This document provides guidance on meeting the meal pattern and crediting requirements for the vegetables/fruits component of the U.S. Department of Agriculture’s (USDA) Summer Food Service Program (SFSP) meal patterns. For more information on the SFSP meal patterns and the vegetables/fruits component, visit the “SFSP Meal Patterns” and “Vegetables/Fruits Component for the SFSP” sections of the Connecticut State Department of Education’s (CSDE) SFSP webpage.

Meal Pattern Requirements

The SFSP meal patterns require ½ cup of the vegetables/fruits component at breakfast and ¾ cup at lunch and supper. A ¾-cup serving of fruits or vegetables may be offered as one of the two required snack components.

- **Breakfast** may include vegetables, fruits, 100 percent full-strength juice, or any combination of these foods that total ½ cup.

- **Lunch and supper** must include at least two different servings that total ¾ cup. This can be any combination of at least two different vegetables, at least two different fruits, or at least one vegetable and one fruit. For example, a lunch menu could include ½ cup of carrots and ¼ cup of cucumbers; ½ cup of applesauce and ¼ cup of raisins; or ½ cup of broccoli and ¼ cup of strawberries.

  - Two forms of the same fruit or vegetable are not allowed, e.g., orange and orange juice; apple and applesauce; or tomato sauce and sliced tomatoes.

  - Mixed vegetables (such as carrots, peas, and corn; three-bean salad; and a California mix of broccoli, cauliflower, and carrots), mixed fruits (such as fruit salad, fruit cocktail, and mixed berries), and mixed vegetables and fruits (such as carrot-raisin salad and Waldorf salad) count as only one of the two required servings.

  - Juice cannot credit for more than half of the vegetables/fruits component at lunch and supper.

- **Snack** may include vegetables, fruits, 100 percent full-strength juice, or any combination of these foods that total ¾ cup. Snack must include two different components. Fruits and vegetables cannot be the only two snack components, even if they are different kinds. For example, a snack that contains ¼ cup of apples and ¼ cup of carrot sticks is not reimbursable because both food items are from the vegetables/fruits component.

The minimum creditable amount is ⅛ cup. If a menu item provides less than the full meal pattern serving, the SFSP menu must include the additional amount from other vegetables/fruits.
Requirements for the Vegetables/Fruits Component of the SFSP Program Meal Patterns

Requirement for visible components

The USDA requires that foods must be visible (recognizable) to credit toward the SFSP meal patterns. For example, SFSP sponsors cannot credit applesauce in muffins or pureed fruits and vegetables in entrees. The intent for this requirement is to ensure that children can easily identify the foods in SFSP menus. The nutrition education aspect of the Child Nutrition Programs includes the goal of helping children recognize the food groups that contribute to healthy meals and snacks.

The USDA allows an exception to this requirement for pureed fruits and vegetables in smoothies, and pasta made with 100 percent vegetable flours. For more information, refer to “Crediting pureed vegetables,” “Crediting smoothies,” and “Crediting pasta made of 100 percent legume flours” in this document.

Determining Servings for Fresh Vegetables and Fruits

The USDA’s Food Buying Guide for Child Nutrition Programs (FBG) provides food yields and crediting information for common types and customary sizes of vegetables and fruits. The FBG indicates how many servings a specific quantity of vegetable or fruit will provide and helps menu planners determine how recipes and purchased foods contribute to the vegetables/fruits component.

Table 1 shows examples of the meal pattern contribution of fresh vegetables and fruits. For additional guidance, refer to the CSDE’s portion control charts for vegetables and fruits in the “Vegetables Component” and “Fruits Component” sections of the CSDE’s Menu Planning for Child Nutrition Programs webpage.

10 half cherry tomatoes | 9 whole cherry tomatoes  
15 half cherry tomatoes |

¹ Consider children’s ages and developmental readiness when deciding what vegetables and fruits to offer. Prepare all vegetables and fruits to reduce the risk of choking. For more information, refer to “Considerations for Reducing Choking Risks for Young Children” in this document.

² The count pack is the number of whole fruits that that fit into a case. The smaller the count, the larger the size of the fruit.
Requirements for the Vegetables/Fruits Component of the SFSP Program Meal Patterns

Required Crediting Documentation

Vegetables and fruits that are part of other foods or that contain added ingredients require appropriate documentation to credit as the vegetables/fruits component in the SFSP. For example, to credit a commercial hummus product or a hummus recipe as ¼ cup of the vegetables/fruits component, the SFSP sponsor must have documentation indicating that the serving contains ¼ cup of pureed chickpeas. The guidance below summarizes the required documentation for commercial processed products and foods made from scratch. Documentation must be based on the food yields and crediting information in the FBG.

Commercial processed products

SFSP sponsors must maintain crediting documentation for commercial processed products that contain vegetables and fruits, such as vegetable egg rolls, hummus, breaded onion rings, and fruit-filled turnovers. Acceptable documentation includes a Child Nutrition (CN) label (available only for main dish entrees that contribute to the meat/meat alternates component) or manufacturer’s product formulation statement (PFS). For more information, refer to the CSDE’s resources, Child Nutrition (CN) Labeling Program, Product Formulation Statements and Accepting Processed Product Documentation in the SFSP; the USDA’s documents, Product Formulation Statement for Documenting Vegetables and Fruits in the Child and Adult Care Food Program, Summer Food Service Program, and NSLP Afterschool Snacks, and Tips for Evaluating a Manufacturer’s Product Formulation Statement. For additional guidance, visit the “Crediting Commercial Processed Products” section of the CSDE’s SFSP webpage.

Foods made from scratch

For all foods prepared from scratch, SFSP sponsors must have a recipe that documents the amount of vegetables and fruits per serving. Recipes are required for vegetables and fruits in combination foods (such as vegetables in egg rolls, peppers and tomato sauce on pizza, beans in burritos, and fruit in yogurt parfaits) and vegetables and fruits that contain added ingredients (such as potato salad, carrot-raisin salad, fruit crisp, and breaded vegetables).

The USDA encourages SFSP sponsors to use standardized recipes whenever possible. For more information, refer to the CSDE’s Standardized Recipe Form for the SFSP and visit the “Standardized Recipes” section of the CSDE’s SFSP webpage.
Crediting Requirements

Creditable vegetables include fresh, frozen, canned, and rehydrated dried vegetables; and pasteurized full-strength vegetable juice. Vegetable products and recipes must meet specific criteria to credit as the vegetables/fruits component in the SFSP meal patterns. The guidance below addresses the crediting requirements for vegetables.

Crediting canned vegetables

Canned vegetables must be drained; the serving cannot include the packing liquid, such as water or sauce. For example, to credit canned peas as ½ cup of the vegetables/fruits component, the ½-cup serving cannot include the packing water. To credit baked beans as ½ cup of the vegetables/fruits component, the ½-cup serving cannot include the sauce. The serving must contain ½ cup of vegetables before any added liquid.

Crediting dried vegetables

Dried or dehydrated vegetables (such as potato flakes and dried soup mix) credit as the vegetables component based on their rehydrated volume. The product’s PFS must provide specific documentation on the amount of vegetables per serving (refer to “Required Crediting Documentation” in this document). Dried vegetables used for seasonings (such as dried onion and dried parsley) do not credit in the SFSP meal patterns.

Crediting hominy

Hominy is made from whole kernels of maize (dried field corn) that have been soaked in an alkaline solution (nixtamalized). Hominy is available dried and in a fully cooked canned form. Dried hominy is cooked and credited the same as legumes. In its whole form, hominy credits toward the vegetables/fruits component as a starchy vegetable. For example, ¼ cup of drained canned hominy credits as ¼ cup of vegetables/fruits component. For information on crediting hominy as the grains/breads component, refer to the CSDE’s resource, Requirements for the Grains/Breads Component of the SFSP Meal Patterns.

Crediting legumes as vegetables

Legumes (including roasted legumes such as roasted chickpeas and soybeans) credit as either the meat/meat alternates component or the vegetables component, but one serving cannot credit as both components in the same meal or snack. A ½-cup serving of legumes credits as ½ cup of vegetables/fruits component. The serving refers to the amount of cooked legumes and does not include added ingredients, such as the sauce and pork fat in canned baked beans. For example, a
½-cup serving of baked beans that contains ⅛ cup of sauce and pork fat credits as ⅜ cup of the vegetables component. For more information, refer to the CSDE’s resource, *Crediting Legumes in the SFSP*.

**Crediting pasta made of 100 percent vegetable flours**

A ½-cup serving of pasta made of one or more 100 percent vegetable flours credits as ½ cup of the vegetables/fruits component. If the pasta product contains non-vegetable ingredients, the SFSP sponsor must obtain a PFS stating the amount of vegetable flours per serving (refer to “Required Crediting Documentation” in this document). Grain-based pasta products that contain small amounts of vegetable powder for color, such as spinach pasta or sun-dried tomato pasta, do not credit as the vegetables/fruits component. The requirements for crediting pasta products made of vegetable flours are summarized in USDA Memo SP 26-2019, CACFP 13-2019 and SFSP 12-2019: *Crediting Pasta Products Made of Vegetable Flour in the Child Nutrition Programs*.

**Crediting pureed vegetables**

Pureed vegetables in foods must be visible (recognizable) to credit in the SFSP meal patterns. Examples include pureed foods made from one vegetable such as tomato sauce, split pea soup, mashed potatoes, mashed sweet potatoes, and pureed butternut squash.

Foods that contain pureed vegetables (such as pureed carrots in macaroni and cheese) cannot credit as the vegetables/fruits component unless they also provide at least ⅛ cup of visible creditable vegetables. For example, a serving of macaroni and cheese that contains ⅛ cup of diced butternut squash (visible) and ⅛ cup of pureed carrots (not visible) could credit as ¼ cup of the vegetables/fruits component. For more information, refer to “Requirement for visible components” in this document.

Pureed vegetables credit based on the volume served, not the volume before pureeing. SFSP sponsors must document crediting information with a standardized recipe or PFS (refer to “Required Crediting Documentation” in this document).

**Crediting soups**

Vegetable soups made from scratch credit based on the amount of vegetables contained in one serving. SFSP sponsors must document crediting information with a standardized recipe based on the yields listed in the FBG (refer to “Required Crediting Documentation” in this document).

Creditable commercial vegetable soups include lentil, pea, and bean (legumes); minestrone; tomato; tomato with other basic components such as rice; vegetable (contains only vegetables); and vegetable
Requirements for the Vegetables/Fruits Component of the SFSP Program Meal Patterns

with other basic components such as meat or poultry. The FBG indicates that a 1-cup serving of a commercial legume soup credits as ½ cup of vegetables, and a 1-cup serving of commercial vegetable soup credits as ¼ cup of vegetables. The serving refers to the amount of the cooked soup, e.g., heated canned or frozen ready-to-serve soup, reconstituted dried soup, and reconstituted condensed soup.

Menu planners should consider the appropriateness of the serving size for soup. The large serving of a commercial soup needed to provide the full vegetables/fruits component might be unreasonable, especially for younger children. For example, to provide ¼ cup of the vegetables/fruits component at snack requires 3 cups of a commercial vegetable soup and 1½ cups of a commercial legume soup. For additional guidance, refer to the CSDE’s resource, Crediting Soups in the NSLP and SBP.

Menu planners should consider the size of the container used to serve the soup. A 1-cup container (8 fluid ounces) does not provide 1 cup of soup unless it is completely filled to the top, which is impractical. To avoid spilling and ensure that the served portion meets the meal pattern requirements, the container should be larger than the planned serving size of soup. For example, SFSP sponsors could use a 10-fluid ounce bowl to hold 8 fluid ounces (1 cup) of soup and a 6-fluid ounce bowl to hold 4 fluid ounces (½ cup) of soup.

Crediting vegetables with added ingredients

If a vegetable product or recipe contains added ingredients (such as mayonnaise, salad dressing, butter, and sauce), only the vegetable portion credits toward the SFSP meal patterns. Examples include baked beans with sauce and pork fat; coleslaw and potato salad made with mayonnaise and seasonings; carrot-raisin salad made with yogurt; and mashed potatoes made with butter and seasonings. For example, to credit potato salad as ½ cup of the vegetables/fruits component, the serving must contain ½ cup of potatoes, excluding added ingredients such as mayonnaise and seasonings. SFSP sponsors must maintain crediting documentation for each product and recipe (refer to “Required Crediting Documentation” in this document).

Noncreditable vegetables

Examples of foods that do not credit include but are not limited to chili sauce; dehydrated vegetables used for seasoning; cream vegetable soups (e.g., cream of broccoli and cream of mushroom); home-canned products (for food safety reasons); ketchup; pickle relish; and snack-type foods made from vegetables such as potato chips. For more information, refer to the CSDE’s resource, Noncreditable Foods in the SFSP.
Requirements for the Vegetables/Fruits Component of the SFSP Program Meal Patterns

Crediting Requirements for Fruits

Creditable fruits include fresh, frozen, dried, and canned (packed in water, full-strength juice, or light syrup), and pasteurized full-strength fruit juice. Fruit products and recipes must meet specific criteria to credit as the vegetables/fruits component in the SFSP meal patterns. The guidance below addresses the crediting requirements for fruits.

Crediting canned fruits

A serving of canned fruit may include the 100 percent juice in which the fruit is packed. For example, ½ cup of canned peaches in juice credits as ½ cup of the vegetables/fruits component.

Water and syrup in canned fruit do not credit. For example, to credit canned peaches in light syrup as ½ cup of the vegetables/fruits component, the serving must contain ½ cup of peaches, not including the syrup. For more information, refer to the CSDE’s resource, Crediting Juice in the SFSP.

Crediting coconut

Fresh and frozen coconut credit, but dried coconut, coconut flour, and coconut oil do not. Coconut water labeled as 100 percent juice credits based on the volume served and must meet the same requirements as juice (refer to “Crediting juice” in this document). Coconut is high in calories and saturated fat and should be limited in SFSP menus. The requirements for crediting coconut are summarized in USDA Memo SP 34-2019, CACFP 15-2019 and SFSP 15-2019: Crediting Coconut, Hominy, Corn Masa, and Corn Flour in the Child Nutrition Programs.

Crediting dried fruits

Dried fruits (such as raisins, apricots, cherries, cranberries, blueberries, mixed fruit, and coconut) credit based on the served volume. For example, ¼ cup of dried fruit credits as ¼ cup of the vegetables/fruits component. Serving a large amount of dried fruit may be unreasonable, especially for younger children. For example, to credit dried fruit as the vegetables/fruits component at snack, the required serving is ¾ cup. The CSDE recommends serving smaller portions of dried fruit and supplementing with another fruit or vegetable to meet the full serving.

Manufacturers sometimes process dried fruit with added sugar to keep the fruit pieces separated. The CSDE encourages menu planners to read labels and choose dried fruit without added sweeteners, including sugars and nonnutritive sweeteners such as aspartame, acesulfame potassium, sucralose, and stevia.
Requirements for the Vegetables/Fruits Component of the SFSP Program Meal Patterns

Crediting frozen fruits
A serving of thawed frozen fruit includes the thawed juice.

Crediting fruits in grain-based desserts
Fruits in grain-based desserts (such as fruit crisp and fruit turnovers) credit based on the amount of fruits per serving. For example, a fruit turnover that contains ¼ cup of apples credits as ¼ cup of the vegetables/fruits component. SFSP sponsors must maintain crediting documentation for each product and recipe (refer to “Required Crediting Documentation” in this document). At snack, the amount of a grain-based dessert required to provide ¾ cup of fruit might be unreasonable (refer to “Fruits with added ingredients” in this document).

Crediting fruits in yogurt
Fruits in commercial yogurt products (blended, mixed, or on top) do not credit as the vegetables/fruits component. Menu planners may credit fruit provided as a separate component, such as ½ cup of blueberries in a yogurt parfait.

Crediting fruits with added ingredients
If a product or recipe contains added ingredients (such as mayonnaise or a grain-based topping), only the fruit portion of the serving credits toward the vegetables/fruits component. Examples include Waldorf salad made with mayonnaise, walnuts, and seasonings; and fruit crisp or cobbler made with grain-based topping. For example, to credit fruit crisp as ½ cup of the vegetables/fruits component, the serving must contain ½ cup of fruit, excluding other ingredients such as the grain topping. SFSP sponsors must maintain crediting documentation for each product and recipe (refer to “Required Crediting Documentation” in this document).
Requirements for the Vegetables/Fruits Component of the SFSP Program Meal Patterns

Crediting juice

Juice (fresh, frozen, and made from concentrate) must be pasteurized full-strength fruit juice, vegetable juice, or a combination. Juice (including pureed fruits and vegetables in smoothies) cannot credit for more than half of the vegetables/fruits component at lunch and supper. Juice cannot be served at snack when milk is the only other snack component. For more information, refer to the CSDE’s resource, Crediting Juice in the SFSP.

The USDA recommends serving whole fruits (fresh, frozen, canned, and dried) more often than juice. Juice does not provide the same nutritional benefits as whole fruits and vegetables, which contain fiber, fewer calories, and more nutrients.

Crediting smoothies

Pureed fruits and vegetables in smoothies credit only as juice and must meet the same requirements as juice (refer to “Crediting juice” in this document). For more information, refer to the CSDE’s resource, Crediting Smoothies in the SFSP.

Crediting fresh fruits

The crediting amount for one piece of fresh fruit depends on the type and size, and ranges from ¼ cup to 1¼ cups. For example, the FBG indicates that:

- one 60-count plum, one 88-count peach, and one clementine each credit as ⅛ cup of fruit;
- one 100-120-count banana, one 150-count pear, one 80-count peach, one 138-count orange, and one 45-count plum each credit as ½ cup of fruit.

Menu planners must ensure that an individual piece of fresh fruit (whole or cut-up) provides the correct serving for each SFSP meal and snack. If the amount is less than the full serving of the vegetables/fruits component, the meal or snack must include additional fruits or vegetables to meet the full serving.
The examples below illustrate this requirement.

- **Example 1**: The SFSP breakfast meal pattern requires ½ cup of fruits, vegetables, or both. One 120-count tangerine credits as ⅜ cup of fruit, which does not provide the full serving. To credit as the full component, the breakfast menu must include an additional ⅛ cup of fruits or vegetables.

- **Example 2**: The SFSP snack meal pattern requires ¾ cup of fruits, vegetables, or both. One 113-count orange credits as ⅝ cup of fruit, which does not provide the full serving. To credit as the full fruits component, the snack menu must include an additional ⅛ cup of the fruits component.

Table 2 lists the additional amounts of fresh fruit needed to provide ½ cup or ¾ cup of the vegetables/fruits component, based on the crediting information in the FBG.

¹ Consider children’s ages and developmental readiness when deciding what fruits to offer. Prepare all fruits to reduce the risk of choking. For more information, refer to “Considerations for Reducing Choking Risks for Young Children” in this document.

² The count pack is the number of whole fruits that that fit into a case. The smaller the count, the larger the size of the fruit.

³ A $\frac{1}{2}$-cup serving of the vegetables/fruits component is required at breakfast and may be one of the two required servings of the vegetables/fruits component at lunch and supper.

⁴ A $\frac{3}{4}$-cup serving of the vegetables/fruits component may be one of the two required snack components. The additional amount can be from the same fruit, a different fruit, or a vegetable.
Noncreditable fruits

Examples of foods that do not credit include, but are not limited to fruit snacks (e.g., fruit roll-ups, fruit leathers, fruit wrinkles, fruit twists, yogurt-covered fruit snacks); banana chips; home-canned products (for food safety reasons); jams, jellies, and preserves; and juice drinks that are not 100 percent juice, such as grape juice drink, orange juice drink, pineapple-grapefruit drink, cranberry juice cocktail, and lemonade. For more information, refer to the CSDE’s resource, *Noncreditable Foods in the SFSP*.

Considerations for Reducing Choking Risks for Young Children

Children younger than 4 are at the highest risk of choking. Examples of vegetables that may be choking hazards include cooked or raw whole-kernel corn, and small pieces of raw vegetables, e.g., raw green peas, whole beans, raw carrot rounds, baby carrots, string beans, celery, and other raw or partially cooked hard vegetables. Examples of fruits that may be choking hazards include whole grapes, berries, melon balls, apples and other hard pieces of raw fruit, and dried fruits. Preparation techniques to reduce the risk of choking include cooking until soft, and cutting, dicing, or shredding into small pieces.

Consider children’s age and developmental readiness when deciding what types of vegetables and fruits to offer in SFSP menus; and modify foods and menus as appropriate. For additional guidance, visit the “Choking Prevention” section of the CSDE’s *Food Safety for Child Nutrition Programs* webpage.

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, sex, disability, age, or reprisal or retaliation for prior civil rights activity in any program or activity conducted or funded by USDA.

Persons with disabilities who require alternative means of communication for program information (e.g. Braille, large print, audiotape, American Sign Language, etc.), should contact the Agency (State or local) where they applied for benefits. Individuals who are deaf, hard of hearing or have speech disabilities may contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program complaint of discrimination, complete the USDA Program Discrimination Complaint Form, (AD-3027) found online at: https://www.usda.gov/oasco/how-to-file-a-program-discrimination-complaint, and at any USDA office, or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by:

(1) mail: U.S. Department of Agriculture
Office of the Assistant Secretary for Civil Rights
1400 Independence Avenue, SW
Washington, D.C. 20250-9410;
(2) fax: (202) 690-7442; or
(3) email: program.intake@usda.gov.

The Connecticut State Department of Education is committed to a policy of equal opportunity/affirmative action for all qualified persons. The Connecticut Department of Education does not discriminate in any employment practice, education program, or educational activity on the basis of age, ancestry, color, criminal record (in state employment and licensing), gender identity or expression, genetic information, intellectual disability, learning disability, marital status, mental disability (past or present), national origin, physical disability (including blindness), race, religious creed, retaliation for previously opposed discrimination or coercion, sex (pregnancy or sexual harassment), sexual orientation, veteran status or workplace hazards to reproductive systems, unless there is a bona fide occupational qualification excluding persons in any of the aforementioned protected classes.

Inquiries regarding the Connecticut State Department of Education’s nondiscrimination policies should be directed to: Levy Gillespie, Equal Employment Opportunity Director/Americans with Disabilities Coordinator (ADA), Connecticut State Department of Education, 450 Columbus Boulevard, Suite 505, Hartford, CT 06103, 860-807-2071, levy.gillespie@ct.gov.

This institution is an equal opportunity provider.
