

COVID-19 Update November 18, 2020

As of **November 17, 2020, at 8:30 PM**, the total of laboratory-confirmed and probable COVID-19 cases reported among Connecticut residents is **97028**, including **90529** laboratory-confirmed and **6499** probable cases. **Eight hundred sixteen** patients are currently hospitalized with laboratory-confirmed COVID-19. There have been **4784** COVID-19-associated deaths.

In Connecticut during the early months of this pandemic, it became increasingly clear that it would be necessary to track probable COVID-19 cases and deaths, in addition to laboratory-confirmed (RT-PCR) cases and deaths. This was needed to better measure the burden and impact of this disease in our communities and is now part of the [national surveillance case definition for COVID-19](#). Prior to June 1, probable and confirmed cases were reported together.

Overall Summary	Total**	Change Since Yesterday
COVID-19 Cases (confirmed and probable)	97028	+2042
COVID-19 Tests Reported (molecular and antigen)	2854185	+34135
Daily Test Positivity*		5.98%
Patients Currently Hospitalized with COVID-19	816	+39
COVID-19-Associated Deaths	4784	+13

**Includes confirmed plus probable cases

COVID-19 Cases and Associated Deaths by County of Residence

As of 11/17/20 8:30pm.

County	COVID-19 Cases		COVID-19-Associated Deaths	
	Confirmed	Probable	Confirmed	Probable
Fairfield County	29809	2560	1140	323
Hartford County	22794	1360	1214	330
Litchfield County	3129	252	134	21
Middlesex County	2775	160	158	39
New Haven County	22411	1704	1003	169
New London County	4966	146	120	37
Tolland County	2264	231	56	15
Windham County	2019	40	24	1
Pending address validation	362	46	0	0
Total	90529	6499	3849	935

[National COVID-19 statistics](#) and information about [preventing spread of COVID-19](#) are available from the Centers for Disease Control and Prevention.

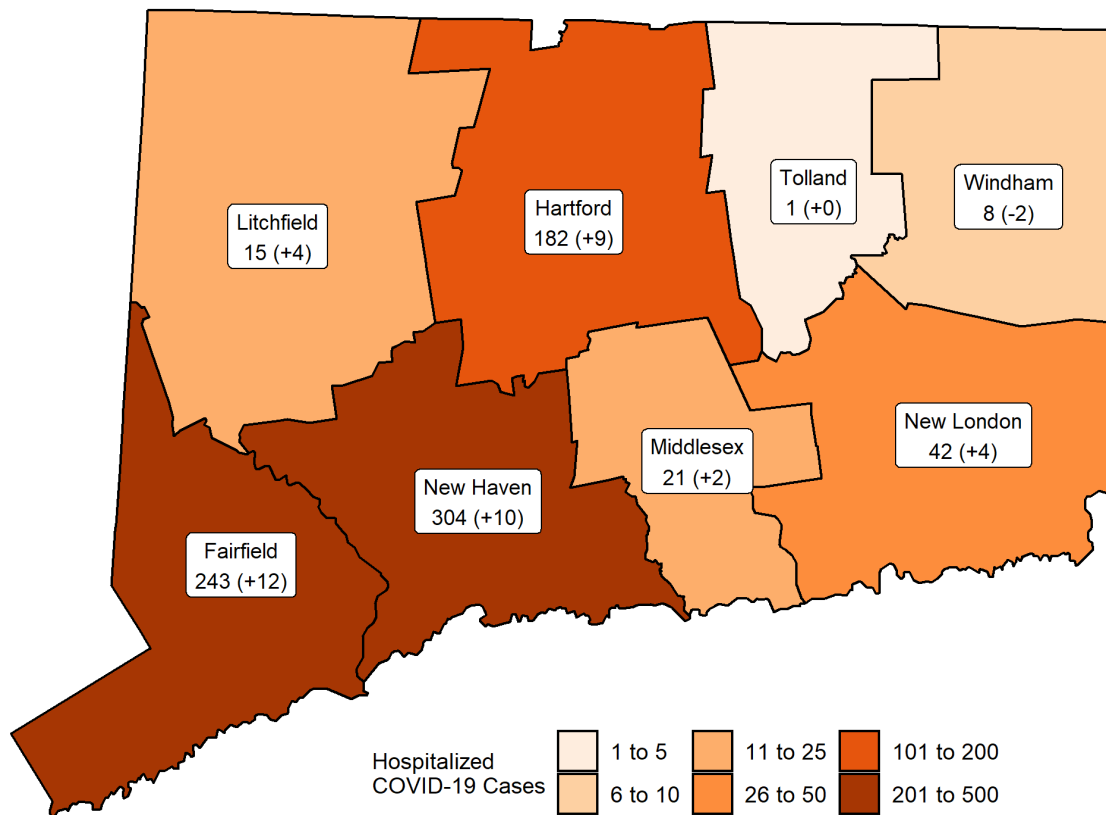

Day-to-day changes reflect newly reported cases, deaths, and tests that occurred over the last several days to week. All data in this report are preliminary; data for previous dates will be updated as new reports are received and data errors are corrected. Hospitalization data were collected by the Connecticut Hospital Association. Deaths reported to either OCME or DPH are included in the daily COVID-19 update.

Hospitalization Surveillance

The map below shows the number of patients currently hospitalized with laboratory-confirmed COVID-19 by county based on data collected by the Connecticut Hospital Association. The distribution is by location of hospital, not patient residence. The labels indicate the number of patients currently hospitalized with the change since yesterday in parentheses.

Patients Currently Hospitalized by Connecticut County

Distribution by location of hospital not patient residence. Data from the Connecticut Hospital Association.

More information about hospitalized cases of COVID-19 in New Haven and Middlesex Counties is available from [COVID-NET](#).

Characteristics of COVID-19 Cases and Associated Deaths

Number of Confirmed and Probable COVID-19 Cases by Date

As of 11/17/2020 at 8:30pm

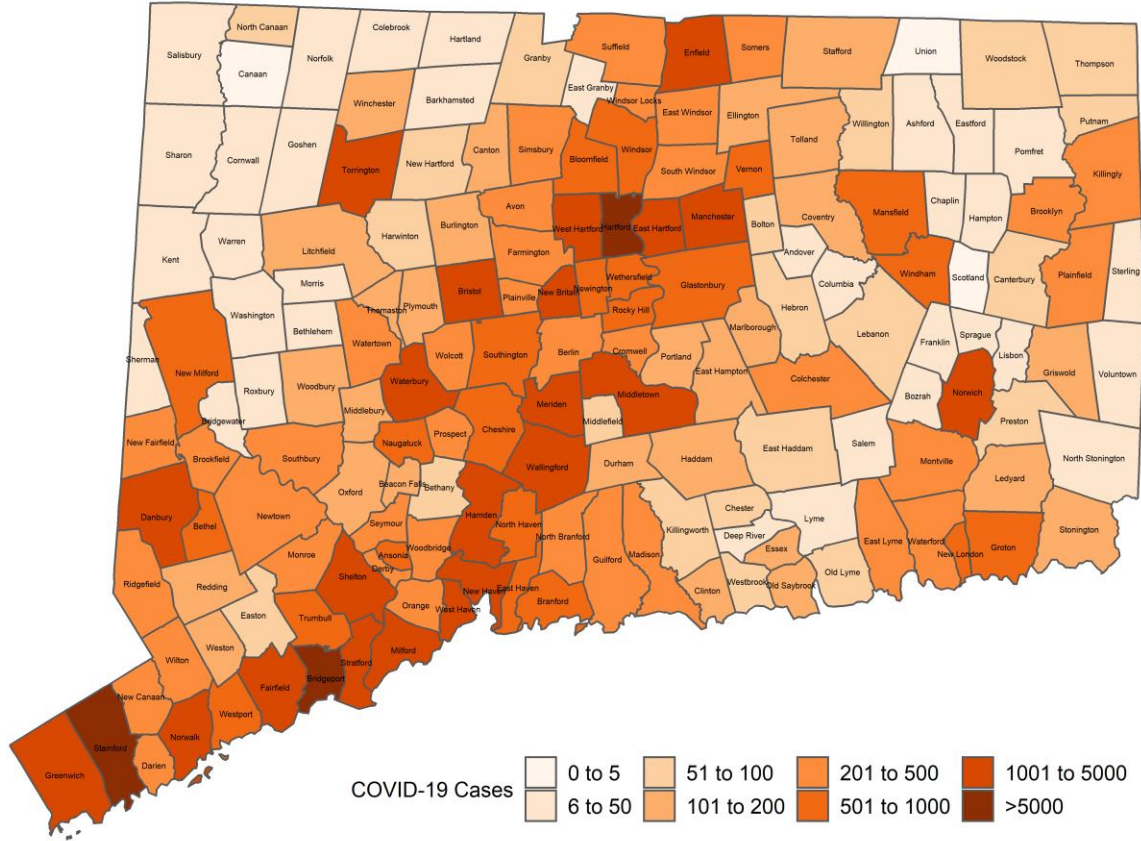

Number of COVID-19-Associated Deaths by Date of Death

As of 11/17/2020 at 8:30pm

Cumulative Number of COVID-19 Cases by Town

Map does not include 408 cases pending address validation

APPENDIX A. Cumulative Number of COVID-19 Cases by Town

Table does not include 408 cases pending address validation

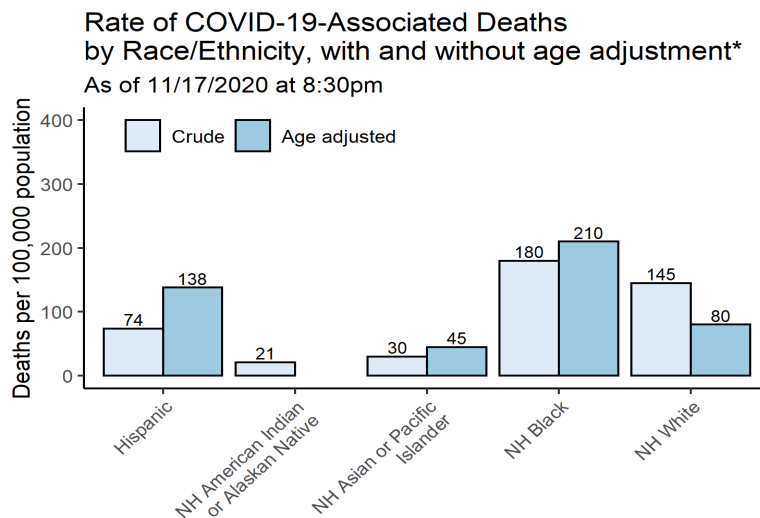

Town	Confirmed Cases	Probable Cases	Town	Confirmed Cases	Probable Cases	Town	Confirmed Cases	Probable Cases
Andover	27	1	Griswold	183	2	Prospect	206	15
Ansonia	544	35	Groton	592	24	Putnam	93	3

APPENDIX B. The following graphs show the number of cases and deaths by race and ethnicity. Categories are mutually exclusive. The category “multiracial” includes people who answered ‘yes’ to more than one race category. NH=Non-Hispanic

The following graphs show the number of COVID-19 cases and COVID-19-associated deaths per 100,000 population by race and ethnicity. Crude rates represent the total cases or deaths per 100,000 people. Age-adjusted rates consider the age of the person at diagnosis or death when estimating the rate and use a standardized population to provide a fair comparison between population groups with different age distributions. Age-adjustment is important in Connecticut as the median age of among the non-Hispanic white population is 47 years, whereas it is 34 years among non-Hispanic blacks, and 29 years among Hispanics. Because most non-Hispanic white residents who died were over 75 years of age, the age-adjusted rates are lower than the unadjusted rates. In contrast, Hispanic residents who died tend to be younger than 75 years of age which results in higher age-adjusted rates.

The 2018 Connecticut and 2000 US Standard Million populations were used for age adjustment; population estimates from: [DPH Population Statistics](#). Categories are mutually exclusive. Cases missing data on race/ethnicity are excluded from calculation of rates. NH=Non-Hispanic

**Age adjusted rates only calculated for groups with at least 30 deaths*
