (see table 1-4 in this section).

- A preschool snack that contains two servings from the same component is not reimbursable. For example, a snack menu of orange juice (fruits component) and applesauce (fruits component) is not reimbursable because it contains only one food component. However, a snack of orange juice (fruits component) and carrot sticks (vegetables component) is reimbursable because it contains two different components.

- If the snack menu includes a creditable beverage (milk or juice), the other snack component cannot be a beverage. SFAs cannot serve juice when milk is the only other snack component.

- If the snack menu includes milk, the other snack component should not be yogurt. The CSDE recommends this practice to increase nutrient variety.

- If the snack menu includes more than two different food items, at least two food items must meet the required food components and servings. An example is a snack menu of yogurt (meat/meat alternates component), strawberries (fruits component) and granola (grains component). The snack menu must clearly indicate which items contribute to the ASP preschool meal pattern, and the serving size provided.

- A snack menu that includes a noncreditable food must also include the minimum required serving of at least two components. For example, a snack of strawberry gelatin (noncreditable food), whole-grain crackers (grains component), and unflavored low-fat milk (milk component) contains three food items but only two components. To be reimbursable, this snack menu must provide the minimum serving of both milk and crackers.

- The snack menu should include a vegetable or fruit as often as possible. The USDA’s *CACFP Best Practices* recommends making at least one of the two required snack components a vegetable or a fruit.

- The SFA must make water available during the preschool snack service, but cannot offer water in place of the required food components. The SFA should offer water at snack when no other beverage is served. For more information, see “Water Availability” in section 4.
Meal pattern documentation

- SFAs must have a written preschool menu to document that all meals and ASP snacks provide the required components and minimum servings for each age group. For more information, see “Menus” in section 2.

- SFAs must have a Child Nutrition (CN) label or manufacturer’s production formulation statement (PFS) on file to document the meal pattern contribution of all commercial foods served in preschool menus, such as entrees, grains, and vegetables and fruits with added ingredients, e.g., coleslaw, potato salad, and carrot-raisin salad. **Note:** CN labels are available only for main dish entrees that contribute to the meat/meat alternates component. However, they usually indicate the contribution of other meal components that are part of these products, such as grains, vegetables, and fruits. For more information, see “Child Nutrition (CN) Labels” and “Product Formulation Statements” in section 2.

- SFAs must have documentation on file to indicate that WGR foods were identified using one of the USDA’s six allowable methods for determining compliance with the preschool WGR criteria. For more information, see the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP*. **Note:** The WGR criteria for NSLP and SBP meal patterns are different for preschoolers and grades K-12. Grain foods (excluding grain-based desserts) that meet the WGR criteria for grades K-12 also meet the preschool WGR criteria. For more information, see “Grain-based desserts” and “WGR requirement” in section 3.

- SFAs must have documentation on file to indicate that all breakfast cereals meet the preschool sugar limit (no more than 6 grams of sugars per dry ounce) and that compliance was determined using one of the USDA’s three allowable methods. For more information, see “Crediting Criteria for Breakfast Cereals” in section 3 and the CSDE’s handout, *Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP*.

- SFAs must have documentation on file to indicate that all yogurt and soy yogurt products meet the preschool sugar limit (no more than 3.83 grams of sugars per ounce). For more information, see “Crediting Yogurt and Soy Yogurt” in section 3 and the CSDE’s handout, *Crediting Yogurt for Preschoolers in the NSLP, SBP, and ASP*.

- SFAs must have documentation on file to indicate that APPs meet the requirements in appendix A of the NSLP regulations (7 CFR 210). For more information, see “Crediting Alternate Protein Products” in section 3 and the CSDE’s handout, *Requirements for Alternate Protein Products in the NSLP and SBP*.
SFAs must have documentation on file to indicate that tofu and tofu products contain at least 5 grams of protein in 2.2 ounces (weight) or ¼ cup (volume). For more information, see “Crediting Commercial Tofu and Tofu Products” in section 3 and the CSDE’s handout, Crediting Tofu and Tofu Products in the NSLP and SBP.

SFAs must have standardized recipes on file to document the meal pattern contribution of all foods made on site. Examples of foods made on site include entrees, grains (such as pancakes, muffins, and breads), and vegetables and fruits with added ingredients, e.g., coleslaw, potato salad, and carrot-raisin salad. For more information, see “Standardized Recipes” in section 2.

SFAs must have daily production records on file for all preschool meals and ASP snacks. The production record must list all meal components and menu items, including all meal choices, food components, types of milk, leftovers, substitutions, and all other food items such as condiments and other noncreditable foods. For more information, see “Production records for breakfast and lunch” and “Production records for snack” in section 2.

Resources for Preschool Meal Patterns

The resources and websites below provide information and guidance on planning meals and ASP snacks to meet the preschool meal patterns. For detailed information on crediting foods in the preschool meal patterns, see the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.

• Child and Adult Care Food Program Meal Pattern Revision: Best Practices (USDA): https://fns-prod.azureedge.net/sites/default/files/cacfp/CACFP_factBP.pdf

• Meal Patterns for Preschoolers in School Nutrition Programs (CSDE webpage): https://portal.ct.gov/SDE/Nutrition/Meal-Patterns-Preschoolers-in-School-Nutrition-Programs/Documents

• Menu Planner for School Meals (USDA): https://www.fns.usda.gov/tn/menu-planner

For information on recipes, see “Standardized Recipes” and “Recipe Resources” in section 2. For additional resources, see section 5.
SFAs must be able to document that preschool meals and ASP snacks provide the food components and minimum servings required by the preschool meal patterns. Without appropriate documentation, foods and beverages cannot credit as part of reimbursable meals and snacks. The CSDE will disallow reimbursement for noncompliant meals.

SFAs should ensure that all appropriate school food service staff are aware of the documents needed to demonstrate the menu’s compliance with the preschool meal patterns. Staff must also understand how to complete and maintain appropriate documentation. Table 2-1 summarizes the required documentation for meal pattern compliance. SFAs must maintain these records on file for the CSDE’s Administrative Review of school nutrition programs.

**Table 2-1. Documentation for meal pattern compliance**

**Menus**

SFAs must maintain menu records that document the service of reimbursable meals to preschoolers. Menus should reflect all food items, and indicate the type of milk served and which grain products are WGR. The CSDE’s sample menus for ages 3-5 in the CACFP provide menu ideas for preschoolers.

- Sample Cold Breakfast Menus for CACFP Child Care Centers and Homes:  
  https://portal.ct.gov/-/media/SDE/Nutrition/CACFP/MealPattern/menubreakcoldCACFP.pdf

- Sample Hot Breakfast Menus for CACFP Child Care Centers and Homes:  
  https://portal.ct.gov/-/media/SDE/Nutrition/CACFP/MealPattern/menubreakhotCACFP.pdf
• Sample Cold Lunch/Supper Menus for CACFP Child Care Centers and Homes: https://portal.ct.gov/-/media/SDE/Nutrition/CACFP/MealPattern/menulunchcoldCACFP.pdf

• Sample Hot Lunch/Supper Menus for CACFP Child Care Centers and Homes: https://portal.ct.gov/-/media/SDE/Nutrition/CACFP/MealPattern/menulunchhotCACFP.pdf

• Sample Snack Menus for CACFP Child Care Centers and Homes: https://portal.ct.gov/-/media/SDE/Nutrition/CACFP/MealPattern/menusnackCACFP.pdf

Menu forms for breakfast and lunch
The CSDE’s sample preschool menu forms for breakfast and lunch help SFAs plan menus to include the required meal pattern components in the appropriate servings. These forms include:

• Five-day Breakfast Menu Planning Form for Ages 1-2;
• Five-day Breakfast Menu Planning Form for Ages 3-4;
• Five-day Lunch Planning Form for Ages 1-2;
• Five-day Lunch Planning Form for Ages 3-4;
• Four-day Breakfast Menu Planning Form for Ages 1-2;
• Four-day Breakfast Menu Planning Form for Ages 3-4;
• Four-day Lunch Planning Form for Ages 1-2;
• Four-day Lunch Planning Form for Ages 3-4;
• Seven-day Breakfast Menu Planning Form for 1-2;
• Seven-day Breakfast Menu Planning Form for 3-4;
• Seven-day Lunch Planning Form for Ages 1-2; and
• Seven-day Lunch Planning Form for Ages 3-4.

The preschool menu forms are available in the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.
Menu forms for snack

The CSDE’s sample ASP menu forms help menu planners include the required ASP meal pattern components in the appropriate portion sizes. These forms include:

- ASP Menu Form for Ages 1-2;
- ASP Menu Form for Ages 3-4; and
- ASP Sample Menu for Ages 3-4.

The ASP forms are available in the “Documents/Forms” section of the CSDE’s ASP webpage.

Cycle menus

The CSDE strongly encourages SFAs to use cycle menus for preschool meals and snacks. A cycle menu is a series of menus planned for a specific period (such as four weeks) with a different menu for each day. Cycle menus can help SFAs comply with the meal pattern requirements, increase variety, control food cost, control inventory, and save time.

The CSDE recommends a period of at least four weeks for cycle menus. This time period increases the variety of meals offered and ensures that children are not served the same combination of foods too often. The resources below provide additional information on cycle menus for young children.

- Menus for Child Care (ICN): https://theicn.org/icn-resources-a-z/menus-for-child-care/

Note: Some resources may have been developed prior to the updated preschool meal patterns. SFAs should check resources for preschool meal pattern compliance and adapt recipes, as needed. For more resources, see the CSDE’s resource list, Menu Planning and Food Production.
Production Records for Breakfast and Lunch

The USDA regulations for the NSLP (7 CFR 210.10(a)(3)) and SBP (7 CFR 220.8(a)(3)) require that SFAs maintain daily production records for school meals for preschoolers and grades K-12. Production records must show how the offered meals contribute to the required food components and food quantities for each meal served to each age group every day. SFAs must keep production records on file for three years plus the current school year.

A production record is a working tool that outlines the type and quantity of foods that need to be purchased and available for the meal service. Table 2-2 indicates what elements production records should include and when food service personnel should complete the information.

<table>
<thead>
<tr>
<th>Table 2-2. Required elements for production records</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Complete before meal service</strong></td>

<tr>
<td>• Name of site</td>
</tr>
<tr>
<td>• Meal date</td>
</tr>
<tr>
<td>• Meal type (breakfast or lunch)</td>
</tr>
<tr>
<td>• All planned menu items including all meal choices, food components, types of milk, leftovers, substitutions, and all other food items such as condiments and other noncreditable foods</td>
</tr>
<tr>
<td>• Recipe name and number or product name and code</td>
</tr>
<tr>
<td>• Planned serving size and number of servings for reimbursable meals for each age/age group, and if applicable, nonreimbursable meals (e.g., second meals and adult meals), and a la carte sales</td>
</tr>
</tbody>
</table>

1 Food service staff should record temperatures throughout the meal service to ensure that hot foods are held at 140 °F or above and cold foods at held at 41 °F or below. For additional guidance, visit the CSDE’s Food Safety for Child Nutrition Programs webpage.
To avoid potential compliance issues with production records, food service personnel must:

- complete all information (no missing or incomplete information);
- make the information legible;
- use the proper weight or volume measure for each food item, e.g., use cups for fruits and vegetables instead of ounces (see “Volume versus Weight” below);
- enter the number of servings, pounds, cans, or pieces in the column for “total quantity of food used” (not the number of portions prepared);
- separately list each type of milk served;
- list all condiments;
- list portion sizes accurately and ensure that these are the same as what is actually being served to students;
- list all items prepared for the meal including daily items and alternate meal choices;
- accurately record the “planned” servings for each preschool age group;
- separately list nonreimbursable adult meals and second student meals from reimbursable student meals;
- add any extra amounts of food needed during the meal service period;
- note if any substitutions are made or leftovers are used; and
- use a production record for each site, including satellite locations.

For more information on production records, review chapter 4 of the USDA’s guide, *Menu Planner for School Meals: School Year 2018-2019*.

**Volume versus weight**

During the Administrative Review of school nutrition programs, the CSDE frequently finds that production records include incorrect information for the volume or weight of a menu item. Production records must reflect the measurements required by the preschool meal patterns. For example, the preschool meal patterns require a specific volume (cups) for the fruits component and vegetables component, and specific a volume (tablespoons) for peanut butter. Therefore, production records for preschool menus must list the servings of fruits and vegetables in cups, not weight (ounces), and the servings of peanut butter in tablespoons, not weight (ounces).

Volume is the amount of space an ingredient occupies in a measuring container, and is not the same as weight. Volume measures include teaspoon, tablespoon, fluid ounce, cup, pint, quart and gallon. A specific measure of volume (fluid ounces) does not equal the same measure of weight (ounces). For example, a ½-cup serving of a food (4 fluid ounces) does not weigh 4 ounces. The weight of a volume measure of food varies depending on the density of the food. For example, ½ cup of lettuce weighs less than ½ cup of canned peaches.
Menu Records

Production record forms for breakfast and lunch
The CSDE’s sample production records help SFAs provide the information required to comply with the USDA’s regulations for production records. The forms are based on food items and food components, and include:

- Food Components: Preschool Ages 1-4;
- Food Components: Preschool Ages 3-4;
- Food Components: Prekindergarten through Grade 8;
- Food Components: Prekindergarten through Grade 12; and
- Food Items: Preschool Ages 1-4.

The production record forms can be used for breakfast and lunch. They are available in the “Documents/Forms” section of the CSDE’s Production Records for School Nutrition Programs webpage.

Production record forms for snack
The USDA regulations require that all schools and institutions participating in the ASP must complete daily menu production records that document the service of reimbursable snacks to preschoolers and grades K-12. Production records must demonstrate how snacks contribute to the required food components for each day of operation.

The CSDE’s sample ASP production record for preschoolers help SFAs provide the information required to comply with the USDA’s regulations for production records. The sample completed production record shows how to complete the form.

- ASP Production Record for Ages 3-4
- Sample Completed ASP Production Record for Ages 3-4

These documents are available in the “Documents/Forms” section of the CSDE’s ASP webpage.

Other Snack Forms
SFAs must document snack counts for all schools in the ASP. The CSDE has sample forms that SFAs may use for schools that are site or area eligible, and other sample forms for schools that are not site or area eligible. These forms are available in the “Documents/Forms” section of the CSDE’s ASP webpage.
Standardized Recipes

The USDA’s regulations require that SFAs develop and follow standardized recipes. The USDA defines a standardized recipe as one that has been tried, adapted, and retried several times for use by a given foodservice operation; and has been found to produce the same good results and yield every time when the exact procedures are used with the same type of equipment, and the same quantity and quality of ingredients.

Standardized recipes have many benefits. They help to ensure:

- consistent food quality;
- predictable yield;
- consistent nutrient content;
- customer satisfaction;
- food cost control;
- efficient purchasing procedures;
- inventory control;
- labor cost control;
- increased employee confidence;
- reduced record keeping; and
- successful completion of the CSDE’s Administrative Review of school nutrition programs.

When SFAs prepare foods on site, standardized recipes must document that a serving provides the amount of each food component credited toward the preschool meal patterns. For example, if the menu planner credits lasagna as 1½ ounces of the meat/meat alternates component, ¼ cup of the vegetables component, and ½ serving of the grains component, the SFA’s standardized recipe must document that each serving contains 1½ ounces of cooked lean meat and cheese, ¼ cup of tomato sauce, and ¼ cup of whole grain, WGR, or enriched pasta. Foods made on site include:

- foods that are prepared from scratch using a recipe, such as cornbread, coleslaw, potato salad, soup, lasagna, chicken stir-fry, and casseroles; and
- foods that require some additional processing by adding other ingredients after purchasing. For example, making rice or pasta with butter, sautéing vegetables in oil, adding dressing to salad, assembling a sandwich, adding eggs and oil to a muffin mix, and reconstituting canned soup with milk.

Standardized recipes are not required for foods that do not contain any added ingredients, such as fresh fruits and vegetables, purchased breads and rolls, and commercially prepared entrees and side dishes.
Requirements for standardized recipes

SFAs may standardize their own local recipes or use existing standardized recipes such as the USDA’s recipes. Standardized recipes must include the following:

- recipe name that describes the recipe;
- recipe number that is unique to each recipe;
- recipe category classification, e.g., main dish, grains, and vegetables;
- recipe yield (weight and/or volume and number of servings), i.e., the amount produced when production is complete;
- ingredients used;
- ingredient amounts per yield, i.e., the quantity (weight or volume) of all ingredients for each yield, such as 50 servings or 100 servings;
- preparation equipment and utensil, such as pans, steamers and mixers;
- food safety Critical Control Points (CCPs), i.e., time and temperature critical limits for each step of preparing, holding, serving, and storing;
- cooking time and temperature, as required;
- serving size (the weight and/or volume of the single portion size);
- serving utensils such as scoops, ladles, and spoodles; and
- meal pattern component contributions per serving, e.g., fruits component, vegetables component (including subgroups), grains component, and meats/meat alternates component.

The CSDE’s *Standardized Recipe Form for School Nutrition Programs* provides a template that SFAs may use to develop standardized recipes. For more information on using standardized recipes, see chapter 4 of the USDA’s guide, *Menu Planner for School Meals*, “Determining In-house Product Yields” in this section, and the resources below.

For more information, see the CSDE’s Menu Planning for Child Nutrition Programs webpage.

Note: SFAs must ensure that local menus comply with the preschool meal patterns. Menu planners should check resources for current meal pattern compliance and adapt recipes, as needed.
Documentation for Commercial Products

Commerically prepared foods served in preschool meals and ASP snacks must provide the amount of the food components being credited toward the preschool meal patterns. For example, to credit commercially prepared chicken nuggets as the meat/meat alternates component and grains component for ages 3-4 at lunch, the manufacturer’s documentation must indicate that one serving of the product contains 1½ ounces of cooked chicken and ½ serving of WGR or enriched breading.

To credit commercial products toward the preschool meal patterns, SFAs must obtain either:

- the original CN label from the product carton or a photocopy or photograph of the CN label shown attached to the original product carton; or
- a PFS signed by an official of the manufacturer stating the amount of each meal pattern component contained in one serving of the product.

These are the only acceptable records that SFAs can use to document a commercial product’s meal pattern contribution. Nutrition Facts labels, ingredients statements, and product packaging do not provide sufficient information to document a product’s meal pattern contribution.

Table 2-3 compares the criteria for CN labels and PFS forms. Only CN labels provide a guarantee of the product’s contribution to the USDA’s meal patterns for the Child Nutrition Programs. SFAs must check the crediting information on PFS forms for accuracy.

<table>

</tbody>
</table>

Commercial products without a CN label or PFS cannot credit toward the meal patterns. For additional guidance on accepting product documentation, see the CSDE’s

**Child Nutrition (CN) Labels**

The USDA’s CN Labeling Program is a voluntary federal labeling program for Child Nutrition Programs. It provides food manufacturers the option to include a standardized food crediting statement on their product labels, which the USDA approves prior to use. Manufacturers participating in the CN Labeling Program must have quality control procedures and inspection oversight that meet USDA’s requirements.

The USDA does not require that manufacturers make CN-labeled products or that SFAs purchase foods with CN labels. Purchasing decisions are at the discretion of the local SFA. If a CN-labeled product is required, the SFA must clearly state this information in their purchasing specifications.

CN labels are available only for main dish entrees that contribute to the meat/meat alternates component of the USDA’s meal patterns. Examples include beef patties, cheese or meat pizzas, meat or cheese and bean burritos, egg rolls, and breaded fish portions.

CN labels will usually indicate the contribution of other meal components that are part of these products. For example, CN-labeled pizza may list contributions to the meat/meat alternates, grains, and vegetables components; and CN-labeled breaded chicken nuggets may list contributions to the meat/meat alternates and grains components.

A CN label statement clearly identifies the contribution of a food product toward the meal pattern requirements, based on the USDA’s evaluation of the product’s formulation. Manufacturers state this contribution on their labels. CN labeling provides a warranty that the product contributes to the meal pattern requirements as printed on the label.

The CN label is found on the actual product packaging and will always contain the following:

- the CN logo, which is a distinct border;
- the meal pattern contribution statement;
- a six-digit product identification number;
- the USDA’s authorization; and
- the month and year of approval.

The USDA does not allow manufacturers to place the CN label on a fact sheet or any other product information. Acceptable and valid documentation for the CN label includes the original CN label from the product carton, or a photocopy or photograph of the CN label.
shown attached to the original product carton. CN labels that are photocopied or photographed must be visible and legible.

The resources below provide additional information on CN labels.

- CN Labeling Program (USDA website): https://www.fns.usda.gov/cn/labeling-program

The USDA’s Authorized Labels and Manufacturers webpage lists approved CN-labeled products and manufacturers.

Product formulation statements
A PFS is a document developed by manufacturers that provides specific information about how a product credits toward the USDA’s meal patterns for Child Nutrition Programs. It generally includes a detailed explanation of what the product contains and indicates the amount of each ingredient in the product by weight. The information on a PFS can vary among manufacturers because the USDA does not monitor PFS forms.

To document a product’s crediting information, the PFS must:

- indicate how the product credits toward the USDA’s meal pattern requirements;
- document how the manufacturer obtained the crediting information by citing specific Child Nutrition Program resources or regulations such as the USDA’s Food Buying Guide for Child Nutrition Programs (FBG) and USDA’s policy on crediting foods (such as the USDA’s policy memos for school meals and Food and Nutrition Service (FNS) instructions for Child Nutrition Programs); and
• be prepared on company letterhead with the signature of a company official and the date of issue. The signature can be handwritten, stamped, or electronic.

All creditable ingredients in the PFS must match a description in the FBG. The USDA’s CN Labeling website provides sample PFS templates for the meat/meat alternates, vegetables, fruits, and grains components. If the PFS does not meet these requirements, the SFA cannot accept it, and the product cannot credit in school meals.

Unlike a CN label, a PFS does not provide any warranty against audit claims for reimbursable meals. The USDA does not monitor PFS forms for compliance with the product’s actual formulation or stated contribution to the meal pattern requirements. Therefore, SFAs must check the manufacturer’s crediting information for accuracy prior to including the product in reimbursable meals. SFAs should request supporting documentation from manufacturers, verify its accuracy, and maintain this documentation on file for the CSDE’s Administrative Review of school nutrition programs.

The resources below provide additional information on PFS forms.

Menu Records

For more information, see the CSDE’s handout, Product Formulation Statements, and the USDA’s handout, Tips for Evaluating a Manufacturer’s Product Formulation Statement.

Determining Food Yields

The USDA’s FBG provides yield information for common types and customary sizes of meat/meat alternates, vegetables, fruits, and grains, including commercially available foods and USDA Foods. The FBG helps SFAs determine:

- how many servings a specific quantity of food will provide;
- what quantity of raw product will provide the amount of ready-to-cook food in a recipe; and
- how much food to buy.

The FBG helps SFAs determine how much food to purchase to meet the minimum servings in the USDA meal patterns, and calculate how school recipes contribute to the meal patterns. For example, menu planners can use the FBG to determine how much raw broccoli provides 50 servings of ½ cup of cooked vegetable or how much uncooked brown rice provides 100 servings of ¼ cup of cooked rice. This information is essential for documenting compliance with the preschool meal pattern requirements.
Menu Records

Determining in-house product yields

The yield information provided in the FBG represents average yields based on research conducted by the USDA. Many factors affect yield, including:

- the quality and condition of the food purchased;
- storage conditions and handling;
- the equipment used in preparation;
- cooking method and time;
- the form in which the food is served, e.g., whether potatoes are mashed, fried, or baked; and
- the serving utensils and portion control methods used.

If a food service operation consistently obtains a higher or lower yield for a product than the yield listed in the FBG, the SFA should conduct an in-house yield study to determine the actual number of portions of a specified size that the product provides. In-house yields are also required for products not listed in the FBG. The CSDE allows SFAs to use in-house yields if they are properly documented and follow the CSDE’s yield study procedures.

Yield study procedures

SFAs can use the procedures below to determine and document in-house yields for food products.

1. Select a day when the product is served on the menu. Use at least four separate samples of the product to determine yields. A “sample” is the product pack unit, such as number 10 cans or 5-pound bags. If the food service operation uses more samples, the yield data will be more accurate.

2. For the best yield estimate, at least two people should independently portion and count the samples. Each person completes half of the samples. For example, with a sample of four cans, each person works alone to measure and count the servings from two cans.

3. Select the appropriate measuring utensil for the portion size being served, such as a number 16 scoop/disher or ½-cup measuring spoon. For information on measuring utensils, see the Institute of Child Nutrition’s (ICN) Basics at a Glance Portion Control Poster.

4. Fill the measuring utensil level to the top of the measure.
5. Carefully count and document the number of portions in each sample.

6. Add the total number of servings from each of the samples.

7. Divide the total number of servings by the number of samples to get the average number of servings per sample.

8. Complete the CSDE’s *Yield Study Data Form* and maintain on file for review by the CSDE staff during the Administrative Review of school nutrition programs.

For additional assistance with yield studies, contact the CSDE’s school nutrition programs staff.

**Nutrition Information**

SFAs must obtain nutrition information for all commercially prepared foods used to prepare school meals. If a processed product does not have a Nutrition Facts panel, the SFA is responsible for obtaining the necessary information from the manufacturer.

Preschool meals are not included when the CSDE conducts a nutrient analysis of school meals as part of the Administrative Review of school nutrition programs. The weekly dietary specifications for grades K-12 do not apply to preschool meals.

However, SFAs are still responsible for maintaining nutrition information for commercially prepared foods used to prepare preschool meals. SFAs operating the NSLP and SBP must follow the NSLP and SBP regulations. The menu documentation requirements for grades K-12 also apply when a SFA serves preschoolers. Therefore, SFAs must maintain product Nutrition Facts labels, ingredients, and recipes, as required by the USDA’s regulations and policies for the NSLP and SBP.

The USDA considers providing nutrition information for foods served in school meals a component of reasonable meal modifications for children whose disability restricts their diet. SFAs are responsible for making nutrition information for school meals available to students, families, school nurses, and others as needed. For information on the requirements for meal modifications, see the CSDE’s guide, *Accommodating Special Diets in School Nutrition Programs*, and visit the CSDE’s Special Diets in School Nutrition Programs webpage.

The USDA encourages SFAs to inform students, parents, and the public about efforts they are making to meet the meal requirements for school meals.
Menu Planning Guide for Preschoolers

2 | Menu Records

Nutrition information for USDA Foods

The USDA provides product information sheets for USDA Foods, which are available at [https://www.fns.usda.gov/fdd/nslp-usda-foods-fact-sheets](https://www.fns.usda.gov/fdd/nslp-usda-foods-fact-sheets). These product information sheets include the product’s description, crediting and yield information, culinary tips and recipes, food safety information, and a general Nutrition Facts label. However, they do not include a product-specific Nutrition Facts label or ingredients statement.

For further processed USDA Foods, the nutrition information and ingredients for USDA direct delivery food items (brown box) may vary based on the vendor who received the bid. If a SFA requires product information for students with food allergies or other dietary needs, the SFA must obtain product-specific information from the manufacturer.

To find the nutrition information for USDA direct delivery food items, check the outside of the case or the inside packaging. If nutrition information is not available, check with the product’s manufacturer. The agreement between the Connecticut FDP and processor requires that processors must provide product nutrition information to SFAs upon request and must make available product nutrition information on their website. For additional assistance, contact the Connecticut FDP.

Nutrition disclosure

The USDA’s regulations for the NSLP (210.10 (n)) require that schools must accurately represent foods on lunch and breakfast menus. Menus cannot claim that a food item is beef, pork, poultry (such as chicken or turkey) or seafood (such as fish or tuna) if the food item contains more than 30 percent APPs. The names used for these menu items must reflect that they are not 100 percent meat, poultry, or fish. For more information on APPs, see “Alternate protein products (APPs)” in section 3.
3 — Meal Components

Each food component of the USDA’s preschool meal patterns has specific criteria for determining how foods credit toward reimbursable meals. The menu planning guidance in this section assists SFAs with meeting the requirements for the five food components of the preschool meal patterns. The components include milk, meat/meat alternates, vegetables, fruits, and grains. For additional guidance on crediting foods, see the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.

Creditable Foods

Creditable foods are foods and beverages that count toward the meal pattern requirements for reimbursable meals and ASP snacks in the USDA Child Nutrition Programs. The USDA considers the following factors when determining whether a food credits:

- nutrient content;
- function in a meal;
- regulations concerning the USDA Child Nutrition Programs (quantity requirements and definition);
- the Food and Drug Administration’s (FDA) standards of identity;
- the USDA’s standards for meat and meat products; and
- administrative policy decisions on the crediting of particular foods.

The websites and resources below address the requirements for crediting foods in the USDA’s preschool meal patterns.

- CSDE Operational Memos for the CACFP:
  https://portal.ct.gov/SDE/Lists/Operational-Memoranda-for-the-CACFP

- CSDE Operational Memos for School Nutrition Programs:
  https://portal.ct.gov/SDE/Lists/Operational-Memoranda-for-School-Nutrition-Programs

- Crediting Updates for Child Nutrition Programs: Be in the Know! Webinar Series (USDA):

- Food Buying Guide for Child Nutrition Programs (USDA):
Minimum creditable amounts

Each component has a minimum amount that credits toward the preschool meal patterns. Foods served in amounts less than the minimum do not credit.

SFAs must provide the milk component as one full serving of fluid milk. When meals include breakfast cereals, SFAs may serve fluid milk as a beverage, on cereal, or both. For fruit and vegetable smoothies only, the minimum creditable amount of milk is ¼ cup. If the amount of milk in a smoothie is less than the full-required serving of the milk component, the meal or ASP snack must include an additional serving of milk to meet the full-required serving for each preschool age group.

The minimum creditable amounts for the other food components are ⅛ cup for the vegetables component, ⅛ cup for the fruits component, ¼ serving for the grains component; and ¼ ounce for the meat/meat alternates component. If a food item provides less than the full-required serving of a component, the menu must include additional foods to meet the full-required serving for each preschool age group.
Noncreditable Foods

Noncreditable foods are foods and beverages that cannot credit toward the preschool meal patterns. Examples include potato chips, pudding, ice cream, gelatin, cream cheese, bacon, and condiments such as syrup, jam, ketchup, mustard, mayonnaise, and butter.

SFAs may serve noncreditable foods in addition to the meal components to add variety, help improve acceptability in the meal, and satisfy appetites. Some examples include maple syrup on pancakes, salad dressing on tossed greens, and condiments such as ketchup or mustard on sandwiches and other entrees.

To ensure that preschool meals and snacks meet children’s nutritional needs, the CSDE encourages SFAs to use discretion when serving noncreditable foods. Noncreditable foods typically contain few nutrients and are higher in added sugars, saturated fats, and sodium. Menu planners should read labels, be aware of the ingredients in foods, and limit the frequency and amount of less nutritious choices.

Some noncreditable foods (such as candy, soda, coffee, tea, and sports drinks) cannot be sold in the school nutrition programs due to federal or state requirements. For more information, see the CSDE’s competitive foods guides (Guide to Competitive Foods in HFC Public Schools, Guide to Competitive Foods in Non-HFC Public Schools, and Guide to Competitive Foods in Private Schools and Residential Child Care Institutions) and visit the CSDE’s Competitive Foods webpage and Beverage Requirements webpage.

Snack foods sold a la carte (separately from reimbursable preschool meals and ASP snacks) must meet the Connecticut Nutrition Standards (CNS) or the USDA’s Smart Snacks nutrition standards. The CNS applies to public school districts that participate in the healthy food option of Healthy Food Certification (HFC). The USDA’s Smart Snacks nutrition standards apply to public school districts that do not participate in the healthy food option of HFC, and to all private schools and residential child care institutions (RCCIs).

Examples of noncreditable foods are listed in the section for each food component. For more information and examples of noncreditable foods for preschoolers, see the CSDE’s handout, Noncreditable Foods for Preschoolers in the NSLP, SBP, and ASP.

Water

The Healthy Hunger-Free Kids Act requires that SFAs must make drinking water available to children at no charge where meals are served during the meal service, including ASP snacks. However, water does not credit in the preschool meal patterns. Preschool menus cannot offer a choice between water and milk or juice. For more information, see “Water Availability” in section 4.
Milk Component

Milk must be pasteurized, meet all state and local requirements, and contain vitamins A and D at levels specified by the FDA. The preschool meal patterns require a serving of fluid milk at breakfast and lunch. Milk may be served as one of the two required snack components. However, only one snack component can be a creditable beverage. Milk cannot be served when juice is the only other snack component.

Allowable Types of Milk

The preschool meal patterns require unflavored whole milk for age 1, and unflavored low-fat milk or unflavored fat-free milk for ages 2-4. Flavored milk cannot be served. The USDA’s handout, *Serving Milk in the CACFP*, summarizes the requirements for the preschool meal patterns.

SFAs cannot serve milk that does not comply with the specific fat content of the preschool meal patterns. For example, low-fat milk, fat-free milk, and reduced-fat milk cannot be served to 1-year-olds; and whole milk and reduced-fat milk cannot be served to ages 2-4. However, if a child has a disability that requires milk with a fat content that is different from the preschool meal pattern requirements, the SFA can make the substitution prescribed in the medical statement signed by a recognized medical authority. For more information, see the CSDE’s handout, *Allowable Milk Substitutes for Children without Disabilities in School Nutrition Programs*, and the CSDE’s guide, *Accommodating Special Diets in School Nutrition Programs*.

State Requirements for Milk in Public Schools

In addition to meeting the USDA’s requirements for the milk component, all milk sold in Connecticut public schools must comply with the state beverage requirements of Section 10-221q of the Connecticut General Statutes (C.G.S.). The state beverage requirements apply to milk sold as part of reimbursable meals and milk sold separately from reimbursable meals, i.e., milk a la carte sales. The state beverage statute does not apply to private schools or RCCIs.

Products that meet the federal and state requirements for milk are on list 16 of the CSDE’s *List of Acceptable Foods and Beverages* webpage, which includes brand-specific lists of foods that meet the Connecticut Nutrition Standards and beverages that meet the requirements of
the state beverage statute. For more information on the state beverage statute, see the CSDE’s Beverage Requirements webpage.

**Menu Documentation for Milk**

Preschool menus must document the type of milk served to each age group. For example, the menu must state “unflavored low-fat milk” instead of “low-fat milk,” and “unflavored fat-free milk” instead of “fat-free milk.”

**Transitioning from Whole Milk to Low-Fat or Fat-Free Milk**

The preschool meal patterns for children do not allow whole milk for ages 2-4. However, the USDA allows SFAs to serve unflavored reduced-fat milk and unflavored whole milk during a one-month transition period when a 24-month-old child is switching from whole milk to low-fat or fat-free milk. For example, the procedures below can help ease a child’s transition to low-fat or fat-free milk.

1. Add a small amount of reduced-fat milk to whole-milk.
2. Gradually change to low-fat or fat-free milk mixed with whole milk.
3. Decrease the amount of whole milk over time so the entire serving is low-fat or fat-free milk by the end of the one-month transition period.

**Milk Substitutes for Children without Disabilities**

SFAs may choose, but are not required, to offer one or more allowable milk substitutes for children whose special dietary needs do not constitute a disability. The two types of allowable substitutes for children without disabilities include:

- nondairy milk substitutes that meet the USDA’s nutrition standards for fluid milk substitutes (see table 3-1); and
- lactose-reduced or lactose-free milk with the appropriate fat content, i.e., low-fat milk (unflavored or flavored) and fat-free milk (unflavored or flavored).

Parents or guardians must submit a written request for a nondairy milk substitute for their child. A medical statement signed by a recognized medical authority is not required. For more information, see the CSDE’s handout, ALLOWABLE MILK SUBSTITUTES FOR CHILDREN WITHOUT DISABILITIES IN SCHOOL NUTRITION PROGRAMS, and the CSDE’s guide, ACCOMMODATING SPECIAL DIETS IN SCHOOL NUTRITION PROGRAMS.

If SFAs choose to offer nondairy milk substitutes, these products must meet the USDA’s nutrition standards for fluid milk substitutes.
Note: SFAs cannot offer any other beverages as a choice instead of milk, including juice and water. Juice and water are not allowable milk substitutes for children without disabilities.

**USDA’s nutrition standards for fluid milk substitutes**

SFAs that choose to offer a milk substitute as part of reimbursable meals for children without disabilities must use products that meet the USDA’s nutrition standards for fluid milk substitutes. Table 3-1 summarizes these requirements. SFAs cannot offer any nondairy milk substitutes that do not meet the USDA’s nutrition standards.

SFAs cannot determine if a product meets the USDA’s nutrition standards for fluid milk substitutes by reading the product’s packaging. The Nutrition Facts label lists only a few of the nine nutrients required by the USDA for allowable fluid milk substitutes. To determine if a product meets the USDA’s nutrition standards, SFAs must obtain documentation from the manufacturer that includes the nutrition information for all nine nutrients.

### Table 3-1. USDA’s nutrition standards for fluid milk substitutes

<table>
<thead>
<tr>
<th>Minimum nutrients per cup (8 fluid ounces)</th>

</tr>
</tbody>
</table>

\(^1\) The FDA labeling laws require manufacturers to round nutrition values to the nearest 5 percent. The unrounded minimum DV is 27.6% for calcium, 22.2% for phosphorus, 9.97% for potassium, 25.88% for riboflavin, and 18.33% for vitamin B12. Source: How to Determine if a Soy-Based Beverage Meets the Nutrient Requirements to Qualify as an Authorized Milk Substitute in WIC, USDA Food and Nutrition Services (FNS) Office of Research, Nutrition, and Analysis (ORNA), 2006.
State requirements for nondairy milk substitutes in public schools

In addition to meeting the USDA’s nutrition standards, all nondairy milk substitutes sold as part of reimbursable meals and a la carte in public schools must comply with the state beverage requirements of C.G.S Section 10-221q. The state beverage statute does not apply to private schools or RCCIs.

Under C.G.S Section 10-221q, nondairy milk substitutes may be unflavored or flavored. They cannot contain artificial sweeteners, and cannot exceed:

- 4 grams of sugar per ounce;
- 35 percent of calories from fat; and
- 10 percent of calories from saturated fats.

List 17 of the CSDE’s List of Acceptable Foods and Beverages webpage includes milk substitute products that meet the federal and state requirements. For more information on milk substitutes for children without disabilities, see the CSDE’s handout, Allowable Milk Substitutes for Children without Disabilities in School Nutrition Programs, and the CSDE’s guide, Accommodating Special Diets in School Nutrition Programs.

Lactose-reduced and lactose-free milk

Children who cannot digest the lactose found in regular milk may be able to drink lactose-free (e.g., Lactaid) or lactose-reduced milk. These types of milk are regular fluid milk that is modified by the addition of lactase enzymes to reduce or eliminate the lactose (milk sugar). Lactose-reduced milk has part of the lactose removed, while lactose-free milk has all of the lactose removed.

Lactose-free and lactose-reduced milk come in a variety of flavors and fat contents. They credit the same as regular milk. CACFP facilities may substitute low-fat or fat-free lactose-reduced or lactose-free milk for regular milk. A written request is not required for lactose-reduced or lactose-free milk. The CSDE encourages CACFP facilities to make lactose-reduced or lactose-free milk available to children as needed.

In addition to meeting the meal patterns, any lactose-reduced and lactose-free milk served as part of reimbursable meals in public schools must comply with the sugar limit of the state beverage requirements of C.G.S. Section 10-221q. SFAs cannot sell lactose-reduced and lactose-free milk that does not meet the state requirements, either as part of reimbursable meals or a la carte. For more information, see “State Requirements for Milk in Public Schools” in this section.
List 17 of the CSDE’s List of Acceptable Foods and Beverages webpage includes lactose-reduced and lactose-free milk that meets the federal and state requirements.

Milk in Prepared Foods

Only fluid milk meets the USDA’s definition for milk and the FDA’s standard of identity for milk. The preschool meal patterns require fluid milk as a beverage. When preschool meals and ASP snacks include breakfast cereals, SFAs may serve fluid milk as a beverage, on cereal, or both.

Milk does not credit when cooked in cereals, puddings, cream sauces, or other foods. For example, milk does not credit when used to make quiche or macaroni and cheese.

Foods made from milk (such as cheese, yogurt, and ice cream) cannot credit as the milk component. For information on crediting cheese and yogurt as meat/meat alternates, see the “Meat/Meat Alternates Component” section.

Noncreditable Foods in the Milk Component

Examples of foods that do not credit as the milk component include, but are not limited to:

- for age 1, plain or flavored reduced fat (2%) milk; plain or flavored low-fat (1%) milk, and plain or flavored fat-free milk;
- for ages 2-4, plain or flavored whole milk, plain or flavored reduced fat (2%) milk, and flavored low-fat (1%) milk;
- nondairy milk substitutes that do not meet the USDA’s nutrition standards for fluid milk substitutes, e.g., rice milk, almond milk, and cashew milk; and
- milk that is cooked or baked in prepared foods, such as cereals, puddings, and cream sauces.

For more information, see “Noncreditable Foods” at the beginning of section 3, and the CSDE’s handout, Noncreditable Foods for Preschoolers in the NSLP, SBP, and ASP.
Resources for Crediting Milk

The resources below assist SFAs with crediting foods as the milk component in the preschool meal patterns.

For additional crediting resources, visit the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.
Meat/Meat Alternates Component

The preschool meal patterns require a serving of the meat/meat alternates component at lunch. The meat/meat alternates component is not required at breakfast, but may be substituted for the entire grains component up to three times per week. The meat/meat alternates component may be served as one of the two required snack components. The USDA’s CACFP Best Practices recommends serving only lean meats, nuts, and legumes; limiting processed meats to one serving per week; and serving only low-fat or reduced-fat natural cheese.

Serving Size for Meat/Meat Alternates

Menu planners should consult the USDA’s FBG to determine the crediting information for foods in the meat/meat alternates component. A 1-ounce serving of the meat/meat alternates component equals:

- 1 ounce of lean meat, poultry, or fish;
- 3 ounces of surimi;
- 1 ounce of natural cheese, e.g., Colby, Monterey Jack, and Swiss or process cheese, e.g., American (reduced-fat or low-fat recommended for ages 2 and older);
- ¼ cup of cottage cheese (reduced-fat or low-fat recommended for ages 2 and older);
- 2 ounces of cheese food/spread or cheese substitute;
- ¼ cup of cooked beans and peas (legumes), e.g., kidney beans, chick peas (garbanzo beans), lentils, and split peas;
- ½ large egg;
- 2 tablespoons of nut or seed butters, e.g., peanut butter, almond butter, cashew butter and sunflower seed butter;
- 1 ounce of nuts or seeds, e.g., almonds, Brazil nuts, cashews, filberts, macadamia nuts, peanuts, pecans, pine nuts, pistachios, soy nuts, and walnuts;
- ½ cup of yogurt or soy yogurt (plain or flavored) containing no more than 23 grams of sugars per 6 ounces (3.83 grams per ounce);
- 1 ounce of tempeh that contains specific ingredients (see “Crediting Tempeh” in this section);
• 2.2 ounces (weight) or ¼ cup (volume) of tofu and other soy products containing at least 5 grams of protein; and
• 1 ounce of APP that meets the USDA’s APP requirements.

Amounts in the meat/meat alternates component refer to the edible portion of cooked lean meat, poultry, or fish, e.g., cooked lean meat without bone, breading, binders, extenders, or other ingredients. A serving must contain the appropriate edible portion of meat/meat alternates before any other ingredients are added. For example, tuna salad for ages 3-4 at lunch must contain 1½ ounces of tuna fish before added ingredients such as mayonnaise, celery, and seasonings.

Commercially prepared foods (such as pizza and chicken nuggets) must provide the amount of the meal components credited in preschool menus. For example, to credit a commercially prepared cheese pizza as 1½ ounces of the meat/meat alternates component, the product’s CN label or PFS must indicate that the product contains 1½ ounces of cheese per serving. For more information, see “Documentation for Commercial Products” in section 2, and the CSDE’s handout, Accepting Processed Product Documentation in the NSLP and SBP.

The NSLP and ASP meal patterns for preschoolers and the ASP meal pattern for grades K-12 list the meat/meat alternates component in ounces. The NSLP meal pattern for grades K-12 lists the meat/meat alternates component in ounce equivalents. The amount of a food that provides 1 ounce equivalent or 1 ounce of the meat/meat alternates component is the same.

**Main Dish Requirement for Lunch**

SFAs must serve the daily meat/meat alternates component at lunch in a main dish, or in a main dish and only one other food item. The main dish is generally considered the main food item in the menu, which is complemented by the other food items. For example, a preschool lunch menu could provide the required 1½ ounces of the meat/meat alternates component from:

• a sandwich containing 1½ ounces of tuna; or
• a half sandwich containing ¾ ounce of served with ¾ cup of yogurt (¾ ounce of meat/meat alternates).

SFAs cannot serve the daily meat/meat alternates component for lunch in more than two food items.

Foods that are not a main dish do not credit toward the meat/meat alternates component. Examples include soup made with blended soft tofu and muffins made with peanut butter or
yogurt. The USDA’s intent for this requirement is to ensure that SFAs offer the meat/meat alternates component in a form that is recognizable to children. The USDA emphasizes the importance of the nutrition education aspect of the Child Nutrition Programs, which includes the goal of helping children easily recognize the key food groups that contribute to a healthy meal.

**Note:** The USDA allows an exception to the main dish requirement for yogurt or soy yogurt blended in fruit or vegetable smoothies. Yogurt or soy yogurt credits as the meat/meat alternates component when served in smoothies made on site by the SFA. Other meat/meat alternates, such as peanut butter, cannot credit when served in smoothies. For more information, see the CSDE’s handout, *Crediting Smoothies for Preschoolers in the NSLP, SBP, and ASP in the NSLP and SBP.*

### Meat/Meat Alternates at Breakfast

The meat/meat alternates component is not required at breakfast. SFAs may choose to substitute the meat/meat alternates component for the entire grains component up to three times per week. This provision applies regardless of the number of days in the week. For example, SFAs could choose to substitute the meat/meat alternates component for the entire grains component three times during a three-day week or three times during a five-day week.

A ½-ounce serving of the meat/meat alternates component substitutes for ½ serving of the grains component. For example, SFAs may substitute 1 tablespoon of peanut butter, ½ ounce of cheese, ¼ of a large egg, or ¼ cup of yogurt for ½ ounce equivalent of the grains component. The USDA resources below provide additional guidance on serving the meat/meat alternates component in preschool breakfast menus.

- Serving Meat and Meat Alternates at Breakfast (English):  
- Serving Meat and Meat Alternates at Breakfast (Spanish):  
- Serving Meat and Meat Alternates at Breakfast Webinar (English):  
- Serving Meat and Meat Alternates at Breakfast Webinar (Spanish):  
Crediting Deli Meats, Hot Dogs, and Sausage

SFAs must ensure that a serving of commercial meat products provides the required amount of the meat/meat alternates component. The amount that provides 1 ounce of the meat/meat alternates component depends on the product’s ingredients.

- Products that are 100 percent meat without added liquids (e.g., water or broth), binders, and extenders credit on an ounce-per-ounce basis (actual serving weight). For example, 1 ounce of 100 percent meat credits as 1 ounce of the meat/meat alternates component.

- Products with added liquids, binders, and extenders credit based on the percentage of meat in the product formula. A 1-ounce serving of these products does not credit as 1 ounce of the meat/meat alternates component. For example, one brand of deli meat might require 1.6 ounces to credit as 1 ounce of the meat/meat alternates component, while another brand might require 2.3 ounces to credit as 1 ounce of the meat/meat alternates component.

SFAs must obtain appropriate crediting documentation for all meats with added liquids, binders, and extenders. Acceptable documentation includes a CN label or a manufacturer’s PFS stating the amount of the meat/meat alternates component contained in one serving of the product. The USDA’s Authorized Labels and Manufacturers webpage lists approved CN-labeled products and manufacturers. For more information, see “Child Nutrition (CN) Labels” and “Product Formulation Statements” in section 2.

Liquids, binders, and extenders

Table 3-2 lists examples of ingredients that are binders and extenders. The ingredients statements below show examples of turkey breast products that contain added liquid, binders, and extenders (indicated in italics).

Ingredients: Turkey breast, water, modified cornstarch, contains less than 2% of sodium lactate, salt, sugar, sodium phosphates, carrageenan, natural flavor, sodium diacetate, potassium chloride, sodium ascorbate, sodium nitrite, caramel color.

Ingredients: Turkey breast meat, turkey broth, contains 2% or less salt, sugar, carrageenan, sodium phosphate, sodium acetate, sodium diacetate, flavoring.

Products with added liquids, binders, and extenders cannot credit as the meat/meat alternates component without a CN label or PFS that indicates the amount of the meat/meat alternates component.
component per serving. Menu planners must review product labels and ingredients to determine if products contain added liquids, binders, and extenders.

¹ Binders and extenders are defined by the USDA’s regulations for the Food Safety and Inspection Service (FSIS) (9 CFR 318.7).
² Products may contain these ingredients if they meet the USDA’s APP requirements. For more information, see “Crediting Alternate Protein Products” in this section.

For more information, see “Documentation for Commercial Products” in section 2, and the CSDE’s handouts, Crediting Deli Meats in the NSLP and SBP, Crediting Commercial Meat/Meat Alternate Products in the NSLP and SBP, CN Labeling Program, and Product Formulation Statements.

Developing recipes for deli meats

Different brands and types of deli meat credit differently. To ensure proper crediting, SFAs should develop standardized recipes for menu items that contain deli meats, such as sandwiches and other entrees. The SFA’s standardized recipes should indicate the deli meat’s contribution to the meat/meat alternates component based on a specific weight of a specific brand. For ease of portioning, the weight of the deli meat in the recipe should be rounded up to the nearest measure. For example, the recipe should list 1.2 ounces as 1.25 ounces and 1.6 ounces as 1.75 ounces.
If a SFA makes the same food item using different brands of deli meats that credit differently, the standardized recipe should include the specific weight of each brand. For example, if a school makes a turkey sandwich using either ABC brand turkey breast or XYZ brand turkey breast, the standardized recipe should include the required weight of ABC brand and the required weight of XYZ brand. Alternatively, the SFA could develop a separate standardized turkey sandwich recipe for each brand of deli meat.

For information on standardized recipes, see the CSDE’s form, *Standardized Recipe Form for School Nutrition Programs*, and “Standardized Recipes” in section 2.

**Crediting Alternate Protein Products (APPs)**

APPs are generally single ingredient powders that are added to foods, such as soy flours, soy concentrates, soy isolates, whey protein concentrate, whey protein isolates, and casein. APPs may be used alone or in combination with meat or other meat alternates. Examples of foods with added APPs include beef patties, beef crumbles, pizza topping, meat loaf, meat sauce, taco filling, burritos, and tuna salad. APPs are generally single ingredient powders that are added to foods, such as soy flours, soy concentrates, soy isolates, whey protein concentrate, whey protein isolates, and casein.

APPs must meet the USDA’s requirements specified in **appendix A** of the NSLP regulations (7 CFR 210) and **appendix A** of the SBP regulations (7 CFR 220). The SFA must have documentation on file to indicate that APPs comply with these requirements. For more information on crediting APPs, see the CSDE’s handout, *Requirements for Alternate Protein Products in the NSLP and SBP*, and the USDA’s handout, *Questions and Answers on Alternate Protein Products*.

**Crediting Commercial Tofu and Tofu Products**

Commercial tofu and tofu products must meet the two criteria below to credit as the meat/meat alternates component.

1. The product must be easily recognizable as a meat substitute. Examples include tofu burgers and tofu sausage.

2. The tofu ingredient must contain at least 5 grams of protein in a 2.2-ounce serving by weight (¼ cup volume equivalent).

The SFA must have documentation on file to indicate that tofu products comply with these requirements. For more information on crediting tofu and how to calculate the grams of
protein per serving, see the CSDE’s handout, *Crediting Tofu and Tofu Products in the NSLP and SBP*.

**Crediting Cheese**

For ages 2 and older, menu planners should use low-fat or reduced-fat natural cheese whenever possible to help reduce saturated fats in preschool meals. Natural cheese is cheese that is produced directly from milk, such as cheddar, Colby, Monterey Jack, mozzarella, Muenster, provolone, Swiss, feta, and brie. Natural cheese also includes pasteurized blended cheese that is made by blending one or more different kinds of natural cheese. Natural cheese does not include pasteurized process cheese such as American cheese, pasteurized process cheese food, pasteurized process cheese spread, and pasteurized process cheese products.

The serving size for cheese depends on the type. A 1-ounce serving of the meat/meat alternates component equals:

- 1 ounce of natural cheese (e.g., Colby, Monterey Jack, and Swiss) or process cheese (e.g., American); and
- 2 ounces (¼ cup) of cottage or ricotta cheese, cheese food or cheese spread, and cheese substitutes. For cottage and ricotta cheese, ⅛ cup credits as ½ ounce of the meat/meat alternates component and ⅛ cup credits as ½ ounce of the meat/meat alternates component.

Cheese substitute, cheese food substitute, and cheese spread substitute must meet the FDA’s standard of identity for substitute foods and must be labeled as “cheese substitute,” “cheese food substitute,” or “cheese spread substitute.” The standard of identity requires that a cheese substitute is not nutritionally inferior to the standardized cheese for which it is substituting. A 2-ounce serving of cheese food, cheese spread, or cheese substitute credits as 1 ounce of the meat/meat alternates component. Imitation cheese and cheese products do not credit as the meat/meat alternates component in the preschool meal patterns.
Crediting Legumes as Meat/Meat Alternates

Legumes (cooked dry beans and peas) credit as either the meat/meat alternates component or the vegetables component, but not both in the same meal. Menu planners must decide in advance how legumes will credit in preschool menus.

Legumes credit as the meat/meat alternates component based on volume. A ¼-cup serving (4 tablespoons) of legumes credits as 1 ounce of the meat/meat alternates component. The minimum creditable amount of legumes is 1 tablespoon (¼ ounce). If a menu item contains less than the full preschool serving, the meal must include an additional menu item from the meat/meat alternates component to provide the full-required serving.

The serving size refers to the amount of cooked legumes without any added liquid, such as the sauce in baked beans. For example, if the menu planner credits ¼ cup of baked beans as 1 ounce of the meat/meat alternates component, the serving must contain ¼ cup of beans, not including the sauce.

Roasted or dried legumes (such as roasted edamame and roasted chickpeas) credit as the meat/meat alternates component the same as nuts and seeds, which credit based on weight (ounces). A 1-ounce serving of roasted or dried legumes provides 1 ounce of the meat/meat alternates component.

For more information on crediting legumes and guidance on how to calculate the contribution of legumes in a recipe, see the CSDE’s handout, Crediting Legumes in the NSLP and SBP.

Crediting Legume Flour Pasta Products as Meat/Meat Alternates

Pasta products made of 100 percent legume flours (such as chick pea flour or lentil flour) credit as the meat/meat alternates component. However, SFAs must offer the pasta with additional meat/meat alternates, such as tofu, cheese, or meat. The USDA’s intent for this requirement is to ensure that SFAs offer meat/meat alternates in a form that is recognizable to students. The USDA emphasizes the importance of the nutrition education aspect of school nutrition programs, which includes the goal of helping children easily recognize the key food groups that contribute to a healthy meal.

A ¼-cup serving of cooked legume flour pasta credits as 1 ounce of the meat/meat alternates component. Alternatively, SFAs may credit legume flour pasta using the bean flour yield information on page C-1 of Appendix C of the FBG, or with appropriate documentation on the manufacturer’s PFS. For more information, see “Product Formulation Statements” in section 2 and the USDA’s resources, Sample PFS for Meat/Meat Alternate Products and Tips for Evaluating a Manufacturer’s PFS.
Meal Components

**Meat/Meat Alternates**

**Note:** Pasta made of 100 percent legumes may also credit as the vegetables component, but cannot credit as the vegetables component and the meat/meat alternates component in the same meal. For more information, see “100 percent vegetable flours crediting as a vegetable” in the Vegetables section.

The requirements for crediting pasta products made of vegetable flours are summarized in USDA Memo SP 26-2019, CACFP 13-2019 and SFSP 12-2019: *Crediting Pasta Products Made of Vegetable Flour in the Child Nutrition Programs.*

**Crediting Dried Meat**

Shelf-stable, dried and semi-dried meat, poultry, and seafood (such as jerky or summer sausage) credit as the meat/meat alternates component. The USDA indicates that these products are most useful in meals served off-site, such as during school field trips or picnics. However, SFAs may also credit these products in meals served on site.

Crediting of dried meat, poultry, and seafood products must follow the same crediting principles used for all other products made from meat, poultry, or seafood. SFAs must obtain a CN label or manufacturer’s PFS to document the product’s meal pattern contribution. The FBG does not include crediting information for dried meat, poultry, or seafood products because industry production standards for these products vary widely.

SFAs must evaluate the dried meat product’s PFS to ensure that it complies with the USDA’s crediting principles below.

1. The creditable meat ingredient listed on the product’s PFS must match or have a similar description as the ingredient listed in the product’s ingredients statement. For example, the dried beef stick below lists “Ground beef (not more than 30% fat” as the first ingredient. This product’s PFS must also list the crediting information for “Ground beef (not more than 30% fat).”

   **Ingredients:** Ground beef (not more than 30% fat), water, salt, less than 2% brown sugar, spices, monosodium glutamate, sugar, flavorings, sodium nitrate.

2. The creditable meat ingredient listed on the product’s PFS must have a similar description to a food item in the FBG. For the example above, “Ground beef (not more than 30% fat” matches the description for “Beef, Ground, fresh or frozen, Market Style, no more than 30% fat (Like IMPS #136), cooked lean meat” on page 1-17 of the FBG.
3. The creditable amount cannot exceed the finished weight of the product, i.e., the cooked weight ready for serving. For example, a 1-ounce serving of beef jerky cannot credit for more than 1 ounce of the meat/meat alternates component.

Ground pork and beef ingredients must include the percent fat because the fat content has a direct correlation to the cooking yield. To credit in Child Nutrition Programs, the fat content of ground beef or ground pork in dried meat products cannot exceed 30 percent. Products that do not indicate the fat percentage do not credit. For example, the dried pork stick below cannot credit as the meat/meal alternates component because the creditable ingredients (pork) does not list the fat percentage, and does not match a description in the FBG.

Ingredients: Pork, cane sugar, garlic (garlic, citric acid, ascorbic acid), contains 2% or less of: Spanish smoked paprika (paprika, rosemary extract), sea salt, natural flavors, sherry wine vinegar, red pepper chili flakes, celery powder, in collagen casing.

For information on CN labels and PFS forms, see “Child Nutrition (CN)” labels and “Product Formulation Statements” in section 2.

The requirements for crediting dried meat are summarized in USDA Memo SP 21-2019, CACFP 08-2019 and SFSP 07-2019: Crediting Shelf-Stable, Dried and Semi-Dried Meat, Poultry, and Seafood Products in the Child Nutrition Programs. For additional guidance on crediting dried meat products, review the USDA’s webinar, Moving Forward: Update on Food Crediting in Child Nutrition Programs with Guidance for Dried Meat Products.

**Crediting Nuts and Seeds**

Creditable nuts and seeds include almonds, Brazil nuts, cashews, filberts, macadamia nuts, peanuts, pecans, walnuts, pine nuts, pistachios, and soy nuts. At lunch, nuts and seeds cannot credit for more than half of the meat/meat alternates component. They must be combined with another food from the meat/meat alternates component to meet the full requirement for each preschool age group. For example, a lunch for ages 3-4 can meet the required 1½ ounces of the meat/meat alternates component by offering ¾ ounce of nuts or seeds and ⅛ ounce of cheese. For more information on crediting nuts and seeds, see the CSDE’s handout, Crediting Nuts and Seeds in the NSLP and SBP.
**Note:** Children younger than 4 are at the highest risk of choking. The USDA recommends that CACFP facilities consider children’s age and developmental readiness when deciding whether to offer nuts and seeds. This consideration is especially important when serving young children or children with disabilities. The USDA recommends that any nuts or seeds served to these groups are in a prepared food, and are ground or finely chopped.

**Crediting Nut and Seed Butters**

Creditable nut and seed butters include almond butter, cashew nut butter, peanut butter, sesame seed butter, soy nut butter, and sunflower seed butter. Reduced-fat peanut butter credits if it meets the FDA’s standards of identity for peanut butter (21 CFR 164.150), which requires that products contain at least 90 percent peanuts.

The serving size for nut and seed butters is based on volume (tablespoons), not weight (ounces). The following amounts apply to crediting nut and seed butters in the preschool meal patterns:

- 3 tablespoons credit as 1 ½ ounces of the meat/meat alternates component;
- 2 tablespoons credit as 1 ounce of the meat/meat alternates component;
- 1 ½ tablespoons credit as ¾ ounce of the meat/meat alternates component; and
- 1 tablespoon credit as ½ ounce of the meat/meat alternates component.

Menu planners should consider the appropriateness of the serving size for each preschool age group. It may be unreasonable to provide the full serving of a nut or seed butter in one menu item, such as a peanut butter sandwich. The CSDE recommends providing a smaller portion of peanut butter and supplementing with another food from the meat/meat alternates component to provide the full serving.

For example, the preschool lunch meal pattern for ages 3-4 requires 1½ ounces of the meat/meat alternates component (3 tablespoons of peanut butter). The lunch menu could provide the required amount from 1½ tablespoons of peanut butter (¼ ounce of meat/meat alternates) served with ¼ ounce of low-fat cheese (¼ ounce of meat/meat alternates). For more information on crediting nut and seed butters, see the CSDE’s handout, *Crediting Nuts and Seeds in the NSLP and SBP.*
Crediting Surimi

Surimi seafood is a pasteurized, ready-to-eat, restructured seafood product usually made from pollock (fish). Surimi seafood is available in many forms and shapes, including chunks, shredded, and flaked. It does not require additional preparation. Surimi seafood can be incorporated into a variety of menu items, such as seafood salads, sushi-style rolls, sandwiches, tacos, and ramen.

The amount of fish in surimi varies depending on the manufacturer and product. Surimi seafood may contain as little as one-third seafood ingredient, and may include other creditable food ingredients. A 3-ounce serving of surimi credits as 1 ounce of the meat/meat alternates component. Table 3-3 shows the crediting information for surimi seafood.

<table>
<thead>
<tr>
<th>Surimi seafood (ounces)</th>
<th>Meat/meat alternates contribution</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.0</td>
<td>2 ounces</td>
</tr>
<tr>
<td>4.4</td>
<td>1½ ounces</td>
</tr>
<tr>
<td>3.0</td>
<td>1 ounce</td>
</tr>
<tr>
<td>2.0</td>
<td>½ ounce</td>
</tr>
<tr>
<td>1.0</td>
<td>¼ ounce</td>
</tr>
</tbody>
</table>

1 The crediting ratio for surimi seafood differs based on portion size due to USDA rounding rules that require rounding down to the nearest 0.25 ounce.

To credit surimi seafood differently from the amounts above, SFAs must obtain a CN label or manufacturer’s PFS that documents how the crediting is determined. For example, a manufacturer’s PFS might document that 1 ounce of a surimi seafood product credits as ½ ounce of the meat/meat alternates component.

The requirements for crediting surimi are summarized in USDA Memo SP 24-2019, CACFP 11-2019 and SFSP 10-2019: Crediting Surimi Seafood in the Child Nutrition Programs. For additional guidance on crediting surimi, review the USDA’s webinar, Additional Meat/Meat Alternate Options for CNPs: Crediting Tempeh and Surimi.
Crediting Tempeh

Tempeh is a highly nutritious fermented soybean cake traditionally made from whole soybeans. Tempeh may be used as a meat alternate in a variety of recipes, including stir-fries, sandwiches, and salads.

A 1-ounce serving of tempeh credits as 1 ounce of the meat/meat alternates component. This method of crediting applies only to tempeh products whose ingredients are limited to soybeans (or other legumes), water, tempeh culture, and for some varieties, vinegar, seasonings, and herbs. If a tempeh product contains other ingredients, SFAs must obtain a CN label or PFS to document crediting.

Varieties of tempeh that include other creditable foods as ingredients (such as brown rice, sunflower seeds, sesame seeds, flax seed, and vegetables) may also credit as the meat/meat alternates component, grains component, and vegetables component. To credit in school nutrition programs, a product must provide the minimum creditable quantities, i.e., ⅛ cup of vegetables, ¼ ounce of meat/meat alternates, and ¼ serving of grains. SFAs must obtain a CN label or manufacturer’s PFS to document how much tempeh and other creditable foods these products contain. For more information, see “Documentation for Commercial Products” in section 2.

The requirements for crediting tempeh are summarized in USDA Memo SP 25-2019, CACFP 12-2019 and SFSP 11-2019: Crediting Tempeh in the Child Nutrition Programs. For additional guidance on crediting tempeh, review the USDA’s webinar, Additional Meat/Meat Alternate Options for CNPs: Crediting Tempeh and Surimi.
**Crediting Yogurt and Soy Yogurt**

Yogurt includes plain yogurt, flavored yogurt, and yogurt with added fruit (either blended or on the bottom). Yogurt must meet the FDA’s standards of identity for yogurt (21 CFR 131.200), low-fat yogurt (21 CFR 131.203), or nonfat yogurt (21 CFR 131.206). Frozen yogurt, drinkable yogurt, and squeezable yogurt do not credit in the preschool meal patterns.

The required serving size for yogurt is based on volume (cups) or weight (ounces) and is the same for all types, flavors, and fat contents. A ½-cup serving (volume) or 4 ounces (weight) credits as 1 ounce of the meat/meat alternates component.

**Sugar limit for yogurt**

Yogurt and soy yogurt must meet the preschool sugar limit of no more than 23 grams of total sugars per 6 ounces (no more than 3.83 grams of sugars per ounce). Yogurt and soy yogurt used in smoothies made on site by the SFA must also meet this requirement. The SFA must have documentation on file to indicate that yogurt and soy yogurt served in preschool meals and ASP snacks comply with the sugar limit.

**Yogurt in smoothies**

Yogurt and soy yogurt used in smoothies made on site by the SFA credit as the meat/meat alternates component if the product contains no more than 23 grams of total sugars per 6 ounces (no more than 3.83 grams per ounce). Yogurt in commercial smoothies does not credit. For more information on crediting smoothies, see “Crediting Fruit and Vegetable Smoothies” in the “Fruits Component” section.

**Noncreditable Yogurt**

Drinkable or squeezable yogurt and frozen yogurt do not credit in the preschool meal patterns. The FDA’s definition and standard of identity requires that yogurt must be “coagulated,” not liquid. The FDA does not have a standard of identity for frozen yogurt. Yogurt tubes must be fully defrosted before they can be served.

**Yogurt served to preschoolers and grades K-12**

Unlike the preschool meal patterns, the NSLP, SBP, and ASP meal patterns for grades K-12 do not limit the amount of sugars in yogurt and soy yogurt. If SFAs serve the same type of yogurt or soy yogurt to preschoolers and grades K-12, these foods must comply with the preschool sugar limit for yogurt and soy yogurt. The two exceptions are when SFAs choose to
follow:

- the K-5 meal pattern for preschoolers and grades K-5 who eat in the same service area at the same time; or
- the ASP K-12 meal pattern for preschoolers and grades K-12 who eat in the same service area at the same time.

For more information, see “Serving the same foods to preschoolers and grades K-12,” “Preschoolers and grades K-5 eating together in the NSLP, SBP, and SSO,” and “Preschoolers and grades K-12 eating together in the ASP” in section 1.

**Resources for crediting yogurt**

The resources below assist SFAs with crediting yogurt as the meat/meat alternates component in the preschool meal patterns.

- Choose Yogurts that are Lower in Added Sugars (English): [https://fns-prod.azureedge.net/sites/default/files/tn/cacfp-chooseyogurts.pdf](https://fns-prod.azureedge.net/sites/default/files/tn/cacfp-chooseyogurts.pdf)
- Choose Yogurts that are Lower in Added Sugars (Spanish): [https://www.fns.usda.gov/sites/default/files/tn/FNSCACFPSP.pdf](https://www.fns.usda.gov/sites/default/files/tn/FNSCACFPSP.pdf)
- Choose Yogurts that are Lower in Added Sugars (USDA): [https://fns-prod.azureedge.net/sites/default/files/tn/cacfp-chooseyogurts.pdf](https://fns-prod.azureedge.net/sites/default/files/tn/cacfp-chooseyogurts.pdf)
- Choose Yogurts that are Lower in Added Sugars Webinar (English): [https://www.fns.usda.gov/cacfp/cacfp-choose-yogurts-are-lower-added-sugars](https://www.fns.usda.gov/cacfp/cacfp-choose-yogurts-are-lower-added-sugars)

For additional crediting resources, visit the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.
Crediting Meat/Meat Alternates in Commercial Products

SFAs must ensure that commercial products (such as pizza, chicken nuggets, and cheese ravioli) provide the required amount of the meat/meat alternates component for each age group. For example, to credit commercial chicken nuggets as 1½ ounces of the meat/meat alternates component, the SFA must obtain a CN label or manufacturer’s PFS documenting that one serving of the product contains 1½ ounces of cooked chicken. Commercial products cannot credit as the meat/meat alternates component without this documentation.

Menu planners cannot determine the amount of the meat/meat alternates component in a commercial product by reading the Nutrition Facts label or ingredients statement. Protein content is not an indicator that a commercial product credits as the meat/meat alternates component because the grams of protein listed on the product’s Nutrition Facts label do not correspond to the ounces of the meat/meat alternates component contained in the product. In addition to protein, meat and meat alternates contain other components such as water, fat, vitamins, and minerals. Protein is also found in varying amounts in other ingredients (such as cereals, grains, and many vegetables) that may be part of a commercial meat or meat alternate product.

The terms “protein” and “meat/meat alternate” are often used interchangeably, but they are not the same. The USDA’s meal patterns require a specific amount of the meat/meat alternates component, not a specific amount of protein. The only exceptions are commercial tofu and tofu products, which must contain at least 5 grams of protein in a 2.2-ounce serving by weight. For more information, see “Crediting Commercial Tofu and Tofu Products” in this section.

SFAs must maintain a CN label or manufacturer’s PFS on file to document the meal pattern contribution of commercial products. For more information, see “Documentation for Commercial Products” in section 2.

The CSDE’s handout, *Crediting Commercial Meat/Meat Alternate Products in the NSLP and SBP*, summarizes the requirements for crediting commercial meat/meat alternates in school nutrition programs.
Crediting Combination Entrees

Combination entrees are foods that contain more than one food component, such as tacos, lasagna, and chicken stir-fry. For example, beef lasagna contains the grains component (pasta), the meat/meat alternates component (ground beef and cheese), and the vegetables component (tomato sauce). Combination entrees generally cannot be separated (such as pizza or a burrito) or are not intended to be separated (such as hamburger on a bun or turkey sandwich).

For combination foods made on site, SFAs must determine the meat/meat alternates contribution from the school’s standardized recipe, using the ingredient yields listed in the FBG. For commercial combination entrees that are processed or contain added ingredients, SFAs must obtain a CN label or manufacturer’s PFS stating the amount of the meat/meat alternates component per serving.

For additional guidance on accepting product documentation for the meat/meat alternates component, see “Documentation for Commercial Products” in section 2, the CSDE’s handout, Accepting Processed Product Documentation, and CSDE Operational Memorandum No. 10-15: Guidance for Accepting Processed Product Documentation for Meal Pattern Requirements.

Noncreditable Foods in the Meat/Meat Alternates Component

Examples of foods that do not credit as the meat/meat alternates component include, but are not limited to:

- bacon;
- commercial canned soups, e.g., beef barley, beef noodle, turkey or chicken noodle, and turkey or chicken rice;
- cream cheese;
- drinkable yogurt;
- egg whites;
- frozen yogurt;
- imitation cheese;
- products made with tofu that are not easily recognized as meat substitutes;
- sour cream;
- tofu that contains less than 5 grams of protein in 2.2-ounce serving by weight;
- yogurt or soy yogurt that contains more than 3.83 grams of sugars per ounce; and
- yogurt or soy yogurt in commercial smoothies.
SFAs should use the FBG to identify foods that credit as the meat/meat alternates component. For more information, see “Noncreditable foods” at the beginning of section 3, and the CSDE’s handout, *Noncreditable Foods for Preschoolers in the NSLP, SBP, and ASP*.

For additional crediting resources, visit the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.
Vegetables Component

The preschool meal patterns require a serving of the vegetables component at lunch. At breakfast, vegetables and fruits are one component and can include vegetables, fruits, or both. The vegetables component may be served as one of the two required snack components.

The vegetables component includes fresh, frozen, canned, and rehydrated dried vegetables; and pasteurized full-strength vegetable juice. Menu planners should consult the USDA’s FBG to determine the crediting information for specific vegetables.

Unlike the lunch meal pattern for grades K-12, the preschool lunch meal pattern does not require minimum weekly servings of the five vegetable subgroups (dark green vegetables, red and orange vegetables, beans and peas (legumes), starchy vegetables, and other vegetables). However, the USDA’s CACFP Best Practices recommends providing at least one serving of each vegetable subgroup per week, and incorporating seasonal and locally produced foods into meals. For information on the vegetable subgroups, see the CSDE’s handout, Vegetable Subgroups in the CACFP. For information on farm to school, visit the USDA’s Farm to Preschool webpage, the CSDE’s Farm to School webpage, and the University of Connecticut’s Put Local on Your Tray webpage.

Substituting Vegetables for Fruits at Lunch

Vegetables can replace the fruits component at any preschool lunch. Lunch can contain one serving of vegetables and one serving of fruits, or two different servings of vegetables. For example, SFAs may choose to substitute vegetables for the fruits component on Monday and Friday, or every day of the week. Lunch cannot contain only two servings of fruits.

Serving Size for Vegetables

All vegetables credit based on volume (cups) with two exceptions. Raw leafy greens such as lettuce or spinach credit as half the volume served. Tomato paste and tomato puree credit based on the volume as if reconstituted, as indicated in the FBG:

- 1 tablespoon of tomato paste credits as ¼ cup of the vegetables component; and
- 2 tablespoons of tomato puree credit as ¼ cup of the vegetables component.
Crediting Canned Vegetables

A serving of cooked vegetables must be drained. For example, a serving of canned corn cannot include the water in which it is packed, and a serving of baked beans cannot include the sauce in which it is packed.

Crediting Raw Leafy Greens

Raw leafy greens credit as half the volume served. For example, ½ cup of raw leafy greens credits as ¼ cup of the vegetables component. Examples of raw leafy greens include kale, greens (e.g., beet, collard, mustard, and turnip), spinach, arugula, and lettuce such as iceberg, romaine, Boston, Bibb, red leaf, and spring mix.

Cooked leafy greens (such as spinach and kale) and roasted or dried leafy greens (such as roasted kale) credit based on the volume served. For example, ½ cup of cooked spinach or roasted kale credits as ½ cup of the vegetables component.

Crediting Vegetable Juice

Vegetable juice must be pasteurized 100 percent full-strength juice or a combination of vegetable and fruit juices. It can be fresh, frozen, or made from concentrate. The name of the full-strength juice on the label must include one of the following terms: “juice,” “full-strength juice,” “100 percent juice,” “reconstituted juice,” or “juice from concentrate.”

Pasteurized full-strength juice can meet the vegetables component or fruits component at only one preschool meal or ASP snack per day. For more information, see “Juice limit” in the “Fruits Component” section, and the CSDE’s handout, Crediting Juice for Preschoolers in the NSLP, SBP, and ASP.

Crediting Legumes as Vegetables

SFAs may credit legumes as the vegetables component or the meat/meat alternates component, but not both in the same meal. The menu planner must determine in advance how to credit legumes in a meal. For information on crediting legumes as the meat/meat alternates component, see “Crediting Legumes as Meat/Meat Alternates” in the “Meat/Meat Alternates Component” section.

Legumes credit as the vegetables component based on the volume (cups) served. For example, ½ cup of kidney beans credits as ½ cup of the vegetables component. A menu item must provide at least ⅛ cup of legumes to credit toward part of the vegetables component. If the
amount is less than the full preschool serving, the meal must include additional vegetables to meet the full serving for each preschool age group. For more information, see “Serving Size for Vegetables” in this section.

A serving of legumes must contain the minimum required amount of beans, excluding other ingredients such as sauce and pork fat. For example, a ½-cup serving of baked beans that contains ⅛ cup of sauce and pork fat credits as only ⅜ cup of the vegetables component. For more information, see “Vegetables with Added Ingredients” in this section.

Note: Peanuts are legumes that credit only as the meat/meat alternates component. For more information, see “Nuts and Seeds” in the “Meat/Meat Alternates” section.

Crediting roasted or dried legumes as vegetables

Roasted or dried legumes, such as chick peas and soy beans, credit as the vegetables component based on the volume (cups) served. For example, ¼ cup of roasted or dried legumes credits as ¼ cup of the vegetables component. For information on crediting roasted or dried legumes as the meat/meat alternates component, see “Crediting Roasted or Dried Legumes as Meat/Meat Alternates” in the “Meat/Meat Alternates Component” section.

Note: Children younger than 4 are at the highest risk of choking. The USDA recommends that CACFP facilities consider children’s age and developmental readiness when deciding whether to offer roasted or dried legumes. This consideration is especially important when serving young children or children with disabilities.

Crediting legumes in recipes as vegetables

A recipe must provide at least ⅛ cup of legumes per serving to credit toward the vegetables component. The menu planner must determine a recipe’s crediting information for the vegetables component by dividing the total volume (cups) of beans in the recipe by the number of servings, then rounding down to the nearest ⅛ cup. For guidance on how to calculate the contribution of legumes in a recipe, see the CSDE’s handout, Crediting Legumes in the NSLP and SBP.

Crediting Vegetables in Combination Foods

SFAs must ensure that combination foods made with vegetables provide the amount of vegetables being credited toward the preschool meal patterns. Vegetables in combination foods credit based on the volume (cups) of vegetables per serving, excluding added
ingredients such as other creditable food components (e.g., grains and meat/meat alternates) and noncreditable ingredients such as mayonnaise and salad dressing. Examples of combination foods with vegetables include pizza, lasagna, vegetable egg rolls, hummus, and bean burritos.

SFAs must maintain documentation on the amount of vegetables in one serving of a combination food. For commercially prepared foods, SFAs must obtain a CN label (if the vegetables are part of a main dish entree that contributes to the meat/meat alternates component), or a PFS stating the specific contribution of all vegetables. SFAs must check the manufacturer’s crediting information on the PFS for accuracy prior to including the item in reimbursable preschool meals and ASP snacks.

Vegetables alone are ineligible for CN labels, which are available only for main dish entrees that contribute to the meat/meat alternates component. However, CN-labeled products usually include crediting information for other components (such as grains, vegetables, and fruits) that are part of the product. For example, a CN label for cheese pizza may indicate the contribution of the tomato sauce (vegetables component) and crust (grains component), in addition to the cheese (meat/meat alternates component). For more information, see “Documentation for Commercial Products” in section 2.

SFAs must have standardized recipes on file for vegetables prepared on site with added ingredients. Recipes are not required for vegetables without added ingredients, e.g., whole or cut-up fresh vegetables, canned vegetables, and frozen vegetables. SFAs must determine the meal pattern contribution of vegetables using the FBG. For more information, see “Standardized Recipes” in section 2.

**Crediting Vegetables with Added Ingredients**

Vegetables with added ingredients (such as mayonnaise, yogurt, sugar, molasses, salad dressing, and marshmallows) credit based on the volume of vegetables per serving, excluding the weight or volume of added nonvegetable ingredients. Examples include coleslaw, tossed salad with dressing and croutons, Waldorf salad, potato salad, sweet potato casserole with marshmallows, mashed potatoes made with butter and milk, baked beans with sauce, and carrot-raisin salad.

For example, ½ cup of coleslaw made with shredded cabbage and carrots, mayonnaise, sugar, and spices does not credit as ½ cup of the vegetables component because it contains other ingredients in addition to the vegetables. To credit as ½ cup of the vegetables component, one serving of coleslaw must provide ½ cup of vegetables **before** any added ingredients.
SFAs must maintain documentation on the amount of vegetables in one serving. Commercially prepared foods require a PFS stating the specific contribution of all vegetables. For foods made on site, SFAs must have standardized recipes on file. For more information, see “Documentation for Commercial Products” and “Standardized Recipes” in section 2.

**Crediting Vegetable and Fruit Mixtures**

Mixtures of vegetables and fruits may credit toward both the vegetables component and fruits component if the serving contains at least ⅛ cup of easily identifiable vegetables and at least ⅛ cup of easily identifiable fruits. For example, a carrot-raisin salad that contains ½ cup of carrots and ⅛ cup of raisins credits as ½ cup of the vegetables component and ¼ cup of the fruits component (dried fruit credits as twice the volume served).

**Crediting Mixed Vegetables at Lunch**

Vegetable mixtures may credit toward both the vegetables component and the fruits component if they contain at least ⅛ cup of two different kinds of vegetables. For example, a lunch menu for ages 3-4 includes ¼ cup of broccoli and ¼ cup of cauliflower mixed together. The preschool lunch meal pattern supper allows vegetables to substitute for the fruits component. Therefore, the menu planner may choose to credit the broccoli as the full vegetables component (¼ cup) and use the cauliflower to replace the full fruits component (¼ cup), because the cauliflower provides the minimum required preschool serving (¼ cup) for the fruits component.

If the quantities of the different vegetables are not known, such as frozen mixed carrots and peas, the vegetable mixture credits as one serving of vegetables and cannot credit as the fruit component. In this case, the preschool menu would require either a serving of the fruits component or another serving of vegetables substituted for the fruits component.

**Crediting Soups**

Only certain types of commercial vegetable soups credit toward the vegetables component. Allowable commercial soups include tomato, vegetable, clam chowder with potatoes, corn chowder, minestrone, and lentil, pea, or bean (legumes). Commercial beef barley, chicken/turkey noodle, and chicken/turkey rice soup are noncreditable foods, and cannot credit in the preschool meal patterns.

Soups made on site by the SFA credit based on the amount of vegetables contained per serving, which must be documented by the school’s standardized recipe. However, commercial soups credit differently, based on the information in the FBG. A 1-cup serving of
commercial lentil, pea, or bean soup credits as ½ cup of the vegetables component. A 1-cup serving of all other allowable commercial vegetable soups credits as ¼ cup of the vegetables component.

Menu planners must ensure that a serving of soup is sufficient to provide the required amount of the vegetables component. A 1-cup container (8 fluid ounces) does not provide 1 cup of soup unless it is completely filled to the top, which is impractical. To avoid spilling and ensure that the served portion complies with the meal pattern requirements, the container should be larger than the planned serving size of soup. For example, SFAs could use a 10-fluid ounce bowl to hold 8 fluid ounces (1 cup) of soup and a 6-fluid ounce bowl to hold 4 fluid ounces (½ cup) of soup. **Note:** The 1-cup serving required for a commercial soup to credit as the vegetables component may not be practical for preschoolers.

For more information, see the CSDE’s handout, *Crediting Soup in the NSLP and SBP.*

**Crediting Pureed Vegetables**

Pureed vegetables must be recognizable to credit in the preschool meal patterns. Pureed foods made from one vegetable (such as tomato sauce, split pea soup, mashed potatoes, mashed sweet potatoes, and pureed butternut squash) are recognizable creditable vegetables. Combination foods with pureed (unrecognizable) vegetables may contribute to the vegetables component if the dish that contains them also provides an adequate amount of recognizable creditable vegetables. For example, a serving of macaroni and cheese that contains ⅛ cup of diced butternut squash (recognizable) and ⅛ cup of pureed carrots (unrecognizable) credits as ¼ cup of the vegetables component. Pureed vegetables credit based on the volume served, not the volume before pureeing.

**Crediting Dried Vegetables**

Dried vegetables credit when rehydrated if the product’s PFS provides specific documentation on the amount of vegetables per serving. SFAs should check the accuracy of the PFS prior to including foods with dehydrated vegetables in reimbursable meals. Dehydrated vegetables used for seasonings, such as dried onion and dried parsley, do not credit in the preschool meal patterns.

A serving must contain at least ⅛ cup of rehydrated vegetables (the minimum creditable amount) to credit toward part of the vegetables component. If the amount is less than the full serving, the meal must include additional vegetables to meet the full serving for each preschool age group.
Vegetables

The FBG lists yields for some dehydrated vegetables, including pinto beans, refried beans, onions, bell peppers, potatoes, seaweed, and sweet potatoes. For products not listed, SFAs must determine crediting information based on the rehydrated volume, not the fresh volume that may be stated on the container. Rehydration data on the container often varies from brand to brand. SFAs must use the following procedure for each brand of dehydrated product.

1. Rehydrate (add water or liquid to) a purchase unit of the dehydrated vegetable according to the manufacturer’s directions. If the container does not include directions, request rehydration directions from the manufacturer.

2. Measure the rehydrated volume.

3. Measure the number of ¼-cup servings of rehydrated product that one purchase unit provides.

4. Keep records on file as verification. Records should include information on the size of the purchase unit, the number of ¼-cup servings of rehydrated product per purchase unit, the name of the manufacturer, and the manufacturer’s directions for rehydrating the product.

For more information, see “Determining in-house product yields” in section 2.

Crediting Hominy as Vegetables

Hominy is a traditional food in Mexican and Native American cultures that is commonly served as a vegetable or milled grain product, e.g., hominy grits. Hominy is made from whole kernels of maize (dried field corn) that have been soaked in an alkaline solution (nixtamalized). This process removes the hull and germ, causes the corn to puff up to about double its normal size, and increases the bioavailability of certain nutrients, such as calcium and niacin.

Hominy is available dried and in a fully cooked canned form. Dried hominy is cooked the same as dried beans (legumes). In its whole form, hominy credits toward the vegetables component as a starchy vegetable. For example, ¼ cup of canned drained hominy credits as ¼ cup of the starchy vegetables subgroup.

For information on crediting hominy as the grains component, see “Crediting Hominy as Grains” in “Part A: Preschool Crediting Requirements” of “Grains Component” in this section.
Crediting Pasta Products Made of Vegetable Flour

SFAs may credit pasta products made of vegetable flours as the vegetables component, if they meet the requirements below. The requirements for crediting pasta products made of vegetable flours are summarized in USDA Memo SP 26-2019, CACFP 13-2019 and SFSP 12-2019: Crediting Pasta Products Made of Vegetable Flour in the Child Nutrition Programs.

Vegetable flours crediting as a vegetable

Pasta made of one or more 100 percent vegetable flours credits toward the vegetables component, even if the pasta is not served with another recognizable vegetable. These products credit the same as vegetables, i.e., ½ cup of pasta made of 100 percent vegetable flour credits as ½ cup of the vegetables component. The ingredients statements below show examples of pasta products that contain 100 percent vegetable flours.

- Ingredients: Red lentil flour.
- Ingredients: Green lentils, cauliflower, parsnips.

Vegetable flours from one vegetable subgroup

Pasta products made of one or more vegetable flours from one vegetable subgroup may credit toward the appropriate vegetable subgroup. For example, pasta made of 100 percent red lentil flour credits as ½ cup of the legumes subgroup. As a reminder, the vegetable subgroups are not required for the preschool meal patterns. However, the USDA’s CACFP Best Practices recommends providing at least one serving of each vegetable subgroup per week.

Note: Pasta made of 100 percent legumes may also credit as the meat/meat alternates component, but cannot credit as the legumes subgroups and the meat/meat alternates component in the same meal. For more information, see “Crediting Legume Flour Pasta Products as Meat/Meat Alternates” in the Meat/Meat Alternates section.
Vegetable flours and other nonvegetable ingredients

Pasta products made of vegetable flour and other nonvegetable ingredients may credit toward the vegetables component (or, in the case of 100 percent legume pasta, the meat/meat alternate component) with a PFS that details the actual volume of vegetable flour per serving. This crediting does not apply to grain-based pasta products that contain small amounts of vegetable powder for color, such as spinach pasta or sun-dried tomato pasta. For example, the product below shows cannot credit as the vegetables component.

Ingredients: Semolina (wheat), durum flour (wheat), dried spinach, niacin, ferrous sulfate (iron), thiamin mononitrate, riboflavin, folic acid.

The example below shows an ingredients statement for a vegetable pasta product that contains dried vegetables (carrot, tomato, and spinach) and other nonvegetable ingredients. The SFA must obtain a PFS from the manufacturer to determine this product’s crediting information.

Ingredients: Semolina (wheat), durum flour (wheat), dried carrots, dried tomato, dried spinach, niacin, ferrous sulfate (iron), thiamin mononitrate, riboflavin, folic acid.

Required signage and training

Nutrition education, including signs in cafeterias and other meal service areas, help children understand what foods are in their meals and snacks. SFAs must use signs or other nutrition education to indicate that pasta made of vegetable flour is a “vegetable” and not a grain component of the meal. For example, pasta made of chickpea flour could be labeled as “chickpea pasta” with a symbol showing it to be part of the vegetables component of the meal. Note: Signage for preschoolers should be appropriate to the age group being served, such as pictures and symbols.

The USDA encourages SFAs to offer vegetables in a variety of ways on the menu and to educate children about vegetables from farm to plate. Additionally, it is critical that school food service staff are trained to recognize a reimbursable meal. SFAs should inform serving line staff when meals include pasta made with vegetable flours.
3 | Meal Components

Vegetables

Noncreditable Foods in the Vegetables Component

Examples of foods that do not credit as the vegetables component include, but are not limited to:

- chili sauce;
- dehydrated vegetables used for seasoning;
- cream vegetable soups (e.g., cream of broccoli and cream of mushroom);
- home-canned products (for food safety reasons);
- ketchup;
- pickle relish; and
- snack-type foods made from vegetables such as potato chips.

SFAs should use the FBG to identify foods that credit as the vegetables component. For more information, see “Noncreditable Foods” at the beginning of section 3, and the CSDE’s handout, Noncreditable Foods for Preschoolers in the NSLP, SBP, and ASP.

Resources for Crediting Vegetables

The resources below assist SFAs with crediting foods as the vegetables component in the preschool meal patterns.

Vegetables

- USDA Memo CACFP 09-2017: Vegetable and Fruit Requirements in the Child and Adult Care Food Program; Questions and Answers:
  https://www.fns.usda.gov/cacfp/vegetable-and-fruit-requirements-cacfp-qas

- USDA Memo SP 26-2019, CACFP 13-2019 and SFSP 12-2019: Crediting Pasta Products Made of Vegetable Flour in the Child Nutrition Programs:

For additional crediting resources, visit the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.
Fruits Component

The preschool meal patterns require a serving of the fruits component at lunch. However, SFAs may substitute vegetables for the full fruits component at any preschool lunch. At breakfast, vegetables and fruits are one component and can include vegetables, fruits, or both. The fruits component may be served as one of the two required snack components. However, only one snack component can be a creditable beverage such as milk, juice, or a fruit smoothie. Juice cannot be served when milk is the only other snack component.

The fruits component includes fresh, frozen, dried, and canned fruits; and pasteurized full-strength fruit juice. Menu planners should consult the USDA’s FBG to determine the crediting information for specific fruits.

The USDA’s CACFP Best Practices encourages SFAs to serve a variety of fruits and choose whole fruits (fresh, canned, dried, or frozen) more often than juice; making at least one of the two required snack components a vegetable or a fruit, and incorporating seasonal and locally produced foods into meals. For information on farm to school, visit the USDA’s Farm to Preschool webpage, the CSDE’s Farm to School webpage, and the University of Connecticut’s Put Local on Your Tray webpage.

Serving Size for Fruits

All fruits credit based on volume (cups) except for dried fruit, which credits as twice the volume served. The menu planner determines the serving size and the number of servings needed to meet the fruits component for each grade group at each meal. SFAs may choose to serve one fruit or a combination of several fruits to meet the full serving for each grade group. For example, a lunch menu for ages 3-4 can meet the required ¼-cup serving of the fruits component by serving ¼ cup of peaches, or ⅛ cup of peaches and ⅛ cup of applesauce.
Crediting Fresh Fruit

The meal pattern contribution of fresh fruit varies depending on the type and size (count pack) of the fruit. Menu planners should consult the FBG to determine the proper crediting information for an individual piece of whole or cut-up fresh fruit. For example, the FBG indicates that:

- one 60-count plum, one 2 ⅛-inch diameter peach, and one 150-count petite banana each credit as ⅛ cup of fruit;
- one 100-count and 120-count banana, one 150-count pear, one 80-count peach, one 138-count orange, and one 45-count (2-inch diameter) plum each credit as ½ cup of fruit; and
- one 113-count and 125-count orange each credit as ⅝ cup of fruit.

One piece of fresh fruit (whole or cut-up) might not credit as the full preschool serving of the fruits component, depending on the meal and age group being served. For example, breakfast for ages 3-4 and snack for ages 1-4 require ½ cup of the fruits component. A breakfast or snack menu that includes only one 120-count tangerine credits as only ⅜ cup of the fruits component. The preschool menu must include another ⅛ cup of the fruits component to provide the full-required serving.

Table 3-4 lists the FBG’s meal pattern contribution of whole fresh fruits and, if applicable, the additional amount required to provide a ½-cup serving.

<table>
<thead>

</tbody>
</table>

¹ The additional amount of fruit can be from the same fruit or a different fruit.
**Crediting Canned Fruit**

Canned fruit may be in juice, water, light syrup, or heavy syrup. A serving of canned fruit may include the 100 percent juice in which the fruit is packed, but cannot include water or syrup. For example, ½ cup of canned peaches in juice credits as ½ cup of the fruits component. However, ½ cup of canned peaches in syrup does not; the SFA can only credit the amount of peaches without the syrup.

The juice from canned fruit counts toward the preschool juice limit if the SFA credits the juice toward the fruits component. In the example above, the menu planner credits both the juice and canned peaches as the fruits component. Therefore, fruit juice cannot credit as the fruits component at any other preschool meal or snack that same day.

Juice from canned fruit does not count toward the preschool juice limit if the SFA plans the juice as an extra food that does not credit toward the preschool meal patterns. For example, the juice from canned fruit does not count toward the preschool juice limit if food service personnel portion ½ cup of canned fruit in a 5½-ounce container and add the juice after measuring the full ½-cup serving of fruit.

**Crediting Dried Fruit**

Dried fruit (such as raisins, apricots, dried cherries, dried cranberries, dried blueberries, mixed dried fruit, and dried coconut) credits as twice the volume served. For example, ¼ cup of raisins credits as ½ cup of the fruits component.

**Note:** The crediting requirement for dried fruit (twice the volume served) does not apply to amounts less than ⅛ cup (the minimum creditable amount). For example, SFAs cannot credit ¼/16 cup (1 tablespoon) of raisins as ⅛ cup fruit.

Manufacturers sometimes process dried fruit with added sugar to keep the fruit pieces separated. The CSDE encourages menu planners to read labels and choose dried fruit without added sweeteners, including sugars and nonnutritive sweeteners, e.g., aspartame, acesulfame potassium, sucralose, and stevia.

**Crediting Fruit juice**

Juice must be pasteurized 100 percent full-strength juice or a combination of fruit and vegetable juices. The name of the full-strength juice on the label must include one of the following terms: “juice,” “full-strength juice,” “100 percent juice,” “reconstituted juice,” or “juice from concentrate.” Juice can be fresh, frozen, or made from concentrate. Juice may be
served liquid or frozen, e.g., full-strength frozen juice pops. For more information, see the CSDE’s handouts, *Crediting juice for Preschoolers in the NSLP, SBP, and ASP* and *Crediting Smoothies for Preschoolers in the NSLP, SBP, and ASP*.

**Juice concentrates**

Juice concentrates credit only when they are reconstituted with water to 100 percent full-strength juice and are served in the form of juice. Foods made with juice concentrate, such as gelatin or sherbet, do not credit as juice because they are no longer in the form of juice.

Juice made from concentrate is reconstituted with a volume of water that is several times the amount of the juice concentrate. A typical reconstitution ratio might be three parts water to one part concentrate, but this ratio may vary for different juice products. Commercial juice products made from concentrate will list “water” as the first ingredient, followed by the type of juice concentrate, for example, “water, orange juice concentrate” and “filtered water, grape juice concentrate.” Juice made from concentrate that is labeled “100 percent juice” credits when the SFA follows the manufacturer’s specific instructions for reconstituting.

**Juice blends**

Juice blends must be a combination of full-strength (100 percent) fruit juices, full-strength vegetable juices, or full-strength fruit and vegetable juices. At lunch, fruit and vegetable juice blends credit based on the first juice ingredient. If the first juice ingredient is fruit juice, the product credits as the fruits component. If the first juice ingredient is vegetable juice, the product credits as the vegetables component.

The ingredients statement below shows an example of a vegetable and fruit juice blend. Since the first ingredient is a reconstituted vegetable juice blend, this product credits as the vegetables component.

**Ingredients:** Reconstituted vegetable juice blend (water and concentrated juices of sweet potatoes, purple carrots, carrots), reconstituted fruit juices (water and concentrated juices of apples, white grapes, cranberries, blackberries), contains less than 2% of: natural flavoring, citric acid, lemon juice.

**Frozen juice products**

The meal pattern contribution of frozen fruit juice (such as full-strength frozen juice pops) is based on the fluid volume prior to freezing. SFAs must request a PFS from the manufacturer to document this information. For more information, see “Product Formulation Statements” in section 2.
Juice limit
Pasteurized full-strength juice credits as the vegetables component or fruits component at only one preschool meal or ASP snack per day. The daily juice limit includes all sources of 100 percent juice, such as fruit and vegetable juice, frozen pops made from 100 percent juice, pureed fruits and vegetables in smoothies, and juice from canned fruit in 100 percent juice. Drained canned fruit and canned fruit in light syrup or water do not count toward the juice limit. For more information, see “Crediting Canned fruit” in this section.

If a preschool meal or ASP snack includes any type of juice as the fruits component or vegetables component, juice cannot credit as the fruits component or vegetables component at any other preschool meal or ASP snack that day. The examples below illustrate this requirement.

- If the breakfast menu includes juice as the fruits component, juice cannot credit as either the vegetables component or fruits component at lunch or ASP snack that same day.
- If the lunch menu includes canned fruit in juice as the fruits component, juice cannot credit as the fruits component or vegetables component at breakfast or ASP snack that same day.
- If the ASP snack menu includes a smoothie made with pureed fruit as the fruits component, juice cannot credit as the fruits component or vegetables component at breakfast or lunch that same day.

If the daily preschool menus comply with the juice limit, SFAs could choose to offer juice as an extra noncreditable food that does not count toward the preschool meal patterns. However, the USDA encourages SFAs to limit juice in preschool menus to ensure that meals and snacks meet preschoolers’ nutrition needs. Preschoolers might not consume the actual meal components if the menu includes extra juice. In addition, SFAs must consider the cost issues of providing extra foods. The USDA’s CACFP Best Practices recommends serving a variety of fruits and choosing whole fruits (fresh, canned, dried, or frozen) more often than juice.

Juice ingredients
All pasteurized 100 percent juices meet the USDA’s requirements for the fruits component, but their ingredients may vary among manufacturers. The FDA’s labeling regulations allow 100 percent juice to contain added ingredients and still be labeled “100% juice.” Therefore, some 100 percent juices contain added ingredients such as artificial flavors, artificial colors (e.g., red 40, blue 1, yellow 5 and 6, and titanium dioxide), preservatives (e.g., sodium benzoate
and potassium sorbate), flavor enhancers (e.g., ethyl maltol), and emulsifiers or thickeners (e.g., glycerol esters of wood rosin and xanthan gum). The CSDE encourages menu planners to read product ingredients statements and choose 100 percent juice without these added ingredients.

**Apple cider**

Apple cider credits as the fruits component if it is pasteurized 100 percent full-strength juice. Pasteurized juice has been heat-treated to kill harmful bacteria. SFAs cannot serve unpasteurized apple cider or any other unpasteurized juices.

**Crediting Fruit and Vegetable Smoothies**

Smoothies credit differently depending on whether the SFA prepares them on site or purchases commercially prepared products. The USDA recommends not offering smoothies at more than one meal or ASP snack per day.

**Smoothies made on site**

Pureed fruits and vegetables in smoothies made on site by the SFA credit only as juice toward the preschool meal patterns. Crediting is based on the actual volume of pureed fruits and vegetables per serving, which must be documented by the SFA’s standardized recipe. Smoothies that contain a mix of pureed fruits and vegetables, or that contain 100 percent fruit and vegetable juice blends, credit as the fruits component if fruit juice or fruit puree is the predominant ingredient. If vegetable juice or vegetable puree is the predominant ingredient, the smoothie credits as the vegetables component.

Menu planners must count pureed fruits and vegetables in smoothies with all other juices toward the preschool juice limit. Pasteurized full-strength juice credits as the vegetables or fruits component at only one preschool meal or ASP snack per day, between all meals and ASP snacks served to preschoolers. For example, if the menu planner credits a smoothie as the fruits component at breakfast, juice cannot credit as the fruits component or the vegetables component at lunch or ASP snack.

For more information, see “Juice limit” in this section and the CSDE’s handout, *Crediting Smoothies for Preschoolers in the NSLP, SBP, and ASP.*
**Commercial smoothies**

Commercial smoothies do not meet the USDA’s requirements for fluid milk or yogurt because they do not comply with the FDA’s standard of identity for milk or yogurt. Smoothies with dietary supplements (such as whey protein powder) or herbal supplements (such as gingko biloba, ginseng, and echinacea) cannot credit in Child Nutrition Programs.

Commercial smoothies made with pureed fruits/vegetables credit only as juice toward the fruits component. The product label should include a statement regarding the “percent juice content,” which is required by the FDA for beverages made with fruit/vegetable juice or fruit/vegetable puree. For example, an 8-fluid ounce smoothie made from fruit puree with the juice content labeled as “contains 50% juice” credits as 4 fluid ounces or ½ cup of juice. SFAs may need to obtain a PFS from the manufacturer to document the amount of pureed fruit in the product.

**Crediting Coconut**

Fresh and frozen coconut credit as the fruits component based on the volume served. For example, ⅛ cup of fresh or frozen coconut credits as ⅛ cup of the fruits component. The minimum serving size is ⅛ cup.

Dried coconut credits the same as other dried fruit, i.e., as twice the volume served. For example, ⅛ cup of dried coconut credits as ¼ cup of the fruits component. For more information, see “Crediting Dried Fruit” in this section.

Menu planners should consider coconut’s high caloric and saturated fat content, which may limit its frequency in preschool menus. Coconut flour, coconut oil, and coconut milk do not credit.

Juices labeled as 100 percent juice, including coconut water, credit toward the fruits component based on the volume served. SFAs must count coconut water with all other juices toward the preschool juice limit. For more information, see “Juice limit” in this section.

Crediting information for coconut is summarized in USDA Memo SP 34-2019, CACFP 15-2019 and SFSP 15-2019: Crediting Coconut, Hominy, Corn Masa, and Masa Harina in the Child Nutrition Programs:
Creditting Pureed Fruit

Pureed fruit must be recognizable to credit in the preschool meal patterns. Pureed foods made from one fruit (such as applesauce) are recognizable creditable fruits. Combination foods with pureed (unrecognizable) fruits may contribute to the fruits component if the dish that contains them also provides an adequate amount of recognizable creditable fruit. Pureed fruit credits based on the volume served, not the volume before pureeing.

Pureed fruits and vegetables in smoothies made on site by the SFA credit only as juice. Crediting is based on the actual volume of pureed fruits and vegetables per serving, which must be documented by the SFA’s standardized recipe. For more information, see “Creditting Fruit and Vegetable Smoothies” in this section.

Creditting Fruit in Commercial Products

SFAs must ensure that commercial products made with fruit provide the amount of fruit being credited toward the meal patterns. To document the product’s meal pattern contribution, SFAs must obtain a PFS from the manufacturer stating the amount of fruit per serving. SFAs must check this crediting information for accuracy prior to including the item in reimbursable meals. SFAs must keep this information on file to document meal pattern compliance for auditing purposes. For more information, see “Documentation for Commercial Products” in section 2.

Creditting Fruit in Desserts

The fruit portion of grain-based desserts (such as pies, cobblers, or crisps) credits toward the fruits component based on the amount of fruit per serving. This information must be documented by the SFA’s standardized recipe (for foods made on site) or the manufacturer’s PFS (for commercial foods). The USDA indicates that sweetened fruit should be served in moderation to help reduce children’s consumption of added sugars and help children develop a taste preference for unsweetened fruit.

Note: The grain portion of grain-based desserts does not credit toward the grains component in the preschool meal patterns. For more information, see “Grain-based desserts” in the “Grains Component” section.
Noncreditable Foods in the Fruits Component

Examples of foods that do not credit as the fruits component include, but are not limited to:

- fruit snacks (e.g., fruit roll-ups, fruit leathers, fruit wrinkles, fruit twists, and yogurt-covered fruit snacks);
- banana chips;
- home-canned products (for food safety reasons);
- jams, jellies, and preserves; and
- juice drinks that are not 100 percent juice such as grape juice drink, orange juice drink, pineapple-grapefruit drink, cranberry juice cocktail, and lemonade.

SFAs should use the FBG to identify foods that credit as the fruits component. For more information, see “Noncreditable foods” at the beginning of section 3, and the CSDE’s handout, Noncreditable Foods for Preschoolers in the NSLP, SBP, and ASP.
Resources for Crediting Fruits

The resources below assist SFAs with crediting foods as the fruits component in the preschool meal patterns.

- USDA Memo CACFP 09-2017: Vegetable and Fruit Requirements in the Child and Adult Care Food Program; Questions and Answers: https://www.fns.usda.gov/cacfp/vegetable-and-fruit-requirements-cacfp-qas

For additional crediting resources, visit the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.
Grains Component

The preschool meal patterns require a serving of the grains component at breakfast and lunch. The grains component may be served as one of the two required snack components. Preschool menus must include at least one serving of whole grain-rich (WGR) grains per day, between all meals and snacks served to children.

The grains component for the preschool meal patterns includes a variety of products, such as:

- breads, biscuits, bagels, rolls, tortillas, and muffins;
- snack products, such as crackers (including sweet crackers, such as animal crackers and graham crackers), hard pretzels, hard bread sticks, and tortilla chips;
- cereal grains, such as buckwheat, brown rice, bulgur, and quinoa;
- RTE breakfast cereals, such as puffed cereals, whole grain rounds or flakes, and granola;
- cooked breakfast cereals (instant and regular), such as oatmeal, farina, and cream of wheat;
- bread products used as an ingredient in another menu item, such as combination foods, e.g., breading on fish or poultry and pizza crust in pizza; and
- pasta products, such as macaroni, spaghetti, noodles, orzo, and couscous.

To credit as the grains component in the preschool meal patterns, grain menu items must contain whole grains, enriched grains bran or germ as the greatest ingredient by weight. Products that are 100 percent whole grain, such as whole-wheat bread and brown rice, provide the best nutrition and should be served most often.

This section includes three parts to assist menu planners with determining if foods credit as the grains component:

- Part A: Preschool Crediting Requirements (beginning on page 100);
- Part B: Preschool WGR Criteria (beginning on page 110);
- Part C: Preschool Serving Size (beginning on page 120).
**Grain-based Desserts**

Grain-based desserts cannot credit as the grains component in the preschool meal patterns. Examples of grain-based desserts include brownies, cookies, cakes, cupcakes, coffee cakes, cinnamon streusel quick breads, pie crusts in sweet pies (e.g., apple, coconut, blueberry, and pecan), cinnamon rolls, doughnuts, cereal bars, granola bars, breakfast bars, sweet rolls, pastries, toaster pastries, sweet scones (e.g., blueberry, raisin, and orange cranberry), rice pudding, and sweet bread pudding.

Grain-based desserts do not include sweet crackers (such as graham crackers and animal crackers), muffins, quick breads, e.g., banana bread and zucchini bread (except for cinnamon streusel), cornbread, pancakes, waffles, French toast, savory scones (such as cheese and herb), and pie crusts in entrees such as quiche, meat pies, and chicken pot pie.

As a best practice, the USDA encourages preschool menus to limit sweet crackers (such as graham crackers and animal crackers) because of their higher sugar content. The CSDE recommends not serving sweet crackers more than twice per week between all preschool meals and ASP snacks.

SFAs may choose to serve grain-based desserts as an additional food item that does not credit toward the preschool meal patterns. Examples include serving cake or cookies at special celebrations. However, to ensure children’s nutritional needs are met, the USDA and CSDE encourage SFAs to use discretion when serving noncreditable foods and beverage. For more information, see “Noncreditable foods” at the beginning of section 3.

The resources below provide guidance on the requirements for grain-based desserts.

- USDA Memo CACFP 09-2018: Grain Requirements in the Child and Adult Care Food Program; Questions and Answers: [https://fns-prod.azureedge.net/sites/default/files/cacfp/CACFP09_2018os.pdf](https://fns-prod.azureedge.net/sites/default/files/cacfp/CACFP09_2018os.pdf)
Noncreditable Foods in the Grains Component

Examples of foods that do not credit as the grains component include, but are not limited to:

- commercial products that do not contain a whole grain, enriched grain, bran, or germ as the first ingredient (excluding water);
- recipes that do not contain a whole grain, enriched grain, bran, or germ as the greatest grain ingredient by weight;
- noncreditable ingredients such as oat fiber, corn fiber, wheat starch, corn starch, and modified food starch (including potato, legume, and other vegetable flours);
- breakfast cereals that contain more than 6 grams of sugars per ounce; and
- grain-based desserts such as brownies, cookies, cake, coffee cake, doughnuts, cereal bars, granola bars, breakfast bars, sweet rolls, pastries, toaster pastries, sweet scones (e.g., blueberry, raisin, and orange cranberry), sweet pie crusts, rice pudding, and sweet bread pudding. For more information, see “Grain-Based Desserts” in this section.

SFAs should use the FBG to identify foods that credit as the grains component. For more information, see “Noncreditable Foods” at the beginning of section 3, and the CSDE’s handout, Noncreditable Foods for Preschoolers in the NSLP, SBP, and ASP.

Resources for Crediting Grains

The resources below assist SFAs with crediting foods as the grain component in the preschool meal patterns.

For additional crediting resources, visit the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.
Part A: Preschool Crediting Requirements

This section addresses the crediting requirements for the grains component of the preschool meal patterns. All grain items served in preschool menus must comply with these requirements, including commercial grain products and grain foods made on site by the SFA.

Creditable Grains

Creditable grains are the grain ingredients in a food that credit toward the grains component of the preschool meal patterns, including whole grains, enriched grains, bran, and germ. **Note:** Bran and germ credit in the preschool meal patterns for the NSLP, SBP and ASP; and in the ASP meal pattern for grades K-12. However, they do not credit in the NSLP and SBP meal patterns for grades K-12.

To credit as the grains component, a grain product or recipe must contain a creditable grain as the **primary** (greatest) ingredient by weight. For information on identifying whole and enriched grains, see the CSDE’s handouts, *Crediting Whole Grains in the NSLP and SBP* and *Crediting Enriched Grains in the NSLP and SBP*. For guidance on the steps for identifying creditable grains, see the CSDE’s handout, *How to Identify Creditable Grains for Preschoolers in the NSLP, SBP, and ASP*.

**Note:** Grain foods (excluding grain-based desserts) that meet the crediting criteria for grades K-12 also meet the crediting criteria for preschoolers. However, grain foods that meet the crediting criteria for preschoolers might not meet the crediting criteria for grades K-12. For example, wheat germ and oat bran credit in the meal patterns for preschoolers, but not for grades K-12. If SFAs serve the same grain foods to preschoolers and grades K-12, these foods must comply with whichever requirements are stricter. For more information, see “Serving the same foods to preschoolers and grades K-12” in section 1.

The preschool meal patterns have different crediting requirements for commercial grain products, commercial combination foods, cooked breakfast cereals, RTE breakfast cereals, and grain foods made on site by the SFA. These crediting requirements are summarized in this section.

**Note:** Groups A-E and H-I refer to the grain groups in the USDA’s grain servings chart. For more information, see “Part C: Preschool Serving Size” in this section.
Part A: Preschool Crediting Requirements

Crediting Criteria for Commercial Grain Products

Commercial grain products in groups A-E (baked goods, such as breads, rolls, muffins, crackers, and waffles) and group H (pasta and cereal grains, such as quinoa, rice, and millet) credit as the grains component if:

- a creditable grain is the first ingredient; or
- water is the first ingredient and a creditable grain is the second ingredient.

The ingredients statements below show examples of creditable commercial grain products.

Ingredients: *Enriched wheat flour* (flour, niacin, reduced iron, thiamine mononitrate, riboflavin, folic acid), canola and/or sunflower oil, salt, contains 2% or less of: yeast, nonfat milk, sugar, baking soda, monocalcium phosphate, paprika, spices, celery, onion powder.

Ingredients: Water, *whole-wheat flour*, yeast, wheat gluten, contains less than 2% of each of the following: soybean oil, sugar, salt, calcium propionate (preservative), fumaric acid, baking soda, monocalcium phosphate, calcium sulfate, ammonium sulfate.

Ingredients: Water, *enriched flour* (wheat flour, niacin, reduced iron, vitamin B1 [thiamin mononitrate], vitamin B2 [riboflavin], folic acid), *whole-wheat flour*, vegetable oil (soybean, palm, and/or canola oil), egg whites, *wheat bran*, sugar, contains 2% or less of leavening (baking soda, sodium aluminum phosphate, monocalcium phosphate), salt, malt flavoring, whey, soy lecithin.

For examples of how to determine if commercial grain products are creditable, see the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP*. Menu planners may use the CSDE’s Excel worksheet, *Child Care Worksheet 1: Crediting Commercial Grains in the CACFP*, to determine if commercial grain products comply with the preschool crediting criteria. For more information, see “Grain Crediting Worksheets” in this section.

Multiple creditable grains in commercial grain products

If a creditable grain is not the first ingredient, but the commercial grain product contains more than one creditable grain, the SFA must obtain a PFS from the manufacturer to determine crediting information. To credit in the preschool meal patterns, the product’s PFS must document that the combined weight of all creditable grains in the product is the greatest ingredient by weight. For information on PFS forms, see “Product Formulation Statements” in section 2. For guidance on how to evaluate a manufacturer’s PFS for a grain product, see “Evaluating PFS Forms for Grain Products” in section 3 of the CSDE’s guide, *Menu Planning Guide for School Meals for Grades K-12*. 
Part A: Preschool Crediting Requirements

Crediting Criteria for Breakfast Cereals

RTE breakfast cereals in group I (such as puffed cereals, round or flaked cereal, and granola) and cooked breakfast cereals in group H (including instant and regular, such as oatmeal, farina, and cream of wheat) credit as the grains component if:

- the first ingredient is a creditable grain or the cereal is fortified; and
- the cereal contains no more than 6 grams of sugars per dry ounce.

Fortified breakfast cereals have nutrients added by the manufacturer that were not originally present, or that are at higher levels than originally present. Fortified breakfast cereals typically contain the five enrichment nutrients plus other vitamins and minerals. Different cereal brands may list different fortification nutrients. Manufacturers may choose which additional nutrients to use for fortification. The USDA does not specify a minimum number of nutrients or a minimum percentage for the level of fortification for breakfast cereals in Child Nutrition Programs. If a breakfast cereal is fortified, it does not need to be enriched.

The ingredients statement below shows an example of a creditable cooked breakfast cereal. The first ingredient is not creditable grain, but the cereal is fortified.

Ingredients: Wheat farina, calcium carbonate, ferric orthophosphate (source of iron), niacinamide (vitamin B3), pyridoxine hydrochloride (vitamin B6), folic acid, thiamin mononitrate (vitamin B1) riboflavin (vitamin B2).

The ingredients statement below shows an example of a creditable RTE breakfast cereal. The first ingredient is a creditable grain and the cereal is fortified.

Ingredients: Whole-grain oat flour, sugar, corn flour, whole-wheat flour, rice flour, salt, calcium carbonate, disodium phosphate, reduced iron, niacinamide, zinc oxide, BHT (a preservative), yellow 5, yellow 6, thiamin mononitrate, pyridoxine hydrochloride, riboflavin, folic acid.

For examples of how to determine if breakfast cereals are creditable, see the CSDE’s handout, *Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP*. Menu planners may use the CSDE’s Excel worksheets, *Child Care Worksheet 2: Crediting Ready-to-eat (RTE) Breakfast Cereals in the CACFP* and *Child Care Worksheet 3: Crediting Cooked Breakfast Cereals in the CACFP*, to determine if breakfast cereals comply with the preschool crediting criteria. For more information, see “Grain Crediting Worksheets” in this section.
Sugar limit for breakfast cereals

The preschool meal patterns require that breakfast cereals cannot contain more than 6 grams of sugars per dry ounce (no more than 21.2 grams of sucrose and other sugars per 100 grams of dry cereal). The sugar limit applies only to breakfast cereals as purchased. SFAs may choose to add toppings to breakfast cereals to increase their appeal. However, the USDA strongly encourages SFAs to offer healthy toppings for breakfast cereals, such as fruit instead of sugar. Minimizing sweet toppings will help reduce consumption of added sugars, which contribute calories without essential nutrients.

The USDA allows three different methods to determine if a breakfast cereal complies with the sugar limit. The CSDE’s handout, *Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP*, summarizes these methods. The USDA resources below provide additional guidance on evaluating the sugar content of breakfast cereals.

- Choose Breakfast Cereals that are Lower in Added Sugars (English) (USDA): [https://www.fns.usda.gov/sites/default/files/tn/cacfp-cereal.pdf](https://www.fns.usda.gov/sites/default/files/tn/cacfp-cereal.pdf)
- Choose Breakfast Cereals that are Lower in Added Sugars (Spanish) (USDA): [https://www.fns.usda.gov/sites/default/files/tn/cacfp-cereal-sp.pdf](https://www.fns.usda.gov/sites/default/files/tn/cacfp-cereal-sp.pdf)
- Choose Breakfast Cereals that are Lower in Added Sugars Webinar (English) (USDA): [https://www.fns.usda.gov/cacfp-halftime-thirty-thursdays-%E2%80%9Cchoose-breakfast-cereals-are-lower-added-sugars%E2%80%9D](https://www.fns.usda.gov/cacfp-halftime-thirty-thursdays-%E2%80%9Cchoose-breakfast-cereals-are-lower-added-sugars%E2%80%9D)
- Choose Breakfast Cereals that are Lower in Added Sugars Webinar (Spanish) (USDA): [https://www.fns.usda.gov/cacfp-halftime-thirty-thursdays-choose-breakfast-cereals-are-lower-added-sugars-spanish](https://www.fns.usda.gov/cacfp-halftime-thirty-thursdays-choose-breakfast-cereals-are-lower-added-sugars-spanish)

**Note:** The CSDE recommends that menu planners review the breakfast cereal’s sugar content before reviewing its ingredients statement. If a breakfast cereal exceeds the sugar limit, it cannot credit in the preschool meal patterns, even if it contains creditable grains or is WGR.
Part A: Preschool Crediting Requirements

Serving the same breakfast cereals to preschoolers and grades K-12

The NSLP, SBP, and ASP meal patterns for grades K-12 do not limit the amount of sugars in breakfast cereals. However, the meal patterns for preschoolers require a sugar limit for breakfast cereals. If SFAs serve the same breakfast cereals to both groups, these foods must comply with the preschool sugar limit for breakfast cereals. The only exceptions to this requirement are when SFAs choose to follow:

- the K-5 meal pattern for preschoolers and grades K-5 who eat in the same service area at the same time; or
- the ASP K-12 meal pattern for preschoolers and grades K-12 who eat in the same service area at the same time.

For more information, see “Serving the same foods to preschoolers and grades K-12,” “Preschoolers and grades K-5 eating together in the NSLP, SBP, and SSO,” and “Preschoolers and grades K-12 eating together in the ASP” in section 1.

Crediting Criteria for Commercial Combination Foods

Commercial combination foods that contain a grain portion from groups A-E (such as pizza crust in pizza and baked fish coated with bread crumbs) or groups H-I (such as noodles in lasagna and baked chicken coated with crushed cereal flakes) credit as the grains component if the first grain ingredient is a creditable grain. The ingredients statement below shows an example for breaded chicken nuggets. This product credits in the preschool meal patterns because the first grain ingredient (whole-wheat flour) is a creditable grain.

Ingredients: Boneless, skinless chicken breast with rib meat, water, whole-wheat flour, contains 2% or less of the following: dried garlic, dried onion, salt, sea salt, soybean oil, spice, sugar, torula yeast, turmeric, yeast, yeast extract. Breading set in vegetable oil.
Separate grain portion in commercial combination foods
A commercial combination food that lists the ingredients for the grain portion separately credits as the grains component if:

- a creditable grain is the first ingredient in the grain portion; or
- water is the first ingredient in the grain portion and a whole grain is the second ingredient in the grain portion.

The ingredients statement below shows an example for cheese ravioli. This product credits in the preschool meal patterns because the first ingredient (whole-wheat flour) in the pasta (grain portion highlighted in yellow) is a creditable grain.

**Ingredients:** **Filling:** Fat-free ricotta cheese (whey, skim milk [made from nonfat dry milk powder], vinegar, xanthan gum, carrageenan), water, egg, low moisture part skim mozzarella cheese (cultured part skim milk, salt, enzymes), whey protein isolate, sodium caseinate, romano cheese made from cow's milk (cultured milk, salt, enzymes), bleached wheat flour, garlic salt (salt, dehydrated garlic), salt, corn starch, sugar, dehydrated garlic.

**Pasta:** Whole-wheat flour, enriched durum wheat flour (wheat flour, niacin, ferrous sulfate, thiamin mononitrate, riboflavin, folic acid), water, egg.

Multiple creditable grains in commercial combination foods
If a creditable grain is not the first ingredient, but the grain portion of the combination food contains more than one creditable grain, the SFA must obtain a PFS from the manufacturer to determine crediting information. To credit in the preschool meal patterns, the product’s PFS must document that the combined weight of all creditable grains in the grain portion of the product is the greatest ingredient by weight in the grain portion. For information on PFS forms, see “Product Formulation Statements” in section 2. For examples of how to determine if commercial combination foods are creditable, see the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP*. For guidance on how to evaluate a manufacturer’s PFS for a grain product, see “Evaluating PFS Forms for Grain Products” in section 3 of the CSDE’s guide, *Menu Planning Guide for School Meals for Grades K-12.*
Crediting Criteria for Foods Made on Site

Grain foods made on site by the SFA (such as breads, rolls, muffins, waffles, and pancakes) credit as the grains component in the preschool meal patterns if:

- a creditable grain is the greatest ingredient by weight in the standardized recipe; or
- the combined weight of all creditable grains is the greatest ingredient by weight in the standardized recipe.

Combination foods made on site by the SFA (such as pizza, lasagna, and breaded chicken) credit as the grains component if:

- a creditable grain is the greatest grain ingredient by weight in the standardized recipe; or
- the combined weight of all creditable grains is the greatest grain ingredient by weight in the standardized recipe.

For examples of how to determine if grain foods made on site are creditable, see the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP*.

Menu planners may use the CSDE’s Excel worksheets, *Child Care Worksheet 4: Crediting Family-size Recipes for Grains in the CACFP* or *Child Care Worksheet 5: Crediting Quantity Recipes for Grains in the CACFP*, to determine if grain foods made on site comply with the preschool crediting criteria. For more information, see “Grain Crediting Worksheets” in this section.
Crediting Corn Masa, Masa Harina, Corn Flour, and Cornmeal

Corn ingredients credit as the grains component if they are whole grain, enriched, or treated with lime (nixtamalized). Nixtamalization is a process in which dried corn is soaked and cooked in an alkaline (slaked lime) solution. This process increases the bioavailability of certain nutrients and provides a nutritional profile similar to whole-grain corn.

Nixtamalized corn is used to make hominy, masa harina (corn flour), corn masa (dough from masa harina), and certain types of cornmeal. Masa harina is used for making corn products such as tortillas, tortilla chips, and tamales.

Ingredients labeled as hominy, corn masa, or masa harina are nixtamalized, and therefore credit as whole grains. The ingredients statements below show some examples of corn chip products that credit as 100 percent whole grains.

Ingredients: *Corn masa flour*, water, contains 2% or less of: cellulose gum, guar gum, amylase, propionic acid, benzoic acid, and phosphoric acid (to maintain freshness).

Ingredients: *Whole-white corn*, vegetable oil (contains soybean, corn, cottonseed, and/or sunflower oil), salt, *lime/calcium hydroxide* (processing aid). **Note:** The lime/calcium hydroxide is the processing aid for the nixtamalization of corn.

The ingredients statements below show some examples of taco shell products that credit as 100 percent whole grains.

Ingredients: *Limed whole-grain white corn*, palm oil, salt, TBHQ (preservative).

Ingredients: *Whole-grain yellow corn*, high oleic canola oil, water, *corn flour*, salt, *hydrated lime*. **Note:** The corn flour is nixtamalized with hydrated lime and is therefore a whole grain.
Part A: Preschool Crediting Requirements

Corn, cornmeal, and corn flour do not credit unless they are whole grain, enriched, or nixtamalized. For example, the corn chip product below cannot credit as the grains component because the corn is not whole grain, enriched, or nixtamalized.

Ingredients: Corn, corn oil, salt.

If the product’s ingredients statement does not provide sufficient information, SFAs must obtain a PFS from the manufacturer to document that any corn ingredients (such as cornmeal and yellow corn flour) are whole grain, enriched, or nixtamalized. Products made with corn ingredients that are not whole grain, enriched, or nixtamalized do not credit in the preschool meal patterns.

Methods for identifying nixtamalized corn

SFAs may use the two methods below to identify products made with nixtamalized corn.

1. If a product made with corn includes one of two FDA-approved whole grain health claims on its packaging, the corn in the product is nixtamalized and the product provides at least 50 percent whole grain.
   - **Low-fat claim:** “Diets rich in whole grain foods and other plant foods and low in total fat, saturated fat, and cholesterol, may reduce the risk of heart disease and certain cancers.”
   - **Moderate-fat claim:** “Diets rich in whole grain foods and other plant foods, and low in saturated fat and cholesterol, may help reduce the risk of heart disease.”

2. If the ingredients statement indicates that the corn is treated with lime, the corn ingredient is nixtamalized. Examples include “ground corn with trace of lime” and “ground corn treated with lime.” Nixtamalized corn ingredients credit as whole grains.

Corn masa, corn flour, and cornmeal credit the same as all other creditable grain ingredients and foods. Crediting is determined by the weight of the product (as listed in the USDA’s grain servings chart) or by the grams of creditable grain per portion. For more information, see “Section C: Preschool Serving Size.”

Crediting information for corn masa, masa harina, corn flour, and cornmeal is summarized in **USDA Memo SP 34-2019, CACFP 15-2019 and SFSP 15-2019: Crediting Coconut, Hominy, Corn Masa, and Masa Harina in the Child Nutrition Programs**.
Crediting Hominy as Grains

Hominy is a traditional food in Mexican and Native American cultures that is commonly served as a vegetable or milled grain product, e.g., hominy grits. Hominy is made from whole kernels of maize (dried field corn) that have been soaked in an alkaline solution (nixtamalized). This process removes the hull and germ, causes the corn to puff up to about double its normal size, and increases the bioavailability of certain nutrients, such as calcium and niacin.

Hominy is available dried and in a fully cooked canned form. Dried hominy is cooked the same as dried beans (legumes). Hominy offered in a dried, milled form (such as grits) is a considered a whole grain. A ¼-cup serving of cooked hominy grits or ½ ounce (14 grams) of dry hominy grits credits as ½ serving (the required preschool amount) of the grains component. For information on crediting hominy as the vegetables component, see “Crediting Hominy as Vegetables” in the “Vegetables” section.

Grain Crediting Worksheets

The CSDE’s CACFP crediting worksheets evaluate grain-based foods for compliance with the CACFP crediting, WGR, and serving requirements. Since the preschool and CACFP meal pattern requirements are the same, SFAs may use the CSDE’s CACFP crediting worksheets to determine if grain foods comply with the preschool meal patterns. The grain crediting worksheets include:

- Child Care Worksheet 1: Crediting Commercial Grains in the CACFP;
- Child Care Worksheet 2: Crediting Ready-to-eat (RTE) Breakfast Cereals in the CACFP;
- Child Care Worksheet 3: Crediting Cooked Breakfast Cereals in the CACFP;
- Child Care Worksheet 4: Crediting Family-size Recipes for Grains in the CACFP; and
- Child Care Worksheet 5: Crediting Quantity Recipes for Grains in the CACFP.

These worksheets are available in the “Documents/Forms” section of the CSDE’s Crediting Foods in CACFP Child Care Programs webpage.
Part B: Preschool WGR Requirement

Preschool menus must include at least one serving of WGR grains per day. All WGR foods credit in the preschool meal patterns, but not all creditable grains are WGR. The preschool WGR criteria are different for commercial products and foods made on site by the SFA. This section summarizes these requirements.

Note: The WGR criteria for the preschool meal patterns are different from the NSLP and SBP meal patterns for grades K-12. Except for grain-based desserts, grain foods that meet the WGR criteria for grades K-12 will also meet the preschool WGR criteria. However, grain foods that meet the preschool WGR criteria may or may not meet the WGR criteria for grades K-12.

WGR Requirement

Preschool menus must include at least one serving of WGR grains per day, between all meals and ASP snacks served to preschoolers. SFAs may choose to serve a WGR food at any preschool meal or ASP snack. The USDA’s CACFP Best Practices recommends at least two servings of WGR grains per day. When planning preschool menus to meet the WGR requirement, SFAs must meet the requirements below.

- If the SFA serves only one preschool meal per day (breakfast or lunch), the grain served at that meal must be WGR.

- If the SFA serves only preschool breakfast and chooses to substitute meat/meat alternates for the grains component at breakfast (allowed up to three times per week), a WGR food is not required.

- The grains component is not required in the ASP, but may be served as one of the two required snack components. If the SFA only serves ASP snack to preschoolers and offers a grain as one of the two snack components, the grain must be WGR.

The WGR requirement applies to the school nutrition programs, not to each child. If the SFA serves more than one meal, and two different groups of children are at each meal (such as one group of children at breakfast and another group of children at lunch), only one meal must contain a WGR food. However, the USDA strongly encourages SFAs to vary the meal that
includes a WGR item. For example, the preschool menu could include whole-grain toast at breakfast on Monday and brown rice at lunch on Tuesday. This helps to ensure that all children are served a variety of whole grains, and benefit from the important nutrients these foods provide.

**Serving the same WGR foods to preschoolers and grades K-12**

The WGR criteria for the NSLP and SBP meal patterns are different for preschoolers and grades K-12. Except for grain-based desserts, grain foods that meet the WGR criteria for grades K-12 will also meet the preschool WGR criteria. However, grain foods that meet the preschool WGR criteria may or may not meet the WGR criteria for grades K-12.

If SFAs serve the same grain foods to preschoolers and grades K-12, these foods must meet the WGR criteria for grades K-12. If SFAs serve the same cooked and RTE breakfast cereals to preschoolers and grades K-12, these cereals must meet the WGR criteria for grades K-12 and the preschool sugar limit. SFAs cannot serve the grain-based desserts to preschoolers and grades K-12 because grain-based desserts do not credit in the preschool meal patterns. For more information, see “Grain-based Desserts” in this section.

The only exceptions to these requirements are when SFAs choose to follow:

- the K-5 meal pattern for preschoolers and grades K-5 who eat in the same service area at the same time; or
- the ASP K-12 meal pattern for preschoolers and grades K-12 who eat in the same service area at the same time.

For more information on the meal pattern requirements for preschoolers and grade K-12 eating together, see “Serving the same foods to preschoolers and grades K-12,” “Preschoolers and grades K-5 eating together in the NSLP, SBP, and SSO,” and “Preschoolers and grades K-12 eating together in the ASP” in section 1.

For information on the WGR criteria for grades K-12, see the CSDE’s handout, *Whole Grain-rich Criteria for Grades K-12 in the NSLP and SBP*. For information on the differences between the grains component for preschoolers and grades K-12, see the CSDE’s handout, *Comparison of Meal Pattern Requirements for the Grains Component in School Nutrition Programs.*
WGR Criteria

WGR foods include 100 percent whole grains (every grain ingredient is whole grain) and foods that contain a blend of whole (at least 50 percent) and enriched grains. SFAs must determine if foods are WGR by using one of the six methods allowed by the USDA. These methods are summarized in the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP*.

The USDA’s “rule of three” is one of the methods that SFAs can use to determine if commercial foods meet the WGR criteria for the preschool meal patterns. The “rule of three” requires that the first ingredient (excluding water) is a whole grain, and the next two grain ingredients (if any) are creditable grains. When reviewing a commercial product’s ingredients statement for compliance with the preschool “rule of three” WGR criteria:

- a whole grain must be the first ingredient and may be the second or third grain ingredients;
- an enriched grain may be the second or third grain ingredients; and
- bran and germ may be the second or third grain ingredients.

If a food meets the “rule of three,” the menu planner does not need to check any other grain ingredients further down on the ingredients statement to verify if they are creditable.

Noncreditable grains cannot be any of the first three grain ingredients. Examples of noncreditable grains for the preschool meal patterns include legume flours, corn flour, corn grits, farina, malted barley flour, milled corn, nut or seed flours, oat fiber, potato flour, potato starch, rice, soy fiber, soy flakes, wheat flour, and yellow corn flour. For additional examples and more information on noncreditable grains, see the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP*.

**Note:** The “rule of three” applies only to the preschool meal patterns. SFAs cannot use the “rule of three” to determine if foods meet WGR criteria for the NSLP and SBP meal patterns for grades K-12. To determine if foods comply with the WGR criteria for grades K-12, SFAs must use the WGR criteria outlined in the CSDE’s handout, *Whole Grain-rich Criteria for Grades K-12 in the NSLP and SBP*.
Part B: Preschool WGR Requirement

The “rule of three” preschool WGR criteria are different for commercial grain products, commercial combination foods, cooked breakfast cereals, RTE breakfast cereals, and foods made on site by the SFA. These requirements are summarized below. For detailed guidance and examples of how to determine if grain products are WGR, see the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP.*

**WGR Criteria for Commercial Grain Products**

Under the “rule of three” preschool WGR criteria, commercial grain products in groups A-E (baked goods, such as breads, rolls, muffins, crackers, waffles, and pancakes) and group H (pasta and cereal grains, such as quinoa, rice, and millet) are WGR if they meet the following two criteria:

- a whole grain is the first ingredient (or water is the first ingredient and a whole grain is the second ingredient); and
- the next two grain ingredients (if any) are whole, enriched, bran, or germ.

The ingredients statements below show some examples of commercial grain products that meet the preschool “rule of three” WGR criteria.

**Ingredients:** Whole-wheat flour, sugar, wheat gluten. Contains 2% or less of each of the following: honey, salt, yeast, molasses, diacetyl tartaric acid esters of mono-diglycerides (datem), ascorbic acid, mono- and diglycerides, l-cysteine, enzymes.

**Ingredients:** Water, whole-wheat flour, yeast, wheat gluten, contains less than 2% of each of the following: soybean oil, sugar, salt, calcium propionate (preservative), fumaric acid, baking soda, monocalcium phosphate, calcium sulfate, ammonium sulfate.

**Ingredients:** Whole-wheat flour, enriched flour (wheat flour, niacinamide, reduced iron, thiamin mononitrate [vitamin B1], riboflavin [vitamin B2], folic acid), soybean oil with TBHQ for freshness, salt, contains two percent or less of corn syrup, baking soda, yeast, soy lecithin.
Multiple whole grains in commercial grain products

If a whole grain is not the first ingredient, but the grain product contains more than one whole grain, the SFA must obtain a PFS from the manufacturer that states the combined weight of all whole grains. The ingredients statement below shows an example.

Ingredients: Unbleached enriched wheat flour [flour, malted barley flour, reduced iron, niacin, thiamin mononitrate (vitamin B1), riboflavin (vitamin B2), folic acid], water, whole-wheat flour, whole oats, sugar, yeast, soybean oil, salt.

To meet the preschool WGR criteria, the product’s PFS must document that the combined weight of the two whole grains (whole-wheat flour and whole oats) is more than the weight of the first ingredient (unbleached enriched wheat flour). For information on PFS forms, see “Product Formulation Statements” in section 2. For guidance on how to evaluate a manufacturer’s PFS for a grain product, see “Evaluating PFS Forms for Grain Products” in section 3 of the CSDE’s guide, Menu Planning Guide for School Meals for Grades K-12.

WGR Criteria for Cooked Breakfast Cereals

Under the “rule of three” preschool WGR criteria, cooked breakfast cereals (instant and regular, such as oatmeal, cream of wheat, and farina) are WGR if they meet the following three criteria:

- the first ingredient is a whole grain;
- the next two grain ingredients (if any) are whole, enriched, bran, or germ; and
- the sugars per serving do not exceed 6 grams per dry ounce.

For more information, see “Sugar limit for breakfast cereals” in this section.

The ingredients statement below shows an example of a cooked 100 percent whole-grain cereal. To credit as the grains component, the menu planner must check that this cereal also complies with the preschool sugar limit.

Ingredients: Whole-grain rolled oats, sugar, natural flavors, salt.

For examples of how to determine if cooked breakfast cereals are WGR, see the CSDE’s handout, Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP. Menu planners may use the CSDE’s Excel worksheet, Child Care Worksheet 3: Crediting Cooked Breakfast Cereals in the CACFP, to determine if cooked breakfast cereals comply with the preschool WGR criteria. For more information, see “Grain Crediting Worksheets” in this section.
WGR Criteria for RTE Breakfast Cereals

RTE breakfast cereals are WGR if they meet the following three criteria:

- the first ingredient is a whole grain;
- the cereal is fortified; and
- the sugars per serving do not exceed 6 grams per dry ounce.

For more information, see “Sugar limit for breakfast cereals” in “Part A: Grain Crediting Requirements.”

The ingredients statement below shows an example of a whole-grain fortified RTE breakfast cereal. To credit as the grains component, the menu planner must check that this cereal also complies with the preschool sugar limit.

Ingredients: Whole-grain oat flour, sugar, corn flour, whole-wheat flour, rice flour, salt, calcium carbonate, disodium phosphate, reduced iron, niacinamide, zinc oxide, BHT (a preservative), yellow 5, yellow 6, thiamin mononitrate, pyridoxine hydrochloride, riboflavin, folic acid.

For examples of how to determine if RTE breakfast cereals are WGR, see the CSDE’s handout, Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP. Menu planners may use the CSDE’s Excel worksheet, Child Care Worksheet 2: Crediting Ready-to-eat (RTE) Breakfast Cereals in the CACFP, to determine if RTE breakfast cereals comply with the preschool WGR criteria. For more information, see “Grain Crediting Worksheets” in this section.
**WGR Criteria for Commercial Combination Foods**

Under the “rule of three” preschool WGR criteria, commercial combination foods that contain a grain portion from groups A-E (such as pizza crust in pizza and baked fish coated with bread crumbs) or groups H-I (such as noodles in lasagna and baked chicken coated with crushed cereal flakes) are WGR if:

- a whole grain is the first grain ingredient; and
- the next two grain ingredients (if any) are whole, enriched, bran, or germ.

The ingredients statement below shows an example of breaded chicken nuggets. This product meets the preschool “rule of three” WGR criteria because whole-wheat flour is the first and only grain ingredient.

**Separate grain portion in commercial combination foods**

A commercial combination food that lists the ingredients for the grain portion separately is WGR if a:

- whole grain is the first ingredient in the grain portion (or water is the first ingredient and a whole grain is the second ingredient); and
- the next two grain ingredients in the grain portion (if any) are whole, enriched, bran, or germ.

The ingredients statement below shows an example of a breaded chicken patty that lists the grain portion separately. This product meets the preschool “rule of three” WGR criteria because the first grain ingredient in the breading (grain portion highlighted in yellow) is a whole grain, and the second and only other grain ingredient is an enriched grain.

**Ingredients:** Boneless, skinless chicken breast with rib meat, water, whole wheat flour, contains 2% or less of the following: dried garlic, dried onion, salt, sea salt, soybean oil, spice, sugar, torula yeast, turmeric, yeast, yeast extract. Breading set in vegetable oil.

**Ingredients:** Chicken, water, salt and natural flavor. **Breaded with:** white whole-wheat flour, water, salt, enriched yellow corn flour, dried onion, dried garlic, dried yeast, brown sugar, extractives of paprika, and spices. Breading set in vegetable oil.
Multiple whole grains in commercial combination foods
If a whole grain is not the first ingredient, but the grain portion of the combination food contains more than one whole grain, the SFA must obtain a PFS from the manufacturer to determine crediting information. The ingredients statement below shows an example of a breaded chicken patty that lists multiple whole grains.

Ingredients: Chicken, water, salt and natural flavor. **Breaded with:** unbleached enriched wheat flour [flour, malted barley flour, reduced iron, niacin, thiamin mononitrate (vitamin B1), riboflavin (vitamin B2), folic acid], water, whole-wheat flour, whole oats, dried onion, dried garlic, dried yeast, brown sugar, extractives of paprika, and spices. Breading set in vegetable oil.

To meet the preschool WGR criteria, the product’s PFS must document that the combined weight of the two whole grains (whole-wheat flour and whole oats) in the breading (grain portion highlighted in yellow) is the greatest ingredient by weight. For information on PFS forms, see “Product Formulation Statements” in section 2. For guidance on how to evaluate a manufacturer’s PFS for a grain product, see “Evaluating PFS Forms for Grain Products” in section 3 of the CSDE’s guide, **Menu Planning Guide for School Meals for Grades K-12.**

WGR Criteria for Grain Foods Made on Site
Grain foods made on site by the SFA (such as breads, rolls, muffins, waffles, and pancakes) are WGR if:

- a whole grain is equal to or greater than the combined weight of all other creditable grains in the standardized recipe; or
- the combined weight of all whole grains is equal to or greater than the combined weight of all other creditable grains in the standardized recipe.

The examples below show recipes that meet the preschool WGR criteria.

- A muffin recipe contains 2 pounds of whole-wheat flour and 2 pounds of enriched flour. This recipe is WGR because the weight of the whole grain and enriched flour are the same.

- A bread recipe contains ¾ pound of whole-grain flour, ½ pound of rolled oats, and 1 pound of enriched flour. This recipe is WGR because the combined weight (1¼ pounds) of the two whole grains (whole-grain flour and rolled oats) exceeds the weight of the enriched flour.

For examples of how to determine if grain foods made on site are WGR, see the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP.*
WGR Criteria for Combination Foods Made on Site

For combination foods made on site by the SFA that contain a grain portion from groups A-E (such as pizza crust in pizza and baked fish coated with bread crumbs) or groups H-I (such as noodles in lasagna and baked chicken coated with crushed cereal flakes), the “rule of three” preschool WGR criteria apply only to the grain portion. The grain portion is WGR if:

- the weight of the whole grain is equal to or greater than the combined weight of all other creditable grains in the standardized recipe; or
- the combined weight of all whole grains) is equal to or greater than the combined weight of all other creditable grains in the standardized recipe.

Required Documentation for Grains

SFAs must maintain documentation on file to indicate that grain products and recipes comply with the preschool crediting and WGR requirements. Acceptable documentation for commercial products includes CN labels (if the grain portion is part of a meat/meat alternate) and PFS forms. Standardized recipes are required for foods made on site by the SFA. The CSDE will review this documentation as part of the Administrative Review of school nutrition programs. For more information, see “Documentation for Commercial Products” in section 2.

The CSDE recommends that SFAs include information on the preschool menu about the type of grain item. This helps to document meal pattern compliance and provide information for families about the types of grains served in preschool meals and snacks. For example, the menu planner could list:

- “whole-wheat bread,” “whole grain-rich bread,” or “enriched white bread” instead of “bread;”
- “brown rice” or “enriched rice” instead of “rice;”
- “enriched spaghetti” instead of “spaghetti;”
- “whole-corn tortilla” instead of “tortilla;” and
- “fortified whole-grain cereal” instead of “breakfast cereal.”
Other acceptable methods for documenting WGR grains on preschool menus include using:

- abbreviations, such as “WW bread” for whole-wheat bread or “WGR blueberry muffin” for whole grain-rich blueberry muffin;
- symbols to indicate WGR foods; or
- a check box to signify that a food is WGR.

When using abbreviations or symbols, SFAs should include a key on the menu to help families and staff understand what the symbols mean.

SFAs should indicate the crediting and WGR information for the grains component on the daily production record, or provide other menu documentation, such as:

- a binder of nutrition information for commercial products that includes Nutrition Facts labels and ingredients statements;
- a list of all grain products served and whether they are WGR (including 100 percent whole grain products), enriched, or fortified (breakfast cereals only);
- standardized recipes for foods made on site; and
- CN labels and PFS forms for commercial foods.

SFAs must also maintain documentation on file to indicate that all breakfast cereals meet the preschool sugar limit. Documentation should include the products’ Nutrition Facts label and the SFA’s calculation showing that the cereal contains no more than 6 grams of sugars per dry ounce. For more information, see “Sugar limit for breakfast cereals” in “Part A: Preschool Crediting Requirements.”
Part C: Preschool Serving Size

Grains served in preschool meals and ASP snacks must provide the required amount specified in the preschool meal patterns. Through September 30, 2021, the amounts for the grains component are in servings. The amount of a grain food that provides ½ serving varies because different types of foods contain different amounts of creditable grains.

The USDA allows two methods for determining the preschool serving for the grains component. These methods are summarized below. For detailed guidance on both methods, see the CSDE’s handout, *Calculation Methods for Grain Servings for Preschoolers in the NSLP, SBP, and ASP*.

**Method 1: Weight or volume (USDA’s grain servings chart)**

Method 1 determines the preschool serving for commercial grain products using the appropriate weight (groups A-E) or volume (groups H-I) in the USDA’s grain servings chart. This chart groups foods based on the average grain content of similar products. The minimum creditable amount is ¼ serving. **Note:** Groups F and G do not have crediting amounts because the grain-based desserts in these groups do not credit in the preschool meal patterns. For more information, see “Grain-based Desserts” in this section.

Through September 30, 2021, the required preschool amount is ½ serving. For more information, see the CSDE’s handout, *Grain Servings for Preschoolers in the NSLP, SBP, and ASP*.

- **Groups A-E (baked goods, excluding grain-based desserts):** Baked goods (such as crackers, animal crackers, graham crackers, breads, rolls, taco shells, muffins, waffles, and pancakes) require 7.38 grams of creditable grains to credit as ½ serving. The amount that provides ½ serving varies from 10 grams (0.4 ounces) for foods in group A to 31 grams (1.1 ounces) for foods in group E.

- **Group H (cereal grains):** Pasta, cooked breakfast cereals, and cereal grains (such as amaranth, barley, buckwheat, cornmeal, corn grits, farina, kasha, millet, oats, quinoa, wheat berries, and rolled wheat) require ¼ cup cooked or 13 grams (0.5 ounce) dry to credit as ½ serving. Cereal grains typically credit based on the cooked serving, but SFAs may choose to use the dry uncooked weight. **Note:** Dry cereal grains used as an
Part C: Preschool Serving Size

An ingredient in a recipe (such as rolled oats in bread) credit the same as groups A-E; they require 7.38 grams of creditable grains to credit as ½ serving. For guidance on the crediting and serving size requirements for cooked breakfast cereals, see the CSDE’s handout, *Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP*.

- **Group I (RTE breakfast cereals):** RTE breakfast cereals require ¼ cup or ⅓ ounce (10 grams) for ages 1-2; and ⅜ cup or ½ ounce (14 grams) for ages 3-4. If the appropriate volume of cereal weighs less than the required amount, it still credits as ½ serving. For example, ⅜ cup of flaked cereal that weighs 13 grams credits as ½ serving for ages 3-4. For guidance on crediting RTE breakfast cereals, see the CSDE’s handout, *Crediting Breakfast Cereals for Preschoolers in the NSLP, SBP, and ASP*.

The USDA’s grain servings chart applies to all creditable commercial grain products. SFAs may also use this chart for creditable grain foods made on site, if the standardized recipe indicates the weight of the prepared (cooked) serving. If the standardized recipe does not provide this information, the SFA must calculate the average weight per serving by weighing at least four samples of the cooked product. For more information, see the CSDE’s handout, *Yield Study Data Form*.

**Note:** Effective October 1, 2021, the required amount for the grains component changes to ounce equivalents. The required preschool amount is ½ ounce equivalent. For more information, see the CSDE’s handout, *Grain Ounce Equivalents for Preschoolers in the NSLP, SBP, and ASP*.

**Method 2: Creditable grains**

Method 2 determines the preschool serving for grain products and recipes by calculating the total weight (grams) of creditable grains per serving. A food in groups A-E of the USDA’s grain servings chart must contain 7.38 grams of creditable grains to credit as ½ serving (the required preschool amount). A food in groups H-I of the USDA’s grain servings chart must contain 13 grams of creditable grains to credit as ½ serving.

- **Commercial products:** SFAs must obtain a manufacturer’s PFS that indicates the weight of all creditable grains per serving of the product. This information cannot be determined from the product’s Nutrition Facts label or packaging. For more information, see “Documentation for Commercial Products” in section 2.
Part C: Preschool Serving Size

- **Foods made on site:** SFAs must determine the amount of creditable grains per serving from the weights listed for each grain ingredient in the standardized recipe. If the recipe lists grain ingredients by volume (e.g., cups and quarts), the SFA must calculate the equivalent weight (grams) for each grain ingredient. For more information, see “Standardized Recipes” in section 2.

The CSDE encourages SFAs to use method 2 for foods made on site because it provides more accurate crediting information.

### When method 2 is required for commercial products

There are five situations when SFAs must use method 2 (instead of the USDA’s grain servings chart) to determine the preschool serving for commercial grain products.

1. **Multiple creditable grains:** A creditable grain is not the first ingredient (excluding water), but the product contains more than one creditable grain. SFAs must obtain a PFS from the manufacturer to document that the combined weight of all creditable grains is the greatest ingredient. For more information, see “Multiple creditable grains in commercial grain products,” “Multiple creditable grains in commercial combination foods,” “Multiple whole grains in commercial grain products,” and “Multiple whole grains in commercial combination foods” in this section.

2. **Combination foods:** A commercial combination food contains a grain portion from groups A-E or H-I of the USDA’s grain servings chart. Examples include pizza crust in pizza, noodles in lasagna, and baked chicken coated with bread crumbs or crushed cereal flakes. SFAs must obtain a PFS from the manufacturer that documents the amount of creditable grains in the grain portion of the product.

3. **Manufacturer’s crediting claim:** The manufacturer claims that a commercial product can provide the minimum creditable grains using a serving that is less than the minimum weight or volume specified for that product’s group in the USDA’s grain servings chart.

4. **Product not listed:** A commercial product does not belong to one of the nine groups listed in the USDA’s grain servings chart.

5. **SFA credits a product differently:** The SFA wants to credit a commercial product differently from the servings listed in the USDA’s grain servings chart.
Part C: Preschool Serving Size

For each situation described above, SFAs must obtain a manufacturer’s PFS that states the amount of creditable grains per serving. The PFS must also demonstrate how the product provides this amount according to the USDA’s regulations, guidance, or policy. SFAs must verify the accuracy of the product’s PFS prior to including the product in reimbursable meals. For guidance on how to evaluate a manufacturer’s PFS for a grain product, see “Evaluating PFS Forms for Grain Products” in section 3 of the CSDE’s guide, *Menu Planning Guide for School Meals for Grades K-12*.

SFAs must maintain all crediting documentation on file. The CSDE will review this information during the Administrative Review of school nutrition programs.

**Note:** If the manufacturer will not supply a PFS, or the PFS does not provide the appropriate documentation, SFAs cannot use the product to credit as the grains component.
Part C: Preschool Serving Size
4 — Meal Service

In addition to the USDA meal pattern requirements, SFAs must comply with other USDA and state regulations and policies regarding meal service in the school nutrition programs. This section addresses the meal service requirements for the NSLP and SBP, including water availability, Connecticut’s statute regarding lunch periods, prohibition of gender separation, and family-style meal service.

Water Availability

The HHFKA requires that schools participating in the NSLP, SBP, SSO, and ASP must make plain potable water available to children at no cost during the meal service. The water must be available without restriction in the location where meals are served. Water must also be made available for meals and ASP snacks that are served outside of the cafeteria, such as meals served in a classroom or during in-school suspension. Schools can implement this requirement in a variety of ways, which include:

- offering water pitchers and cups on tables or in an area that is easily accessible to all children during meals and ASP snacks; and

- providing a water fountain or a faucet that allows students to fill their own bottles or cups with drinking water. The location of the water fountain must be in the foodservice area or immediately adjacent, such as a water fountain that is right outside the door to the foodservice area and accessible to all students during the meal period.

While water must be made available to students during meal service, water is not a meal pattern component and is not part of the reimbursable meal or ASP snack. Students are not required to take water. SFAs cannot promote or offer water or any other beverage as an alternative selection to fluid milk throughout the food service area.

The USDA does not provide separate funding for this provision and schools cannot claim reimbursement for water. However, reasonable costs associated with providing potable water would be an allowable cost to the nonprofit food service account.
Lunch Periods

Lunch periods in Connecticut schools are governed by state and federal regulations. The CSDE’s Circular Letter C-9: Federal and State Requirements for Provision and Timeframe of Daily Lunch Period for Students, summarizes the federal and state requirements.

C.G.S. Section 10-221o mandates that each local and regional board of education requires each school under its jurisdiction to offer all full-day students a daily lunch period of not less than 20 minutes.

The USDA’s regulations specify that schools and institutions participating in the NSLP must serve lunches during the time frame of 10:00 a.m. to 2:00 p.m. SFAs must submit a written request to the CSDE for a waiver if lunches will be served before or after this time frame. The district must submit the exemption request for the upcoming school year by July 1 of each school year.

The CSDE evaluates the circumstances of each request to determine whether it meets one of the USDA’s criteria for an exemption from the specified time frame for lunch. These criteria are based on USDA’s memo, Granting Exemptions to the Lunch Period, and are summarized below.

1. The CSDE may grant reasonable variances from the meal service requirements to accommodate special circumstances encountered in schools operating for traditional students at traditional times. For example, if a school has a legitimate need to extend the lunch service to 2:30 p.m. due to capacity concerns or because of extended school hours, an exception would be considered a special circumstance.

2. The CSDE may grant exemptions from the meal service requirements if the school operates for traditional students but at a nontraditional time. For example, a school may need to provide lunch service from 3:00 to 4:00 p.m. to accommodate a work-study program that allows high school students to work in the morning and attend high school classes in the later afternoon or evening. Approval of an exemption for this specific circumstance will only be granted if these alternative programs provide students of high school grade or lower an opportunity to obtain the minimum requirements for graduation at a nontraditional time, and it is not possible to serve lunch at a more traditional time.
The written request for a waiver must be submitted to the CSDE by the superintendent and must include the special circumstances at the school that necessitate a change in the time frame for lunch. The CSDE will grant exemptions only if the school’s schedule meets one of the two USDA criteria specified above. The CSDE will not grant exemptions for routine scheduling choices such as block schedules.

For more information, see the CSDE’s Circular Letter C-9: Federal and State Requirements for Provision and Timeframe of Daily Lunch Period for Students and Operational Memorandum No. 10-19: Requirements for Lunch Periods in the National School Lunch Program (NSLP).

**Breakfast Periods**

The USDA’s regulations for the SBP (7 CFR 220.2) do not state a specific time period for breakfast, but require that breakfast shall be served at or close to the beginning of the child's day at school. The CSDE recommends that scheduled mealtimes provide students with at least 10 minutes to eat after sitting down for breakfast. This time does not include the time needed to walk to the cafeteria from the classroom, select and pay for the meal, sit down at a table, and walk back to the classroom after the meal.

**Meal Schedules**

SFAs should schedule meal services to ensure good nutrition practices and minimize food waste. Generally, most children need to eat within 3 to 4 hours of their last meal.

- When the time span between breakfast and lunch is too short, children will not be hungry for lunch. An example is breakfast ending at 9:30 a.m. and lunch starting at 10:00 a.m., for the same group of children.

- When the time span between breakfast and lunch is too long, children can experience hunger symptoms (such as fatigue, irritability, inability to concentrate, weakness, and stomach pains) that can interfere with learning. An example is breakfast ending at 8:00 a.m. and lunch starting at 1:00 p.m., for the same group of children.

SFAs should work with their school administrators to consider the appropriateness of timing and scheduling of all meals (and ASP snacks, if offered).
Prohibition of Gender Separation

In general, the USDA’s nondiscrimination laws and policies in 7 CFR Parts 15, 15a, and 15b do not permit SFAs participating in the USDA’s school nutrition programs to separate children on any protected basis during meal service. Federal law prohibits discrimination based on gender at any educational institution receiving federal assistance. The USDA allows only two exceptions to the prohibition of gender-separated meal service, as described below.

1. Coeducational schools and school-based sites: The USDA recognizes religious exemptions granted by the federal Department of Education (ED) without prior express approval. ED guidelines allow school and school-based sites to apply for an exemption when federal law prohibiting gender separation is inconsistent with the institution’s religious tenets. These exemptions apply broadly to operations, including the meal service at a given site, such as a faith-based school. Additionally, ED guidelines specifically allow for the approval of gender-separate instruction at public primary and secondary non-vocational schools that could take a variety of forms. Since the general rule is that gender separation during meal service is prohibited, a coeducational school may not use limited ED approval of gender-separate instruction to justify blanket gender separation during meal service. Limited exemptions in these situations must be approved by the USDA.

2. Other institutions and organizations: State agencies may approve exemptions allowing separation by gender during meal service without express prior approval from the USDA in the following circumstances:
   - meal service at religious institutions operating under the dictates of the religion with which they are affiliated;
   - meal service at juvenile correctional facilities where combining members of the opposite gender would present a potential safety risk; and
   - meal service at facilities that fully separate by gender as part of their normal operations, e.g., gender-separated summer camps.

The local educational agency (LEA) must submit the request in writing to the CSDE. LEAs must specify which reason applies and why separation by gender is necessary. For more information on the exemption process, see CSDE Operational Memorandum No. 30-15: Guidance on Prohibition of Separation by Gender during Child Nutrition Program Meal Service.

The exceptions described above are the only acceptable bases for gender separation during meal service in the USDA’s school nutrition programs. Any gender separation not based on the ED or USDA approval processes is strictly prohibited.
Situations that do not clearly fit into any of the exemptions outlined above may be considered on a case-by-case basis by the CSDE in direct consultation with the USDA Food and Nutrition Services (FNS) Regional Office, including the FNS Civil Rights Office and appropriate FNS National Office Child Nutrition Program staff.

**Family-style Meal Service**

Family style is a type of meal service that allows children to serve themselves from common platters of food with assistance from supervising adults. Meals served family style to preschoolers must follow the procedures below to ensure compliance and be eligible for reimbursement.

- A sufficient amount of prepared food and the appropriate type of milk must be placed on each table to provide the full-required portions of each of the food components for all children at the table and to accommodate the supervising adults. **Note:** Milk for ages 2-4 must be unflavored low-fat or fat-free milk. For more information, see “Milk Component” in section 3.

- Children must initially be offered the full-required portion of each meal component. However, since replenishment is immediately available at each table, children may select an initial serving of a food component or food item that is less than the full-required minimum quantity. If children do not take the minimum required serving size of a food component, the meal is still reimbursable. The supervising adult should encourage additional portions and selections to meet the full-required serving, as appropriate.

- Children are not required to take a minimum quantity of fruits or vegetables for a reimbursable meal, if the offered meals meet the preschool meal patterns. OVS is not allowed for preschool meals. However, if the SFA chooses to serve the K-5 meal pattern to preschoolers and grades K-5 who eat together in the same service area at the same time, and the SFA also implements OVS, the OVS requirements apply to all children including preschoolers. In this case, all children must take at least ½ cup of fruits or vegetables and the full serving of at least two other components for a reimbursable meal. For more information on serving preschoolers and grades K-5 together, see “Preschoolers and grades K-5 eating together in the NSLP, SBP, and SSO” in section 1.
4 | Meal Service

- During the course of the meal, the supervising adults are responsible for actively encouraging each child to accept service of the full-required portion (minimum daily serving) for each food component of the USDA meal patterns. For example, if a child initially refuses a food component or does not accept the full-required portion, the supervising adults should offer the food component to the child again. However, if children choose not to self-serve or consume the full minimum required serving size of a food component, the meal is still reimbursable.

- Second meals and second servings cannot be claimed for reimbursement. SFAs can claim only one reimbursable breakfast and one reimbursable lunch for each child per day.

Family-style meal service must be strictly supervised to ensure that schools serve reimbursable meals and follow adequate daily collection procedures. An adult must be present and monitor the entire process at each table to ensure that children take a reimbursable meal. The adult must track children each day to determine who ate lunch in each meal eligibility category (free, reduced, and paid), without overt identification of the child’s eligibility status.

The CSDE has observed many compliance issues with family-style meal service. Schools must carefully consider whether they can successfully implement family-style meal service so that all meals comply with the USDA requirements for the preschool meal patterns. Due to the high level of supervision required during family-style meal service, many schools do not implement this type of meal service.

Requirement for written procedures

Schools that choose to implement family-style meal service for preschoolers must develop written procedures. These procedures must indicate how the SFA will implement family-style meal service and provide assurances that the SFA will:

- prepare and offer the minimum serving for each required component in the preschool meal patterns;
- monitor reimbursable meals by a trained supervising adult at each table;
- claim meals based on a child’s free, reduced, or paid status;
- prevent overt identification during family-style meal service;
- conduct and document adequate training for supervising adults, including how to implement family-style meal service, the preschool meal pattern requirements, and what constitutes a reimbursable meal.
These procedures must be shared with all staff and supervising adults involved in implementing family-style meal service and must be available for audit purposes.

For additional guidance on family-style meal service, see USDA Memo SP 35-2011: *Clarification on the Use of Offer Versus Serve and Family Style Meal Service*. SFAs may contact their assigned CSDE school nutrition consultant for technical assistance. For more information, see the CSDE’s handout, *County Assignments for School Nutrition Programs*.

Glossary

**a la carte sales:** Foods and beverages that are sold separately from reimbursable meals in the USDA school nutrition programs.

**added sugars:** Sugars and syrups added to foods in processing or preparation, as opposed to the naturally occurring sugars found in foods like fruits, vegetables, grains, and dairy products. Names for added sugars include brown sugar, corn sweetener, corn syrup, dextrose, fructose, fruit juice concentrates, glucose, high-fructose corn syrup, honey, invert sugar, lactose, malt syrup, maltose, molasses, raw sugar, sucrose, sugar, and syrup.

**Administrative Review (AR):** The state agency's comprehensive offsite and onsite evaluation of all SFAs participating in the NSLP and SBP. The review cycle is every three years for each SFA, and includes a review of both critical and general areas. For more information, visit the CSDE's Administrative Review for School Nutrition Programs webpage.

**Afterschool Snack Program (ASP):** The USDA’s federally assisted snack program implemented through the National School Lunch Program (NSLP). The ASP provides cash reimbursement to help schools serve snacks to children in afterschool activities aimed at promoting the health and well-being of children and youth. Schools must provide children with regularly scheduled activities in an organized, structured and supervised environment that includes educational or enrichment activities, e.g., mentoring/tutoring programs. Programs must meet state or local licensing requirements and health and safety standards. For more information, visit the CSDE’s Afterschool Snack Program webpage.

**alternate protein products (APPs):** APPs are generally single ingredient powders that are added to foods. Some examples include soy flours, soy concentrates, soy isolates, whey protein concentrate, whey protein isolates, and casein. APPs include vegetable protein products. The USDA has specific requirements for the crediting of APPs in Child Nutrition Programs. For more information, see “Alternate Protein Products” in section 3, and the CSDE’s handout, Requirements for Alternate Protein Products in the NSLP and SBP.
Glossary

artificial sweeteners: Ingredients with little or no calories used as sugar substitutes to sweeten foods and beverages. Artificial sweeteners are hundreds of times sweeter than sugar. Common artificial sweeteners include acesulfame potassium (Acesulfame-K, Sunett, Sweet & Safe, Sweet One), aspartame (Nutrasweet, Equal), neotame, saccharin (Sweet and Low, Sweet Twin, Sweet ‘N Low Brown, Necta Sweet), sucralose (Splenda), and tagatose. These nonnutritive sweeteners are calorie-free, except for aspartame, which is very low in calories. For more information, see “nonnutritive sweeteners” in this section.

bran: The protective coating around the whole-grain kernel that is rich in nutrients, fiber and other health promoting substances called phytochemicals. Bran is not a whole grain. Note: Bran credits in the preschool meal patterns for the NSLP, SBP and ASP; and in the ASP meal pattern for grades K-12. However, it does not credit in the NSLP and SBP meal patterns for grades K-12.

cereal grains: The seeds that come from grasses. Cereal grains can be whole grain (such as amaranth, barley, buckwheat, corn, millet, oats, quinoa, rice, rolled wheat, rye, sorghum, triticale, wheat, and wheat berries) or enriched, such as cornmeal, corn grits, and farina.

Child and Adult Care Food Program (CACFP): The USDA’s federally assisted meal program providing nutritious meals and snacks to children in child care centers, family day care homes, and emergency shelters, and snacks and suppers to children participating in eligible at-risk afterschool care programs. The CACFP also provides meals and snacks to adults who receive care in nonresidential adult day care centers. For more information, visit the USDA’s CACFP webpage and the CSDE’s CACFP webpage.

Child Nutrition (CN) label: A statement that clearly identifies the contribution of a food product toward the USDA’s meal patterns, based on the USDA’s evaluation of the product’s formulation. Products eligible for CN labels include main dish entrees that contribute to the meat/meat alternates component of the meal pattern requirements, e.g., beef patties, cheese or meat pizzas, meat or cheese and bean burritos, egg rolls, and breaded fish portions. The CN label will usually indicate the contribution of other meal components (such as vegetables, grains, and fruits) that are part of these products. For more information, see “Child Nutrition CN Labels” in section 2, the CSDE’s handout, Child Nutrition (CN) Labeling Program, and the USDA’s Child Nutrition (CN) Labeling webpage.

Child Nutrition Programs: The USDA’s federally funded programs that provide nutritious meals and snacks to children, including the National School Lunch Program (NSLP), School Breakfast Program (SBP), Afterschool Snack Program (ASP), Special Milk Program (SMP), Summer Food Service Program (SFSP), Seamless Summer Option (SSO) of the NSLP, Fresh Fruit and Vegetable Program (FFVP), and Child and Adult Care Food Program (CACFP). The CACFP also provides nutritious meals and snacks to the frail elderly in adult day care centers. For more information, visit the CSDE’s Child Nutrition Programs webpage.
**competitive foods:** Any foods and beverages sold to students anytime on school premises other than meals served through the USDA’s school meal programs. Competitive food sales include, but are not limited to, cafeteria a la carte sales, vending machines, school stores, and fundraisers. For more information, visit the CSDE’s Competitive Foods in Schools webpage and review the CSDE’s guides, **Guide to Competitive Foods in HFC Public Schools**, **Guide to Competitive Foods in Non-HFC Public Schools**, and **Guide to Competitive Foods in Private Schools and RCCIs**.

**Connecticut Nutrition Standards:** State nutrition standards developed by the Connecticut State Department of Education per Section 10-215e of the Connecticut General Statutes. These standards address the nutritional content of all foods sold to students separately from reimbursable meals. They focus on limiting fat, saturated fats, trans fats, sodium, and added sugars, moderating portion sizes, and increasing consumption of nutrient-rich foods such as fruits, vegetables, whole grains, low-fat dairy, lean meats, and legumes. All schools in any district that chooses to comply with the healthy food option of Healthy Food Certification under Section 10-215f of the Connecticut General Statutes must follow the Connecticut Nutrition Standards for all sources of food sales to students, including school cafeterias, vending machines, school stores, fundraisers, and any other sources. The Connecticut Nutrition Standards also apply to all snacks served in the Afterschool Snack Program. For more information, visit the CSDE’s Connecticut Nutrition Standards webpage.

**creditable food:** A food or beverage that counts toward the meal pattern requirements for a reimbursable meal or snack in the USDA Child Nutrition Programs. For more information, visit the “Documents/Forms” section of the CSDE’s Meal Patterns for Preschoolers in School Nutrition Programs webpage.

**cycle menu:** A series of menus planned for a specific period of time, with a different menu for each day. Cycle menus can help SFAs to increase variety, control food cost, and save time. For more information, see “Cycle menus” in section 2.

**deep-fat frying:** Cooking by submerging food in hot oil or other fat. The USDA final rule for the CACFP meal patterns (including the meal patterns for preschoolers in the NSLP and SBP) prohibits deep-fat frying foods on site for the CACFP and preschoolers in the NSLP, SBP, and ASP.

**Dietary Guidelines for Americans:** A federal document that provides science-based advice for Americans ages 2 and older to promote health and reduce risk for chronic diseases through diet and physical activity. The U.S. Department of Health and Human Services and the U.S. Department of Agriculture jointly publish the *Dietary Guidelines* every five years. This document forms the basis of federal food, nutrition education and information programs. For more information, visit the Dietary Guidelines for Americans webpage.
disability: A condition in which a person has a physical or mental impairment that substantially limits one or more major life activities, has a record of such an impairment, or is regarded as having such an impairment. For more information, see the CSDE’s guide, *Accommodating Special Diets in School Nutrition Programs*.

edible portion: The portion of a food that can actually be eaten after the nonedible parts are removed, for example, cooked lean meat without bone, and fruit without seeds or pits.

endosperm: The soft, white inside portion of the whole-grain kernel. The endosperm contains starch, protein, and small amounts of B vitamins.

enriched grains: Refined grains (such as wheat, rice, and corn) and grain products (such as cereal, pasta, and bread) that have some vitamins and minerals added to replace the nutrients lost during processing. The five enrichment nutrients are added within limits specified by the FDA, and include thiamin (B₁), riboflavin (B₂), niacin (B₃), folic acid, and iron. For more information, see the CSDE’s handout, *Crediting Enriched Grains in the NSLP and SBP*.

enrichment: Adding back nutrients (usually vitamins or minerals) originally present in a food that were lost during processing. Enrichment nutrients are added back in approximately the same levels as were originally present in the food. For more information, see “enriched grains” in this section.

family-style meal service: A method of meal service that allows children to serve themselves from common platters of food with assistance from supervising adults, if needed. For more information, see “Family-style Meal Service” in section 4.

fluid milk substitutes: Nondairy beverages (such as soy milk) that can be used as a substitute for fluid milk in the USDA Child Nutrition Programs. For reimbursable meals and ASP snacks, nondairy beverages served to children without disabilities must comply with the USDA nutrition standards for milk substitutes. For more information, see “USDA’s nutrition standards for fluid milk substitutes” in section 3.

food components: The five food groups that comprise reimbursable meals in the USDA Child Nutrition Programs, including milk, fruits, vegetables, grains, and meat/meat alternates. For information on the individual food components, see section 3 and visit the “Documents/Forms” section of the CSDE’s *Meal Patterns for Preschoolers in School Nutrition Programs* webpage.

food-based menu planning: A type of menu planning for the USDA’s Child Nutrition Programs that uses a meal pattern with specific food components in certain amounts based on specific age/grade groups. For more information, see “food components” in this section and the meal patterns in section 1.
**fortification:** Adding nutrients (usually vitamins or minerals) that were not originally present in a food or beverage or adding nutrients at levels that are higher than originally present. Fortification is used for naturally nutrient-rich products based on scientifically documented health needs (e.g., fortifying milk with vitamin D to increase the body’s absorption of calcium), or to enhance the perceived nutritional value of products with little or no natural nutritional value, e.g., an “energy” bar made from processed flour that is fortified with multiple vitamins and minerals. Fortification nutrients are added to products in varying amounts, from small percentages up to amounts greater than recommended intakes.

**fruits component:** The meal component of the USDA meal patterns that is comprised of fruits (fresh, frozen, canned, and dried) and pasteurized full-strength juice. Up to half of the weekly fruit offerings may be in the form of full-strength juice. For more information, see “Fruits Component” in section 3.

**full component:** The daily quantity designated by the menu planner (no less than the established minimum) to meet the required weekly ranges.

**full serving:** See “full component” in this section.

**full-strength fruit or vegetable juice:** An undiluted product obtained by extraction from sound fruit. Full-strength juice may be fresh, canned, frozen or reconstituted from concentrate and may be served in either liquid or frozen state. The name of the full-strength fruit juice on the label must include one of the following terms: “juice,” “full-strength juice,” “100 percent juice,” “reconstituted juice,” or “juice from concentrate.” **Note:** The preschool meal patterns allow pasteurized full-strength juice to credit as the vegetables or fruits component at only one preschool meal or ASP snack per day, between all meals and ASP snacks served to preschoolers. For more information, see “Juice limit” in section 3 and the CSDE’s handout, *Crediting Juice for Preschoolers in the NSLP, SBP, and ASP.*

**germ:** The sprouting section of the whole-grain kernel that contains B vitamins, vitamin E, trace minerals, healthy fats, antioxidants, and phytochemicals. Germ is not a whole grain. **Note:** Germ credits in the preschool meal patterns for the NSLP, SBP and ASP; and in the ASP meal pattern for grades K-12. However, it does not credit in the NSLP and SBP meal patterns for grades K-12.

**grains component:** The meal component of the USDA meal patterns that is comprised of cereal grains and products made from their flours. To credit as the grains component, all foods be whole grain-rich or enriched. Breakfast cereals must be whole grain-rich, enriched, or fortified. For more information, see “Grains Component” in section 3.
**Glossary**

**Healthy Food Certification:** A state statute (Section 10-215f of the Connecticut General Statutes) that requires each board of education or governing authority for all public schools participating in the NSLP to certify annually to the CSDE whether they will follow the Connecticut Nutrition Standards (CNS) for all foods sold to students separately from reimbursable meals. Districts that choose to implement the CNS receive additional funding per lunch, based on the total number of reimbursable lunches (paid, free, and reduced) served in the district in the prior school year. For more information, visit the CSDE’s Healthy Food Certification webpage.

**hominy:** A traditional food in Mexican and Native American cultures that is commonly served as a vegetable or milled grain product, e.g., hominy grits. Hominy is made from whole kernels of maize (dried field corn) that have been soaked in an alkaline solution (nixtamalized). This process removes the hull and germ, causes the corn to puff up to about double its normal size, and increases the bioavailability of certain nutrients, such as calcium and niacin. For crediting information, see “Crediting Hominy as Vegetables” and “Crediting Hominy as Grains” in section 3.

**juice drink:** A product resembling juice that contains full-strength juice along with added water and possibly other ingredients, such as sweeteners, spices, or flavorings. Juice drinks do not credit toward the meal pattern requirements.

**lactose:** The naturally occurring sugar found in milk. Lactose contains glucose and galactose. For more information, see “simple carbohydrates (sugars) in this section.

**local educational agency (LEA):** A public board of education or other public or private nonprofit authority legally constituted within a state for either administrative control or direction of, or to perform a service function for, public or private nonprofit elementary schools or secondary schools in a city, county, township, school district, or other political subdivision of a state, or for a combination of school districts or counties that is recognized in a state as an administrative agency for its public or private nonprofit elementary schools or secondary schools. The term also includes any other public or private nonprofit institution or agency having administrative control and direction of a public or private nonprofit elementary school or secondary school, including residential child care institutions, Bureau of Indian Affairs schools, and educational service agencies and consortia of those agencies, as well as the state educational agency in a state or territory in which the state educational agency is the sole educational agency for all public or private nonprofit schools.

**main dish:** The main dish is generally considered the main food item in the menu, which is complemented by the other food items. Examples of main dish items include pizza, chicken stir-fry, and chef’s salad with ham, hard-boiled egg, and cheese.
masa harina: Corn flour used for making corn products such as tortillas, tortilla chips, and tamales. Masa harina is nixtamalized and credits as a whole grain. For more information, see “Crediting Corn Masa, Masa Harina, Corn Flour, and Cornmeal” in section 3.

meal pattern: The required food components and minimum servings that schools and institutions participating in the USDA’s Child Nutrition Programs must provide to receive federal reimbursement for meals and snacks served to children. For more information, see the preschool breakfast, lunch, and snack meal patterns in section 1.

meal: A grain made by coarsely grinding corn, oats, wheat, or other grains. Meal credits toward the USDA’s meal patterns only if it is whole grain, enriched, or fortified.

meals: See “reimbursable meals” in this section.

meat alternates: Foods that provide similar protein content to meat. Meat alternates include alternate protein products, cheese, eggs, cooked dry beans or peas, nuts and seeds and their butters (except for acorn, chestnut and coconut), tofu and other soy products containing at least 5 grams of protein in 2.2 ounces (weight) or ¼ cup (volume), tempeh, and yogurt (plain or flavored) containing no more than 23 grams of sugars per 6 ounces. For more information, see “Meat/Meat Alternates Component” in section 3.

meat/meat alternates component: The meal component of the USDA meal patterns that includes meats (e.g., beef, poultry, and fish) and meat alternates, such as eggs, cheese, yogurt, beans and peas (legumes) nuts, and seeds. For more information, see “Meat/Meat Alternates Component” in section 3.

medical statement: A document that identifies the specific medical conditions and appropriate dietary accommodations for children with special dietary needs. For more information, see the CSDE’s guide, Accommodating Special Diets in School Nutrition Programs, and visit the CSDE’s Special Diets in School Nutrition Programs webpage.

menu item: Any planned main dish, vegetable, fruit, bread, grain or milk that is part of the reimbursable meal. Menu items consist of food items.

MyPlate: Released in June 2011, MyPlate is the USDA’s food guidance system to translate the Dietary Guidelines for Americans into a healthy eating plan. MyPlate emphasizes consuming more fruits, vegetables, whole grains, and low-fat dairy. For more information, visit the USDA’s Choose MyPlate website.
Glossary

**National School Lunch Program (NSLP):** The USDA’s federally assisted meal program operating in public and nonprofit private schools, and residential child care institutions. The NSLP provides nutritionally balanced, low-cost or free lunches to children each school day. It was established under the National School Lunch Act, signed by President Harry Truman in 1946. For more information, visit the CSDE’s National School Lunch Program webpage.

**natural cheese:** Cheese that is produced directly from milk, such as cheddar, Colby, Monterey Jack, mozzarella, muenster, provolone, Swiss, feta, and brie. Natural cheese also includes pasteurized blended cheese that is made by blending one or more different kinds of natural cheese. Natural cheeses do not include pasteurized process cheese (e.g., American), pasteurized process cheese food, pasteurized process cheese spread, or pasteurized process cheese products.

**nixtamilization:** A process in which dried corn is soaked and cooked in an alkaline (slaked lime) solution. This process increases the bioavailability of certain nutrients and provides a nutritional profile similar to whole-grain corn. Nixtamalized corn is used to make hominy, masa harina (corn flour), corn masa (dough from masa harina), and certain types of cornmeal. Nixtamalized corn credits as a whole grain. For more information, see “Crediting Corn Masa, Masa Harina, Corn Flour, and Cornmeal” in section 3.

**noncreditable foods:** Foods and beverages that do not contribute toward the meal patterns for the USDA’s Child Nutrition Programs. Noncreditable foods and beverages are either in amounts too small to credit (i.e., foods and beverage that do not provide the minimum creditable amount of a food component), or they do not fit into one of the meal pattern components. For more information, see the CSDE’s handouts, *Noncreditable Foods for Preschoolers in the NSLP, SBP, and ASP.*

**noncreditable grains:** Grain ingredients and products that do not contribute toward the grains component of the preschool meal patterns. Examples include fiber and modified food starch (including potato, legume, and other vegetable flours). **Note:** Bran and germ credit in the preschool meal patterns for the NSLP, SBP and ASP; and in the ASP meal pattern for grades K-12. However, they do not credit in the NSLP and SBP meal patterns for grades K-12. For a list of noncreditable grains, see the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP.*

**nonnutritive sweeteners:** Ingredients with no calories used as sugar substitutes to sweeten foods and beverages. Nonnutritive sweeteners can be 200 to 600 times sweeter than sugar. They include artificial sweeteners such as acesulfame-potassium, neotame, saccharin, and sucralose and “natural” sweeteners such as stevia (e.g., Rebiana, Rebaudioside A, Truvia, PureVia, and SweetLeaf). For a list of artificial sweeteners, see “artificial sweeteners” in this section.
nutrient-dense foods: Foods and beverages that provide vitamins, minerals, and other substances that contribute to adequate nutrient intakes or may have positive health effects, and contain little or no solid fats, added sugars, refined starches, or sodium. Ideally, these foods and beverages are also in forms that retain naturally occurring components, such as dietary fiber. Examples include all vegetables, fruits, whole grains, seafood, eggs, beans and peas, unsalted nuts and seeds, fat-free and low-fat dairy products, and lean meats and poultry (when prepared with little or no added solid fats, sugars, refined starches, and sodium). The term “nutrient dense” indicates the nutrients and other beneficial substances in a food have not been “diluted” by the addition of calories from added solid fats, sugars, or refined starches, or by the solid fats naturally present in the food.

nutrient-rich foods: See “nutrient-dense foods” in this section.

nutrition standards for fluid milk substitutes: The nutrition requirements for nondairy beverages (such as soy milk) used as fluid milk substitutes in the USDA Child Nutrition Programs. The USDA requires that any fluid milk substitutes are nutritionally equivalent to cow’s milk and meet the following nutrients based on a 1-cup serving (8 fluid ounces): 276 milligrams (mg) of calcium; 8 grams (g) of protein; 500 international units (IU) of vitamin A; 100 IU of vitamin D; 24 mg of magnesium; 222 mg of phosphorus; 349 mg of potassium; 0.44 mg of riboflavin; and 1.1 micrograms (mcg) of vitamin B-12. For more information, see “USDA’s Nutrition Standards for Fluid Milk Substitutes” in section 3.

offer versus serve (OVS): OVS is an optional approach to menu planning and meal service that allows children in grades K-12 to decline some of the foods offered in a reimbursable breakfast or lunch. OVS is not allowed for preschool meals in the NSLP or SBP, or snacks in the ASP. For more information, visit the CSDE’s Offer versus Serve for School Nutrition Programs webpage.

ounce equivalent: A weight-based unit of measure for the grains component in the NSLP and the SBP preschool meal patterns (effective October 1, 2021) that takes into account dry versus cooked grains. An ounce equivalent of the grains component is less than a measured ounce for some grain foods (such as pretzels, bread sticks, and crackers), equal to a measured ounce for some grain foods (such as bagels, biscuits, bread, rolls, cereal grains, and RTE breakfast cereals), and more than a measured ounce for some grain foods (such as muffins and pancakes). For more information, see the CSDE’s handout, Grain Ounce Equivalents for Preschoolers in the NSLP, SBP, and ASP.

point-of-service (POS) meal count: The point in the food service operation where a determination can accurately be made that a reimbursable free, reduced-price, or paid lunch has been served to an eligible child.

potable water: Water that is safe for human consumption.
Glossary

**pre-fried foods:** Commercially prepared foods such as meats, poultry, fish, and vegetables that are fried by the manufacturer during preparation. These foods are usually cooked by the food service operation in the oven or microwave. Pre-fried foods include refrigerated or frozen items that are breaded or battered, most frozen potato products, and most frozen products described as “crispy” or “crunchy.” Examples include chicken nuggets, chicken patties, fish sticks, french fries, tater tots, hash browns, and onion rings.

**preschool meal patterns:** The required food components and minimum servings that SFAs participating in the NSLP and SBP must provide to receive federal reimbursement for meals served to children ages 1-4. For more information, see section 1.

**primary grain ingredient:** The greatest grain ingredient by weight. For commercial grain foods, this is the first ingredient (excluding water) listed in the product’s ingredients statement. For commercial combination foods that contain a grain portion, this is the first grain ingredient (excluding water) listed in the product’s ingredients statement. For commercial combination foods that contain a grain portion listed separately, this is the first ingredient (excluding water) listed in the grain portion of the product’s ingredients statement. For more information, see “Grains Component” section 3.

**product fact sheet:** See “product specification sheet” in this section.

**product formulation statement (PFS):** An information statement obtained from the manufacturer that provides specific information about how a product credits toward the USDA’s meal pattern requirements, and documents how this information is obtained citing Child Nutrition Program resources or regulations. All creditable ingredients in this statement must match a description in the USDA’s Food Buying Guide for Child Nutrition Programs. The PFS must be prepared on company letterhead with the signature of a company official and the date of issue. Unlike a CN label, a PFS does not provide any warranty against audit claims. SFAs must check the manufacturer’s crediting information for accuracy prior to including the product in reimbursable meals. For more information, see “Product Formulation Statements” in section 2 and the CSDE’s handouts, Product Formulation Statements and Accepting Processed Product Documentation.

**product specification sheet:** Manufacturer sales literature that provides various information about the company’s products. These materials do not provide the specific crediting information that is required on a product formulation statement, and cannot be used to determine a product’s contribution toward the USDA meal pattern components.
**production record**: A working tool that outlines the type and quantity of foods used to prepare school meals. Production records must demonstrate how meals contribute to the required food components, food items or menu items for each day of operation. In addition, these records must provide sufficient documentation to determine how school meals contribute to meeting the weekly dietary specifications. The USDA’s regulations require that all schools in the NSLP, SBP, and ASP must complete daily menu production records for all meals. For more information, see “Production record forms for breakfast and lunch” and “Production record forms for snack” in section 2.

**recognizable food item**: A food that is visible in the offered meal or snack, and allows students to identify the food groups and amounts recommended for consumption at mealtime. Foods must be recognizable to credit in the preschool meal patterns. The USDA allows some exceptions, such as pureed fruits and vegetables in smoothies and vegetable flours in pasta. For more information, see “Creditig Fruit and Vegetable Smoothies,” “Creditig Legume Flour Pasta Products as Meat/Meat Alternates” and “Creditig Pasta Products Made of Vegetable Flours” in section 3.

**recognized medical authority**: A state-licensed health care professional who is authorized to write medical prescriptions under state law and is recognized by the State Department of Public Health (DPH). In Connecticut, recognized medical authorities include physicians, physician assistants, doctors of osteopathy, and advanced practice registered nurses (APRNs), i.e., nurse practitioners, clinical nurse specialists, and certified nurse anesthetists who are licensed as APRNs. For more information, see the CSDE’s guide, *Accommodating Special Diets in School Nutrition Programs*.

**refined grains**: Grains that have been processed to remove the bran and germ, making the product less nutritious than whole grains. Refined grains may or may not be enriched. For more information, see “enriched grains” in this section.

**reimbursable meals**: Meals and snacks that meet the meal pattern requirements of the USDA regulations, and are eligible for USDA funds.

**residential child care institution (RCCI)**: RCCIs include, but are not limited to homes for the mentally, emotionally or physically impaired, and unmarried mothers and their infants; group homes; halfway houses; orphanages; temporary shelters for abused children and for runaway children; long-term care facilities for chronically ill children; and juvenile detention centers. A long-term care facility is a hospital, skilled nursing facility, intermediate care facility, or distinct part thereof, which is intended for the care of children confined for 30 days or more.
Glossary

School Breakfast Program (SBP): The USDA’s federally assisted meal program operating in public and nonprofit private schools, and residential child care institutions. The SBP provides nutritionally balanced, low-cost or free breakfasts to children each school day. The program was established under the Child Nutrition Act of 1966 to ensure that all children have access to a healthy breakfast at school to promote learning readiness and healthy eating behaviors. For more information, visit the CSDE’s School Breakfast Program webpage.

School food authority (SFA): The governing body that is responsible for the administration of one or more schools and that has the legal authority to operate the school meals programs in those schools.

School nutrition programs: The USDA’s school nutrition programs include the National School Lunch Program (NSLP), School Breakfast Program (SBP), Afterschool Snack Program (ASP) of the NSLP, Seamless Summer Option (SSO) of the NSLP, Special Milk Program (SMP), Fresh Fruit and Vegetable Program (FFVP), and Child and Adult Care Food Program (CACFP) At-risk Supper Program implemented in schools. For more information, visit the CSDE’s School Nutrition Programs webpage.

Seamless Summer Option of the NSLP (SSO): The USDA’s federally assisted summer feeding program that combines features of the NSLP, SBP, and SFSP, and serves meals free of charge to children ages 18 and younger from low-income areas. School districts participating in the NSLP or SBP are eligible to apply to the CSDE to participate in the SSO. SSO meals follow the meal patterns of the NSLP and SBP. For more information, visit the Seamless Summer Option of the NSLP webpage.

Serving size or portion: The weight, measure, or number of pieces or slices of a food or beverage. For meals to be reimbursable, SFAs must provide the minimum servings specified in the USDA’s meal patterns.

Simple carbohydrates (sugars): Carbohydrates consisting of one sugar (e.g., fructose and galactose) or two sugars (e.g., lactose, maltose, and sucrose). Sugars can be naturally present in foods (such as the fructose in fruit or the lactose in milk) or added to foods (such as sucrose or table sugar). Foods that naturally contain simple carbohydrates (such as fruits, milk, and milk products, and some vegetables) also contain vitamins and minerals. Foods that contain large amounts of added sugars (such as cookies, candy, pastries, sweetened baked goods, regular soft drinks, and other sweetened drinks) provide calories with few, if any, nutrients. For more information, see “added sugars” in this section.
standard of identity: The mandatory government requirements that determine what a food product (like whole-wheat bread) must contain or may contain to be marketed under a certain name in interstate commerce. These standards protect consumers by ensuring that a label accurately reflects what is inside. For example, mayonnaise is not an imitation spread, and ice cream is not a similar, but different, frozen dessert. The USDA develops standards for meat and poultry products. The FDA develops standards for other food products.

standardized recipe: A recipe that a given food service operation has tested and adapted for use. This recipe produces the same good results and yield every time when the exact procedures are used with the same type of equipment, and the same quantity and quality of ingredients. Standardized recipes include specific information such as ingredients, weights and measures, preparation directions, serving directions, yield, and portion size. For more information, see “Standardized Recipes” in section 2, and the CSDE’s handout, Standardized Recipe Form for School Nutrition Programs.

sucrose: Another name for table sugar. Sucrose contains glucose and fructose. For more information, see “simple carbohydrates (sugars)” in this section.

sugar alcohols (polyols): A type of carbohydrate used as sugar substitutes to sweeten foods and beverages. Sugar alcohols are incompletely absorbed and metabolized by the body, and contribute fewer calories than most sugars. They also perform other functions such as adding bulk and texture to foods. Common sugar alcohols include sorbitol, mannitol, xylitol, maltitol, maltitol syrup, lactitol, erythritol, isomalt, and hydrogenated starch hydrolysates (HSH). Products with sugar alcohols are often labeled “sugar free.” Large amounts of sugar alcohols may cause bloating, gas, or diarrhea. For more information, see “nonnutritive sweeteners” in this section.

sugars: See “added sugars” and “simple carbohydrates” in this section.

surimi: Pasteurized, ready-to-eat, restructured seafood product usually made from pollock (fish). A 3-ounce serving of surimi credits as 1 ounce of the meat/meat alternates component. For more information, see “Crediting Surimi” in section 3.

tempeh: A highly nutritious fermented soybean cake traditionally made from whole soybeans. 1-ounce serving of tempeh credits as 1 ounce of the meat/meat alternates component. This method of crediting applies only to tempeh products whose ingredients are limited to soybeans (or other legumes), water, tempeh culture, and for some varieties, vinegar, seasonings, and herbs. For more information, see “Crediting Tempeh” in section 3.

USDA Foods: Foods available to the USDA Child Nutrition Programs through the CSDE Food Distribution Program. For more information, visit the USDA’s Food Distribution Programs webpage, and the CSDE’s Food Distribution Program webpage.
Glossary

**vegetables component:** The meal component of the USDA meal patterns that is comprised of vegetables (fresh, frozen, canned, and dried) and pasteurized full-strength juice. Vegetable juice cannot exceed half of the weekly vegetable offerings. For more information, see “Vegetables Component” in section 3.

**wheat bread:** Bread that often has wheat flour or enriched wheat flour (not whole-wheat flour) as an ingredient. Wheat bread is not whole grain unless it is labeled “whole-wheat bread.” Wheat bread is low in fiber unless the manufacturer has added fiber.

**whole foods:** Foods that are unprocessed or minimally processed, and do not contain added ingredients such as fat, sugars, and sodium.

**whole fruits and vegetables:** Fresh, frozen, canned, and dried fruits and vegetables that are unprocessed or minimally processed, and do not contain added ingredients such as fat, sugars, or sodium.

**whole grain-rich (WFR):** For preschool meals in the NSLP, SBP, and SSO and preschool snacks in the ASP, WGR foods contain 100 percent whole grain or contain at least 50 percent whole grains and any other grain ingredients are enriched. The WGR definition for preschool meals and ASP snacks is different from the WGR definition for grades K-12 in the NSLP, SBP, and SSO. For more information, see “Whole grain-rich (WGR) requirement” in section 3, and the CSDE’s handout, *Whole Grain-rich Criteria for Preschoolers in the NSLP, SBP, and ASP.*

**whole grains:** Grains that consist of the entire kernel, including the starchy endosperm, the fiber-rich bran, and the nutrient-rich germ. All grains start out as whole grains, but many are processed to remove the bran and germ, which also removes many of the nutrients. Whole grains are nutrient rich, containing vitamins, minerals, fiber, antioxidants, and health-enhancing phytonutrients such as lignans and flavonoids. Examples of whole grains include whole wheat, whole oats, oatmeal, whole-grain cornmeal, brown rice, whole rye, whole barley, wild rice, buckwheat, and bulgur (cracked wheat). For more information, see the CSDE’s handout, *Crediting Whole Grains in the NSLP and SBP.*

**whole-grain flour:** Flour made by grinding the entire whole-grain kernel, including the fiber-rich bran, nutrient-rich germ, and starchy endosperm. Flour or meal that does not contain all parts of the grain is not whole grain, e.g., degermed corn, milled rice, and wheat flour.

**whole-wheat bread:** Bread that contains the whole grain, including the fiber-rich bran, nutrient-rich germ, and starchy endosperm. Whole-wheat flour will be listed as the first grain ingredient.
