Transmittal File Format

The following table contains the PensionGold transmittal interface file format specifications. This is the file format that a TRB Reporting Unit would use to transmit the monthly transmittal information to TRB if it is generating the file from its own system. This same file format is automatically generated by the TRB transmittal software program.

Each record in the file (header, detail, and trailer) should be ended by the CR+LF symbols (carriage return + line feed: ASCII codes 13 and 10).
