COMMERCIAL FEEDING STUFFS

E. M. BAILEY.*

THE FEED LAW.

The law relating to concentrated commercial feeding stuffs was revised by the legislature of 1925. The new law differs from the previous one chiefly in that: (1) *registration is compulsory*; (2) *a registration fee is required*; (3) *the maximum percentage of crude fiber must be stated in the analysis*; and (4) *ingredients of mixed feeds must be declared*.

The law provides that the Director of this Station and the Dairy and Food Commissioner, acting jointly, may make rules and regulations for carrying out the provisions of the law. Such rules and regulations, together with the text of the law, were issued in a special bulletin of this Station under date of June 30, 1925. Copies of this bulletin of information may still be obtained by request addressed to this Station.

The essential provisions of the new law, and other information pertaining to it, may be briefly restated here.

"Concentrated Commercial Feeding Stuffs" defined. Section 1 of the law defines the term "concentrated commercial feeding stuffs" in substantially the same way that it is defined in the old law; and with the same exemptions. Scratch grains are classed as concentrated feeds.

Labelling. Section 2 defines how concentrated commercial feeding stuffs shall be labelled. The label must declare (1) the number of net pounds of feed in the package; (2) the name, brand or trade mark under which the article is sold; (3) the name and address of the manufacturer or importer; (4) a statement of the minimum percentages of (a) crude protein, (b) crude fat, and (c) the maximum percentage of crude fiber, and (5) in case of feeds composed of two or more ingredients, the name of each ingredient contained therein.

Registration and registration fee. Section 3 requires the annual registration of concentrated commercial feeding stuffs and a registration fee of fifteen dollars (\$15.00) for each brand. Registration is to be made with the Connecticut Agricultural Experiment Station on or before September 1, 1925, and annually thereafter.

Duties of Manufacturers. Manufacturers, jobbers or individ-

* Analyses are chiefly by Messrs. Nolan and Mathis; inspection and sampling by Mr. Churchill; and compilation largely by Miss Bacon.

uals shipping feeds into Connecticut will be expected to register their brands and pay the necessary fees thereon. Connecticut dealers should assure themselves that the brands they handle are properly registered. In case the manufacturer or jobber outside the State neglects or refuses to register, the dealer who handles such feeds will be held responsible for such registration and registration fees.

Dealers within the State who mix their own brands are responsible for the registration and proper labelling thereof.

Cottonseed Meal. Cottonseed meal registered as required by the fertilizer law is not exempt from registration also under the feed law if sold for feeding purposes.

Meaning of "Brand." It is held that a distinct brand name or a distinct guaranty constitutes a distinct brand.

Affixing Tags. The use of wire or any metal in affixing tags is prohibited by law.

EXPLANATION OF TERMS USED IN AN ANALYSIS OF FEEDING STUFF.

In registering feeding stuffs the law requires that the minimum percentages of crude protein and crude fat, and the maximum percentage of crude fiber, shall be given; that is, the registrant must guarantee that the feeds registered will contain *not less* than the stated percentages of crude protein and of crude fat and *not more* than the stated percentage of crude fiber.

The term *crude protein* denotes those nutrients which contain nitrogen, and is obtained by multiplying the percentage of total nitrogen in the feed by the factor 6.25.

The term *crude fat* denotes those substances which are soluble in ether and includes, besides fat, such non-fatty materials as chlorophyll and coloring matter.

The term *crude fiber* denotes the coarse, woody tissues characteristic of all forms of roughage and which are present in the outer coats of cereal and other fodder grains.

While the law requires only a statement of the three nutrients just defined, no objection is taken to more complete statements of composition, but such further statements, if given, must be correct. Thus, tags sometimes bear guaranties for nitrogen-free-extract and for carbohydrates.

The term *nitrogen-free-extract* denotes those nutrients of the starch and the sugar types. This group is never determined directly but is obtained by subtracting from 100 per cent the sum of the percentages of moisture, ash, crude protein, crude fiber and crude fat.

The term *carbohydrates* denotes the combined percentages of crude fiber and nitrogen-free-extract.

REGISTRATIONS.

(For the period September 1st, 1925 to August 31st, 1926.)

One hundred sixty-one firms and individuals have registered 651 brands of feeding stuffs. As required by Statute these registrations are listed as follows:

American Agricultural Chemical Co., New Haven, Conn.

Capitol Meat and Bone Scrap
Prottox Meat and Bone Scrap

American Linseed Co., 297 Fourth Ave., New York, N. Y.

Alinco Old Process Linseed Meal

American Maize-Products Co., 41 East 42d St., New York, N. Y.

Cream of Corn Gluten Feed

American Milling Co., Peoria, Ill.

Amco Old Process Linseed Meal and Old Process Screenings Oil Feed
Empire Dairy Ration
Kick-A-Poo Horse Feed
Sucrene Dairy Feed
Universal Dairy Ration

Arcady Farms Milling Co., Chicago, Ill.

Advanced Registry Dairy
Peerless Milk Ration

Archer-Daniels Midland Co., Minneapolis, Minn.

Pure Old Process Linseed Meal

Ashcraft-Wilkinson Co., Atlanta, Ga.

Helmet Brand Cottonseed Meal
Monarch Brand Cottonseed Meal
Paramount Brand Cottonseed Meal

Atlan Mfg. Co., 142 Logan Ave., Jersey City, N. J.

Diamond Pick Meat and Bone Scrap

Aunt Jemima Mills Branch, The Quaker Oats Co., St. Joseph, Mo.

Hominy Feed

INSPECTION FOR 1925.

During the year analyses of 755 samples of feeding stuffs and other forms of fodder materials have been made. Of these, 488 represent official samples drawn by the station inspector, and 52 were unofficial samples submitted by individuals. The remainder, 215 in number, were examined for the Storrs station in connection with field and other experiments, and are not discussed in this report.

Our inspector has visited 87 cities and towns of the State and drawn 543 samples of feeding stuffs up to the time of closing this report, March 1st, 1926. This number includes all of the brands which could be found on sale.

Inspection of feeding stuffs is done largely in the fall months so that the analytical work connected therewith may be finished before the beginning of the fertilizer inspection. But many feeds, particularly poultry feeds, do not appear in the market until spring. Such must, therefore, be sampled and examined as they are found and will be included in our report for next year.

As soon as samples are examined the results are reported to the manufacturers or jobbers and to the dealers, or others from whose stocks the samples were drawn. In cases of deficiencies check samples have been taken from other sources if possible.

Official samples analyzed for inspection purposes may be classified as follows:

Cottonseed products	12
Linseed products	7
Wheat products	75
Rye products	2
Maize products	25
Brewers' and Distillers' products	2
Dried beet pulp	1
Proprietary Mixed Feeds:	
Horse feeds	35
Dairy feeds	93
Stock feeds	34
Calf feeds, etc.	4
Poultry feeds	164
Beef scrap, etc.	34
Total	488

Analyses of official samples are given in Table I. Results for protein and crude fiber which fail to meet guaranties by more than 0.75 per cent in each case, and for fat which are deficient by more than 0.25 per cent, are given in bold face type.

The inspection can best be summarized in the following tabulated statement.

Kind of Feed	Samples examined	Samples deficient	No. deficient in protein	No. excessive in fiber	No. deficient in fat	Total deficiencies	Percentages substantially conforming to, or exceeding, guaranties
Cottonseed Meal	11	2	2	0	0	2	..
Cottonseed Feed	1	0	0	0	0	0	..
Linseed Meal	7	0	0	0	0	0	..
Wheat Bran	21	0	0	0	0	0	..
Wheat Middlings	28	1	1	0	0	1	..
Wheat Red Dog	5	2	0	0	2	2	..
Wheat Feed	21	4	0	1	1	2	..
Rye Products	2	0	0	0	0	0	..
Corn Gluten Feed	6	0	0	0	0	0	..
Corn Gluten Meal	2	0	0	0	0	0	..
Corn Feed Meal	2	0	0	0	0	0	..
Hominy Feed	15	4	0	0	4	4	..
Brewers' and Distillers' Grains	2	2	2	0	1	3	..
Dried Beet Pulp	1	0	0	0	0	0	..
Total	124	13	5	1	8	14	90
Proprietary feeds, including beef scrap:							
Horse Feed	35	11	3	6	7	16	..
Dairy Feed	93	16	2	3	11	16	..
Stock Feed	34	12	2	7	4	13	..
Calf Feed, etc.	4	0	0	0	0	0	..
Poultry Feed	164	20	7	2	11	20	..
Beef Scrap, etc.	34	10	9	..	1	10	..
Total	364	60	23	18	34	75	80
Total	488	82	28	19	42	89	83

From this summary it is evident that of non-proprietary feeds only about 10 per cent failed to conform to their guaranties by any considerable amounts; in other words 90 per cent substantially met or exceeded their guaranties.

In the case of proprietary mixed feeds, as might be expected, the proportion of deficiencies is greater; here only 80 per cent substantially met or exceeded guaranties.

For the total number of samples about 17 per cent fell considerably short of guaranties; 83 per cent substantially conformed thereto.

A total of 1443 guaranties are represented by the 488 samples analyzed, of which 1351, or 94 per cent, have been substantially met or exceeded.

Only three instances of tags being attached by means of wire were found. This practice is illegal in this State.

In one instance a minimum fiber guaranty was given whereas the law requires that the maximum shall be stated. This manufacturer was notified to revise his tags to conform to the legal requirements.

In a previous report¹ it was shown that for the five-year period 1920-24 a total of 864 official samples of feeding stuffs had been examined, and of these 83 had shown considerable deficiencies in one or more of the guaranteed ingredients. In other words about 90 per cent practically conformed to the guaranteed analyses.

The data for the past year shows a corresponding percentage which is somewhat lower, viz., 83 per cent. There are two reasons for this. During the last year samples have been judged somewhat more stringently as to deficiencies; but chiefly, the proportion of proprietary feeds, in which the number of deficiencies is greatest, has comprised about $\frac{3}{4}$ of the total samples whereas in the five-year period this group comprised only about $\frac{1}{2}$ of the samples examined.

3419	Red Wheat	Wilmington: Reuben Fishbein
2697	Mash	Long Ridge: Louis Draghi

Soaked in skim milk.
Protein N x 6.38.

Wheat 87%; Oats
9.80%; Barley 2.70%;
Weed 0.50%; Corn,
trace.

Consisted chiefly of
corn, oats and mid-
dlings. No cockle
found. Feeding devel-
oped no unfavorable
symptoms in animals
fed.

TABLE II. ANALYSES OF FEEDING STUFFS SUBMITTED BY INDIVIDUALS—Continued.

Station No.	Material	Submitted by	Pounds per Hundred						Remarks
			Water	Ash	Protein (N x 6.25)	Fiber	Nitrogen-free extract (starch, gum, etc.)	Ether extract (crude fat)	
2017	MISCELLANEOUS—Continued. Scratch Feed	<i>E. Granby</i> : B. A. Krick	Consisted of cracked corn, barley, wheat, oats, weed seeds. Slight musty odor. Feeding tests developed no unfavorable symptoms in animals fed.
2607	Unknown Salt. (Found in pasture)	<i>Hartford</i> : Commissioner on Domestic Animals	Identified as potassium nitrate or saltpeter.
2399	Mash	<i>Pleasant Village</i> : Birchwood Farm Co., Inc.	No alkaloids or mineral poisons detected.
2400	Beef Scrap }	White rats and chicks fed with both mash and scrap for period of three days developed no unfavorable symptoms.
2167	Mixed Grain }	<i>West Cheshire</i> : Reno Swift	Feeds clean and wholesome apparently. No indication of salt.
2168	Mash }	Feeding tests developed no unfavorable symptoms in animals fed.

TONICS, CONDITIONERS, REMEDIES, ETC.

3352. *Mineral Mixture* for use in feeds. Sample submitted by Mulberry Shell Co. Composed of salt, sulphur, charcoal, shell and gravel. Salt, sulphur and charcoal did not correspond to the formula used in mixing, due, probably, to the difficulty in mixing such materials and the tendency to stratify upon handling afterwards.

3353. *Coot Shell Clam*, screened. Submitted by the company named above. Consisted of approximately 66 per cent of shell and 29 per cent of sand, gravel, etc.

3354. *Coot Shell Clam*, unscreened. Submitted by the company named above. Consisted of approximately 76 per cent of shell and 18 per cent of sand, gravel, etc.

3160. *Zip Stock Conditioner*. Zip Products Co., Tiffin, Ohio. Sample submitted by John Robb, Middletown. Ingredients claimed to be present are sulphur, quassia, copperas, Glauber's salt, fenugreek, sodium chloride, palmo meal and charcoal. A substance resembling palm nut meal was present and all of the other materials claimed were identified.

915. *Bowman's Abortion Remedy*. Erick Bowman Remedy Co., Inc., Owatonna, Minn. This remedy was called to our attention by a dairyman whose herd was infected with contagious abortion by reason of which he had sustained serious losses in the past few years. While not too sanguine of the efficacy of any advertised "specific," preliminary trials appeared to have produced favorable results and a substantial supply of the remedy was procured at a considerable cost. The disease was not eliminated from his herd, however, and at the time of submitting the sample the purchaser was in doubt as to the value of the treatment.

Examination of the remedy showed that it consisted of some ordinary feeding material, probably bran, with about 85 per cent of brown sugar, and chlorides, calculated as sodium chloride, equivalent to 0.71 per cent. The analysis further indicated the presence of some vegetable extractive or other medicament. The proximate analysis accounted for about 99 per cent of the sample but active medicaments, if present, were not identified.

So far as we are aware, the only progress which has been made in controlling this disease is by the method of strict isolation of infected animals; the efficacy of specifics given by mouth, or otherwise, has not been demonstrated by adequate acceptable evidence.

21664. *Litonic*. Lambert Litonic Co., St. Louis, Mo. This preparation, in the form of a black compressed cake, is said to contain practically all the drugs, herbs, and mineral substances which have been recommended from time to time by various

authorities as desirable adjuncts to the rations of farm animals. Reference is made in accompanying literature to official and other feeding tests which appear to substantiate the claims made for the product.

We have no first-hand information about this preparation from the standpoint of actual feeding experience, but a sample submitted to us showed on analysis substantially the following composition:

Moisture 2.50 per cent; organic matter (loss on ignition less moisture and free sulphur), 13.83 per cent; nitrogen 0.27 per cent; sodium chloride 50.24 per cent; calcium sulphate 15.10 per cent; calcium carbonate 9.21 per cent; magnesium carbonate 1.07 per cent; iron and aluminum oxides 2.85 per cent; silicon dioxide 2.71 per cent; undetermined, including phosphorus if present, 0.57 per cent; free sulphur 1.92 per cent.
