

December 8, 2016

Ms. Edith Pestana
Administrator
Environmental Justice Program
Office of Commissioner
Connecticut Department of Energy and Environmental Protection
79 Elm Street
Hartford, Connecticut 06106

Dear Ms. Pestana:

Attached you will find the Killingly Energy Center Environmental Justice Plan Final Report. At NTE we take pride in our community-focused and transparent approach to developing projects, and here in Connecticut, the Environmental Justice Program helped further enhance our outreach efforts in a way that encouraged stakeholders to participate at the earliest opportunity, so that their input could be considered.

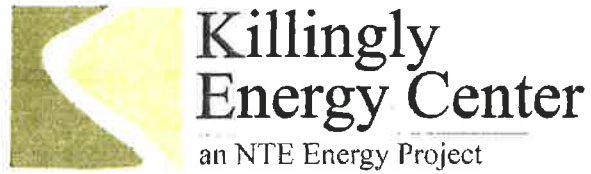

As our EJ Final Report documents, all measures and objectives presented in our EJ Plan were carried out, resulting in meaningful public engagement and participation.

It has been a pleasure to work with you throughout this process.

Sincerely,

A handwritten signature in black ink that reads "Tim Eves".

Tim Eves, SVP, Development

- Appendix U - Information Repository Listing
- Appendix V - Open House Poster Boards
- Appendix W - Semi-Permanent Project Sign
- Appendix X - Temporary Public Notice Signs

1.1 Executive Summary

This final report and certification is to confirm that NTE Connecticut, LLC (NTE) has complied with and exceeded the efforts detailed in its approved Environmental Justice Public Participation Plan (EJ Plan). While NTE looks forward to continued community engagement in efforts before the Connecticut Siting Council (CSC) and the Connecticut Department of Energy and Environmental Protection (DEEP), the submittal of this Environmental Justice Final Report (EJ Report) concludes the formal Environmental Justice process and documents NTE's satisfaction of its EJ Plan.

Consistent with Connecticut General Statutes (C.G.S.) Section 22a-20a and DEEP's Environmental Justice Program and Policy, NTE developed an EJ Plan, which outlined the coordinated public participation activities that NTE would conduct to provide opportunities for early, active and meaningful public involvement throughout the planning, pre-application, certification, permitting, compliance, and implementation process associated with the proposed Killingly Energy Center in Killingly, Windham County, Connecticut (the Project). NTE's updated EJ Plan was approved by the Administrator of Connecticut DEEP's Environmental Justice program on April 19, 2016. The majority of this final report documents NTE's compliance with the statutory requirements and the approved EJ Plan. Beyond this and as referenced below, NTE's efforts went beyond the EJ Plan and statutory requirements.

The activities proposed in the approved EJ Plan, supplemented by additional activities, and undertaken as presented in this EJ Report, facilitated meaningful public participation between stakeholders and NTE throughout the Project pre-construction, permitting, regulatory, and development process. The Environmental Justice-related activities and efforts also provided a variety of opportunities by and through which a number of public concerns were heard and addressed.

One of the goals of the Environmental Justice process is to encourage the meaningful engagement of the Environmental Justice community in the CSC and DEEP regulatory processes. Beyond the efforts undertaken by NTE as described in this report, the turnout and thoughtful and substantive participation at several public forums provides evidence that this goal of citizen engagement has been achieved. More specifically, NTE engaged in a number of activities designed to enhance both awareness and participation by the Environmental Justice community. These efforts included, among others: (i) creating a robust and interactive project website, (ii) providing mailings to the residents and businesses within this community, (iii) publishing monthly Project newsletters, (iv) holding multiple Project meetings in the community, (v) meeting weekly with community members, (vi) and making presentations to community organizations. Beyond these, NTE engaged in supplemental activities: (i) allocating funds for the Town of Killingly to retain a 3rd party engineering consultant to review all application documents to help the Town

evaluate the Project and, if desired, prepare Regulate and Restrict Orders¹, (ii) providing accessibility to studies/reports prior to their formal submission to the CSC, and (iii) undertaking online digital, mailing and call campaigns.

As this EJ Report further communicates, all measures and objectives presented in the EJ Plan were carried out and meaningful public engagement and participation has been achieved. These measures and the results/conclusions are presented in this Final EJ Report.

1.2 Project Purpose and Intent

NTE is proposing the construction of a 550-megawatt (MW) electric generating facility to be located on a 73-acre property (consisting of two parcels) in the Town of Killingly, Windham County, Connecticut (the Site). The proposed facility directly responds to the need for expanding the energy capacity in the state and region by constructing an environmentally responsible energy generation facility capable of providing cost-effective energy.

The proposed Project, located at 180 and 189 Lake Road, is located just beyond the westernmost portion of an existing industrial park in Killingly. The primary parcel at 189 Lake Road is within an area designated for future industrial development by the Town of Killingly. While some low density residential uses are located west of the site, and other residential uses exist at Alexander Lake to the east, the Site is generally located in an area separated from Killingly's higher density residential areas that lie to the east by Interstate 395.

The existing Lake Road Generating Facility is located approximately one mile east of the Site. The proposed Project will utilize a single combustion turbine in a 1x1x1 configuration, with a heat recovery steam generator, steam turbine and air-cooled condenser. The Project will be fueled primarily with natural gas. Natural gas will be provided via the Algonquin Natural Gas pipeline. The Project will connect to the existing Eversource 345-kilovolt (kV) electric transmission line located adjacent to the property's eastern boundary. CT Water has confirmed its ability to supply the Project with its limited water needs. Wastewater will be discharged using nearby interconnections to existing wastewater facilities.

1.3 Efforts to Implement the EJ Plan and Achieve EJ Plan Goals and Objectives

The goal of the EJ Plan was two-fold: 1) to actively seek public participation throughout the process; and 2) to encourage stakeholders to participate at the earliest opportunity in the review of the proposed Project so their input could be considered. The EJ Plan indicated the steps that

¹While the CSC has exclusive jurisdiction over the municipal siting/land use considerations of the facilities it regulates, it must consider municipal regulations and other state laws it considers appropriate when ruling on applications for certificates or petitions for declaratory rulings. In addition, a municipal zoning commission and inland wetland agency may regulate and restrict the proposed location of an electric generation facility or substation.

NTE would take to inform, engage, and solicit input from the local community, local government and local businesses, including a schedule of when the steps would be taken.

NTE's EJ Plan, as related to both the CSC and DEEP regulatory processes, was submitted on March 31, 2016, updated on April 14, 2016, and approved on April 19, 2016 by the Administrator of the Environmental Justice program. A copy of the EJ Plan is included as Appendix A to this report; a copy of the approval letter is provided in Appendix B of this report.

Following approval of the EJ Plan, NTE worked diligently to implement the measures required to facilitate meaningful public participation. This effort included a considerable number and wider variety of approaches to encourage public participation and input from a variety of community demographics.

Public meetings, newspaper publications, emails, direct mailings, site signage, a Project website, an open house, meetings with neighborhood and community members, group presentations, and other efforts were made to encourage and secure public participation. This Final EJ Report describes, in detail, the fulfillment of all public outreach efforts identified in the EJ Plan. Collateral materials used throughout the implementation process are included in the appendices.

The following provides an abbreviated chronology of the most significant milestones in implementing and going beyond the approved EJ Plan:

- **March 22, 2016** – NTE holds Public Open House
- **March 31, 2016** – NTE submits EJ Plan for approval
- **April 14, 2016** – NTE submits updated EJ Plan with revised date for Informal Public Meeting
- **April 19, 2016** – DEEP approves EJ Plan
- **May 4, 2016** – NTE holds Public Meeting #1
- **May 12, 2016** – Administrator, Environmental Justice Program requests further public meeting
- **July 11, 2016** – NTE holds Public Meeting #2
- **July 28, 2016** – Administrator, Environmental Justice Program confirms NTE met Environmental Justice Public Meeting requirement
- **September 29, 2016** – Administrator, Environmental Justice Program provides community supplemental questions to NTE
- **October 11, 2016** – NTE presents Proposed Community Financial Benefits at the regular monthly meeting of the Town Council, including potential benefits related to the Community Environmental Benefits Agreement
- **October 19, 2016** – NTE holds Public Meeting #3 to address community supplemental questions received from the Administrator, Environmental Justice Program

2.0 Community Information

This section describes the considerations contributing to the Town of Killingly's designation as an Environmental Justice community. As defined by the C.G.S. Section 22a-20a, an Environmental Justice community is:

- a. A United States census block group, as determined in accordance with the most recent United States census, for which thirty percent or more of the population consists of low income persons who are not institutionalized and have an income below two hundred percent of the federal poverty level, or
- b. A distressed municipality.

Killingly is identified on the list of distressed municipalities. A distressed municipality, as defined by C.G.S. Section 32-9p, is based on "high unemployment and poverty, aging housing stock and low or declining rates of growth in job creation, population, and per capita income."

2.1 Demographics

NTE took community demographics into consideration in developing communication mediums and tactics to best promote community engagement.

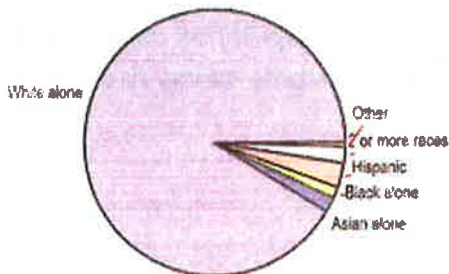

The Connecticut Department of Economic and Community Development (DECD) has identified Killingly as a distressed municipality since 1999. Identifying factors and considerations include high unemployment and poverty, aging housing stock, low or declining rates of growth in job creation, population, per capital income, and education. More specifically, the DECD weighed the following criteria specific to Killingly in DECD's most recent designation of distressed municipalities:

- Per capita income for 2013
- Percent of poverty in population for 2013
- Unemployment rate for 2014
- Percent change in population from 2000 to 2010
- Percent change in employment from 2004 to 2014
- Percent change in per capita income from 2000 to 2013
- Percent of house stock built before 1939 in 2013
- Percent population with high school degree and higher in 2013
- Per Capita Adjusted Equalized Net Grand List in 2015-2016

In 2014, the estimated population of Killingly was 17,172 individuals – nearly 15 percent of the Windham County population. A growth rate of 0.4 percent growth per year had been projected

by the Connecticut Economic Research Center (CERC) for the period from 2012 through 2020. However, the town population dropped 1.1 percent from 2010 to 2014; in contrast, the state population during the same period increased 0.6 percent.

Races in Killingly, CT

Reference: City-Data.com

In 2014, the median household income in Killingly was \$57,016. While higher than the national median of \$53,482, it is notably lower than the state’s median income, \$69,899. The Town’s per capita income was \$27,549, lower than both the national and state averages, \$28,555 and \$38,480, respectively. Similarly, about 9.6 percent of the Killingly population lives in poverty, which is lower than the national average of 14.8 percent, and lower than the state average of 10.8 percent. Almost 88 percent of the population age 25 or older are high school graduates, while 21 percent have obtained a Bachelor’s degree or higher. Killingly is primarily Caucasian (91.3 percent), with Hispanics making up the second largest ethnicity, at 3 percent of Killingly’s population.

Unemployment in Killingly is greater than the state average. In June, 2014, Killingly was at 7.7 percent unemployment, while Connecticut had an unemployment rate of 6.5 percent.

These demographics helped NTE identify the most applicable approach for communications to the community. For instance, 88 percent of the population is over age 25. To reach older age groups, communication channels like direct mailings, newspaper publications, and hard copy prints were more effective. NTE implemented accessible online channels for communications as well, including emails, a website and use of social media, like Twitter. These channels helped reach younger demographics more likely to be connected through the internet. The information available documented that the Town of Killingly is not diverse relative to ethnicity. Based on this, communications were limited to one language (English).

2.2 Community Input

In the EJ Plan, NTE presented potential community concerns typically raised in the context of electric generating facility siting and construction projects. After conducting multiple community interviews, taking questions from community members at public meetings, and requesting feedback from community members through mailings and emails, detailed information was gathered to better understand Project specific concerns from community members.

NTE summarized and organized these questions into topical areas. Using this information, NTE then organized topics of interest and prepared a *Frequently Asked Questions* (FAQs) document that was posted to the Project website.

In broad terms, the most common topical areas raised by the community related to quality of life impacts, particularly those related to water use, local air quality and the Project's benefits to the local community. Other collective concerns included noise, traffic, visual impact, back-up ultra-low sulfur distillate (ULSD) fuel storage and transportation, stormwater management, safety, and alternative power generation options.

Water Use. Input and questions included the proposed water source for the Project, the amount of water required, especially during rare instances when back-up ULSD fuel would be used, water use from the CWC wellfields, and alternative water sources.

Air Quality. Input and questions included the concentration of power generation facilities within a radius of the Town of Killingly, local emissions, and effects on asthma and other potential health concerns.

Project Benefits. Input and questions included the amount of property taxes the Project would pay, the services the Project would require from the community, employment, and direct and induced benefits to the Town, state and the region.

Noise. Input and questions over noise were primarily raised by those living in close proximity to the proposed Project, as well as those around Alexander Lake. Certain questions focused on how noise is measured, how noise ordinances are enforced, what noise levels might be expected during startup and commissioning through activities like steam blows, and other construction noise.

Traffic. NTE received questions related to traffic, ranging from the need for road widening and anticipated truck traffic during construction and normal operation to traffic during rare occasions when ULSD fuel might be used.

Visual Impact. Community members asked several questions related to visual impacts, including questions related to the height of the stack, buffer around the Project site, views from nearby conservation areas and around Alexander Lake.

Back-Up ULSD Fuel. Many questions from the community were posed concerning ULSD fuel. Transportation of fuel, storage of fuel, operation using fuel, protection against spills, containment options and emission impacts were all topics raised related to ULSD fuel.

Stormwater Management. The community asked questions and offered its thoughts regarding stormwater management. A number of questions considered potential effects on nearby wetlands and abutting neighbors.

Safety. NTE received many questions related to safety and emergency response. Questions related to an emergency response plan, as well as the potential for fires, explosions, spills and earthquakes.

Alternative Power Generation. The community asked many questions about renewable energy options, particularly the viability of solar as an alternative to a combined cycle generating facility.

As described in greater detail below, NTE responded to community questions through a number of media and communication vehicles.

3.0 Public Involvement Activities

NTE undertook a variety of public outreach and public participation activities to meet the goals and objectives of the EJ Plan. The Public Involvement Program activities included:

- Consultation with affected agencies, and other stakeholders
- Pre-application activities to increase Project awareness at the earliest opportunity
- Establishment of a Project website to disseminate information to the public
- Direct mail, email, newspaper and newsletter notifications of Project information, Project activities and opportunities for public participation
- Public meetings in the community

3.1 Project Mailing/Email List

During the pre-application phase of the project, NTE created email and mail lists to facilitate and encourage communication, public involvement and to disseminate information. NTE requested email addresses at public meetings, individual meetings, and through website contact forms, and continuously updated the email list.

Email lists included owners of property adjacent to the site; local county and state officials; individuals who attended community meetings; interested community organizations; interested environmental organizations; community members who made inquiries regarding the Project; and individuals who requested to be on the email list through the Project website. See Appendix C for “Key Contact List” and Appendix D for “Email Contact List”.

On April 22, 2016, NTE submitted its first email to the original 30 email contacts. Over the following months, the email list grew to over 130 contacts (and will continue to grow throughout the life of the Project). Email was used to distribute monthly newsletters, Project updates, notifications of resources added to the website, public notices and other Project information. Please see Appendix E - Community Emails.

In addition to emailing, NTE facilitated public involvement through various direct mailings to the community. NTE created a direct mailing list which included nearby residences and businesses, churches, schools, daycares and hospitals. This list included immediate and abutting neighbors. NTE mailed letters and postcards on two occasions to this list of over 400 community members. See Appendix F - Postcards and Mailings.

Additionally, on September 23, 2016, NTE mailed a letter to the residential and commercial interests in the community. See Appendix G for a copy of the letter that was sent to over 6,000 addresses.

As required, a mailing was also made to notify abutting property owners of the submittal of the CSC Application. This mailing is provided as Appendix H – Abutting Property Owner Notification Mailing.

3.2 Regular Agency and Stakeholder Briefings, Meetings, and Updates

To provide meaningful and ongoing consultation with local community members, organizations and officials, regular briefings and meetings were held throughout the pre-application and application phases. This outreach included face-to-face meetings, presentations, phone calls, and written Project updates through a Project monthly newsletter to keep agencies and stakeholders informed and engaged in a positive and productive manner.

NTE team members were in the Town of Killingly nearly every week meeting with individuals, agencies or organizations in the community. Regular briefings and meetings were held throughout the development process. Ongoing consultations with Town staff, municipal or commission representatives, local agencies and other stakeholders occurred throughout this time.

NTE provided project briefings, updates and presentations to organizations including the Killingly-Brooklyn Rotary Club, Killingly Business Association, Danielson Lions, New England Connecticut Chamber of Commerce, Killingly Housing Authority, H.H. Ellis Technical High School, Quinebaug Valley Community College, Wyndham Land Trust, and other local organizations. Other meetings/updates included meetings with abutting neighbors, Alexander Lake Association Members, local educational institutions, local churches, and other stakeholders within the community.

A representative list of briefings, presentations, meetings and updates is included as Appendix I – Public Outreach Log.

Additionally, NTE provided regular updates to the Administrator, Environmental Justice Program, calibrating community outreach activities and EJ Plan fulfillment.

3.3 Key Message Statements, Frequently Asked Questions (FAQs), News Releases, and Press Kits

Development of key message statements early in the process was essential to ensure consistent, accurate and current messaging to the public and within all public involvement materials prepared by NTE. After conducting multiple community interviews, taking questions from community members at public meetings, and requesting feedback from community members through mailings and emails, detailed information was gathered to better understand specific concerns from community members.

NTE collected and summarized the most frequently expressed community questions into the following topics:

- NTE Experience
- Killingly Energy Center Overview Information
- Siting (Environmental Impacts, Benefits)
- Safety
- Air Emissions
- Water
- Natural Gas
- Employment
- Regional Need for Power Generation and Electricity

Questions and answers related to these topics are provided as Appendix J – Frequently Asked Questions. FAQs were valuable for the Project contact person as well as the Environmental Justice community and other Project participants. This effort enabled NTE to provide timely and accurate information when approached by the media, interested members of the public, or other stakeholders. This FAQ also served as an important document to be shared publicly, in whole or in part, depending on specific questions raised throughout the public participation process. The FAQ was provided on the Project website.

NTE participated in many interviews with media outlets, including the *Hartford Courant*, *Norwich Bulletin* and *WINY Radio*. Mark Mirabito, project representative and Vice President, NTE Connecticut, was the primary media contact for this type of outreach and interviews.

3.4 Project Website

A Project website² was professionally designed, created and maintained to promote Project awareness. The website provided information on Project details, schedule, contact information, contact forms, FAQs, reports/evaluations, applications and permits, technical information, presentations, benefits, and other news and announcements. The Project website was a valuable platform for sharing pertinent project information to interested parties. The website was user friendly, easily accessible and efficient in reaching out to the community.

NTE recognized that some members of the community did not have access to the internet, or simply preferred printed copies of Project documents. To address this, NTE representatives placed hard copies of Project documents on file with the Town at the Town Hall and Public Library and mailed or hand-delivered related reports and analyses to those community members requesting the same.

The Project website allowed for all other interested parties to stay informed and obtain instant access to key Project documents, fact sheets, and other Project-related information.

The Project website contained and contains the following sections. Each section includes readily accessible information that is intuitive to access on the website:

- General Project information
- Project Schedule/Milestones
- News & Announcements
- Resources
- Benefits

² www.killinglyenergycenter.com

- FAQs
- Tell Us What You Think Contact Form
- Contact Us

See Appendix K – Project Website for website screenshots and content available.

This website has been invaluable in the Project’s outreach efforts. It has allowed NTE to easily share information in a timely manner. As new content was added to the website, notifications were provided through NTE’s email list.

3.5 Brochures and Fact Sheets

Brochures and fact sheets were prepared to communicate information about NTE Energy and the Killingly Energy Center. These brochures were made available and distributed at the Project Open House, public meetings, individual meetings, presentations to local organizations, and as drop-off material during local business/organization visits. These materials summarized essential Project information including size and scope of Project, schedule, location, and economic benefits. The brochure also included an artist rendering of the Project.

In many cases, brochures were accompanied by Project representative business cards with key contact information, such as email, direct phone number, and cell phone number.

See Appendix L – Brochure and Fact Sheet Collateral.

3.6 Notifications/Public Notices

Throughout the Environmental Justice Process, several public notices and other notifications were published in the local newspaper, on the proposed Project site through proper signage, as well as through emails and mailings³. These public notices announced the following meetings and regulatory proceedings:

- Public Meeting #1, May 4, 2016
- Public Meeting #2, July 11, 2016
- Special Joint Meeting, July 19, 2016
- CSC Application Submission, August 15 and 16, 2016
- Public Meeting #3, October 19, 2016

The *Norwich Bulletin*, which has a circulation of over 13,000 households, was the local newspaper used to disseminate these notices. The *Norwich Bulletin* serves Windham and New London

³ Additional notices were elements of various permitting processes, and are not discussed in this report.

Counties, collectively making up over 389,000 residents and over 150,000 households. Average monthly website traffic includes 1.8 million views.

See Appendix M for published Public Notices in the *Norwich Bulletin*.

NTE also produced and published a monthly Project newsletter, providing updates, key dates for approaching meetings, and invitations to the community to meet with Project developers. These newsletters were posted on the Project website, emailed to the email contact list, and published in the Turnpike Buyer, a local newspaper with a circulation of 21,000 households.

The monthly newsletter included links to Project resources, contact information of the primary representative of the Project, community events/activities, and acted as a primary communication tool for updating community members on NTE's activity and encouraging public participation by notifying key dates and announcements of approaching meetings.

On June 7, 2016 NTE submitted its first monthly newsletter, summarizing activities and providing notices of upcoming meetings, conferences, and other community events. A newsletter has been submitted every month since June. Newsletters were submitted on July 1, 2016; August 1, 2016; August 31, 2016; October 4, 2016; October 31, 2016; and November 30, 2016.

In addition to submitting monthly newsletters to email recipients, NTE also posted these monthly newsletters on the Project website under News & Announcements. These were also published in the local Turnpike Buyer, which has a distribution to over 20,000 residents in the Killingly area. See Appendix N - Project Newsletters.

3.7 Public Meetings

Public meetings were key to providing information and engaging with community members regarding Project details. These meetings during the Project development process provided opportunities for two-way communication, and allowed community members the ability to directly discuss the Project and its potential impacts and benefits with Project representatives.

Prior to submitting the EJ Plan, NTE held a Project Open House on March 22, 2016 at the Gold Eagle Banquet Hall, 8 Tracy Road, Dayville, CT, giving community members the ability to review storyboards and discuss the Project details with Project representatives. Poster boards included the location of the Project, technology overview, renderings of the facility, schedule, and other Project information. See Appendix Y for poster boards presented during the Project Open House. See Appendix O – Open House Attendee Sign-in List.

During the Project Open House, many attendees requested a more formal presentation and question and answer (Q&A) opportunity with Project representatives. In response to this and in

accordance with EJ Plan requirements, NTE scheduled the public meeting (Public Meeting #1) with a formal presentation and opportunity for Q&A with community members.

In accordance with the approved EJ Plan, Public Meeting #1 was held during the development process to facilitate meaningful public participation, provide community members and local government officials the opportunity to directly discuss the Project and its implications with Project representatives, and to give community members the opportunity to ask questions and provide input to the Project team.

NTE scheduled Public Meeting #1 for May 4, 2016. Public Notices were provided in accordance with the communication methods outlined in the EJ Plan. The notice was a one-quarter page advertisement in the *Norwich Bulletin* issued on Monday, April 18, not less than 10 days prior to and no more than 30 days prior to the Public Meeting #1. Additionally, signs were placed on the Project site as part of the Public Notice. Beyond this, the Public Notice was provided on the Project website, and an email was distributed notifying contacts of the meeting.

Over 200 people attended Public Meeting #1 at the Gold Eagle Banquet Hall. NTE provided a presentation of the Project and answered questions and received input from the community. See Appendix P for the presentation provided to the community, and Appendix Q for the sign-in list of attendees.

Following Public Meeting #1, and as recommended by the Administrator, Environmental Justice Program, NTE scheduled a second public meeting for July 11, 2016 (Public Meeting #2). Public Meeting #2 afforded NTE another opportunity to update the community on the status of the proposed Project. This meeting afforded the community another opportunity to ask questions and provide input concerning the Project. Again, a Public Notice (in accordance with the EJ Plan requirements) was provided in the *Norwich Bulletin*, notice signs were placed on the Project site, notice was provided on the website, and notification was transmitted via email.

Public Meeting #2 was held at the Killingly High School, with over 200 community members in attendance. The presentation provided the community with information from the reports listed in Section 3.13 herein, as well as other studies and analysis prepared in furtherance of the CSC application, including:

- A. Wetlands Update
- B. Stormwater
- C. EMF
- D. Species
- E. Cultural Resources
- F. Geotechnical

To maximize the completeness of information being made available to the community, the NTE team made twelve specialists and experts available and provided detailed information on a variety of Project questions and topics at Public Meeting #2. At this Public Meeting #2, NTE fielded questions and provided answers on all aspects of the project and its potential impacts.

On July 28, 2016, the Administrator, Environmental Justice Program confirmed Public Meeting #2 met the Environmental Justice Public Meeting requirement.

See Appendix R for the Public Meeting #2 presentation and Appendix S for the Public Meeting #2 sign-in sheet.

On October 11, 2016, NTE presented to the Town Council a summary of economic benefits that the Project will provide to the Town of Killingly, including the highlights of its proposed Community Environmental Benefits Agreement (CEBA). NTE representatives discussed the CEBA and answered questions from Town Council Members. See Appendix T for Proposed Community Financial Benefits Presentation to the Killingly Town Council.

On October 19, 2016, NTE held a third public meeting (Public Meeting #3) which was noticed as described in Section 3.6. Over forty community members were in attendance. At Public Meeting #3, NTE first responded to the written supplemental questions from the community provided to it by the Administrator, Environmental Justice Program. The remainder of the meeting was allocated for other community questions.

Beyond the public meetings that followed public notice, NTE also participated in other public meetings, including:

- Killingly Energy Center Presentation to Town Council on March 8, 2016
- Joint Meeting of the Town of Killingly Inland Wetlands & Watercourses and Planning and zoning Commissions on July 19, 2016
- Planning and Zoning Commission Special Meeting on September 22, 2016
- Inland Wetlands & Watercourses Commission Special Meeting on September 27, 2016

A representative list of briefings, presentations, meetings and updates is included as Exhibit I – Public Outreach Log.

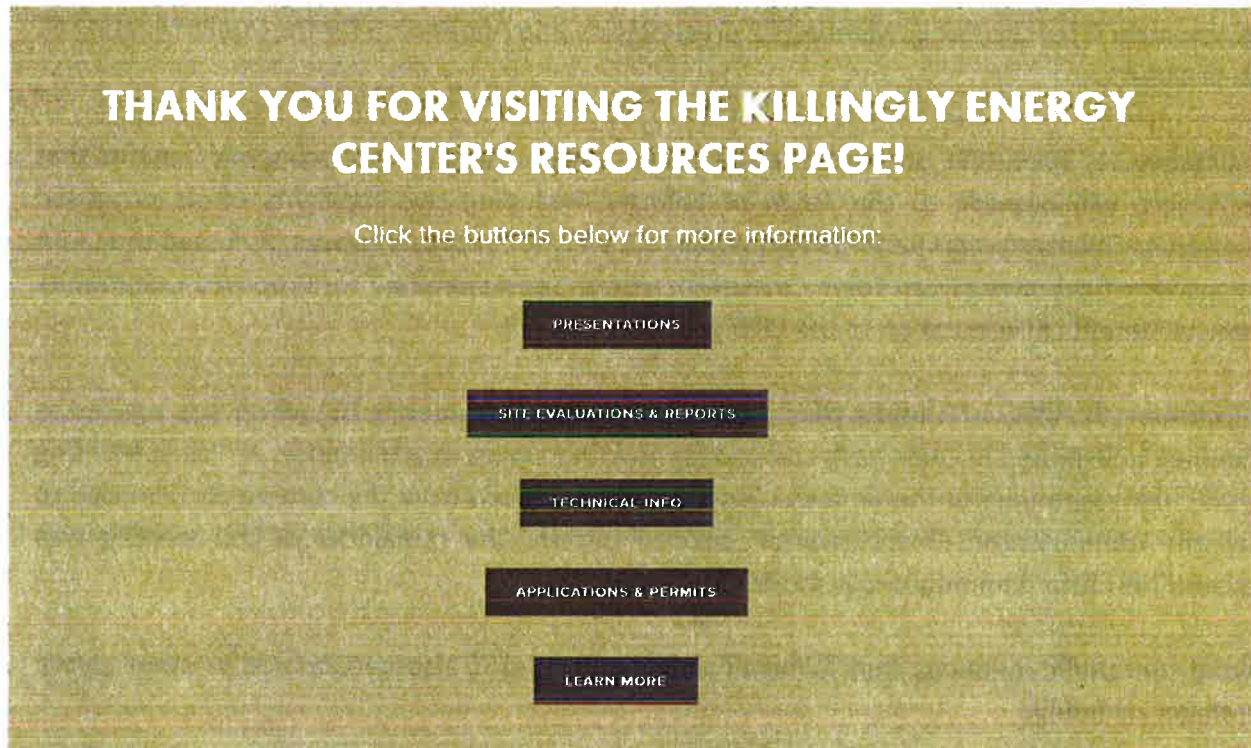

3.8 Information Repository

The information repositories provided the public convenient access to a collection of Project documents to advance their learning about, or keep updated on, Project activities. Information repositories were available in two forms: print and digital. Both forms were initially developed to

contain relevant Project materials. Following this, they were continually updated throughout the development of the Project.

A listing of reports, studies, analyses, site plans and other Project information provided in these information repositories is provided as Appendix U – Information Repository Listing.

Digital information repositories were set up on a “Resources” page on the Project website.

“Resources” tab on www.killinglyenergycenter.com

Print information (hard copies) repositories were established at the Killingly Public Library and Killingly Town Hall. The addresses and hours of operation of these two repositories are:

Killingly Public Library – 25 Westcott Road, Killingly, CT 06239

Hours:

Sunday/Monday: closed
Tues – Thurs: 9:30am – 7:00pm
Friday: 9:30am – 5:30pm
Saturday: 9:30am – 1:00 pm

Killingly Town Hall – 172 Main Street, Killingly, CT 06239

Hours:

Mon, Wed, Thurs: 8:00am – 5:00pm
Tues: 8:00am – 6:00pm

Fri: 8:00am – 12:00pm

3.9 Project Contact Person

A direct contact person was identified early in the development process as the designated project staff to provide information, answer questions or discuss concerns from the community. A formal communication path was also in place so this contact could identify proper team experts to answer any specific questions from the community.

David Groleau, Project Developer, was identified as the designated Project staff member who was responsible for responding to questions and inquiries from the community and other stakeholders.

Mr. Groleau's e-mail and direct phone number was provided on public notices, newsletters, letters, emails, signage, website, and presentations. There were also several contact forms on the Project website that directed inquiries to Mr. Groleau's email address. This direct access further invited community input during the development process and acted as a project hotline for the Project.

3.10 Public Open House

As discussed in Section 3.7, NTE held a Project Open House on March 22, 2016 at the Gold Eagle Banquet Hall, giving community members the ability to review storyboards and discuss the Project details with Project representatives. Poster boards included the location of the Project, technology overviews, renderings of the facility, schedule, and other Project information. See Appendix V for Poster Boards used during this Open House. See Appendix O for the sign in list of attendees.

3.11 Community Interviews, Surveys and/or Focus Groups

NTE performed informal community interviews and surveys throughout the development process. On August 25, 2016, NTE representatives visited local businesses along Main Street in Killingly to bring awareness of the Project to local businesses, as well as to ask questions of local business owners about their impression of the Project. Additionally, NTE solicited feedback through a website form, titled "Tell Us What You Think."

NTE representatives conducted informal focus groups with members of Alexander Lake Association and the local legislators. These focus groups served as opportunities for smaller meetings that allowed particular stakeholder groups to ask questions specific to their questions and concerns.

3.12 Site Signage

Early in the development process, NTE installed a semi-permanent sign on the Project site. Signage was displayed to inform the surrounding community about the proposed site for the Project, as well as to provide the contact information of the direct Project contact. Appendix W is a photo of the semi-permanent signage on the Project site. This sign is expected to be in place for the entirety of the development process.

In addition to the permanent sign, NTE provided temporary signage to bring awareness of approaching Public Meetings. For Public Meetings held on May 4, 2016, July 11, 2016 and October 19, 2016, NTE displayed signs with Public Notice Information. See Appendix X for photos of the Temporary Public Notice Signs installed on the Project site.

3.13 Supplemental Activities

In addition to fulfilling activities included in the approved EJ Plan, NTE completed supplemental activities to further encourage active participation in the process:

Town Third Party Engineering Review. Prior to the submittal of its CSC Application, the Town requested that NTE provide funds for the Town to retain a 3rd party engineering consultant to provide its council members, commission members, and constituents an in-depth analysis of NTE's CSC and air permit application materials. NTE agreed to reimburse the cost of the consultant, enabling the Town to directly contract with a third-party consultant. The Town selected TRC Environmental Corporation (TRC). TRC reviewed the Project's CSC Application and Air Permit Application and then provided input to the Town and guidance to the Planning and Zoning (P&Z) Commission and Inland Wetland and Watercourses Commission (IWWC) in preparation of their respective Regulate and Restrict Orders to the CSC. TRC responded to questions/input from the Commissions and the Town Council throughout the DEEP Air Permit and Connecticut Siting Council application processes.

Reports and Information Provided for Review Prior to Submission of Connecticut Siting Council Application. NTE, in advance of the July 11, 2016 Public Meeting #2, voluntarily made available to the community at the Town Hall, the Library and electronically on the KEC website, among other things, reports and information, including:

- DEEP Air Permit Application;
- DEEP Air Modeling #1 and #2;
- Project Technical Report;
- Report on Need and Economic Benefits;
- Report on Visual Impacts;
- Report on Sound/Noise;
- Report on Traffic;
- Report on Wetlands;

- Report on Water Resources

Online Digital Campaign. In addition to using traditional media for outreach, NTE also conducted online campaigns through digital ads on websites. These digital ads were viewable to web and mobile users in the Killingly area and directed users to the Project website. These ads resulted in over 650,000 impressions (or views) and over 750 clicks to the website. NTE was able to collect feedback through these online ads.

Mailing Campaign. In addition to the two mailings described in Section 3.1, NTE mailed (on September 23) a letter to residents, businesses and industrial addresses in the Town of Killingly, notifying these community members of the Project and inviting them to provide feedback. See Appendix G for a copy of the letter that was sent to over 6,000 addresses.

Online Digital Ad

Call Campaign. NTE also conducted a call campaign to further inform Killingly residents of the Project, as well as to solicit feedback. Over 1,000 calls were made to community members and over 80 community members provided feedback on the Project.

4.0 Results and Conclusions

As a result of the measures presented in this EJ Report, NTE received constructive feedback from the community via website forms, questions and input from meetings, email responses, other forms of inquiries, third party (TRC) review, and the Regulate and Restrict Orders. This feedback is being and will be considered along with feedback from the CSC and DEEP as the Project progresses through the certification and air permit processes.

The community feedback received is the result of meaningful public participation cultivated through the Environmental Justice efforts as presented in this EJ Report. This process has facilitated the broad participation of community members potentially affected and has allowed those community members and local officials in the Town of Killingly to have a meaningful voice and robust opportunity to participate in the process regarding the proposed Project.

Beyond this, the Environmental Justice efforts have positioned the Town and the community for full and active participation in the CSC and other permitting efforts that will follow.

5.0 Certification

I have personally examined and am familiar with the information submitted in this document and all attachments thereto, and I certify that, based on reasonable investigation, the submitted information is true, accurate and complete to the best of my knowledge and belief. I understand that a false statement made in the submitted information may be punishable as a criminal offense, in accordance with Section 22a-6 of the C.G.S., pursuant to Section 53a-157b of the C.G.S., and in accordance with any other applicable statute.

**Connecticut Department of
Energy & Environmental Protection**
Office of the Commissioner
Environmental Justice Program

Environmental Justice Public Participation Plan

Prior to a permit application being filed with the Department, an Environmental Justice Public Participation Plan (the "Plan") must be submitted and approved **for 1) any affecting facility**, in accordance with Section 22a-20a of the Connecticut General Statutes, **and 2) any additional facility applicable under the Department's Environmental Justice Policy**, that is proposed to be located or expanded in an **environmental justice community**. For definitions and guidance, refer to the **Environmental Justice Public Participation Guidelines ("Guidelines")** (www.ct.gov/deep/environmentaljustice). If the Plan is required for your project, complete and submit this form to the address indicated above.

Once the Plan has been approved by the Department, the applicant becomes responsible for fully implementing its approved Plan. Prior to issuance of a Notice of Tentative Determination by the Department, the applicant must submit a final report, documenting the implementation of the Plan. Should any of the information supplied in this form or in the approved Plan change, you must contact the Environmental Justice Program immediately to determine if an amendment to your approved Plan must be submitted.

Label all supporting documents to correspond with the outline provided in this document, e.g., "Part II A: Project Summary".

Part I: Proposed Applicant Information

1. APPLICANT INFORMATION

Applicant: NTE Connecticut, LLC

Mailing Address: 24 Cathedral Place, Suite 302

City/Town: St. Augustine

State: FL

Zip Code: 32084

Business Phone: 904-687-1857

ext.

Fax:

Contact Person: David Groleau

Phone:

ext.

Email: dgroleau@nteenergy.com

Applicant (check one): individual company federal gov't state agency municipality

If a Company, list company type (e.g., corporation, limited partnership, etc.):

Limited Liability Company

Check if any co-applicants. If so, attach additional sheet(s) with the required information as requested above.

2. WILL YOUR PERMIT APPLICATION INVOLVE: (check one):

A new facility

An expansion of an facility

3. FACILITY NAME AND LOCATION

Name of facility : Killingly Energy Center

Street Address or Location Description: 180/189 Lake Road

City/Town: Killingly

State: CT

Zip Code: 06241

Tax Assessor's Reference: Map

Block 83

Lot 6

Part II: Informal Public Meeting Requirements

Complete this part, identifying the time and place of the meeting and the methods that will be used to publicize it. Please note, the Department cannot take any action on the applicant's permit earlier than sixty days after the informal public meeting takes place.

A. Identify Time and Place of Informal Public Meeting

Identify a time and place where an informal public meeting will be held which must take into consideration convenience for the residents of the affected environmental justice community. Be sure to confirm the **date, time and place** of the meeting with the Department's Environmental Justice Program (860-424-3044 or edith.pestana@ct.gov).

- Approximate Date: May 4, 2016
- Place: Golden Eagle: 8 Tracy Rd, Dayville, CT 06241
- Time: 6:00 p.m.

To ensure an effective public meeting the following is advised: (1) schedule meetings at convenient times (i.e., evenings) and locations for community members; (2) announce the meeting through community channels, such as church bulletins, local papers and radio broadcasts; (3) announce meetings in common languages (e.g., Spanish radio or newspaper); (4) provide documentation and speakers in the appropriate languages other than English, if necessary; (5) provide information regarding applicable laws (state and local) with the appropriate contacts. Provide easy to understand information to community members. Respond to all comments. Be direct, open and honest regarding the expectations and limitations of the proposed facility.

Refer to Part III of this form for information to be presented at the meeting.

B. Identify Communication Methods By Which to Publicize the Public Meeting

1. At a minimum, applicants are required to publish notice of the date, time and nature of the informal public meeting.
 - Name of newspaper(s): Norwich Bulletin
 - Date(s) notice will be published: April 18, 2016

The notice must be a minimum one-quarter page advertisement in a newspaper having general circulation in the area affected and any other appropriate local newspaper serving such an area, in the Monday issue of a daily publication or any day in a weekly or monthly publication. Refer to newspaper of general circulation (www.ct.gov/deep/permits&licenses) or contact the Environmental Justice Program at 860-424-3044 for more information on appropriate local and general circulation newspapers. See attached notice template.

The notice must be published not less than 10 days prior to and no more than 30 days prior to the informal public meeting.

Part II: Informal Public Meeting Requirements (continued)

2. Other communication methods include but are not limited to (check as applicable):
- posting a sign on the subject property in English and other common languages spoken by at least twenty percent of the population that reside within a one-half mile radius of the subject facility, subject to any local regulations and ordinances;
 - written notification to local and state elected officials, identified in accordance with Part III. C.1. of this document;
 - written notification to neighborhood and environmental groups, identified in accordance with Part III. C.2. of this document, in English and other languages appropriate for the target audience;
 - posting of a similar notification of the informal public meeting on the applicant's web site, if applicable.
 - Other communication methods: Please specify:

Part III: Measures to Facilitate Meaningful Public Participation

At a minimum, each of the following measures must be completed and submitted with this Plan.

A. Identification of Proposed Facility or Proposed Expansion of a Facility

1. Identify the potential environmental and health impacts of such facility or the expansion of such facility, i.e., increased air emissions, water discharges, material management issues, etc.
2. Identify permits and general permits needed for the project by completing the *Permit Checklist (DEP-APP-001A)*.
It is important to complete the Checklist thoroughly to identify to the public what types of Department permits may be needed for such facility.
3. Identify efforts to mitigate the potential environmental and health impacts of such facility.
4. Identify any pollution control measures associated with the project.
5. Describe the location of the proposed facility with respect to residents and other community members (e.g., schools, parks, where people live, work etc.), including vehicle traffic patterns, noise, hours of operation and proximity to sensitive receptors, which could cause concerns in the community.

B. Identification of Impacted Community

1. Identify potentially impacted community (e.g., local neighborhood and religious institutions, schools and sensitive receptors such as day care centers and clinics and hospitals, local businesses, community based organizations and environmental organizations).
2. Identify community's demographics including: age, income, language, population, race/ethnicity, and economic status.

Efforts should be made to identify and discuss social and economic conditions as well as the cultural basis for some of the community's concerns and needs.

Part III: Measures to Facilitate Meaningful Public Participation (continued)

B. Identification of Impacted Community (continued)

3. Identify community(s) planned and existing types of development.

Maps may be used to provide information on related environmental considerations. Keep in mind that communities may define themselves in non-geographic ways using cultural and social terms (e.g., retirement center, parks, places of worship, social clubs, etc.). In any given area there may also be multiple overlapping communities and interests.

C. Identification of Individuals/Groups to Seek and Notify

1. Notify town(s) officials in which the affecting facility is proposed to be located or expanded. At a minimum, identify the following:

- **chief elected official of the applicable municipality:** David Griffiths, Chair, Town Council
- **state representative of the applicable municipality:** Representative Danny Rovero, Representative Christine Rosati-Randall
- **state senator of the applicable municipality:** Senator Mae Flexer

Check other individual/groups to notify. *Identify names in final report.*

- local building official;
- the zoning enforcement officials;
- local health officials; and
- any local environmental commission, committee or officials.

For information on municipal officials, please refer to the latest edition of the "State of Connecticut Register and Manual" (www.sots.ct.gov/sots/cwp/view.asp?a=3188&Q=392636), or contact municipal offices.

2. Identify the following to notify: abutting property owners, neighborhood residents, community leaders, (neighborhood and religious leaders, block watch captains, etc.), key community members; environmental commissions; civic organizations (e.g. Chamber of Commerce); local businesses; organizations; and neighborhood groups.

For assistance in obtaining environmental justice and other local contacts in the geographic area of interest, contact the Department's Environmental Justice Program at 860-424-3044 or edith.pestana@ct.gov.

Part III: Measures to Facilitate Meaningful Public Participation (continued)

D. Proposed Outreach Efforts

Identify proposed outreach efforts which will be implemented, in addition to the informal public meeting required pursuant to Part II of this document.

Check proposed outreach efforts as applicable:

- media outreach (e.g., sign, newspapers, radio). Include a copy of the planned publication or broadcast. For a list of alternative media, contact the Department's Environmental Justice Program at 860-424-3044 or edith.pestana@ct.gov.
- open house; facility tours
- meetings with neighborhood and community leaders, residents, business, etc.
- Other (please specify): Connecticut Siting Council local information document

E. Identify Other Measures, if applicable:

Attach additional sheets if necessary with the information.

Part IV: Certification

The proposed applicant *and* the individual(s) responsible for actually preparing the Plan must sign the following Certification. Refer to the **Guidelines** for information on who should sign the certification. An application will be considered incomplete unless all required signatures are provided. If the applicant is the preparer, please mark N/A in the spaces provided for the preparer.

"I have personally examined and am familiar with the information submitted in this document and all attachments thereto, and I certify that based on reasonable investigation, including my inquiry of the individuals responsible for obtaining the information, the submitted information is true, accurate and complete to the best of my knowledge and belief.

I understand that a false statement in the submitted information may be punishable as a criminal offense, in accordance with section 22a-6 of the General Statutes, pursuant to section 53a-157b of the General Statutes, and in accordance with any other applicable statute.

I certify that this Plan is on complete and accurate forms as prescribed by the commissioner without alteration of the text.

I also certify that a final report, which documents the implementation of this Plan, will be submitted to the Department **after** this Plan has been approved in writing by the Department and **before** the Department issues a Notice of Tentative Determination."

	April 14, 2016
Signature of Proposed Applicant	Date
Seth Shortlidge	Authorized Representative
Name of Proposed Applicant (print or type)	Title (if applicable)
	April 14, 2016
Signature of Preparer (if different than above)	Date

1.0 INTRODUCTION

This Environmental Justice Plan (EJ Plan) outlines the coordinated public participation activities that NTE Connecticut, LLC (NTE) will conduct to provide opportunities for early and active public involvement throughout the planning, pre-application, certification, compliance, and implementation of the proposed Killingly Energy Center in Killingly, Windham County, Connecticut (the Project). In particular, this EJ Plan emphasizes activities focused on pre-construction activities.

The activities outlined in the EJ Plan provide a variety of opportunities by which public concerns can be identified and addressed as early as possible throughout the various stages of the decision-making process and will facilitate effective and open communication between stakeholders and NTE. Updates to this information will be made as the Project's outreach activities progress.

This EJ Plan was developed consistent with the Connecticut Department of Energy and Environmental Protection (DEEP)'s Environmental Justice Policy, codified as section 22a-20a of the Connecticut General Statutes (CGS). The Project, as an electric generating facility with a capacity of more than ten megawatts (MW) is defined as an "affecting facility." CGS also defines an environmental justice community as including a "distressed municipality"; Killingly is currently listed by DEEP as a distressed municipality. Therefore, an EJ Plan is required to be approved and implemented, with a Final Report to DEEP's Environmental Justice Program to be submitted prior to issuance of a Notice of Tentative Determination by DEEP.

1.1 PROJECT PURPOSE AND INTENT

NTE is proposing an approximately 550-MW electric generating facility to be located on an approximately 70-acre parcel in the town of Killingly, Windham County, Connecticut. The proposed facility directly responds to the need for expanding the energy base in the region by constructing a cost-effective and environmentally responsible energy generation facility.

The proposed Project will be located in an industrial area in the northern portion of Killingly, west of Interstate 395 (I-395) and Alexander Lake; south of the Quinebaug River; and north of Lake Road and the Hartford Providence Turnpike. While some low-density residential uses are located west of the site, and more densely around Alexander Lake, the site is generally located in an area separated from Killingly's higher density residential areas to the east by I-395. The existing Lake Road Generating Facility is located within approximately one mile east of the site.

The proposed Project will utilize a single combustion turbine in a 1x1x1 configuration, with a heat recovery steam generator, steam turbine and air-cooled condensers. The Project will be fueled primarily with natural gas. Natural gas will be provided via the Algonquin Natural Gas pipeline. The Project will connect to the

existing 345-kilovolt (kV) electric transmission line located adjacent to the property's eastern boundary.

It is anticipated that the Project will receive water for process use from the Connecticut Water Company and that infrastructure to provide water exists at or near the Project site within Lake Road. It is presumed that wastewater will be discharged using nearby interconnections to existing wastewater facilities.

1.2 ANTICIPATED PERMITTING REQUIREMENTS

The Project is currently developing design details that will refine its pre-construction environmental permitting requirements, and will update the EJ Plan as additional details are known. At the present time, the following approvals are anticipated to be required at the state level:

- The Project will require approval by the Connecticut Siting Council (CSC);
- The Project will require air permitting New Source Review by DEEP;
- The Project is anticipated to require a permit from DEEP for discharge to the sanitary sewer, which could fall within the requirements of a General Permit categorical industry user (<10,000 gallons per day);
- The Project is working to avoid wetland impact, but could require review for an Inland 401 Water Quality Certification; and
- The Project will require DEEP General Permit approval associated with Stormwater & Dewatering Wastewaters during Construction Activities, as well as for Stormwater Associated with Industrial Activities.

1.3 PLAN GOALS AND OBJECTIVES

The overall goal of this plan is two-fold: 1) to actively seek public participation throughout the planning, pre-application, certification, compliance, and implementation process; and 2) to encourage stakeholders to participate at the earliest opportunity in the review of the proposed Project so their input can be considered. This plan indicates the steps that NTE will take to inform, engage, and solicit input from the local community, general public and other stakeholders, including a schedule that indicates when the steps will be taken. Section 2 of this plan provides a description of the surrounding local community, including important demographic information, while Section 3 outlines the planned public involvement activities.

2.0 COMMUNITY INFORMATION

This section describes the town of Killingly within its context as an environmental justice community. In accordance with CGS Section 22a-20a, an environmental justice community is:

- a. *A United States census block group, as determined in accordance with the most recent United States census, for which thirty percent or more of the population consists of low income persons who are not institutionalized and have an income below two hundred percent of the federal poverty level, or*
- b. *A distressed municipality.*

Killingly is identified on the list of distressed municipalities. The following discussion provides some context for community characteristics.

2.1 COMMUNITY BACKGROUND AND HISTORY

The town of Killingly is located in Windham County in the northeastern corner of Connecticut. The town, first incorporated in 1708, began as several mill villages sited along its abundant waterways, including the Five-Mile and Quinebaug Rivers. In the early half of the 19th century, Killingly was the largest producer of cotton goods in Connecticut in the early 20th century, earning the epithet "curtain capital of the world." The town is one of the largest in the county, and includes several distinct village areas: Attaugan, Ballouville, Dayville, East Killingly, Rogers, South Killingly, and the Borough of Danielson. The Project is located most proximate to the Dayville community.

The area surrounding the Project site has been designated for industrial development by the town, and currently includes several major businesses as well as the Lake Road Generating Plant. Alexander Lake, south and east of this economic development area, includes private residences surrounding this recreational lake.

2.2 DEMOGRAPHICS

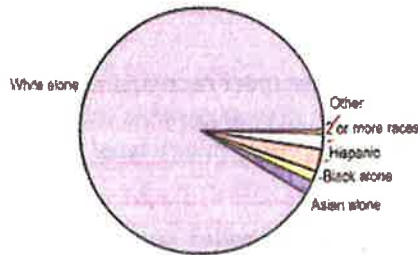

The Connecticut Department of Economic and Community Development (DECD) has identified Killingly as a distressed municipality since 1999. Identifying factors and considerations include high unemployment and poverty, aging housing stock, low or declining rates of growth in job creation, population, per capita income, and education. More specifically, the DECD weighed the following criteria in their most recent designation of distressed municipalities:

- Per capita income for 2013
- Percent of poverty in population for 2013
- Unemployment rate for 2014
- Percent change in population from 2000 to 2010
- Percent change in employment from 2004 to 2014
- Percent change in per capita income from 2000 to 2013
- Percent of house stock built before 1939 in 2013
- Percent population with high school degree and higher in 2013
- Per Capita Adjusted Equalized Net Grand List in 2015-2016

In 2014, the estimated population of Killingly was 17,172 individuals – nearly 15 percent of the Windham County population. A growth rate of 0.4 percent growth per year had been projected by the Connecticut Economic Research Center (CERC) for the period from 2012 through 2020. However, the town population dropped 1.1 percent from 2010 to 2014; in contrast, the state population during the same period increased 0.6 percent.

In 2014, the median household income in Killingly was \$57,016. While higher than the national median of \$53,482, it is notably lower than the state's median income, \$69,899. The town's per capita income was \$27,549, lower than

Races in Killingly, CT

both the national and state averages, \$28,555 and \$38,480, respectively. Similarly, about 9.6 percent of the Killingly population lives in poverty, which is lower than the national average, 14.8 percent, as well as the state average, 10.8 percent.

Almost 88 percent of the population age 25 or older are high school graduates, while 21 percent have obtained a Bachelor's degree or higher.

Killingly is primarily Caucasian (91.3 percent), with Hispanics making up the second largest ethnicity, at 3 percent of Killingly's population.

Unemployment in Killingly is greater than the state average. In June, 2014, Killingly was at 7.7 percent unemployment, while Connecticut had an unemployment rate of 6.5 percent.

2.3 POTENTIAL COMMUNITY CONCERNS

This section summarizes community concerns typically associated with power plant siting and construction projects. Please note the concerns outlined here are those typically communicated by the public for sites undergoing construction. Note that only limited community interviews have so far been conducted; detailed information has not yet been gathered from the local community in Killingly to draw these conclusions about specific community concerns for the Project site.

This section will be updated throughout the outreach and engagement process to reflect concerns that are raised by the surrounding community and stakeholders during events such as stakeholder meetings/briefings, community meetings, and community interviews.

2.3.1 Typical Concerns During Design and Construction

- **Quality of Life Impacts** – During construction projects, local community concerns often include quality of life considerations such as increased dust generation, truck traffic, and noise. For this Project, comprehensive construction plans, including mitigation plans for dust, traffic, and noise, will be available for public comment and consideration. NTE will take the necessary steps to ensure that quality of life impacts are appropriately addressed during design and construction.
- **Health & Safety** – Worker and community health and safety are often key concerns at construction sites. To demonstrate its commitment to the health and safety of site workers and neighbors, NTE will implement the necessary Project controls (such as fencing, signs, security, traffic control, etc.) during all on-site construction activities. Appropriate Project control plans will be developed and finalized before construction begins.
- **Project Construction Schedules** – The timing of Project activities at construction sites is typically a concern to surrounding neighborhoods. To address this potential concern, NTE will make every effort to ensure that work is appropriately scheduled to minimize or even eliminate disruption of normal community activities. NTE will also regularly inform the public of Project schedules through updates on the project website or other means.
- **Access to the Process** – Additional issues tend to arise when the public is concerned that adequate public access and involvement in the regulatory review process is not accommodated, or that communication during the construction process is not clear. Power plant siting and construction projects are complex and they can take substantial time. This plan encourages all interested community members and stakeholders to become engaged early in the process, and stay engaged throughout the entire process. The activities

outlined in Section 3 to be implemented by NTE, such as providing a Project contact, hosting community meetings/open houses, developing a Project website, and preparing/disseminating fact sheets, will go a long way to providing the public and other interested stakeholders with ample opportunity to participate in the process while remaining compliant with legislated outreach requirements.

2.3.2 Typical Concerns During Operation

- **Water Use** – Even where plentiful water is available from existing purveyors, water use can be a concern for power projects. The Project will incorporate air cooling to reduce its water demand to the greatest extent possible, and will work closely with the Connecticut Water Company and the local community to evaluate and assure that impacts to existing users and/or nearby water resources such as Alexander Lake would not occur.
- **Operational Noise** – The Project will be designed using industry best practices to alleviate noise impacts to comply with applicable standards through the use of sound attenuation design measures. Anticipated changes in sound level will be assessed, and compliance with applicable standards demonstrated.
- **Visual** – A common community concern with industrial development is the change in aesthetics. Although the Project site is in an area planned for industrial uses, with surrounding industrial uses, residences are also located nearby. The Project's structures and their potential visibility from surrounding areas will be assessed.
- **Air Quality** – Health-based concerns associated with emissions are typical concerns for new power plant projects. This plan will engage the community in open discussions about the air quality impacts of the Project during construction and operation, including the Project's compliance with applicable health-based standards. By listening to community concerns, addressing them in an open and public forum, and accepting feedback throughout the process, NTE will proactively address air quality concerns. The Project will incorporate emission controls, such as selective catalytic reduction and an oxidation catalyst, to demonstrate that Best Available Control Technology and Lowest Achievable Emissions Rates are reflected by the Project, as appropriate.
- **Greenhouse Gas/Global Warming from Fossil Fuel Combustion** – Greenhouse gases (GHGs) and environmental issues associated with power plants are common community concerns. NTE will utilize extremely efficient technology to comply with all regulatory requirements for GHGs, and will use the best technologies available to reduce GHG emissions. NTE will also implement practices and measures to ensure that the Project functions properly and operates efficiently.
- **Ultra-low sulfur distillate (ULSD) and Chemical Storage** – ULSD and chemical delivery, storage, and handling could result in some level of concern among stakeholders. Detailed containment design will be reflected in the Project and spill response plans will be prepared. Although very stringent standards are required public outreach and engagement will help alleviate concerns.

2.3.3 Killingly-Specific Community Issues

Based on outreach conducted to date, including a public open house held on March 22, 2016, key issues identified to date have focused on concerns about the Project's effect on noise and water resources. As additional meetings are held and broad Project issues are discussed, key topics of local concern will continue to be identified and addressed.

3.0 PUBLIC INVOLVEMENT ACTIVITIES

3.1 PLANNED PUBLIC INVOLVEMENT ACTIVITIES

This section outlines the public outreach and participation activities that NTE will undertake to meet the goals and objectives of this plan. The Project's public involvement program will include:

- Consultation with the affected agencies and other stakeholders
- Pre-application activities to increase Project awareness at the earliest opportunity
- Establishment of a Project website to disseminate information to the public
- Notifications of Project activities and opportunities for public participation

NTE plans to implement the public involvement activities described below to fulfill these objectives and enable stakeholders and agencies to engage in a meaningful way early in the process. In addition, these activities provide many opportunities for the public, agencies, and other stakeholders to stay engaged throughout all phases of the Project, from planning and pre-application to certification and compliance, all the way to operation. The public involvement activities outlined in this section will be sequenced with the major phases of the Project, assuming a general schedule as such:

- Pre-Application (approximately 1 – 2 months)
- Application Review (approximately 9 – 12 months)
- Certification and Compliance Phase (Construction) (approximately 24 – 36 months)
- Operational Phase

A tentative schedule of the planned public involvement activities is described throughout this section and then summarized in Section 3.2.

3.1.1 Project Mailing/E-mail List

Description: To facilitate communication, public involvement, and dissemination of information, a Project mailing/e-mail list will be developed, and maintained for use in distributing fact sheets, notices, and other project information, as appropriate. The Project mailing/e-mail list will include, to the extent possible, owners of property adjacent to the site; local, county, state, and federal officials; individuals who attend community meetings; interested community organizations; interested environmental organizations; people who make inquiries regarding the site; and local school districts, libraries, and media outlets.

The Project mailing/e-mail list will be revised regularly so that contact information, including name, organization (as appropriate), address, phone number, and e-mail address, is kept up to date. Furthermore, the list will be updated as requests for inclusion are received from interested parties.

Timing: Developed in Pre-Application phase; updated and maintained until construction is completed; modified for maintenance throughout Project's operational life.

3.1.2 Regular Agency and Stakeholder Briefings, Meetings, and Updates

Description: In order to provide meaningful and ongoing consultation with the affected agencies and other stakeholders, regular briefings and meetings will be held throughout the Project regulatory review process and written updates prepared. These items will include face-to-face meetings, conference calls, and written Project updates to keep agencies and stakeholders informed and engaged in a positive manner and to continually request their consultation.

Timing: Initiated in the Pre-Application phase to kick off the project; continuing through the Application and Construction phases.

3.1.3 Key Message Statements, Frequently Asked Questions (FAQs), News Releases, and Press Kits

Description: These items will help to proactively publicize progress or key milestones in the process. They will also serve as resources for responding to inquiries from the public for information on how to participate in the proposed Project review. Development of key message statements early in the process will be essential to ensure consistent messaging among all public involvement materials prepared. FAQs will be essential for the Project contact person, as well as Project participants, if they are approached by the media, interested members of the public, or other stakeholders. The remaining items -- news releases and press kits -- would be released to the media outlets identified on the Project mailing/e-mail list as a way to proactively inform those outlets about certain aspects of the Project.

Timing: Developed for use in the Pre-Application phase, and revised as appropriate for review throughout the Project's operating life.

3.1.4 Project Website

Description: A Project website will be designed, set up, and maintained to house Project news and updates, Project schedule, contact information, key documents, etc. This will allow for all interested parties to stay informed and provide instant access to key project documents, fact sheets, and other project-related information.

At the present time, the Project website is envisioned to contain the following:

- General Project information and photos/graphics
- "News and events" feature
- Identification of and contact information for key Project personnel and agency representatives
- Method for phoning/e-mailing/sending in comments/questions to the Project contact person, including the availability of a Project hotline

As the Project progresses and more information is gathered, additional content and features will be added to the Project website to help stakeholders participate in the process.

Timing: Developed/set up to go live early in the Pre-Application phase; maintained and updated until completion of the Construction phase.

3.1.5 Brochures and Fact Sheets

Description: For up-front and ongoing communication with the public, brochures and fact sheets will be prepared to encourage the public and other interested stakeholders to participate at the earliest opportunity. Another objective of fact sheets and brochures is to educate the public as to the specific elements and features of the Project. These materials will summarize essential information for the public and other interested stakeholders, and include

announcements about upcoming events, summaries of current work activities or Project status, schedules for upcoming work, and contact information.

As such, fact sheets will be used to announce major milestones of the Project, explain the principal facts, and provide technical information in plain language, including such information as:

- Background and purpose of the Project
- Current status/major milestones reached
- Next steps in the Project
- Contact information for the Project contact person
- Information about how to access the Project website
- Locations of the local information repositories

Timing: “Introductory” fact sheets developed early in the Pre-Application phase; continue to be developed and disseminated until completion of the Construction phase.

3.1.6 Notifications/Public Notices

Description: Public notices to announce public meetings, open houses, regulatory proceedings, and major Project milestones will be placed in local newspapers (such as the Norwich Bulletin), and on the Project website. For certain events or milestones, these notices can also be sent to the Project mailing/e-mail list.

Notifications will be an important part of this public involvement program as they will broadcast opportunities for the public to participate and provide input throughout the process.

In addition the notification methods listed above, other methods of notification may include:

- Placing newspaper inserts can garner additional attention when used in conjunction with a traditional public notice placed in the local paper.
- Developing a “community notification” newsletter to distribute to members of the public and other interested stakeholders is a good way to directly inform and notify about upcoming events.
- Placing notices in a newsletter distributed by a local government, a civic or community organization, or in a free publication can be a good way to target a specific audience or segment of the community.
- Placing signs and bulletin boards within the community can alert interested members of the public about upcoming events.
- Using social media outlets (Facebook, Twitter, etc.) can help promote upcoming events.
- Making telephone calls can provide a personal and immediate manner of spreading information.

Timing: To announce important Project events such as public meetings, and open houses.

3.1.7 Public Meetings

Description: Scheduling and implementing periodic public informational meetings during the Project development process will provide two-way communication, with community members able to directly discuss the Project and its implications with Project representatives. Public meetings will be held as required by the regulatory process, as well as at certain key Project milestones and to solicit public input.

Key audience members and their anticipated issues of concern will be identified ahead of time. To the extent possible, public meetings will be announced before the meeting date in local newspapers (such as the Norwich Bulletin), mailings (such as fact sheets) to the Project mailing/e-mail list, and on the Project website.

To the extent possible, the meetings will be scheduled at times and locations that will accommodate the majority of concerned members of the public. Relevant documents will be made available for public review, either via the information repository, project website, at the meeting itself, or a combination of these methods, as necessary.

A sign-up sheet will be available at each public meeting held and attendees will be encouraged to voluntarily provide their names and addresses, which will be added to the Project mail/e-mail list.

Timing: Initial public meeting held early in the Pre-Application phase to introduce the Project; additional public meetings held during the Application review phase.

3.1.8 Information Repository

Description: Information repositories will be set up at the Killingly Public Library and Killingly Town Hall. The two repositories will house hard copies of relevant Project documents. The addresses and hours of operation of these two repositories are:

Killingly Public Library

25 Westcott Road, Killingly, CT 06239

Hours:

Sunday/Monday: Closed

Tues – Thurs: 9:30am-7:00pm

Friday: 9:30am – 5:30pm

Saturday: 9:30am – 1:00pm

Killingly Town Hall

172 Main Street, Killingly, CT 06239

Hours:

Mon, Wed, Thurs: 8:00am – 5:00pm

Tues: 8:00am – 6:00pm

Fri: 8:00am – 12:00pm

The primary objectives of the information repository is to serve as a collection of documents related to the Project and make those documents readily available to people who are interested in learning about, or keeping updated on, Project activities. As such, establishing these repositories makes information accessible to the public in two convenient locations.

As with the Project website, the information repositories can serve as crucial resources for the public in accessing records relating to the Project. As such, both repositories will be initially stocked with relevant Project materials and then continually updated throughout the life of the Project. Some example materials to be included in the repositories include:

- Background information on the proposed Project and NTE
- Fact sheets, brochures, handouts, and other public involvement materials
- This EJ Plan
- Names and phone numbers of the Project contact person and appropriate agency representatives
- Any other relevant material

The repositories will be kept up-to-date by adding new documents as they are generated.

Timing: Set up early in the Pre-Application phase; maintained and updated through completion of the Construction phase.

3.1.9 Project Contact Person

Description: A Project contact person will be identified early in the process and will be a designated Project staff member who is responsible for responding to questions and inquiries from the public, the media, and stakeholders. The Project contact person will be instrumental in developing public involvement materials such as fact sheets, brochures, press kits, and talking points, among other items.

Timing: Contact person identified and ready to go early in the Pre-Application phase.

3.1.10 Public Open Houses

Description: Public open houses can be held to provide the public with an opportunity to gain more information about the Project in an open setting and discuss issues face to face with Project personnel and agency representatives. They can also be held and targeted for special interest community groups.

Open houses are informal meetings in a public location where people can talk to Project and agency personnel on a one-to-one basis. These sessions allow interested members of the public to ask questions and express their concerns directly to Project and agency staff. Open houses can also be set up to allow members of the public to talk with representatives from interested organizations in the community.

Open houses will be typically held when new Project information is available that may not be appropriate for a public meeting and/or when it is found out that members of the public have widely varying interests or levels of knowledge. The more informal setting of these sessions is appropriate to enhance direct dialog with members of the community and encourage members of the public to raise questions and be a part of the process outside of the more formal public meetings and hearings.

Open houses will typically be scheduled during evening or weekend hours, to promote a high level of attendance by all concerned members of the public. A convenient location within the community will be selected.

To provide clear, consistent messaging and information, appropriate materials, such as posters, handouts, or fact sheets, will be prepared and made available at these sessions. To the extent possible, open houses will be announced at least seven days ahead of time. Announcements will be sent to the Project mailing/e-mail list to inform all interested parties.

Timing: As dictated by Project needs.

3.1.11 Community Interviews, Surveys and/or Focus Groups

Description: During the Pre-Application phase, community surveys may be planned and conducted through invited sessions, door knocks, or other means to provide information about the Project to community members, obtain input from neighbors one-on-one, and find out about any concerns about the Project.

Timing: As dictated by Project needs.

3.1.12 Site Signage

Description: Signage will be designed and installed at the Project site to inform the surrounding community about the planned and ongoing construction at the site.

Timing: Installed early in the Construction phase before construction begins at the site and maintained throughout the Project's operational life.

3.1.13 Additional Activities for Consideration

Description: Additional items may include groundbreaking ceremony, completion ceremony, and site tours, as appropriate.

Timing: As needed throughout the Project's Construction and Operational phases.

3.2 SCHEDULE FOR PUBLIC INVOLVEMENT ACTIVITIES

Provided below is a snapshot of the schedule for the public participation activities described above.

Schedule of Public Participation Activities

Activity	Pre-Application Filing (1–2 mos)	Application Review (12-16 mos)	Certification & Compliance (24-36 mos)	Operational Phase (36+ mos)
Project Mailing/E-mail List	Developed	Updated and maintained		Stored for future use
Regular Agency and Stakeholder Briefings, Meetings, and Updates	Planned, initiated	Implemented		As needed
Key Message Statements, FAQs, News Releases, and Press Kits	Developed	Implemented, revised/updated		As needed
Project Website	Developed, implemented	Maintained and updated		Removed from service when appropriate
Brochures and Fact Sheets	Initial series developed, implemented	Updated, developed, implemented		As needed
Notifications/Public Notices	Planned, initiated	Implemented with milestones/events		As needed
Public Meetings	Planned, initiated, implemented	Implemented as necessary		As needed
Information Repository	Coordinated	Maintained, updated		As needed
Project Contact Person	Identified, communicated	Support public activities		Responsibilities transferred to facility
Public Open Houses	Planned, coordinated, implemented as needed			
Community Interviews, Surveys and/or Focus Groups	Planned, coordinated, implemented as dictated by Project needs			
Signage at the Site	Planned	Implemented	Updated, maintained	Permanent sign
Additional Activities for Consideration	Planned, coordinated, implemented as needed			

3.3 COMPLETED ACTIVITIES AND PARTICIPATION RESPONSE

This section houses information about public participation activities that have been accomplished, public participation and input received, and responses to public concerns and inquiries. As activities are completed, this section will be revised. Activities to date have included informal consultation and an initial public open house on March 22, 2016.

Appendix A: Key Contact List

Organization	Type	Contact	Contact Address	Contact City	Contact State	Contact Zip	Local Address
Baptist Church of Danielson	Church/Religious Institution		247 Broad St.	Killingly	CT	06239	247 Broad St.
Calvary Bible Baptist	Church/Religious Institution		162 Main St., 2nd Flr.	Killingly	CT	06239	162 Main St., 2nd Flr.

Overview

As one of the fastest-growing energy companies in the country, the NTE Energy team is made up of some of the most experienced developers, engineers and power marketers in the industry.

On a combined scale, NTE Energy team members have developed over 10,000 MW in the US, Mexico, Europe and Asia. The team has also originated over \$5 billion in power sale contracts and commercialized over 42,000 MW of combined electric generation assets.

NTE Energy focuses on the development and acquisition of strategically located electric generation and transmission facilities within North America. The team executes all aspects of project development, from initial market and site evaluations and permitting to financing, construction and operation. NTE Energy is actively developing projects in Ohio, Texas and North Carolina, as well as pursuing early-stage opportunities in several other locations. The team is focused on developing reliable, efficient power for a cleaner America.

Reliable. In a constantly changing industry, NTE Energy provides dependable power. Whether it's capacity needs, quick-start peaking generation, or baseload power, NTE's energy centers will work to create a strong and reliable energy infrastructure.

Efficient. NTE Energy is developing some of the country's most efficient power facilities by using advanced technologies in a combined cycle configuration.

Clean. NTE Energy is focused on developing electric generation using clean burning natural gas. Our energy centers use significantly less water, provide more power with minimal environmental impacts and produce up to 60% less emissions compared with older, more traditional forms of generation.

Killingly Energy Center

an NTE Energy Project

Project Description:

NTE Energy is developing and plans to construct, own and operate the Killingly Energy Center, a 550 MW greenfield natural gas-fired electric generating facility in Killingly, Connecticut, which will be a source of clean and efficient electric capacity and energy for many communities and utilities in the region.

Once complete, the Killingly Energy Center will be capable of powering approximately 500,000 homes and represent an investment of over \$500 million, providing numerous benefits to the local community and its economy.

Project Overview:

Configuration:

- Technology – 1 x 1 Combined Cycle Gas Turbine (CCGT)
- Fuel – Natural Gas, with limited ULSD backup
- Cooling – Air
- Net Output – approx. 550 MW

Anticipated Economic Impact:

- Investment – Over \$500 million
- Jobs
 - 250-350 During Construction
 - 25-30 During Operation

Anticipated Project Milestones:

- Secure Site – 1Q16
- Interconnection Request – 1Q16
- Air Permit Application – 2Q16
- Siting Council Application – 2Q16
- Obtain Permits – 1Q17
- Obtain Siting Approval – 1Q17
- Start Construction – 2/3Q17
- Commercial Operation – 2020

Please Visit: www.nteenergy.com

NTE Energy is focused on the development and acquisition of strategically located electric generation and transmission facilities within North America. The team executes all aspects of project development, from initial market and site evaluations to permitting and financing, as well as construction and operation.

NTE Energy has completed development, and begun construction on the Middletown Energy Center, located in Southwest Ohio, and the Kings Mountain Energy Center located in North Carolina.

NTE Energy is actively developing projects located in Connecticut, North Carolina, Ohio, and West Texas.

Re: **Approval of the Environmental Justice Public Participation Plan for the Killingly Energy Center Facility Permit Application**

Dear: Mr. Groleau:

The Environmental Justice Public Participation Plan (Plan) for the Killingly Energy Center was received on April 4, 2016. The Plan indicates that this is a request for a new facility permit. A review of the information submitted in Parts I, II, III and IV of the Plan satisfy the requirements under Sec. 22a-20a of the Connecticut General Statutes and the Connecticut Department of Environmental Protection's Environmental Equity Policy. The date, time and meeting location were confirmed with the Environmental Justice Program staff prior to submittal of the Plan. The Public Information meeting will take place on May 4, 2016 at 6:00 PM at the Golden Eagle, 8 Tracy Road, Dayville, CT. The Plan indicates that a public notice announcing the informational meeting will be published in the Norwich Bulletin on April 18, 2016.

Should any of the information supplied in the Plan change, please contact the Environmental Justice Program to determine if an amendment to the approved Plan is required. **In addition, a Final Report documenting the implementation of the Plan must also be submitted prior to the issuance of the Notice of Tentative Determination by the Department. A summary of the public's environmental and public health concerns and how you plan to address them should be documented and included in the Final Report.**

The Environmental Justice Plan for is the Killingly Energy Center Facility is approved. If you require additional information regarding my review or assistance in preparing the required Environmental Justice Public Participation Plan Final Report contact me at 860-424-3044.

Sincerely,

A handwritten signature in black ink, appearing to read "Edith Pestana".

Edith Pestana, MPH

Welcome to the inaugural issue of our newsletter!

Our team is excited to share project updates via this periodic newsletter to keep community members up to-date on our current activities. We are in Killingly nearly every week providing presentations, meeting with community members and groups and participating in community events. If you would like to discuss or ask questions about the Killingly Energy Center, we would be more than happy to meet with you. Don't hesitate to contact me at (804) 325-5522 (cell) or dgroleau@nteenergy.com.

Thanks!

- Dave

Current Site Activities

We've had several teams on the site this month conducting various studies to support permitting and development work. We recently completed a geotechnical study which examines the soil and geology on the site. Over the next several weeks, our ecologists will be on-site to conduct ecological field surveys to identify any sensitive habitats and wildlife. As with all of our studies, we will make reports on this study publically available at the Killingly Public Library and on our project website once completed, expected to be in July.

You may have recently noticed some traffic monitors near the site. In late May, we conducted a traffic study to understand the current traffic volume and patterns in the vicinity of the site. Our consultants are in the process of preparing a report on any potential effects on traffic which we will make publically available when complete, expected in late June.

We've received a number of questions from the community related to water - water use sources, volumes, lake levels and many others. We're actively researching water supply options, including the use of an existing wastewater stream to provide at least a portion of our need. We're planning to release a report by the end of June that will provide detailed information on water source, use and volumes.

Also shortly we will place a large, permanent sign on the property so that anyone driving by knows who to contact with questions or comments.

Upcoming Activities

There are a few upcoming public meetings over the next few weeks that we'd like to let you about. On July 11, we will be hosting a public project meeting to follow up to our Informal Public Meeting of May 4, 2016. At this project meeting, we intend to share additional project information and respond to further questions from the community. We are excited about having a more detailed discussion at the upcoming project meeting as we expect many of our project-specific studies will be available at that time.

We are also participating in a special joint meeting on July 19 with the Killingly Planning and Zoning Commission, Inland Wetlands and Watercourses Commission, and the Town Council, rescheduled from a meeting that was planned for June 27. Both of these meetings will be held at the Killingly High School Auditorium at 226 Putnam Pike, Killingly, CT 06241.

Please visit our website for more information: www.killinglyenergycenter.com

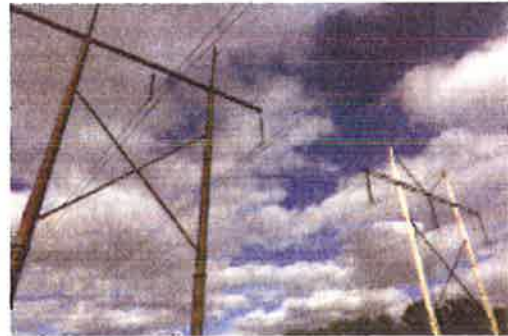

Killingly Energy Center Public Project Meeting Notice

NTE Connecticut, LLC ("NTE"), will host a Public Project Meeting on Monday July 11, 2016 at 7:00 PM at the Killingly High School Auditorium, 226 Putnam Pike, Killingly, Connecticut.

At this meeting, NTE will provide project information and respond to questions from the community about the proposed power generating facility off Lake Road in Killingly, Connecticut.

Copies of all reports and studies will continue to be made available for public review on the Killingly Energy Center website, www.killinglyenergycenter.com.

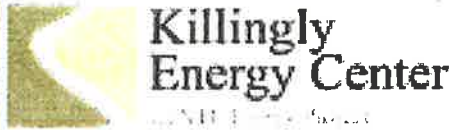

For more information, please contact David Groleau at **904-436-6889** or at dgroleau@nteenergy.com.

Notice of Special Joint Meeting of the Town of Killingly Inland and Wetlands & Watercourses and Planning & Zoning Commissions

The Town of Killingly Planning and Zoning Commission and Inland Wetlands and Watercourses Commission will convene a special joint meeting on Tuesday, July 19, 2016 at 7:00 PM at the Killingly High School Auditorium, 226 Putnam Pike, Killingly, Connecticut. At this meeting, the commissions will view a presentation and discuss plans by NTE Connecticut, LLC to construct a power generating facility off Lake Road in Killingly, Connecticut.

Meeting with these two public bodies is highly recommended/encouraged by the Connecticut Siting Council, which has jurisdiction over electric generating facilities, pursuant to the provisions of Section 16-50g et seq. of the General Statutes.

NTE proposes the development of the Killingly Energy Center (KEC), an approximately 550 MW air-cooled electric generating facility on a 73-acre parcel off Lake Road. The KEC parcel has access to vital infrastructure required for the project including natural gas transmission lines and two 345 kV electric transmission lines near the site. The use of this parcel for industrial purposes is consistent with the Killingly Plan of Conservation and Development, which envisions the future expansion of the existing industrial park in Killingly.

Technical information regarding this proposal is available for review at Town Hall, at the Killingly Public Library and on the Killingly Energy Center website www.killinglyenergycenter.com.

If you have any questions feel free to contact David Groleau, KEC Project Developer, 904-436-6889 or dgroleau@nteenergy.com.

'July Newsletter' Email — 7/1/2016

July Newsletter

The team at the Killingly Energy Center Newsletter highlights current project activities and updates to keep community members informed on our progress. Our Board members are in Killingly nearly every week and if you would like to discuss the project or ask questions about the Killingly Energy Center, we would be happy to meet with you and would appreciate your input. Don't see time to contact me at (904) 438-6885 or darlene@killinglyenergy.com with questions or to set up a meeting.

Thanks!

-Darlene

Current Activities

Several of our Board members have been on the site this past month finalizing studies in support of the Connecticut Siting Council process. From historians to mechanical engineers, from ecologists to scientists, we have been working hard to complete a variety of studies for public review and discussion.

Last week, you'll see a new project sign up with NRE contact information. Our additional sign ups also posted on the site advertising our upcoming public project meeting on July 11th.

This past month, we've participated in the Killingly Business Association and the Economic Development Conventions. We also participated in the Killingly-Bridgewater Rotary Annual Golf Tournament, and are proud to be supporting Killingly Red, White and Blue BBQ on July 1st.

Reports Posted Online

We're happy to announce that project reports are now complete and have been posted on the website. Throughout the past week, the following reports have been posted: Analysis of Need and Economic Incentives, Impact Hydrogeology, Water Evaluation, Social Survey and Analysis Report, Traffic Impact Report, Visual Impact Assessment, and Wetland Report. E-Siting Council Data, You'll also find our Air Permit Application and Ambient Air Quality Analysis (Assessment 1) on the website, as well as other project documents. Please visit the Resources page on our website to find the most up-to-date reports and reports, as well as other project information and background information:

<http://killinglyenergycenter.com/resources/>. Each of these reports will be highlighted as part of the discussion at the July 11th meeting.

Public Meeting on July 11th

NRE will be seeking a public project meeting on July 11th at 7:00am at the Killingly High School Auditorium at 225 Putnam Drive, Killingly, CT 06247. We invite everyone in the community to attend, learn more about the project and ask questions. We'll have a full team of experts available to provide detailed project information.

Upcoming Activities

On July 11th, we'll be participating in a community meeting with the Killingly Planning & Siting Commission and Island Wetlands in Watercourses Commission. The meeting will be held at the Killingly High School Auditorium at 225 Putnam Drive, Killingly, CT 06247 at 7:00am.

We will submit our Revised E-Siting Council Application later in July after the meetings on July 11th and 17th. Community members will have an opportunity to provide comments directly to the Connecticut Siting Council as they evaluate our application.

'Thank You' Email — 7/12/2016

Thank You!

Thank you for those of you who came to the meeting last night. We have posted the presentation on our website - please feel free to download here:

<http://killinglyenergycenter.com/resources/>. As always, if you have additional questions or would like to discuss the project, don't hesitate to reach out to me directly, at **904-687-1857** or dgroleau@nteenergy.com.

Geotechnical Engineering Report

Technical results have been completed to support stormwater design. The report itself is not yet completed, but we expect to finalize and post it to our website by 7/18/2016.

Thanks again,

-Dave

'August Newsletter' Email — 8/1/2016

August 1, 2016

August Newsletter!

We've had a busy month finalizing reports, presenting to community members and Town Commissions, as well as engaging in several other meetings with community members.

As always, our team members are in Killingly nearly every week! If you would like to discuss the Killingly Energy Center or ask questions about the project, we would be happy to meet with you and would appreciate your input. Don't hesitate to contact me at (904) 436-6889 or dgrotsau@necenergy.com with questions or to set up a meeting.

Thanks!

Dave

Recent Meetings

As many of you know, we had two public presentations in July. On July 11th, we held a Public Project Meeting, which was a forum for our team to present the latest project information and to address the community's questions. The second meeting was a Special Joint Meeting on July 19th, which was an opportunity for the Town's Inland Wetlands & Watercourses and Planning & Zoning Commissions to review the status of the project and ask questions. We appreciate the community's thoughtful questions and discussion during these meetings. There will be more opportunities for public engagement over the next several months.

More Content Posted Online

Don't forget to regularly visit our Resources page. We've posted our recent presentations, our site plan and site arrangement, as well as a few other content pieces over the last few weeks.

As a reminder, you can also reach out to us anytime through our user-friendly "Contact Us" page, located here: <http://killinglyenergycenter.com/contact-us/>

Community

Last month, we met with several community members interested in learning more about the project. From educational institutions to churches, from local residents interested in working at the facility, to community members who may have concerns, we appreciate the engagement of the community. The invitation for you to meet with us is always open.

Upcoming Activities

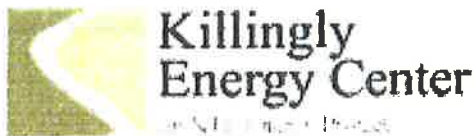

As discussed at the recent meetings, we are planning to file our Connecticut Siting Council (CSC) Application in early/mid August. This will begin the 65 day period for the Killingly Planning & Zoning and Inland Wetlands & Watercourses Commissions to provide recommendations and comments to the CSC for consideration.

As we finalize the application, we will give public notice of our intent to file in the Norwich Bulletin.

Lastly, on August 18th, we are sponsoring and participating in Killingly's 2nd Annual Bike Night. We hope to see you there!

More Info Added to Resources Page

As you may have noticed, over the last few weeks we have added a lot of additional information to our website, including several project reports, the grading plan and two ISO-NE market reports. The following additional information is now available on our website:

- Stormwater Pollution Prevention Plan
- Grading Plans, Erosion and Sedimentation Control Plans & Details
- National Register of Historic Places Eligibility Report
- MEMO - Updates and Clarifications Relevant to Air Analysis
- Report Addendum: Analysis of Need & Economic & Environmental Impacts
- 2015 ISO New England CELT Report
- 2015 ISO New England State of the Grid: Managing a System in Transition

Please click [here](#) to view this additional information and more on the Killingly Energy Center Resources page:

<http://killinglyenergycenter.com/resources/>

Additionally, as formally noticed elsewhere, we are planning to file the Connecticut Siting Council Application this week, incorporating much of the information available in these reports and analyses.

As always, if you have any questions, please don't hesitate to reach out to me directly at dgroleau@nteenergy.com or 904-436-6889.

'CSC Application Submitted' Email — 8/19/2016

**Killingly
Energy Center**
an NTE Energy Project

Application Submitted to the Connecticut Siting Council

The Killingly Energy Center application for a Certificate of Environmental Compatibility and Public Need has been submitted on August 17, 2016 to the Connecticut Siting Council (CSC). The CSC Application is publicly available on the CSC website as Docket No. 470:

<http://www.ct.gov/csc/cwp/view.asp?a=962&Q=583908&PM=1>

You can also find hard copies of the application filed at Town Hall and the Town Library.

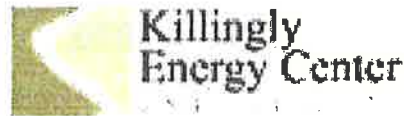

If you have questions or are interested in discussing any part of the application, don't hesitate to contact me at dgroleau@nteenergy.com or 904-436-6889.

-Dave

September Newsletter!

We've had another busy month: meeting with community members and preparing and submitting our Connecticut Siting Council application.

As always, our team members are in Killingly nearly every week; if you would like to discuss the Killingly Energy Center or ask questions about the project, we would be happy to meet with you. Please contact me at (904) 436-6889 or dgraleau@nteenergy.com with questions or to set up a meeting.

Thanks!

Dave

Connecticut Siting Council Application

We submitted our application to the Siting Council on August 31. As the application demonstrates, we're developing one of the cleanest, most efficient natural gas power generation facilities in North America.

Our project will create important economic benefits and employment opportunities for Killingly and surrounding communities. It will also help to displace dirty coal and oil plants, improving Connecticut's air quality. This clean and efficient facility will reduce Connecticut electricity costs and improve regional electric reliability. Our application kicks off the Siting Council's formal project review, which includes numerous opportunities for community input and public participation. This formal review process will include a site visit from the Siting Council and a public hearing, both of which we will announce in upcoming newsletters. We look forward to a robust review process and to continuing our engagement with local residents, elected officials and community leaders.

Our CSC application has been posted online. You can find the application here: http://killinglyenergycenter.com/apps_and_permits

Community Events

Our team enjoyed sponsoring and attending Killingly's 2nd annual Bike Night, held on August 18th. With over 1,200 motorcycles and 4,000 people, the event brought in riders from all over the region!

We also attended the Northeast Connecticut Chamber of Commerce Business After Hours networking event and enjoyed meeting with the local business community.

Finally, we're excited to be sponsoring and participating in the annual Killingly Great Taste Festival on September 10. Hope to see you there!

'Resource Added to Website" Email — 9/20/2016

Resource Added to Website

On August 17, 2016, we submitted our [Killingly Energy Center application](#) to the Connecticut Siting Council, totaling more than 2,000 pages of detailed, technical information. The Town of Killingly hired a 3rd party consultant to review our application and produce an analysis. We've reviewed their report and provided a point-by-point response available [here](#).

We welcome your feedback. Please feel free to contact me with any questions or comments about our project at 904-436-6889 or dgroleau@nteenergy.com.

Thanks,

-Dave

'October Newsletter' Email — 10/4/2016

October Newsletter!

We've had an eventful September attending Town Commission and Council meetings, meeting with community members, touring the wastewater treatment facility and attending the Great Tomato Festival. As always, if you would like to discuss the Killingly Energy Center or ask questions about the project, please contact me at (904) 436-6889 or dgrdeau@teenergy.com with questions or to set up a meeting.

Thanks!

-Dave

Connecticut Siting Council Application Process

Our Connecticut Siting Council (CSC) Application (submitted on August 17th) kicked-off the CSC's formal project review, which includes opportunities for community input and public participation. We've attended several meetings this month with the Planning and Zoning and Inland Wetlands and Water Courses Commissions. These Commissions will provide recommendations to the CSC to consider in their review. We appreciate the time and energy the Commissions are putting into this process.

There are also a few upcoming public CSC activities to note. The CSC will conduct a Public Field Review at the project site (189 Lake Rd.) on October 20, 2016 at 3:30 p.m. The public is welcome to attend this site walk. Additionally, the CSC will hold a Public Comment Hearing Session on October 20, 2016, at 6:30 p.m. at the Killingly High School Auditorium, 226 Putnam Pike, Killingly, CT. We look forward to a robust review process and to continuing our engagement with local residents, elected officials and community leaders.

If you're interested in reading our application, a copy can be reviewed at Killingly Town Hall or Public Library, at the CSC's office in New Britain, CT or on-line at <http://www.ct.gov/csc/cwp/view.asp?a=9026;Q=5839086;PN=1>.

Water

Last week, a few of our team members toured the Killingly wastewater treatment plant to understand the viability of using this source for our limited water needs. Our team is further evaluating this as an alternate option for water supply. Thanks to the Water Pollution Control Authority for taking time to meet with our team.

More Resources Added to Website

Don't forget to check out our website. We've posted more content, including an FAQ that summarizes many of the questions we've heard from the community - <http://killinglyenergycenter.com/frequently-asked-questions/>. We've also included a Benefits page that helps describe how the Town of Killingly benefits from the Killingly Energy Center - <http://killinglyenergycenter.com/benefits/>.

You may have received a letter from us this past week, encouraging you to tell us what you think about the Killingly Energy Center. If you haven't had a chance to write to us yet, please do so here: <http://killinglyenergycenter.com/telluswhatyouthink/>.

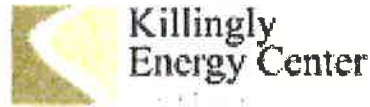

Great Tomato Festival

We had a great time at the Great Tomato Festival on September 10th! My daughter especially enjoyed the bouncy house and endless crafts the community provided. We look forward to continue sponsoring and participating in great community events like this.

'November Newsletter' Email — 10/31/2016

November Newsletter!

October was an eventful month with all the activities associated with our Connecticut Siting Council application. The CSC review process is well underway. If you have questions about the process or would like to discuss the Killingly Energy Center, please feel free to contact me at (904) 436-6889 or dgrolaub@nteenergy.com.

Thanks!

-Dave

Connecticut Siting Council Updates

On October 20, the Connecticut Siting Council (CSC) hosted a Public Field Review at the proposed site of the Killingly Energy Center. Council members and community members walked the site with experts from NTE. That evening, the CSC hosted a Public Comment Hearing Session where community members were able to provide input to the CSC and voice their concern for the Project.

The Council will conduct an evidentiary hearing session on Thursday, November 3, 2016, beginning at 11:00 a.m., at the office of the Council, 10 Franklin Square, New Britain, Connecticut, in Hearing Room One. The evidentiary hearing, if required, will continue on November 15, 2016, also to be held at the CSC's New Britain offices.

As mentioned in previous Newsletters, our application and related filings from all parties are available for review on the CSC website at <http://www.ct.gov/csc/cwp/view.asp?z=962&Q=583908&PW=1>.

Other Meetings

On October 11th at the Town Council Regular Meeting, NTE presented a summary of economic benefits that the project would provide to the Town of Killingly, including the highlights of its proposed Community Environmental Benefits Agreement. NTE also answered questions from Town Council Members. This presentation is available on our website [here](#).

Additionally, on October 19th, NTE hosted an additional public meeting at K&S. At this meeting, NTE responded to written community questions submitted to the Administrator of the Environmental Justice Program. Once NTE answered these questions, the remainder of the meeting was open to other questions from the audience.

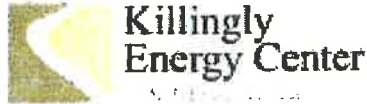

Thank You

Between Town Commission, Town Council and CSC meetings this month, we realize you're taking valuable time out of your schedule to engage in this project. Thank you for your input and questions. We've enjoyed getting to know many of you and appreciate your feedback. As always, if you would like to discuss the project or have questions, my cell phone is (904) 325-5522 and my email is dgrolaub@nteenergy.com - don't hesitate to reach out. Or, feel free to tell us what you think [here](#).

'December Newsletter' Email — 11/30/2016

December Newsletter!

We hope everyone had a wonderful Thanksgiving last week with family and friends. November was another eventful month, mostly focused around evidentiary hearings with the Connecticut Siting Council. If you have questions about the process or would like to discuss the Killingly Energy Center, please feel free to contact me at (904) 436-6889 or dgralaau@nteenergy.com.

Thanks!

-Dave

Connecticut Siting Council Update

The Connecticut Siting Council (CSC) conducted the first evidentiary hearing session on Thursday, November 3rd, 2016. A second evidentiary hearing session was held on Tuesday, November 15th, 2016. Hearing transcripts are available on the Killingly Energy Center Docket website: <http://www.ct.gov/csc/cwp/view.asp?a=962&D=553908BFW&1>.

These hearings involve testimony from Killingly Energy Center representatives, and include questions from CSC members as well as parties who have been approved to participate in the process. The next hearing is scheduled for 11:30am on December 15th at the office of the Council, 10 Franklin Square, New Britain, Connecticut, in Hearing Room One.

Town Meetings

At the November 8th regular Town Council Meeting, the Killingly Town Council discussed various aspects of the Killingly Energy Center, including the Community Environmental Benefits Agreement (CEBA) and drafting a letter on behalf of the Town Council to the CSC. The Town has scheduled a follow up meeting to be held on Wednesday, November 30th for public discussion of 'The Community Environmental Benefits Agreement Associated with The Proposed Killingly Energy Center'. The meeting will be held at 7:00pm in the Marie C. Chartier Community Room, at the Killingly Public Library, 25 Westcott Road. We appreciate the Town's discussions and look forward to finalizing the CEBA.

CT DEEP

The CT Department of Energy and Environmental Protection (CT DEEP) continues their review of the Killingly Energy Center Air Permit Application. As a part of the CT DEEP process, NTE is required to provide its Environmental Justice Plan Final Report (Final Report) to CT DEEP, which summarizes our extensive community outreach activities and implementation of the Killingly Energy Center Environmental Justice Plan. NTE plans to submit the Final Report in early December and it will also be posted on the project website.

As always, if you would like to discuss the project or have questions, my cell phone is (904) 315-5522 and my email is dgralaau@nteenergy.com - don't hesitate to reach out. Or, feel free to tell us what you think at <http://killinglyenergycenter.com/telluswhatyouthink/>.

Killingly Energy Center

an NTE Energy Project

Public Informational Meeting

Regarding the

Killingly Energy Center

What: The Killingly Energy Center will be one of the cleanest, most efficient natural gas power generation facilities in North America and is proposed for development at the industrial park area at 189 Lake Road, Killingly, CT 06241. The meeting agenda includes a presentation from project developers, Q&A and information boards where individuals can have personal conversations with NTE experts.

When: Wednesday, May 4, 2016 at 6:00pm

Where: The Gold Eagle, 8 Tracy Road, Dayville, CT 06241

RSVP: David Groleau: dgroleau@nteenergy.com, 904-687-1857

**NOTICE OF SPECIAL JOINT MEETING OF
THE TOWN OF KILLINGLY INLAND WETLANDS &
WATERCOURSES AND PLANNING & ZONING COMMISSIONS**

24 Cathedral Place, Suite 300
St. Augustine, Florida 32084

The Town of Killingly Planning and Zoning Commission and Inland Wetlands and Watercourses Commission will convene a special joint meeting on Tuesday, July 19, 2016 at 7:00 PM at the Killingly High School Auditorium, 226 Putnam Pike, Killingly, Connecticut. At this meeting, the commissions will view a presentation and discuss plans by NTE Connecticut, LLC to construct a power generating facility off Lake Road in Killingly, Connecticut.

Meeting with these two public bodies is highly recommended/encouraged by the Connecticut Siting Council, which has exclusive jurisdiction over electric generating facilities, pursuant to the provisions of Section 16-50g et seq. of the General Statutes.

NTE proposes the development of the Killingly Energy Center (KEC), an approximately 550 MW air-cooled electric generating facility on a 73-acre parcel off Lake Road. The KEC parcel has access to vital infrastructure required for the project including natural gas transmission lines and two 345 kV electric transmission lines near the site. The use of this parcel for industrial purposes is consistent with the Killingly Plan of Conservation and Development, which envisions the future expansion of the existing industrial park in Killingly.

Technical information regarding this proposal is available for review at Town Hall, at the Killingly Public Library and on the Killingly Energy Center website www.killinglyenergycenter.com.

If you have any questions feel free to contact David Groleau, KEC Project Developer, 804-436-6889 or david.groleau@nteenergy.com.

**Killingly
Energy Center**

an NTE Energy Project

Appendix G: Town-wide Mailing

9/23/2016

Dear Community Member:

As you may know, NTE Energy has proposed a new project in town called the Killingly Energy Center. Located on the west end of the industrial area on Lake Road, the Killingly Energy Center will be one of the cleanest, most efficient natural gas power generation facilities in North America.

Once completed, the Killingly Energy Center will help replace older, dirtier coal and oil plants,

reducing emissions and stabilizing electricity costs. It will be one of the largest, if not the largest, property tax payers in the Town of Killingly, with minimal impacts on town services. The facility will employ between 250-350 workers during construction and 25-30 workers during operation with a focus on local hiring.

We're interested in hearing from you!
killinglyenergycenter.com/telluswhatyouthink

Since early this year, we have spent a great deal of time in Killingly meeting with residents, attending events and addressing questions and concerns at public meetings. Though we have met many residents, we understand that we may not have had the opportunity to meet and visit with you personally. That's why we'd like to invite you to contact us and let us know how you feel about the proposed Killingly Energy Center.

Please share your thoughts by visiting our website: www.killinglyenergycenter.com/telluswhatyouthink

We also invite you to visit our Resources page to find all the information we've posted so that you can gain a better understanding of our project: www.killinglyenergycenter.com/resources

Thank you for your interest. We look forward to hearing from you.

Sincerely,

David Groleau
Project Developer, Killingly Energy Center

Re: NTE Connecticut, LLC Application for the Construction, Maintenance and Operation of an Electric Power Generating Facility on Property at 180 and 189 Lake Road, Killingly, Connecticut

Dear «Salutation»:

NTE Connecticut, LLC (“NTE”) will be submitting an application to the Connecticut Siting Council (“Council”) on or about August 17, 2016, for approval of the construction of an electric power generating facility in the Town of Killingly, Connecticut.

NTE is proposing to develop the Killingly Energy Center (“KEC”), an approximately 550 Mega Watt (“MW”) air-cooled electric generating facility and related electric interconnection switchyard on a total of approximately 73 acres of land off Lake Road in Killingly, Connecticut. A 63-acre parcel north and west of Lake Road would support the power generating facility including a 150-foot tall exhaust stack. The electric switchyard would be constructed on a separate 10-acre parcel south and east of Lake Road, adjacent to an existing Eversource electric transmission line right of way. The primary source of fuel for the KEC facility will be natural gas. Natural gas service to the KEC facility will require an approximately 2.5 mile gas line lateral extension constructed within an existing gas line right of way. During those limited times of natural gas curtailment or service interruption, the KEC facility would operate on Ultra Low Sulfur Distillate (“ULSD”) as a backup fuel.

The location, layout and design of certain elements and features of the proposed KEC facility are subject to change under the provisions of Connecticut General Statutes § 16-50g et seq.

August 15, 2016
Page 2

State law provides that owners of record of property which abuts a parcel on which a facility is proposed to be located must receive notice of the submission of this application. This notice is directed to you either because you may be an abutting land owner or as a courtesy notice. Copies of the application are available for review at Killingly Town Hall, the Killingly public library and on the KEC Project web site www.killinglyenergycenter.com .

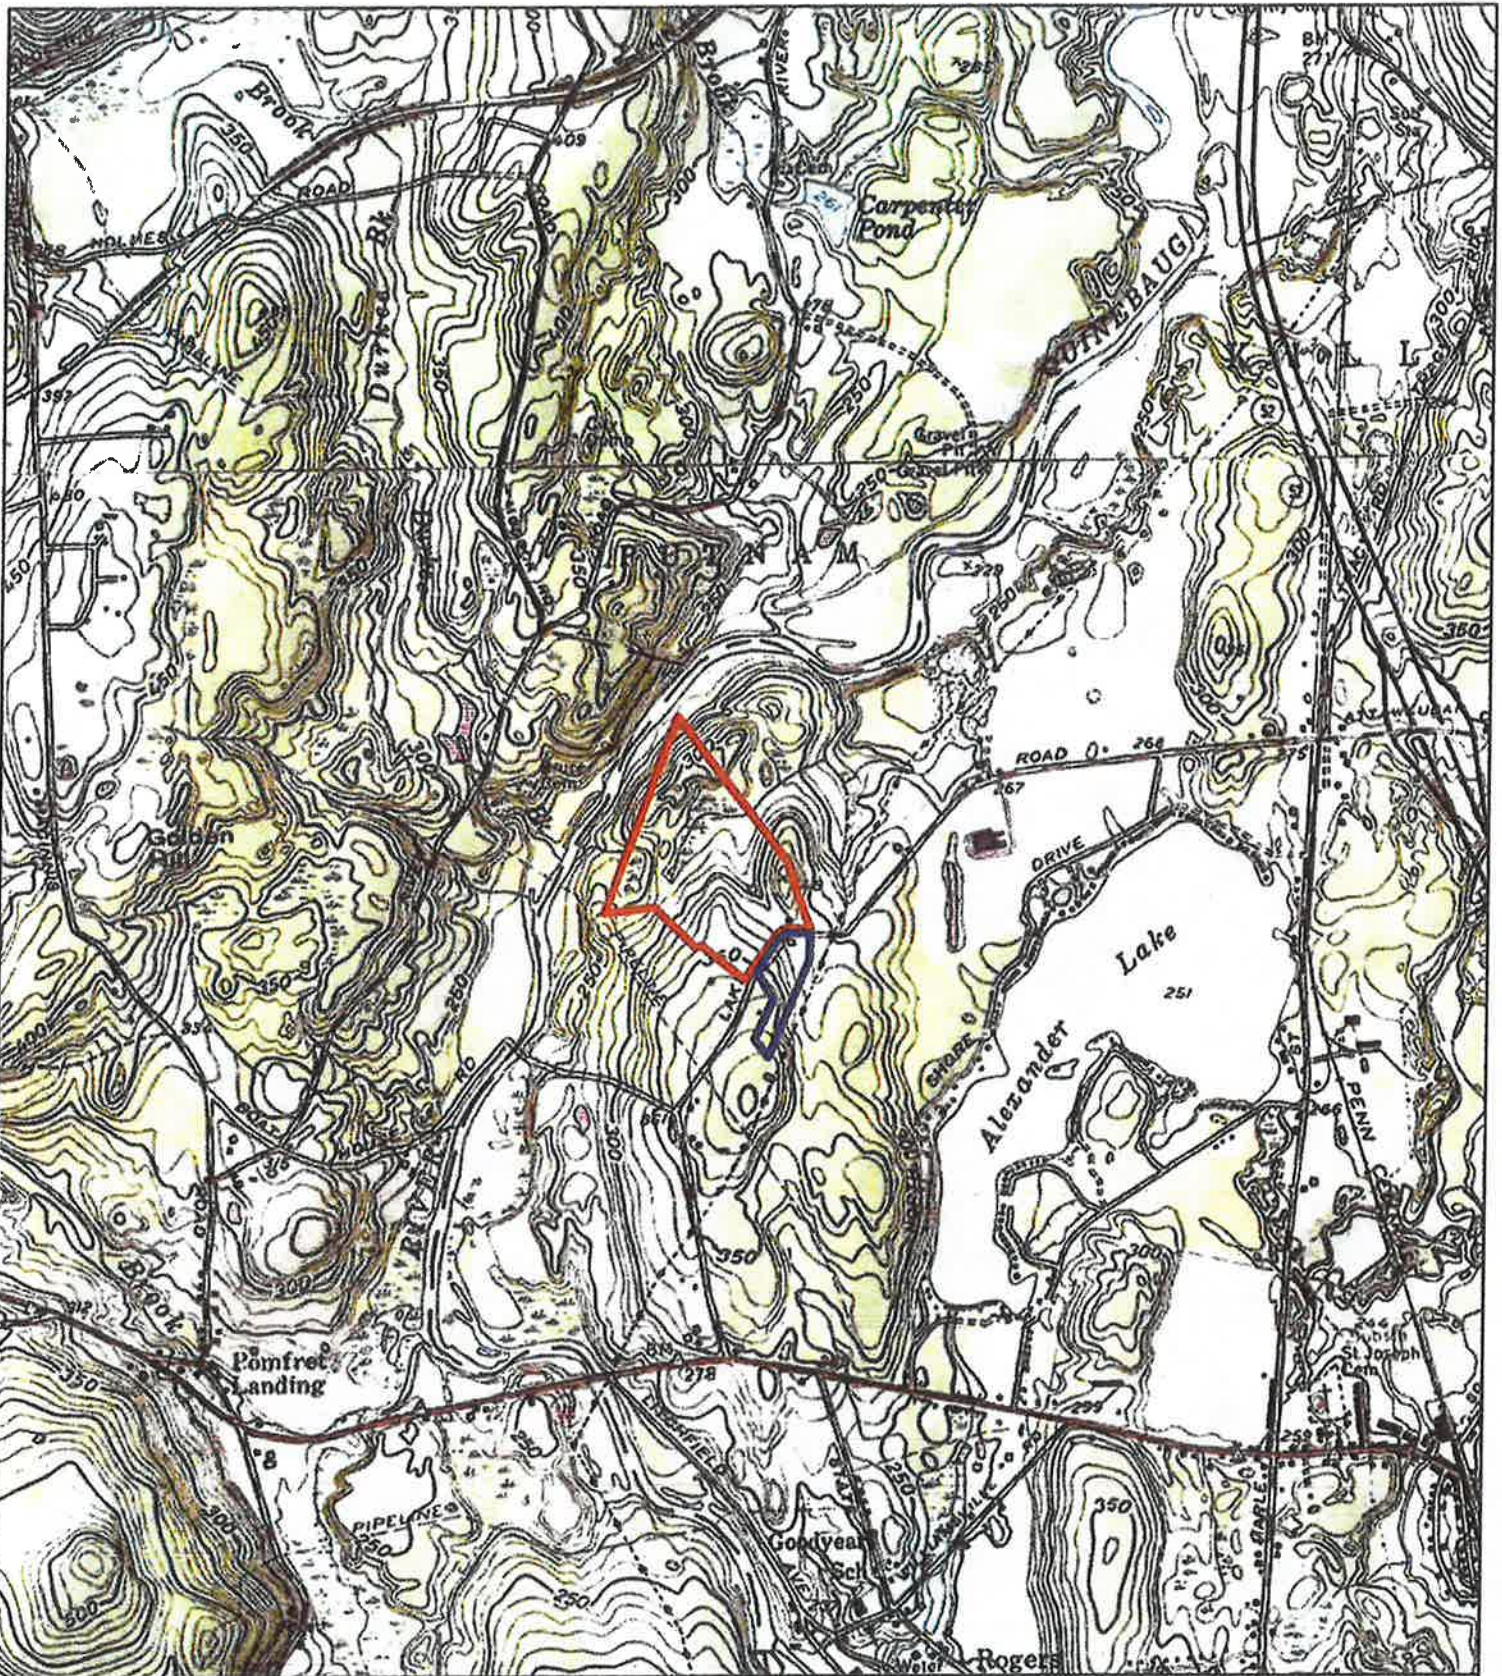

If you have any questions concerning the application, please direct them to either the Connecticut Siting Council or me. My address and telephone number are listed above. The Siting Council may be reached at its New Britain, Connecticut office at (860) 827-2935.

Very truly yours,

A handwritten signature in black ink, appearing to read "Kenneth C. Baldwin", written in a cursive style.

Kenneth C. Baldwin

I. About Killingly Energy Center/NTE Energy

How much energy will KEC produce?

The project will produce 550 MW of baseload power, enough to power approximately 500,000 homes, and will be one of the cleanest, most efficient natural gas generation facilities in North America.

Will the electricity generated by KEC be sold to Connecticut homes and businesses?

Like all New England power generation facilities, KEC's electricity will be delivered to the regional grid for use across the six state region. The regional grid operator, ISO New England, determines how and where electrons flow across the electric grid. However, ISO New England has called for additional electricity generation in southern New England, including Connecticut, to ease supply constraints and meet local demand.

Will KEC lower electricity prices for Connecticut consumers?

Electricity prices are determined by a variety of factors, including fuel availability and costs, generator availability, legislative and regulatory policies, and even the weather. While KEC cannot guarantee a reduction in consumer electricity costs for local ratepayers, our market-based, economic modeling predicts cost savings of \$215 million per year for Connecticut ratepayers during the first five years of operation because KEC will displace older, costlier generation.

NTE has completed an economic and environmental benefits study, which can be found on our website at www.killinglyenergycenter.com/resources.

Has NTE ever operated a power plant before?

The NTE team includes some of most experienced engineers, developers and commercial professionals in the industry. Collectively, NTE team members have built, owned and/or operated dozens of traditional and renewable generation facilities across the country and around the world, representing

tens of thousands of megawatts of power generation. Currently, we own two projects which are under construction in Ohio and North Carolina, and both are expected to be operational in 2018.

II. Siting

Why build KEC in Killingly?

Killingly is rich in infrastructure to support power generation, including access to existing natural gas and electric transmission lines. In addition, the actual KEC site selected conforms to the Town's long term conservation and development plan and is located in an area identified for future industrial development. What's more, Connecticut and the region are in need of reliable baseload power to replace older and high-polluting oil and coal power plants, as well as aging nuclear.

Will there be opportunities for local residents to participate in the permitting and development process?

Yes, both the DEEP and CSC processes are designed to provide opportunities for public participation and input, including a local public hearing prior to their final decisions. What's more, from day one we've been meeting with people in the local community. We take a personal approach to development projects, listen closely to community members and take their concerns seriously. We invite anyone to contact us directly with questions or comments.

Will the KEC property require local zoning changes?

No. The Connecticut Siting Council (CSC) will consider Killingly's zoning regulations and preferences in the course of its decision on KEC's CSC application, but zoning changes are not required. The KEC property is within an area that conforms to the Town's established, long-term plan for future industrial development.

Will NTE pursue a tax abatement from the Town of Killingly?

NTE will be one of the largest tax payers – if not the largest taxpayer – in the community. Yes, we expect to enter into a mutually beneficial tax agreement with the Town, allowing for the delivery of consistent, sustained municipal tax revenue over the operational life of the facility. On average, we expect to pay the Town millions every year, which could help lower tax rates, or provide other important Town services or infrastructure improvements. Additionally, we will also create a community benefits package that delivers tangible benefits to the community beyond tax revenues.

Why can't NTE develop KEC on the site of a retired coal or oil plant?

We agree that re-developing a retired coal or oil facility would be ideal. However, these old sites are frequently located in geographic areas that do not have access to an interstate natural gas pipeline. For

the few sites with sufficient natural gas supply, current owners typically retain these facilities for future redevelopment, making them unavailable to NTE.

How much noise will KEC create when operating?

KEC will be a quiet neighbor. The facility's layout is intentionally designed to minimize impact to ambient noise levels. Generating units will be located in the interior of the site, housed in acoustically treated enclosures inside the turbine building to reduce noise levels significantly. State and local noise regulations require noise at the property boundaries to be no higher than 51 dBA (equivalent to a quiet office setting) and levels will drop off quickly from there.

A detailed noise study has been completed and can be found on our website at www.killinglyenergycenter.com/resources

What features will KEC incorporate to reduce light pollution?

Advances in lighting technology will allow KEC to have a very limited lighting impact. Downward-facing directional lighting will be used to project light only where it is needed. The facility will use motion-detecting lights and manual task lighting wherever possible and safe, to reduce ambient lighting. Orange sodium lights will not be employed. Additionally, the FAA has deemed our facility as having 'no hazard to air navigation', which means no markings or lighting is required on the stack for aviation safety.

How tall will the stack be and will the facility be visible?

KEC will have a single stack standing 150 feet tall, compared to the existing three, 165-foot stacks at the Lake Road Generating Facility. Our site also sits in one of the lower elevations within the wooded Quinebaug River Valley, which will reduce visual impacts considerably.

NTE has completed a visual impact study, which can be found on our website at www.killinglyenergycenter.com/resources.

How will KEC impact property values?

Many factors determine a property's value in a community, including the quality of the public schools, the safety of local neighborhoods, the stability of the community's tax base and a healthy business and economic development climate. KEC is being sited adjacent to the industrial park and in an area designated for industrial development. Given the existing industrial businesses and infrastructure, the added jobs to the community, as well as payment of significant property taxes every year, KEC could have a positive impact on Killingly property values. KEC will also support other important Town services or infrastructure improvements. These revenues could also be used to lower the tax rate for local residents.

NTE has completed an economic and environmental benefits study, which can be found here: website at www.killinglyenergycenter.com/resources.

Will KEC construction require blasting? Will local wells be monitored?

Yes, blasting will be required. KEC will obtain all required permits and work with an experienced contractor who is familiar with the area's geology and hydrology. In addition, KEC will develop and implement a plan to monitor neighboring wells prior to the blasting and mitigate any issues resulting from it.

How much additional traffic will KEC create and will there be upgrades to Lake Road?

KEC will add some additional traffic to Lake Road during construction, but the existing roadway network and infrastructure are capable of handling these increased volumes. Once operational, KEC is expected to add a negligible amount of traffic. Vehicles exiting the facility will be directed to the east, toward the industrial park, and the existing "No Thru Trucks" sign will be moved to the west of the KEC site. To accommodate larger trucks accessing the site, widening of Lake Road may be necessary along the curve just east of the site.

During rare occasions when the ultra-low sulfur distillate tank needs to be replenished, KEC will be serviced by approximately one truck every 30 minutes, which would have no significant effect on current traffic operations.

KEC has completed a Traffic Impact Report, available on our website at www.killinglyenergycenter.com/resources.

Will neighbors feel vibrations when the KEC facility is operating?

No. The facility does not produce any vibrations that can be felt beyond the turbine pedestal.

Will ammonia be stored on the site? What will it be used for?

Yes. We will inject 19% Aqueous Ammonia (81% water / 19% ammonia) upstream of the SCR catalyst in order to reduce NO_x emissions. Aqueous Ammonia, and particularly at this low concentration, is substantially safer than Anhydrous Ammonia (which is a gas) due not only to its lower concentration, but also because it is easily contained. We will store approximately 12,000 gallons of Aqueous Ammonia on site in storage tanks with secondary containment.

III. Safety

Will the KEC facility be safe?

Yes, KEC will be safe. Safety is our highest priority. KEC will incorporate the latest technologies, employ highly trained personnel and utilize the latest industry safety procedures in order to minimize the

possibility of any accidents during construction, testing, start-up and operation. Sophisticated fire suppression systems will be integrated into the project's design. We will work closely with the fire chief and local fire district to ensure they have an intimate knowledge of the KEC facility and are equipped to quickly respond in the unlikely event of an incident.

What will NTE do to protect KEC against cyber-attacks?

Cybersecurity is a top priority for the electricity generation industry as a whole and for NTE. With that in mind, we will hire an experienced operations company with strong cyber security standards and a history of successful cyber security implementation. This operations contractors will utilize the latest technology to protect the integrity and operation of all plant equipment and systems from cybersecurity threats.

How will emergency vehicles and residential traffic traverse Lake Road during construction associated with the lateral upgrade?

NTE will work closely with Yankee Gas, Town officials, the state police and fire district to minimize any traffic disruptions for Lake Road residents and ensure unimpeded access for all emergency vehicles during the upgrade of the lateral. The short distance of the lateral within Lake Road will also minimize the duration of potential disruption.

Who will be responsible for the demolition and decommissioning of the plant?

As a condition to approving the application for a Certificate of Environmental Compatibility and Public Need, the CSC will require that KEC have a plan in place for the safe demolition and decommissioning of the plant.

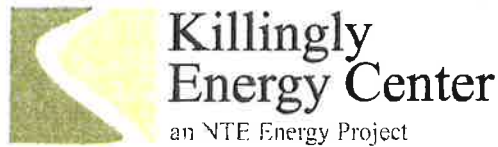

Will KEC be protected against seismic tremors or an earthquake?

Yes, KEC will incorporate design and construction features that will allow it to safely operate in the event of any localized seismic activity. Importantly, the soils at the site are not considered to be susceptible to seismically induced liquefaction and the geographic area is not prone to significant seismic activity.

IV. Air

Shouldn't we be relying more on renewable energy sources?

Yes. Renewables will continue to play an increasingly important role in Connecticut's and New England's electric generation mix. KEC is an important source in a robust renewable energy portfolio. As an efficient and fast-ramping baseload power generation facility, KEC will back up wind and solar generation and will keep the lights on when the wind doesn't blow and the sun doesn't shine. By balancing out wind and solar intermittency, KEC will enable greater utilization and integration of renewables.

Will the proximity of other power plants in this region negatively impact air quality in Killingly?

We know there are concerns regarding the proximity of existing and potential power plants to Killingly. It's easy to imagine that these plants are collectively contributing to a decline in Killingly's air quality but, in fact, the exact opposite is true. Years of air quality data clearly demonstrate that the presence of these new, more efficient natural gas plants has contributed to continuous improvements in air quality in Killingly and the broader region. In fact, within a 100-mile radius of Killingly, over 4500 MW (seven power plants) of coal and oil generation are retiring, or at risk of retirement, thanks to cleaner, more efficient power generation sources in the region.

As each new gas-fired combined cycle plant begins operation, older oil and coal plants with higher emission levels run less frequently, creating incremental improvements in Killingly's air quality.

What's more, Killingly is not unique in the number and proximity of power plants in its immediate vicinity. Various communities throughout southern New England show similar counts of power generation units. According to Richard Pirelli, the director of planning and standards at the CT Borough of Air Management (within DEEP), the reality is that over 90% of Connecticut air pollution comes from out-of-state, from upwind coal- and oil-burning power plants in the Midwest and South, as well as mobile emissions (cars). By contrast, KEC will contribute to emissions decreases by displacing 1.5 million tons of CO₂ (equivalent to planting over 35 million trees or taking over 50,000 cars off the road for five years), 3,500 tons of NO_x and 1,900 tons of SO₂ during the first five years of operation alone.

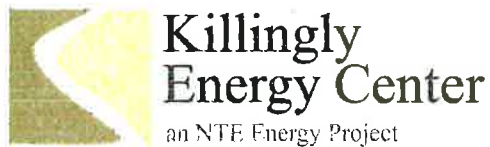

All of KEC's air modeling results – both single source and cumulative – demonstrate that KEC will meet all ambient air quality standards at all times and in every location in Killingly and beyond.

Will KEC protect local air quality standards?

KEC will be among the cleanest, most efficient natural gas power generation facilities in North America, utilizing state-of-the-art electric generation technology that will allow it to operate 25% more efficiently than the average electric generator in Connecticut. This means KEC will displace the operation of older, higher-emitting oil and coal-fired plants that would otherwise be needed to meet regional energy demand, helping improve overall air quality in Connecticut and New England.

Our air quality analysis was completed following Connecticut Department of Energy and Environmental Protection (DEEP) and United States Environmental Protection Agency (USEPA) guidelines. The analysis is based on worst case scenario assumptions. Put another way, the analysis intentionally overstates the project's potential impacts to ensure protection of air quality. Even with these worst-case assumptions, KEC's modeled impacts are well within all applicable ambient air quality standards that have been established to protect even the most sensitive individuals.

KEC will use a continuous air emissions monitoring system which measures and records emission levels to confirm and demonstrate our ongoing compliance with all federal and state emission standards and programs. This data is reported regularly to the DEEP and is available to the public.

NTE has submitted an air permit application, as well as an economic and environmental benefits study, which can be found on our website at www.killinglyenergycenter.com/resources.

What is the “significant impact area” and what does it mean?

The “significant impact area” is a technical designation used by DEEP and the USEPA to determine the scope of our required air permit modeling analysis. It does not represent an area that will be subject to any air quality standard exceedances. All of KEC’s air modeling results – both single source and cumulative – demonstrate that KEC will meet all ambient air quality standards at all times and in every location in Killingly and beyond.

Why do we need more power plants?

Over 30% -- or more than 10,000 megawatts -- of regional electricity generation could be gone by 2020 due to planned and likely facility retirements. That includes 401 megawatts of coal generation and 1,772 megawatts of oil-fired generation in Connecticut alone. So while electricity demand may increase slightly or remain flat, more generation is needed to fill the void left by the retiring coal and oil facilities. Connecticut’s Integrated Resource Plan calls for reliable, clean and cost-effective electric resources, including natural gas powered generation, to ensure Connecticut has sufficient capacity to meet demand, and Killingly Energy Center provides this clean, cost-effective capacity.

V. Water

How much water will KEC use? Where will it come from? What impact will it have on Alexander’s Lake and the surrounding watershed?

Because KEC will utilize air-cooled technology, water needs are reduced by 95% when compared to water-cooled facilities. KEC’s average water use will be up to 50,000-100,000 gallons per day. In the rare event that natural gas is not available and KEC must operate on ultra-low sulfur distillate in order to maintain grid reliability, water requirements would be up to 400,000 gallons per day. We expect this would occur only for several hours on the order of once every 2-3 years based on historical precedents. By comparison, it takes about 312,000 gallons to water a golf course each day, 360,000 gallons to cool a data center for a day and 540,000 gallons per day to make six inches of snow at a ski resort.

The limited water needs of KEC will be provided by CT Water using their existing resources without any additional use of the Killingly Industrial Park well. CT Water’s system has the capacity to sustainably provide up to 400,000 gallons per day to KEC. KEC may facilitate a connection to adjacent CT Water infrastructure, creating enhanced supply for the Killingly area.

KEC will not impact the water quality or quantity of Alexander’s Lake. As stated above, CT Water will meet the KEC demand from existing infrastructure and wells that are hydrogeologically separated from Alexander’s Lake and without any additional use of the industrial park well.

How will stormwater be controlled on the site and discharged to the environment?

NTE has closely examined existing and proposed surface and subsurface conditions at the site in order to identify and mitigate any potential impacts to the quality of stormwater discharges.

The project's stormwater design integrates all required mitigation measures, consistent with the Town of Killingly Inland Wetlands & Watercourses Regulations and the 2004 Connecticut Stormwater Quality Manual. These measures - as well as significant erosion and sediment control measures to be implemented during site preparation and construction - have been designed to protect existing earth resources, minimize the area of disturbed land, maximize infiltration, preserve water quality, and control drainage and runoff flowing onto, within and from the site.

Following construction of KEC, the final grading plan will be implemented and the installation of the permanent stormwater management system will be completed. The final stormwater management system will minimize the release and suspension of pollutants, effectively and safely remove water from the roadway and other critical areas, and properly treat stormwater before final discharge from the site. Further, consistent with Town of Killingly Inland Wetlands & Watercourses Regulations, KEC will not allow untreated surface drainage into any watercourse or inland wetland.

VI. Natural Gas/ULSD

How will gas from the Algonquin pipeline reach the plant?

There is an existing Yankee Gas lateral from the Algonquin pipeline currently running just west of the project site. No new right-of-way will be developed. Yankee Gas has informed us that they will replace and upgrade the existing, decades-old lateral in order to provide enhanced reliability for all end users and supply natural gas to KEC. The plant lateral will run a short distance within Lake Road from the point it intersects the road to the plant site. It is not anticipated that this upgrade will impact existing landowners or abutters. The Algonquin pipeline is also undergoing its own modernization, ensuring that it has robust capacity and reliability to safely serve homes and businesses throughout Killingly, Connecticut and the region.

Will KEC utilize fracked natural gas?

KEC's natural gas supply will come from the same interstate pipeline that provides natural gas to local homes and businesses. Some of this natural gas comes from shale fields that require hydraulic fracturing, while other sources typically include Canadian and Gulf Coast gas supplies or LNG imported through Boston Harbor. We believe that fracking should be conducted with the highest environmental integrity and oversight to eliminate methane emissions, protect local water supplies and reduce environmental impacts.

How much ultra-low sulfur distillate (ULSD) will KEC store on site?

Although KEC will have the capacity to store up to 1 million gallons of ULSD, in practice, KEC will store only a fraction of that during normal operations. ULSD is only used in the unlikely event that natural gas is temporarily unavailable and the independent grid operator requires KEC to operate to maintain system reliability. Based on historical precedents, we expect this would occur only for short periods on the order of once every 2-3 years. ULSD can be safely stored for years at a time if it is regularly agitated and mixed.

The 1-million-gallon storage capacity provides the region with an operational cushion – basically an insurance policy – to keep KEC running and providing power to the grid in times of gas supply interruptions.

VII. Employment

Will you hire local people to build KEC and work at the plant?

Yes. NTE is committed to hiring local people, service providers and subcontractors during construction and operation of the facility.

Appendix K: Project Website

PROJECT OVERVIEW

KILLINGLY ENERGY CENTER

NTE Energy is developing and plans to construct, own and operate the Killingly Energy Center, a 550 MW natural gas-fired electric generating facility in Killingly, Connecticut, which will be a source of clean and efficient electric capacity and energy for many communities and utilities in the region.

Once complete, the Killingly Energy Center will be capable of powering approximately 500,000 homes and represent an investment of over \$500 million, providing numerous benefits to the local community and its economy.

[CLICK HERE FOR ACCESS TO REPORTS & PROJECT DOCUMENTS](#)

PROJECT HIGHLIGHTS:

Technology: 1 x 1 Combined Cycle Gas Turbine (CCGT)

Fuel: Natural Gas, with limited ULSD backup

Net Output: Approx. 550 MW

Location: Killingly, Connecticut

Anticipated Investment: Over \$500 Million

Anticipated Jobs Created:

250-350 During Construction

25-30 During Operation

PROJECT MILESTONES

Secure Site: 1Q16

Interconnection Request: 1Q16

Air Permit Application: 2Q16

Siting Council Application: 2Q16

Obtain Permits: 1Q17

Start Construction: 2/3Q17

Commercial Operation: 2020

BENEFITS

*The Killingly Energy Center will provide **strong, tangible benefits** to the local community and its economy.*

COMMUNITY BENEFITS

One of the largest tax payers in the community. The Killingly Energy Center will be one of the largest tax payers in the community. Expecting to pay the Town millions every year on average, the project could result in lowering tax rates or providing other important Town services or infrastructure improvements.

Jobs. Numerous job opportunities will be provided for the residents of Killingly and the surrounding communities as a result of this project, with 250-350 jobs during construction and 25-30 high wage, full time jobs once operational. NTE will maximize the use of local labor, service providers and subcontractors during construction and operation of the facility.

FREQUENTLY ASKED QUESTIONS

ABOUT KILLINGLY ENERGY CENTER / NTE ENERGY

How much energy will KEC produce?

The project will produce 550 MW of baseload power, enough to power approximately 500,000 homes, and will be one of the cleanest, most efficient natural gas generation facilities in North America.

Will the electricity generated by KEC be sold to Connecticut homes and businesses?

Like all New England power generation facilities, KEC's electricity will be delivered to the regional grid for use across the six state region. The regional grid operator, ISO New England, determines how and where electrons flow across the electric grid. However, ISO New England has called for additional electricity generation in southern New England, including Connecticut, to ease supply constraints and meet local demand.

TELL US WHAT YOU THINK

Our development approach is personal - we take the time to listen to people, taking concerns seriously and making the development process transparent and accessible. Have questions regarding the Killingly Energy Center? Want to comment on the benefits the facility will bring to Killingly? We're interested in hearing from you.

OCTOBER 4, 2016

October Newsletter!

We've had an eventful September attending Town Commission and Council meetings, meeting with community members, touring the wastewater treatment facility and attending the Great Tomato Festival. As always, if you would like to discuss the Killingly Energy Center or ask questions about the project, please contact me at (904)-436-6889 or dgroleau@ntenergy.com with questions or to set up a meeting.

Thanks!

-Dave

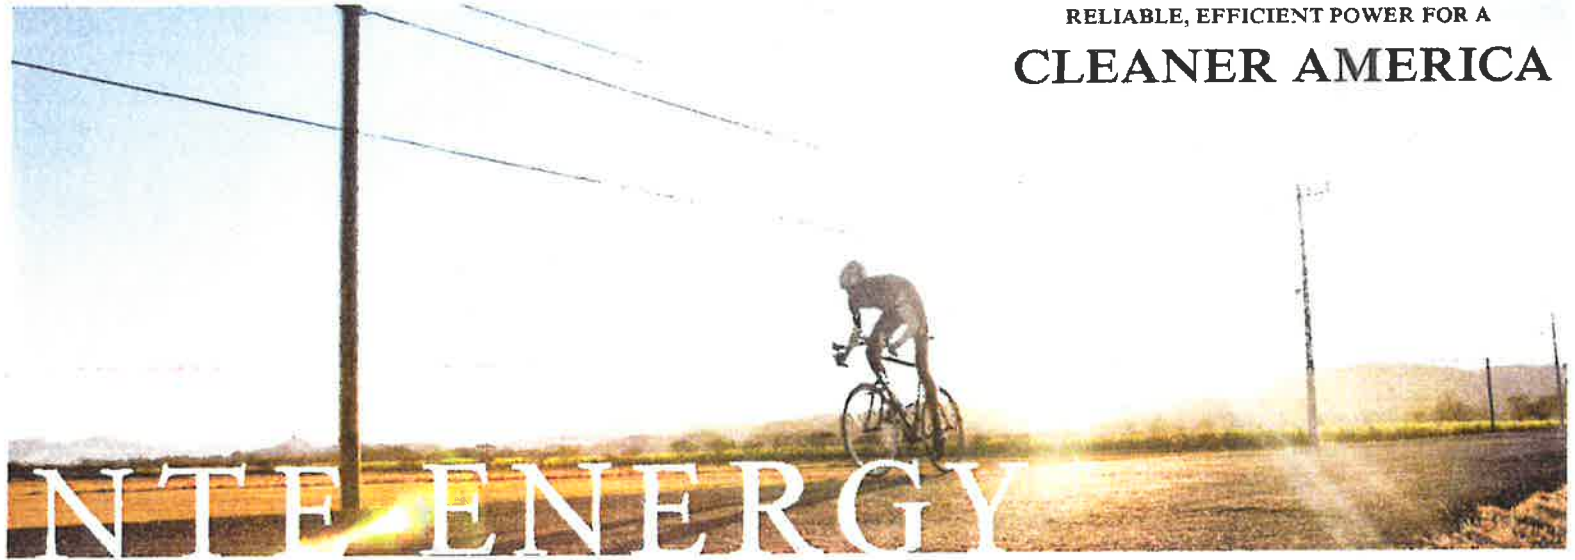

Connecticut Siting Council Application Process

Our Connecticut Siting Council (CSC) Application (submitted on August 17th) kicked off the CSC's formal project

Appendix L: Brochure and Fact Sheet Collateral

RELIABLE, EFFICIENT POWER FOR A
CLEANER AMERICA

Overview

NTE Energy is a family owned company that started as an energy technology business focused on renewable development. NTE Energy—named after the founder’s three children, Noah, Tommy and Elsa—has grown into a successful independent power producer that develops, constructs, owns and operates power plants. Our team works on a variety of projects including natural gas, solar, wind and biomass.

The NTE Energy team includes some of most experienced engineers, developers and commercial professionals in the industry.

Approach

Our development approach is personal— we take the time to listen to people, taking concerns seriously and trying to make the development process as transparent and accessible as possible. We do everything we can to engage residents early in the process and address their concerns.

We err on the side of over-communicating and invite everyone to be a part of the process and participate from the beginning.

Clean and Efficient

We are developing some of the cleanest, most efficient combined cycle natural gas power generation facilities in North America.

The combined cycle process is extremely efficient; it captures heat that would normally be lost and uses it to generate more electricity. This process, combined with sophisticated air emissions control technology and state-of-the-art electric turbines, creates a best-in-class generation facility and enables greater renewables development. Our baseload power quickly balances out the intermittency of renewables, like wind and solar, and helps meet peak electric demands to maintain grid reliability and stability.

NTE ENERGY

www.nteenergy.com

Killingly Energy Center

an NTE Energy Project

Project Summary

The Killingly Energy Center (KEC) is a planned 550 MW natural gas-fired electric generating facility located in Killingly, Connecticut. Once completed, KEC will be one of the cleanest, most efficient natural gas power generation facilities in North America and a reliable source of base load power for communities throughout the region.

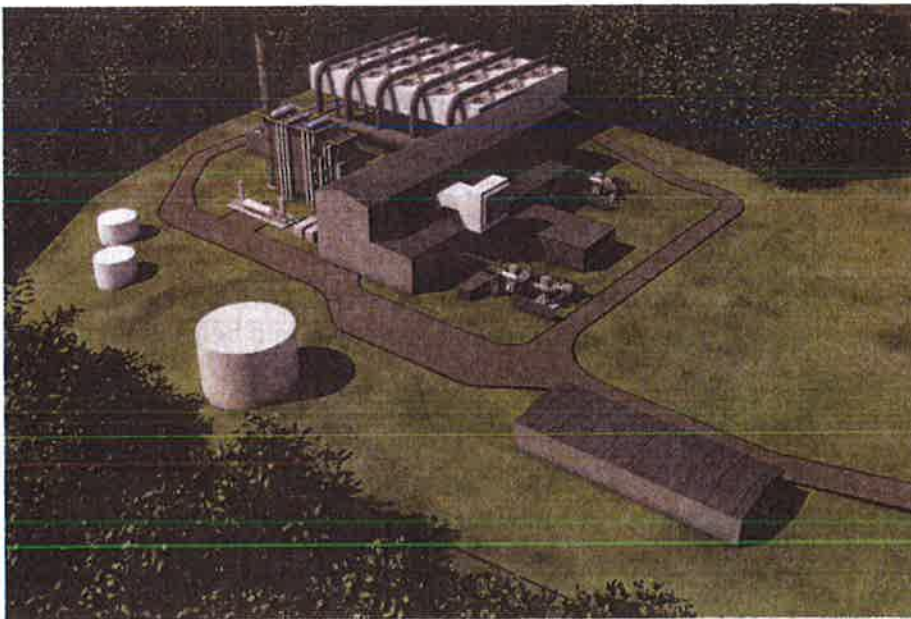

KEC will be capable of powering approximately 500,000 homes, represents an investment of over \$500 million, and will provide numerous economic benefits and employment opportunities for residents in Killingly and beyond.

Expected Community Benefits:

- Over \$500 million investment
- Job Creation
 - 250-350 during Construction
 - 25-30 FTEs during Operation
- \$1+ million in local tax payments annually
- 95% less water use compared to similar facilities
- Displaces more expensive and less efficient coal & oil plants, reducing emissions & lowering electricity costs

Anticipated Project Timeline:

- Acquire Site – Q1 2016
- Air Permit Application – Q2 2016
- Siting Council Application – Q2 2016
- Obtain State Permits & Siting Approval – Q1 2017
- Start Construction – Q2/3 2017
- Commercial Operation – 2020

About NTE Energy

NTE Energy is developing the Killingly Energy Center.

NTE Energy is a family owned company that started as an energy technology business focused on renewable development. NTE Energy—named after the founder's three children, Noah, Tommy and Elsa—has grown into a successful independent power producer that develops, constructs, owns and operates power plants.

Our team works on a variety of projects including natural gas, solar, wind and biomass.

Killingly Energy Center

an NTE Energy Project

Public Informational Meeting

Regarding the

Killingly Energy Center

What: The Killingly Energy Center will be one of the cleanest, most efficient natural gas power generation facilities in North America and is proposed for development at the industrial park area at 189 Lake Road, Killingly, CT 06241. The meeting agenda includes a presentation from project developers, Q&A and information boards where individuals can have personal conversations with NTE experts.

When: Wednesday, May 4, 2016 at 6:00pm

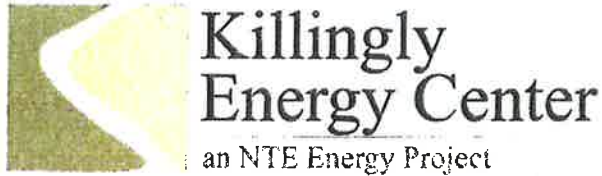

Where: The Gold Eagle, 8 Tracy Road, Dayville, CT 06241

RSVP: David Groleau: dgroleau@nteenergy.com, 904-687-1857

Reliable, efficient power for a cleaner America

NTE ENERGY

Public Project Meeting
Regarding the
Killingly Energy Center

NTE Connecticut, LLC (“NTE”), will host a Public Project Meeting on Monday, July 11, 2016 at 7:00 PM at the Killingly High School Auditorium, 226 Putnam Pike, Killingly, Connecticut.

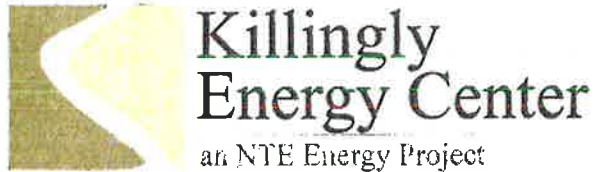

At this meeting, NTE will provide project information and respond to questions from the community about the proposed power generating facility off Lake Road in Killingly, Connecticut.

Copies of all reports and studies will continue to be made available for public review on the Killingly Energy Center website, www.killinglyenergycenter.com.

For more information, please contact David Groleau at **904-436-6889** or at dgroleau@nteenergy.com.

NTE ENERGY

Notice of Special Joint Meeting of the Town of Killingly Inland Wetlands & Watercourses and Planning & Zoning Commissions

The Town of Killingly Planning and Zoning Commission and Inland Wetlands and Watercourses Commission will convene a special joint meeting on Tuesday, July 19, 2016 at 7:00 PM at the Killingly High School Auditorium, 226 Putnam Pike, Killingly, Connecticut. At this meeting, the commissions will view a presentation and discuss plans by NTE Connecticut, LLC to construct a power generating facility off Lake Road in Killingly, Connecticut.

Meeting with these two public bodies is highly recommended/encouraged by the Connecticut Siting Council, which has jurisdiction over electric generating facilities, pursuant to the provisions of Section 16-50g et seq. of the General Statutes.

NTE proposes the development of the Killingly Energy Center (KEC), an approximately 550 MW air-cooled electric generating facility on a 73-acre parcel off Lake Road. The KEC parcel has access to vital infrastructure required for the project including natural gas transmission lines and two 345 kV electric transmission lines near the site. The use of this parcel for industrial purposes is consistent with the Killingly Plan of Conservation and Development, which envisions the future expansion of the existing industrial park in Killingly.

Technical information regarding this proposal is available for review at Town Hall, at the Killingly Public Library and on the Killingly Energy Center website www.killinglyenergycenter.com.

If you have any questions feel free to contact David Groleau, KEC Project Developer, 904-436-6889 or dgroleau@nteenergy.com.

Notice of Connecticut Siting Council Application to be Submitted

Notice is hereby given, pursuant to Section 16-50j(b) of the Connecticut General Statutes and Regulations pertaining thereto, of an Application to be submitted to the Connecticut Siting Council ("Council") on or about August 17, 2016 by NTE Connecticut, LLC ("NTE" or the "Applicant"). NTE is proposing to develop the Killingly Energy Center ("KEC"), an approximately 550 Mega Watt ("MW") air-cooled electric generating facility and related electric interconnection switchyard on a total of approximately 73 acres of land off Lake Road in Killingly, Connecticut. A 63-acre parcel north and west of Lake Road would support the power generating facility, including a 150-foot tall exhaust stack. The electric switchyard would be constructed on a separate 10-acre parcel south and east of Lake Road, adjacent to an existing Eversource electric transmission line right of way. The primary source of fuel for the KEC facility will be natural gas. Natural gas service to the KEC facility will require an approximately 2.5 mile gas line lateral extension constructed within an existing gas line right of way. During times of natural gas curtailment or service interruption, the KEC facility would operate on Ultra Low Sulfur Distillate ("USLD") as a backup fuel.

The location, layout and design of certain elements and features of the proposed KEC facility are subject to change under provisions of Conn. Gen. Stat. § 16-50g et seq.

On the day of the Siting Council public hearing on this proposal, NTE will fly a balloon at the height of 150 feet, representing the tallest structure (the stack) at the KEC facility. Interested parties and residents are invited to review the Application at any of the following offices:

Connecticut Siting Council
10 Franklin Square
New Britain, CT 06051

NTE Connecticut, LLC
800 South Street, Suite 620
Waltham, MA 02453

Killingly Town Clerk
Town of Killingly
172 Main Street
Killingly, CT 06239

TetraTech
2 Lan Drive, Suite 210
Westford, MA 01886

or the office of the undersigned. All inquiries should be addressed to the Connecticut Siting Council or to the undersigned.

NTE ENERGY

Public Project Meeting Notice

NTE Connecticut, LLC (“NTE”), will host a Public Project Meeting on October 19, 2016 at 7:00 PM at the Killingly High School Auditorium, 226 Putnam Pike, Killingly, Connecticut. At this meeting NTE representatives will be available to provide additional project information and respond to questions from the community about the proposed power generating facility off Lake Road in Killingly, Connecticut.

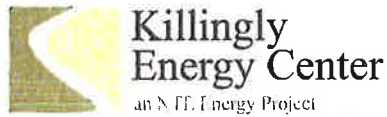

Copies of the project’s Connecticut Siting Council Application as well as reports and studies related to the project are available for public review via the Killingly Energy Center website, (www.killinglyenergycenter.com). For more information, please contact David Groleau at 904-687-1857 or at dgroleau@nteenergy.com.

NTE ENERGY

Appendix N: Project Newsletters

Summary of Community Newsletters

SEPTEMBER 1, 2016

September Newsletter!

We've had another busy month meeting with community members and preparing and submitting our Connecticut Siting Council application.

As always, our team members are in Killingly nearly every week; if you would like to discuss the Killingly Energy Center or ask questions about the project, we would be happy to meet with you. Please contact me at (904) 436-6889 or dgroleau@nteenergy.com with questions or to set up a meeting.

Thanks!

-Dave

Connecticut Siting Council Application

We submitted our application to the Siting Council on August 17. As the application demonstrates, we're developing one of the cleanest, most efficient natural gas power generation facilities in North America.

Our project will create important economic benefits and employment opportunities for Killingly and surrounding communities. It will also help to displace dirty coal and oil plants, improving Connecticut's air quality. This clean and efficient facility will reduce Connecticut electricity costs and improve regional electric reliability. Our application kicks-off the Siting Council's formal project review, which includes numerous opportunities for community input and public participation. This formal review process will include a site visit from the Siting Council and a public hearing, both of which we will announce in upcoming newsletters. We look forward to a robust review process and to continuing our engagement with local residents, elected officials and community leaders.

Our CSC application has been posted online. You can find the application here:<http://killinglyenergycenter.com/apps-and-permits>

Community Events

Our team enjoyed sponsoring and attending Killingly's 2nd annual Bike Night, held on August 18th. With over 1,200 motorcycles and 4,000 people, the event brought in riders from all over the region!

We also attended the Northeast Connecticut Chamber of Commerce Business After Hours networking event and enjoyed meeting with the local business community.

Finally, we're excited to be sponsoring and participating in the annual Killingly Great Tomato Festival on September 10. Hope to see you there!

AUGUST 1, 2016

August Newsletter!

We've had a busy month finalizing reports, presenting to community members and Town Commissions, as well as engaging in several other meetings with community members.

As always, our team members are in Killingly nearly every week; if you would like to discuss the Killingly Energy Center or ask questions about the project, we would be happy to meet with you and would appreciate your input. Don't hesitate to contact me at (904) 436-6889 or dgroleau@nteenergy.com with questions or to set up a meeting.

Thanks!

-Dave

Recent Meetings

As many of you know, we had two public presentations in July. On July 11th, we held a Public Project Meeting, which was a forum for our team to present the latest project information and to address the community's questions. The second meeting was a Special Joint meeting on July 19th, which was an opportunity for the Town's Inland Wetland & Watercourses and Planning & Zoning Commissions to review the status of the project and ask questions. We appreciate the community's thoughtful questions and discussion during these meetings. There will be more opportunities for public engagement over the next several months.

More Content Posted Online

Don't forget to regularly visit our Resources page. We've posted our recent presentations, our site plan and site arrangement, as well as a few other content pieces over the last few weeks.

As a reminder, you can also reach out to us anytime through our user-friendly "Contact Us" page, located here: <http://killinglyenergycenter.com/contactus/>

Community

Last month, we met with several community members interested in learning more about the project. From educational institutions to churches, from local residents interested in working at the facility, to community members who may have concerns, we appreciate the engagement of the community. The invitation for you to meet with us is always open.

Upcoming Activities

As discussed at the recent meetings, we are planning to file our Connecticut Siting Council (CSC) Application in early/mid-August. This will begin the 65-day period for the Killingly Planning & Zoning and Inland Wetlands & Watercourses Commissions to provide recommendations and comments to the CSC for consideration.

As we finalize the application, we will give public notice of our intent to file in the Norwich Bulletin.

Lastly, on August 18th, we are sponsoring and participating in Killingly's 2nd Annual Bike Night. We hope to see you there!

JULY 1, 2016

July Newsletter!

This issue of the Killingly Energy Center Newsletter highlights current project activities and updates to keep community members informed on our progress. Our team members are in Killingly nearly every week and if you would like to discuss the project or ask questions about the Killingly Energy Center, we would be happy to meet with you and would appreciate your input. Don't hesitate to contact me at (904) 436-6889 or dgroleau@nteenergy.com with questions or to set up a meeting.

Thanks!

- Dave

Current Activities

Several of our team members have been on the site this past month finalizing studies as part of the Connecticut Siting Council process. From historians to electrical engineers, from ecologists to scientists, we have been working hard to complete a variety of studies for public review and discussion.

Next week, you'll see a new project sign up with NTE contact information. Two additional signs are also posted on the site advertising our upcoming public project meeting on July 11th.

This past month, we've presented to the Killingly Business Association and the Economic Development Commission. We also participated in the Killingly-Brooklyn Rotary Annual Golf Tournament, and are proud to be sponsoring Killingly's Red, White and Blue BBQ on July 1st.

Reports Posted Online

We're happy to announce that project reports are now complete and have been posted on the website. Throughout the past week, the following reports have been posted: Analysis of Need and Economic & Environmental Impacts, Hydrogeologic Water Evaluation, Sound Survey and Analysis Report, Traffic Impact Report, Visual Impact Assessment, and Wetland Report: Existing Conditions. You'll also find our Air Permit Application and Ambient Air Quality Analysis (Attachment L) on the website, as well as other project documents. Please visit the Resources page on our website to find the most up-to-date studies and reports, as well as other project information and background materials:

<http://killinglyenergycenter.com/resources/>. Each of these reports will be highlighted as part of the discussion at the July 11th meeting.

Public Meeting on July 11th

NTE will be hosting a public project meeting on July 11th at 7pm at the Killingly High School Auditorium at 226 Putnam Pike, Killingly, CT 06241. We invite everyone in the community to attend, learn more about the project and ask questions. We'll have a full team of experts on-hand to provide detailed project information.

Upcoming Activities

On July 19th, we'll be participating in a special joint meeting with the Killingly Planning & Zoning Commission and Inland Wetlands & Watercourses Commission. This meeting will be held at the Killingly High School Auditorium at 226 Putnam Pike, Killingly, CT 06241 at 7:00pm.

We will submit our Connecticut Siting Council Application later in July, after the meetings on July 11th and 19th. Community members will have an opportunity to provide comments directly to the Connecticut Siting Council as they evaluate our application.

JUNE 7, 2016

Welcome to the inaugural issue of our newsletter!

Our team is excited to share project updates via this periodic newsletter to keep community members up-to-date on our current activities. We are in Killingly nearly every week providing presentations, meeting with community members and groups, and participating in community events. If you would like to discuss or ask questions about the Killingly Energy Center, we would be more than happy to meet with you. Don't hesitate to contact me at (904) 436-6889 or dgroleau@nteenergy.com.

Thanks!

- Dave

Current Site Activities

We've had several teams on the site this month conducting various studies to support permitting and development work. We recently completed a geotechnical study which examines the soil and geology on the site. Over the next several weeks, our ecologists will be on-site to conduct ecological field surveys to identify any sensitive habitats and wildlife. As with all of our studies, we will make reports on this study publically available at the Killingly Public Library and on our project website once completed, expected to be in July.

You may have recently noticed some traffic monitors near the site. In late May, we conducted a traffic study to understand the current traffic volume and patterns in the vicinity of the site. Our consultants are in the process of preparing a report on any potential effects on traffic which we will make publically available when complete, expected in late June.

We've received a number of questions from the community related to water - water use, sources, volumes, lake levels and many others. We're actively researching water supply options, including the use of an existing wastewater stream to provide at least a portion of our need. We're planning to release a report by the end of June that will provide detailed information on water source, use and volumes.

Also, shortly we will place a large, permanent sign on the property so that anyone driving by knows who to contact with questions or comments.

Upcoming Activities

There are a few upcoming public meetings over the next few weeks that we'd like to tell you about. On July 11, we will be hosting a public project meeting to follow up to our Informal Public Meeting of May 4, 2016. At this project meeting, we intend to share additional project information and respond to further questions from the community. We are excited about having a more detailed discussion at the upcoming project meeting as we expect many of our project-specific studies will be available at that time.

We are also participating in a special joint meeting on July 19 with the Killingly Planning and Zoning Commission and Inland Wetlands and Watercourses Commission rescheduled from a meeting that was planned for June 27. Both of these meetings will be held at the Killingly High School Auditorium at 226 Putnam Pike, Killingly, CT 06241.

NOVEMBER 1, 2016

November Newsletter!

October was an eventful month with all the activities associated with our Connecticut Siting Council application. The CSC review process is well underway. If you have questions about the process or would like to discuss the Killingly Energy Center, please feel free to contact me at **(904) 436-6889** or dgroleau@nteenergy.com.

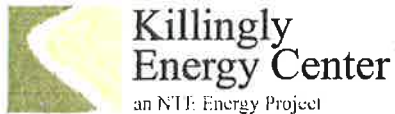

Thanks!

-Dave

Connecticut Siting Council Updates

On October 20, the Connecticut Siting Council (CSC) hosted a Public Field Review at the proposed site of the Killingly Energy Center. Council members and community members walked the site with experts from NTE. That evening, the CSC hosted a Public Comment Hearing Session where community members were able to provide input to the CSC and voice their concern for the Project.

The Council will conduct an evidentiary hearing session on Thursday, November 3, 2016, beginning at 11:00 a.m., at the office of the Council, 10 Franklin Square, New Britain, Connecticut, in Hearing Room

One. The evidentiary hearing, if required, will continue on November 15, 2016, also to be held at the CSC's New Britain offices.

As mentioned in previous Newsletters, our application and related filings from all parties are available for review on the CSC website at <http://www.ct.gov/csc/cwp/view.asp?a=962&Q=583908&PM=1>.

Other Meetings

On October 11th at the Town Council Regular Meeting, NTE presented a summary of economic benefits that the project would provide to the Town of Killingly, including the highlights of its proposed Community Environmental Benefits Agreement. NTE also answered questions from Town Council Members. This presentation is available on our website <http://killinglyenergycenter.com/presentations-1>.

Additionally, on October 19th, NTE hosted an additional public meeting at KHS. At this meeting, NTE responded to written community questions submitted to the Administrator of the Environmental Justice Program. Once NTE answered these questions, the remainder of the meeting was open to other questions from the audience.

Thank You

Between Town Commission, Town Council and CSC meetings this month, we realize you're taking valuable time out of your schedule to engage in this project. Thank you for your input and questions. We've enjoyed getting to know many of you and appreciate your feedback. As always, if you would like to discuss the project or have questions, my cell phone is (904) 325-5522 and my email is dgroleau@nteenergy.com - don't hesitate to reach out. Or, feel free to tell us what you think at <http://killinglyenergycenter.com/telluswhatyouthink/>.

Our Approach

- Rigorous project due diligence
- Local focus on community and economic development
 - Jobs, educational partnerships, community participation
- Transparent and personal communications
 - Open houses/Info sessions
 - Community site visits
 - One-on-one conversations
- Emphasis on safety and environmental stewardship

Killingly Energy Center | Project Summary

- 550 MW Net Output
- One of the cleanest, most efficient natural gas power generation facilities in North America
- Employing advanced technology to reduce the need for water by 95%
- Baseload power source (60% - 75% capacity factor)
- Displaces more expensive, higher emitting and less efficient coal & oil plants
- Supports renewables development by balancing wind and solar

Killingly Energy Center | Economic Development

Anticipated Economic Benefits:

- Investment – Over \$500 million
- Jobs: Use of local labor, local service providers and local subcontractors when possible
 - 250-350 during construction
 - 25-30 during operation
- Strong direct and indirect local economic benefits result from construction and operation
- One of the largest tax payers in the community (with limited need for taxpayer-funded services)

Killingly Energy Center | Air

Connecticut Department of Energy & Environmental Protection (DEEP)

Review processes:

- Safeguard public health and the environment
- Require detailed analyses and establish stringent standards to protect even the most sensitive residents
- Require use of the best available control technology and impose lowest achievable emissions rate as applicable
- Confirm compliance with environmental standards and requirements prior to issuing project approvals
- Opportunities for public input

Killingly Energy Center | Air

- Control technologies to include Dry Low NOx (DLN) combustors, Selective Catalytic Reduction (SCR), Oxidation Catalyst
- KEC will reduce regional greenhouse gas and other emissions by displacing older, less efficient fossil fuel-fired generation

Killingly Energy Center | Noise

- Facility will be designed to meet all applicable noise ordinances
- Noise modeling study underway to determine specific noise mitigation measures
- Generating units will be housed in acoustically treated enclosures and a building that reduce noise levels significantly
- Facility layout designed to minimize ambient noise levels

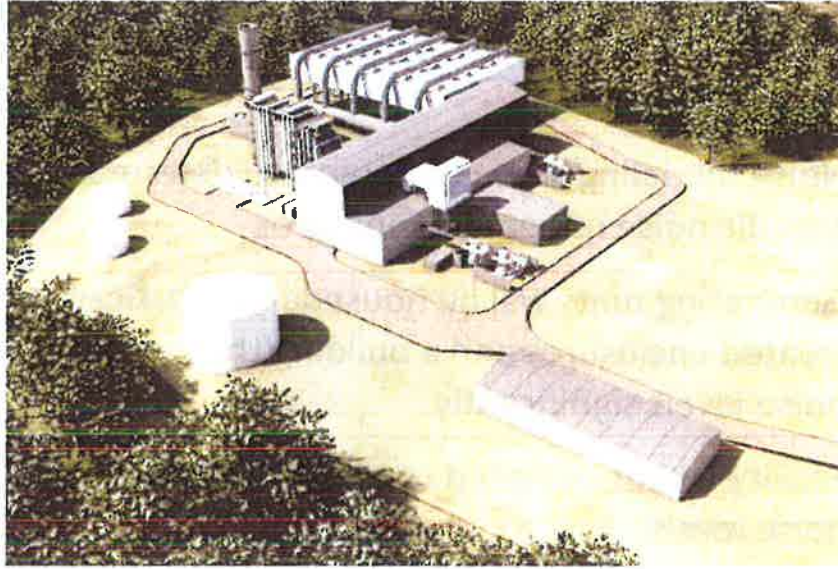

Killingly Energy Center | Visual Impact

- Large property with mature trees creating a significant buffer around the full perimeter
- Minimizing height of exhaust stack: 150 ft.
- Visual impact study underway

Killingly Energy Center | Preliminary Rendering

 NTE ENERGY

Killingly Energy Center | CSC

Connecticut Siting Council (CSC)

Carefully balances the need for adequate and reliable public utility services at the lowest reasonable cost to consumers, while protecting the environment:

- Detailed evaluations of environmental and community issues
- Stringent standards imposed for the welfare and protection of the people of Connecticut
- Local input to the siting and assessment process, and opportunities for public participation

 NTE ENERGY

Killingly Energy Center | CSC

Air Quality – will demonstrate compliance with National Ambient Air Quality Standards

Noise – will meet stringent DEEP standards at the nearest residential property boundary

Visual – will evaluate to affirm change in view; significant topographic and vegetation screening coupled with low profile is anticipated to minimize visibility

Wetlands and Watercourses – layout has been adjusted to avoid impacts associated with the generating facility, resulting in only small, unavoidable impact for the switchyard

Killingly Energy Center | CSC

Wildlife and Species Evaluation – studies underway to meet federal and state recommendations in order to identify any special protection measures necessary

Water Use and Discharge – low water use and existing available resources

Stormwater Management – best management practices to be integrated into site design

Traffic – operational traffic will be extremely low; appropriate construction-period measures will be implemented

Cultural Resources – no evidence of prehistoric occupations identified

Appendix R: Public Meeting #2 Presentation, 7/11/2016

NTE ENERGY

*Reliable, efficient power for
a cleaner America*

**Killingly
Energy Center**

an NTE Energy Project

Outline

- **Introductions**
- **Project Overview/Updates**
- **Schedule/Opportunities for Public Involvement**
- **Discussion of Key Topics**
- **Q&A**
- **Next Steps**

KEC | Introductions

- NTE is committed to sharing information
- Representatives are here to present updated information and respond to your questions
 - *Tetra Tech, Inc.*
 - *PA Consulting Group*
 - *F. A. Hesketh & Associates, Inc.*
 - *Killingly Engineering Associates, LLC*
 - *REMA Ecological Services, LLC*
 - *Robinson & Cole*
 - *Coursey & Company*

KEC | Introductions

Every project of this scope involves many experienced supporting team members:

Development Phase:
Environmental Consultants;
Owner's Engineer; Financial and
Legal Experts; Gas and Electric
Utilities

Financing Phase:
Banks; Title Company;
Financial and Legal Experts

Design and Construction Phase:
Engineering, Procurement and
Construction (EPC) Contractors;
Specialty Subcontractors;
Equipment Manufacturers

Operations Phase:
Operations Contractor (Routine
Maintenance); Equipment
Manufacturer (Major
Maintenance); Gas Supplier

KEC | Project Updates

Reports documenting various topics have been posted to the Killingly Energy Center (KEC) website and placed in the library and town hall since May 4:

- *Ambient Air Quality Analysis*
- *Wetland Report: Existing Conditions*
- *Visual Impact Assessment*
- *Traffic Impact Report*
- *Sound Survey and Analysis Report*
- *Analysis of Need and Economic & Environmental Impacts*
- *Hydrogeologic Water Evaluation*

Selection of Siemens SGT6-8000H combustion turbine technology

KEC | Project Updates

- Sign at the site providing NTE contact information
- Newsletters (latest on July 1) published in the local paper and project website as well as distributed to our growing e-mail list
- Meeting to be held with joint Town Commissions on July 19th
- On-going preparation of the Connecticut Siting Council Application

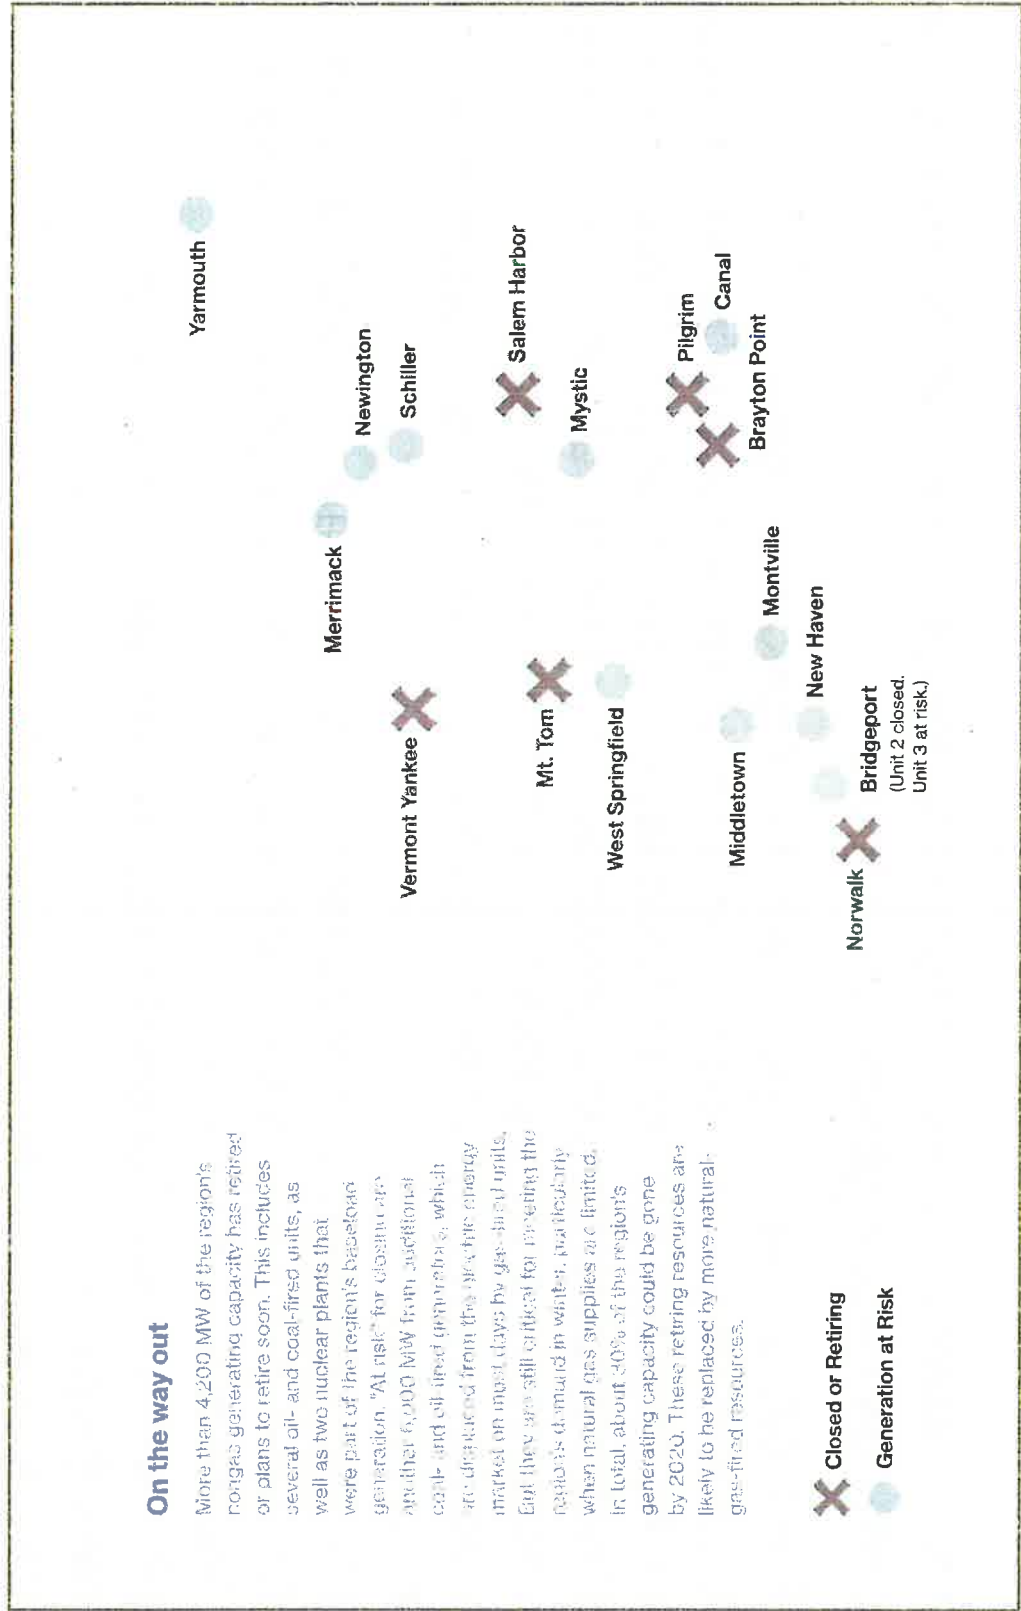

KEC | Regional Electric Generation Needs

- ISO-NE system requires additional reliable, environmentally friendly and efficient new electric generation resources
 - Electricity usage and peak demand expected to grow
 - Coal and oil generation resources have retired or are “at risk” of retirement in the near term; many of these facilities are located in Connecticut
 - Electricity peak demand growth and generation resource retirements will decrease reserve capacity below ISO-NE standards
 - Approximately 80% of ISO-NE electricity demand is located in Southern New England
 - ISO-NE system is overly dependent on generation located in Northern New England, north of transmission and natural gas constraint points in Southern New England
 - ISO-NE is calling for addition of electric generation, specifically in Southern New England
 - KEC’s location addresses these electric system needs
- Connecticut’s Integrated Resource Plan calls for reliable, clean and cost-effective electric resources to ensure Connecticut has sufficient capacity to meet demand
 - KEC supports this strategy and the state’s objectives

KEC | Regional Electric Generation Needs

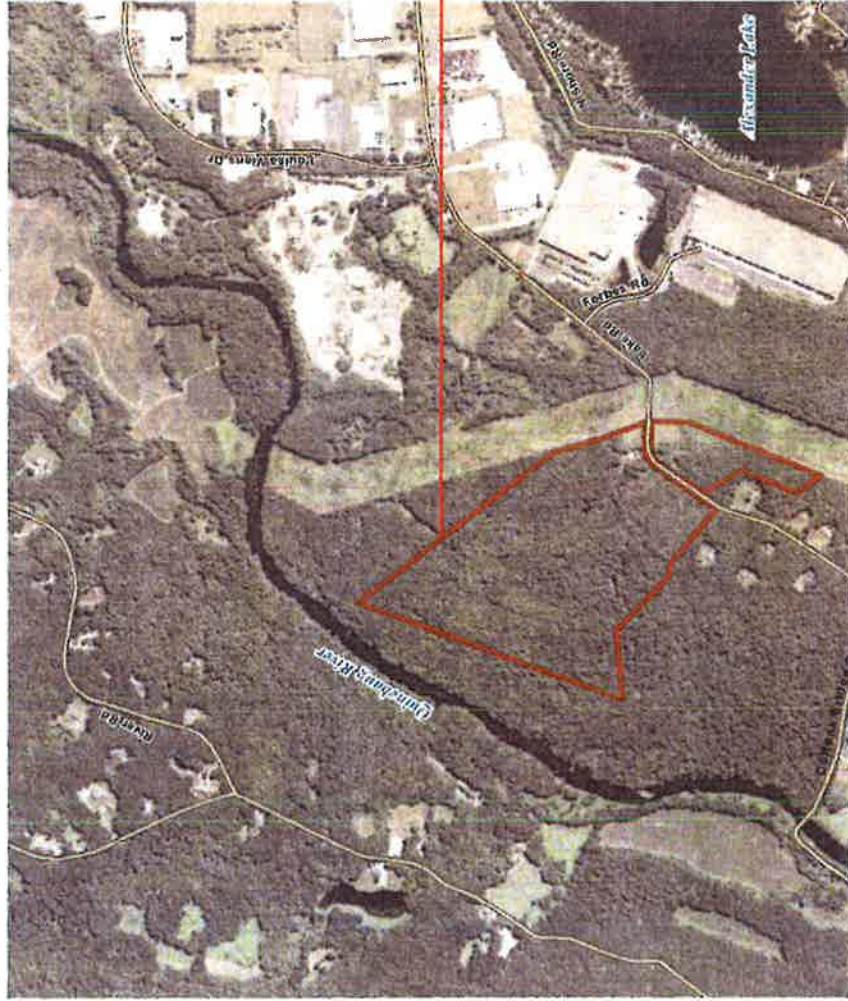

- 4,200 MW of region's non-gas generating capacity has retired or will retire soon
- "At risk" for closing are another 6,000 MW from additional coal and oil generators, including approximately 401 MW of coal and 1,772 MW of oil generators in Connecticut

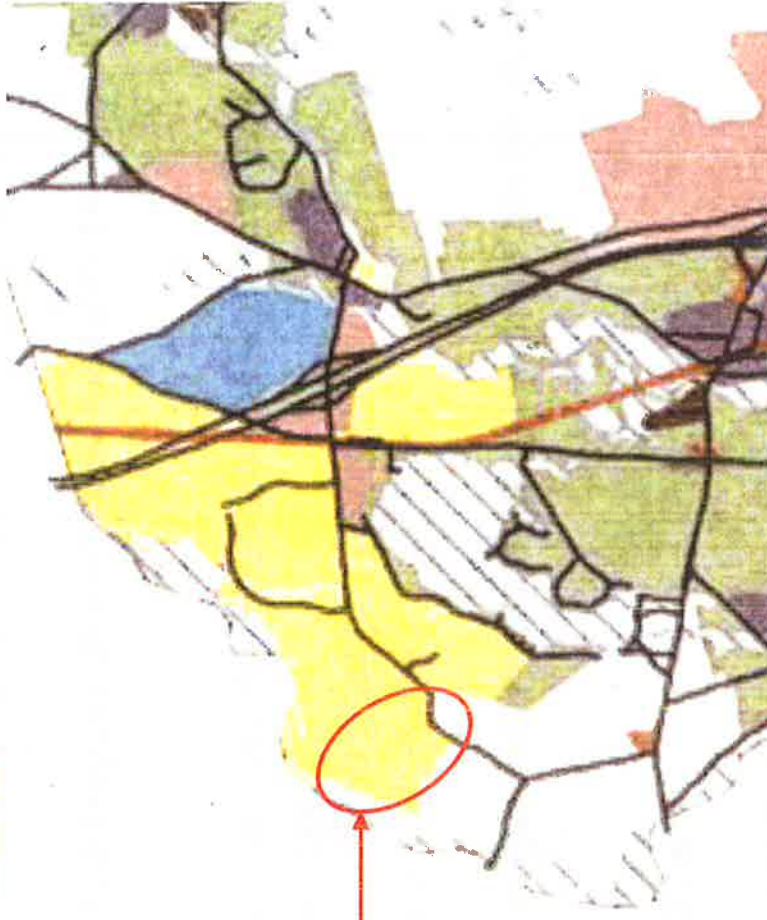

KEC | Benefits

- Job Creation
 - An average of 450 full-time direct and indirect jobs created from 2018–2019 (peak construction period)
 - 250-350 direct construction jobs
 - An average of 1,100 long-term direct and indirect jobs created from 2020–2024
 - 25-30 direct operations jobs
 - \$535 million in total wage creation from 2017–2024
- Economic Benefits
 - One of the largest tax payers in the community
 - NTE will work closely with Town of Killingly to develop Community Environmental Benefits Agreement and Tax Agreement
 - More than \$1 billion in total economic output from 2017-2024
 - \$235 million in economic output during construction from 2017-2020
 - \$80 million from KEC operations from 2020-2024
 - Expected electricity cost savings of \$215 million per year to Connecticut ratepayers from 2020–2024
- Environmental Benefits
 - Emission reductions driven by KEC’s high operating efficiency (requiring less fuel per MWh of electricity produced)
 - Projected region-wide emissions decreases during first five years of operation (2020-2024)
 - CO₂ – 1.5 million tons (equivalent to planting over 35 million trees or taking over 50,000 cars off the road for five years)
 - NO_x – 3,500 tons
 - SO₂ – 1,900 tons
- Property Values

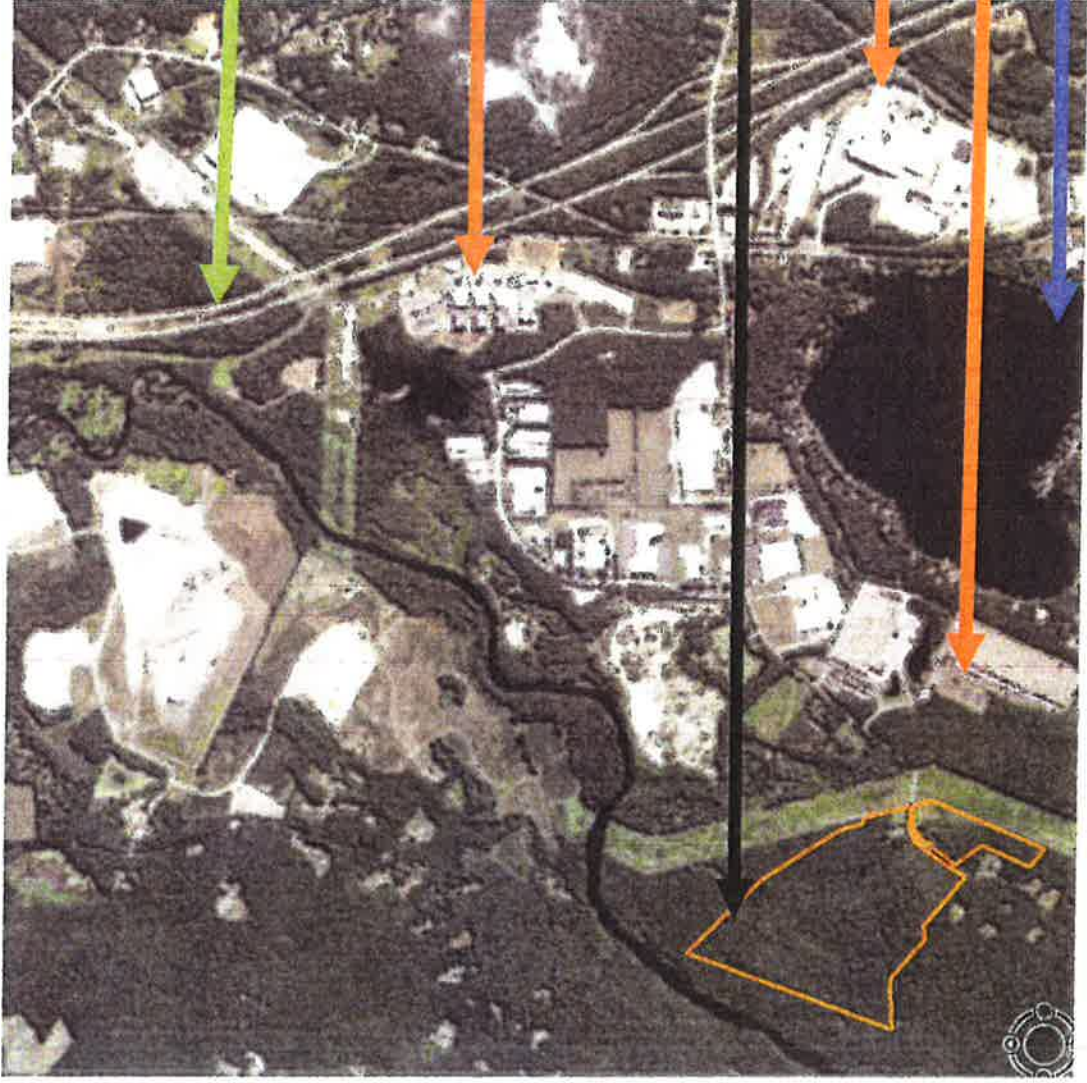

Killingly Future Land Use Map

Industrial

KEC | Location

I-395

Lake Rd. Gen Station

Killingly Energy Center

Frito-Lay

Rite-Aid Dist. Center

Alexander Lake

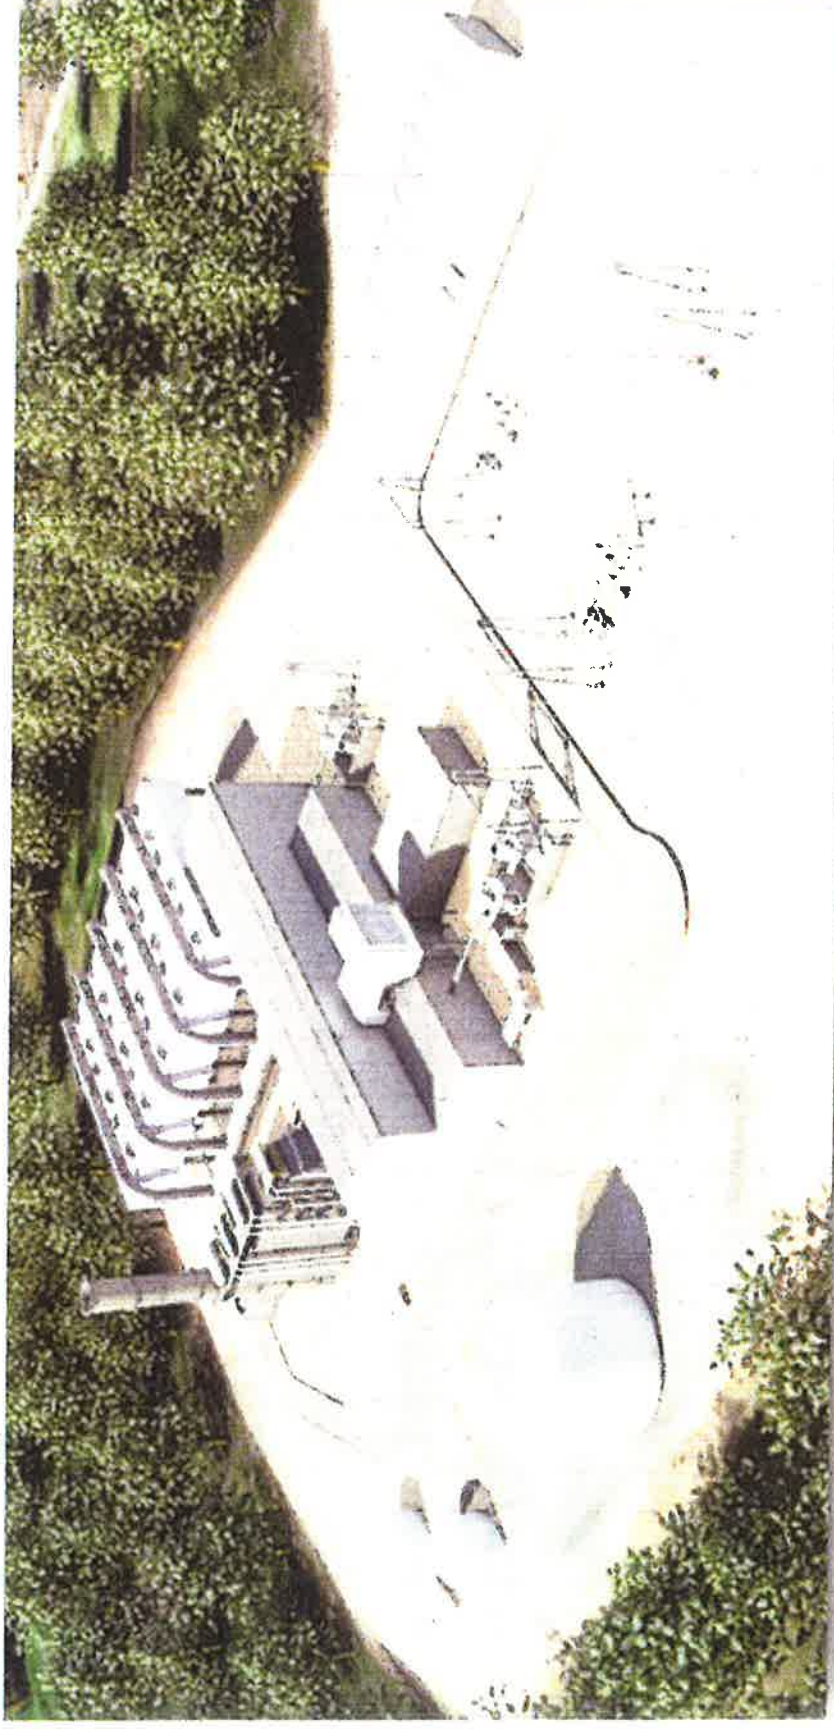

KEC | Project Overview

Type of Facility:

- State-of-the-art 550-MW 1 x 1 combined-cycle, electric generating facility, enough electricity to power about 500,000 homes
- 150-foot exhaust stack
- “Baseload” power source (capable of continuous, steady operation)
- Operational flexibility to respond to changing demand
- Incorporates advanced air cooling technology to reduce water demand by 95%
- All equipment designed and installed to minimize vibration

Electrical Interconnection and Fuel:

- Adjacent 345-kV circuit
- Natural gas via nearby lateral and existing right-of-way; limited ULSD backup

- Completion of survey and work on the range of technical issues has resulted in project refinements:
 - ✓ Selection of Siemens SGT6-8000H technology; reduction in CO emissions
 - ✓ Total acreage verified with ALTA survey
 - ✓ Stormwater basin size and location
 - ✓ Minor equipment shifts for maximum sound reduction
 - ✓ Relocation of access driveway resulting from traffic evaluation
 - ✓ Administration building moved to east side of site

KEC | Schedule

Completed

- Interconnection Request filed 3/5/16
- Air Permit Application filed 4/15/16 (Attachment L filed 5/27/16)
- Local Technical Report filed 5/3/16
- FAA Notice filed 6/3/16

Summer/Fall 2016

- Siting Council Application
- Other Pre-Construction Permit Applications
- Public Hearings

Winter/Spring 2017

- Anticipated Siting Approval
- Anticipated Approval of Other Permits

Summer 2017

- Start Construction

Spring/Summer 2020

- Commercial Operation

KEC | Pre-Construction Environmental Permits

Agency	Anticipated Permit
Connecticut Siting Council	Certificate of Environmental Compatibility and Public Need
CTDEEP	Permit to Construct; Prevention of Significant Deterioration (PSD); Nonattainment Area New Source Review
United States Army Corps of Engineers	Clean Water Act, Section 404 General Permit
CTDEEP	Clean Water Act, Section 401 Water Quality Certification
Federal Aviation Administration	Determination of No Hazard
CTDEEP	Wastewater – Discharge Permit (for Discharge to Sanitary Sewer)
CTDEEP	National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater - Construction

KEC | CSC Public Involvement Opportunities

- CSC filings will be posted on the CSC website
- A public hearing will be held in the Town of Killingly (Fall 2016), aligning with the date for CSC site walk and balloon simulation of stack height
- Comments can be sent to the CSC on an on-going basis for consideration
- Parties to the proceeding can participate in evidentiary hearings
- Town involved in third-party expert review of NTE reports and studies
- NTE will be engaged with the local community throughout this process

KEC | Air Permit Public Involvement Opportunities

- CTDEEP issued a notice of Air Permit Application sufficiency on May 31, initiating technical review process
- Technical review by CTDEEP is anticipated to be ongoing throughout the summer and early fall of 2016
- Once CTDEEP completes its technical review, it will issue a Tentative Determination (TD)
- Issuance of the Tentative Determination will trigger a public comment period and notice for a public hearing
- Written comments are welcome to be submitted, and the public hearing will be an opportunity for comments to be expressed to CTDEEP in person; CTDEEP will consider these comments in its final decision
- NTE will be engaged with the local community throughout this process

KEC | Discussion of Key Topics

- Air
- Water
- Wastewater
- Traffic
- Visibility
- Noise
- Safety Planning
- Wetlands
- Stormwater
- Species
- Cultural Resources

KEC has submitted a detailed BACT/LAER analysis to CT DEEP:

- Siemens SGT6-8000H combustion turbine and HRSG with 150-foot stack
- State-of-the-art emissions controls
- Clean fuels – natural gas, with limited ULSD only when gas is unavailable
- One of the cleanest, most efficient natural gas power generation facilities in North America

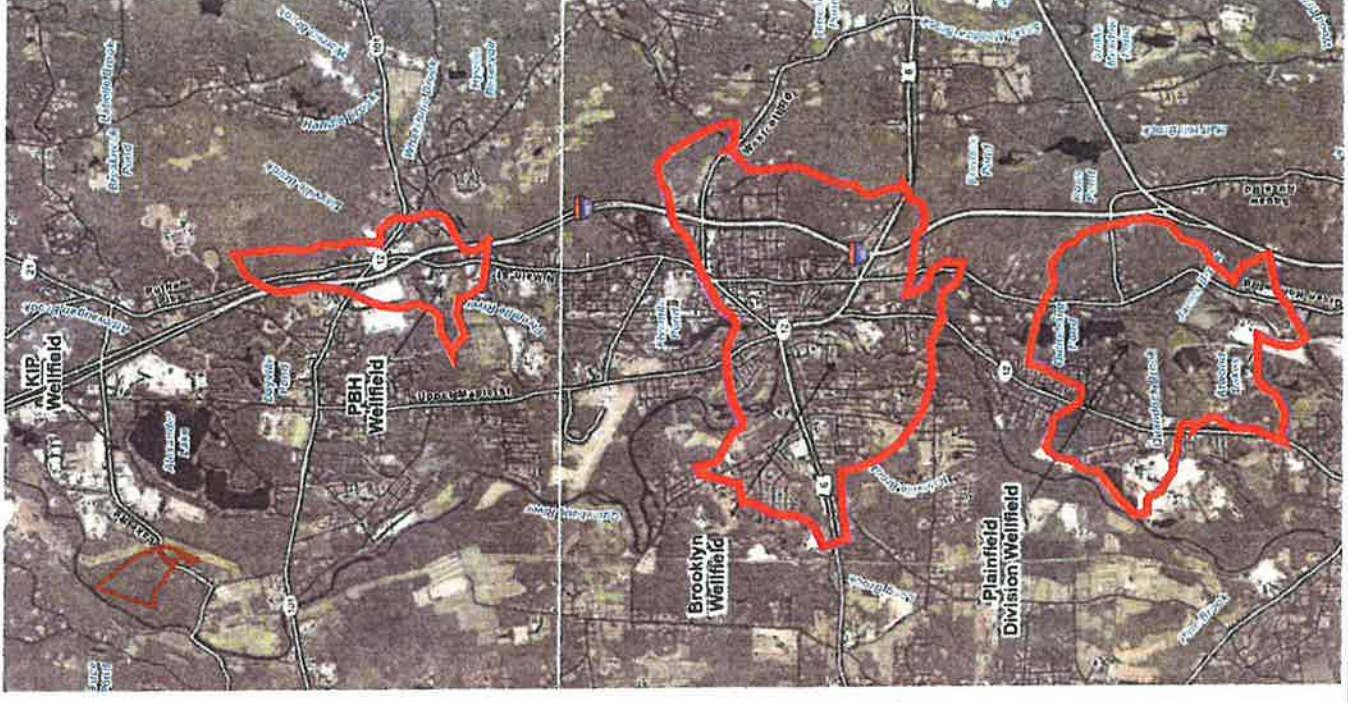

Emission	Emission Control	Natural Gas Firing (without duct firing)	Natural Gas Firing (with duct firing)	ULSD Firing
NO _x	DLN/SCR (gas) Water Injection/SCR (ULSD)	2.0 ppmvdc	2.0 ppmvdc	5.0 ppmvdc
VOC	Oxidation catalyst	1.0 ppmvdc	2.0 ppmvdc	2.0 ppmvdc
CO	Oxidation catalyst	0.9 ppmvdc	1.7 ppmvdc	2.0 ppmvdc
PM _{1.0} /PM _{2.5}	Low sulfur fuels	0.0055 lb/MMBtu	0.0059 lb/MMBtu	0.0155 lb/MMBtu
H ₂ SO ₄	Low sulfur fuels	0.00056 lb/MMBtu	0.00053 lb/MMBtu	0.00054 lb/MMBtu
GHG	High efficiency CTG	(net, annual, natural gas firing at ISO full load, no supplemental firing) 7,273 Btu/kW-hr		
SO ₂	Low sulfur fuels	0.0015 lb/MMBtu (≤0.5 gr S/100 scf)	0.0015 lb/MMBtu (≤0.5 gr S/100 scf)	0.0015 lb/MMBtu (≤15 ppmw S)
NH ₃	Catalyst design	2.0 ppmvdc	2.0 ppmvdc	5.0 ppmvdc

- Conservative ambient air quality analysis that follows agency guidelines and demonstrates compliance with National Ambient Air Quality Standards, designed to protect the environment and health of the most sensitive human population
 - Evaluates maximum potential to emit under a composite of highest-emitting conditions that would never occur simultaneously, many of them the ULSD firing case
 - Incorporates varying meteorological conditions using five years of hourly data
- Modeled impacts for most pollutants/averaging periods below impact screening thresholds (SILs), indicating impacts too low to warrant further analysis
- Cumulative impact analysis for 1-hour NO₂ and 24-hour PM_{2.5} for existing and proposed sources selected using CT DEEP procedures within 50-km radius
 - NAAQS compliance demonstration is based on the maximum predicted impacts (time and space)
 - Includes contributions of the project and interacting sources added to existing background levels
- Maximum project impacts are well below PSD increments and cumulative impacts well below all health-based NAAQS, with impacts at residential areas and other sensitive receptors at Killingly even lower

- In addition to demonstrating compliance with NAAQS standards, additional air quality benefits will result
 - Displacement of older, less efficient units will result in net decrease of 311,000 tpy of CO₂, 743 tpy of NO_x and 392 tpy of SO₂ regionally
 - Project will secure over 166 tons of NO_x offsets
- Significant ongoing operational oversight by CT DEEP and USEPA will provide additional assurance that emission commitments are met
 - Continuous Emissions Monitoring
 - Stack tests
 - Agency audits
 - Regular reporting

- KEC will utilize air-cooling to minimize water use
- Water is predominantly used for HRSG makeup, combustion turbine inlet air cooling, and emissions control when operating on ULSD
- When firing natural gas, the project will use up to 50,000 gpd when temperatures are below 59°F, up to 100,000 gpd during hotter temperatures; and up to 400,000 gpd only when operating on ULSD
- Water will be provided by the Connecticut Water Company's (CWC) existing system

- The CWC wellfields currently in use that serve this area of Killingly (Phillip B. Hopkins and Brooklyn wellfields) and that will serve the facility are hydrogeologically separated from Alexander Lake
- This supply plan use will not affect the quantity or quality of the lake or private wells
- The Killingly Industrial Park wellfield, just north of Alexander Lake, has not been identified as a project water source
 - Has not been in use since 2013
 - Permit restricts use to 70,000 gpd
 - Even if used, would represent only a fraction of the recharge to the lake and have no discernible difference

- Water that does not evaporate in the process will be discharged to the Killingly Water Pollution Control Authority system
- All pretreatment standards and requirements will be met or exceeded
- KWPCA treatment capacity – 8 million gpd; average daily flow – 3 million gpd
- When firing natural gas, the project will discharge up to 30,000 gpd when temperatures are below 59°F, up to 45,000 gpd during hotter temperatures; and up to 90,000 gpd only when operating on ULSD

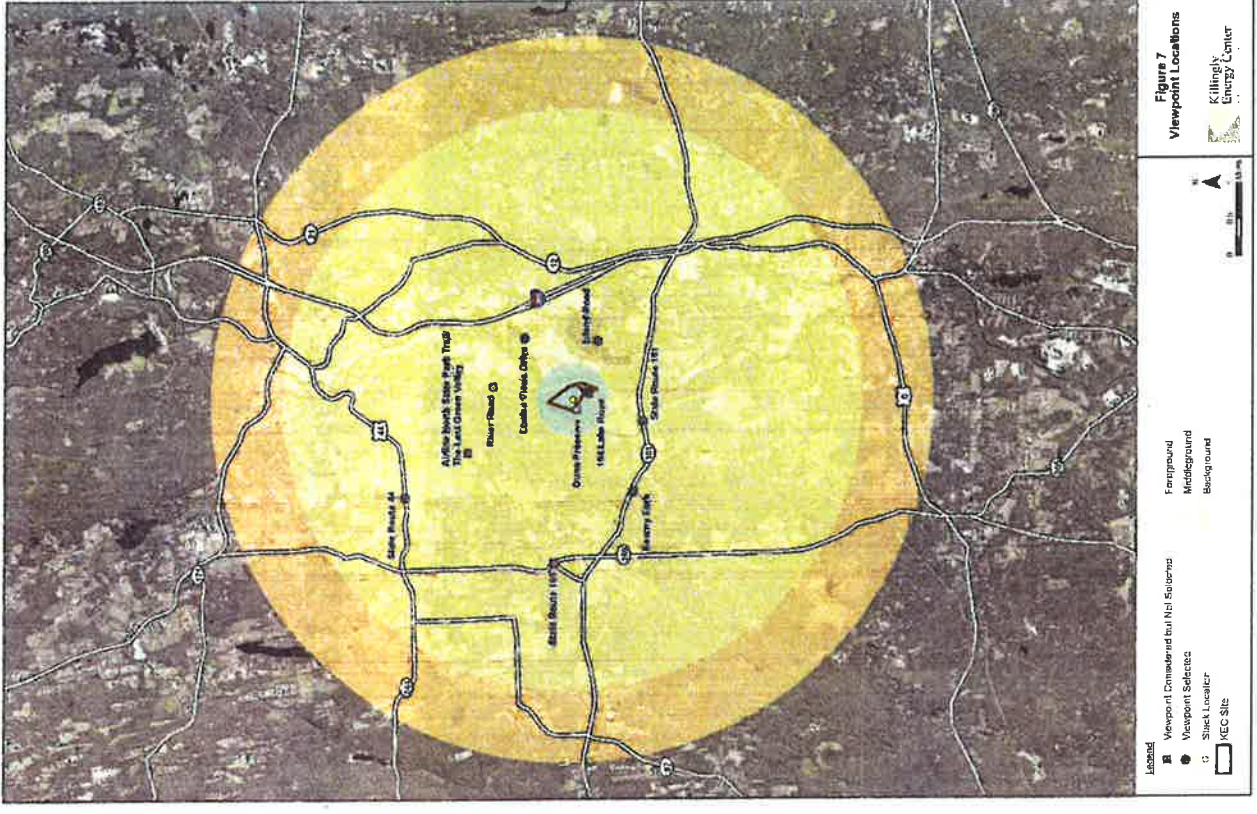

- During normal operational conditions, the level of traffic associated with KEC will have no effect on existing traffic conditions
- Proximity to I-395 eliminates the need for extensive travel on local roadways
- A detailed Level of Service analysis has been completed for the peak construction period, although these levels will occur only for approximately three months during construction
 - Counts to augment records regarding current levels of average daily traffic
 - Analysis of existing conditions
 - Projection of future traffic conditions without project construction traffic
 - Addition of project construction traffic to future conditions
- The existing roadway network has sufficient excess capacity to accommodate additional traffic volumes
- Current roadway infrastructure is capable of handling added volume during construction and operations

KEC | Traffic

- During the limited times that ULSD may be used, truck deliveries will be required:
 - Anticipated to occur only once every two to three years
 - On-site storage accommodates two days of use
 - When in use, two truck deliveries per hour will be required to replenish ULSD supply
 - No significant effect on traffic operations will result
- To accommodate larger trucks accessing KEC, road widening may be necessary along the curve just east of the site
- NTE will work with the Town of Killingly to determine the most appropriate approach
- No project-related through truck traffic would use Lake Road west of the site

- Minimal visibility of project
 - Large property with trees creating a significant buffer around the perimeter
 - Facility set back on property, with tallest feature being the 150-foot stack
 - Most view potential will be screened by existing topography and vegetation
- Visual simulations have been conducted as representative of anticipated views
 - Evaluated locations from roads or other public property
 - Few locations exist where KEC would be visible above the tree line

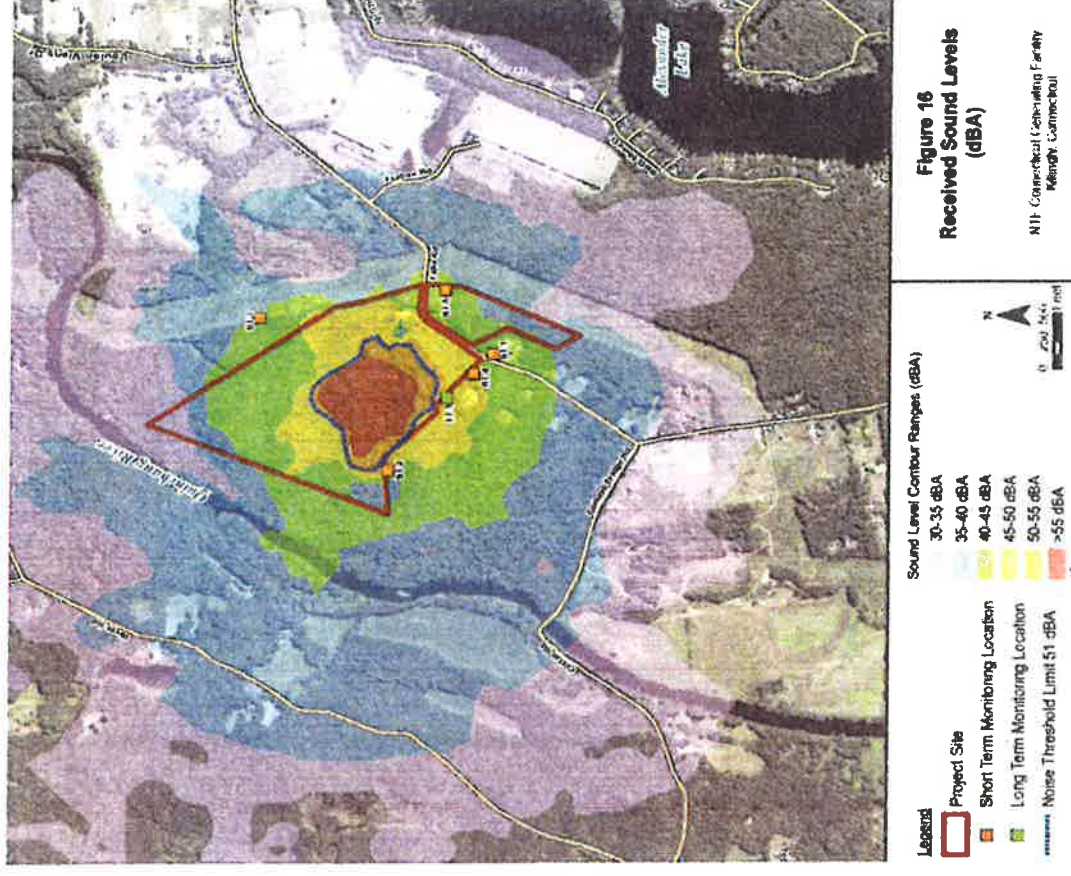

KEC | Visibility

- During the CSC site walk, a balloon will be lofted at the height of the 150-foot stack
- Lighting design to face downwards with appropriate shielding to limit nighttime visibility off-site; lighting motion sensors or manual task lighting wherever safely possible

KEC | Noise

- Stringent state and local noise standards will be met through the use of careful siting and use of mitigation measures such as acoustical enclosures and low-noise equipment
- Nighttime noise at site boundaries will be less than 51 dBA (equivalent to a quiet office setting), decreasing with distance

KEC | Safety Planning

- NTE selects its construction, operations, and maintenance contractors with a focus on safety and excellent safety records
 - Zero reportable or lost-time incidents with over 170,000 labor hours worked on existing NTE construction projects
- During construction and operations, strict safety programs, including an Emergency Response Plan, will be implemented and followed by all contractors, subcontractors and personnel

Emergency Response Plan addresses:

- ✓ Security
- ✓ First Aid
- ✓ Environmental
 - Hazardous Material Control
 - Hazardous Waste
 - Spill Prevention
 - Solid Waste
 - Stormwater Pollution Prevention
- ✓ Emergency Action
 - Evacuations
 - Severe Weather
 - Bomb Threat
 - Fire and Explosion

KEC | Safety Planning

- Compliance with the most current OSHA standards, including NFPA 56, which requires that only inert gases or compressed air be used for cleaning of all flammable gas piping systems
- Design of KEC will integrate safety and security features
 - Facility staffed round the clock
 - Fencing and security cameras
 - Control systems and alarms
 - Fire detection and protection systems
 - Spill prevention and control, including contingency plans
 - Employee training
- Early consultation, coordination and training will occur with local police and fire departments

KEC | Wetlands

- The location of wetlands and watercourses on-site is an important layout consideration
- A man-made pond, a larger wetland and intermittent stream system fed by groundwater seeps, and some smaller wetland features are located on the Generating Facility Site
- The generating facility has been positioned to avoid filling of any wetland or stream
- This results in the footprint of the generating facility being shifted southwest of the site's center

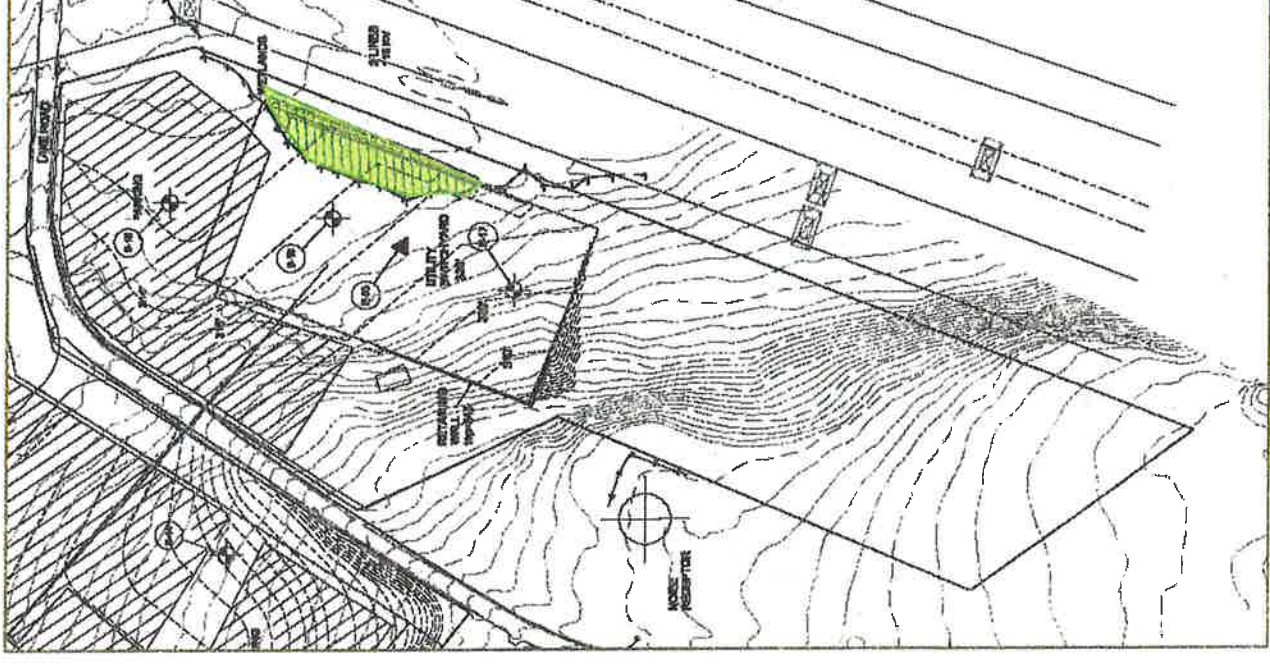

- A significant portion of the site will be retained in its existing wooded character to avoid impacts to wetlands and streams

- Care is being taken in the design of the facility to maximize wetland buffers, protect water quality, and simulate existing drainage patterns to retain existing wetland functions and values

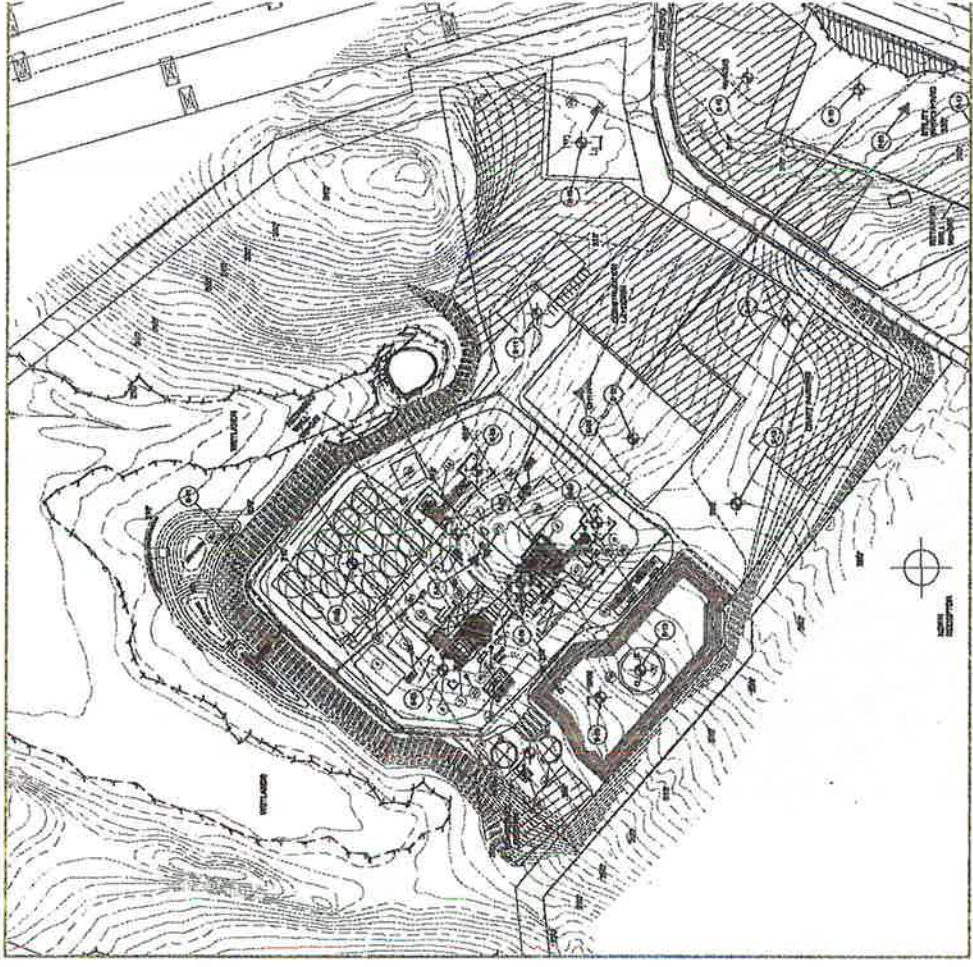

KEC | Wetlands

- A small portion of a wetland located within the Eversource right-of-way extends onto the Switchyard Site
- Given the site dimensions and topography, and the need for the switchyard to be located immediately proximate to the existing right-of-way, a small amount of wetland fill is unavoidable on the Switchyard Site
- Approximately 0.24 acre of impact will result, for which mitigation will be developed
- Mitigation of this minimal impact through wetland replication, restoration, and/or enhancement
- An application for a General Permit will be filed with the U.S. Army Corps of Engineers

KEC | Stormwater

- Pre- and post-development calculations have been completed for the 2-, 10-, and 100-year storm conditions
- Use of a tiered stormwater detention/infiltration basin to return rainfall to existing groundwater and wetland systems
- Stormwater from paved areas will be treated for water quality prior to discharge in accordance with the Connecticut 2004 Stormwater Quality Manual
- Construction erosion and sedimentation control measures have been designed consistent with the Connecticut 2002 guidelines
- Incorporates spill prevention protection measures
- Preliminary geotechnical evaluation indicates limited blasting will be required, completed in accordance with all applicable standards

KEC | Species

- Agency consultation (CTDEEP and USFWS) has indicated which “listed” species should be investigated
- Thorough species searches are ongoing using appropriate survey methods at the appropriate times of the year
 - General characterization
 - Northern long-eared bat and other bat species
 - Avian activity
 - Reptiles and amphibians
 - Moths and butterflies
- The compact footprint that avoids clearing a significant portion of the site will not significantly impact biodiversity or compromise habitat
- Even if presence is not documented, best management practices will be integrated into construction to minimize the potential for species impact

KEC | Cultural Resources

- Archaeological and architectural surveys have been completed on both parcels that indicate no significant cultural resources
- On-site structures have been assessed and determined not to be eligible for listing on the National Register of Historic Places
- A cultural resources report will be submitted to the SHPO for review and comment/concurrence; a summary will be included in the CSC application
- The cemetery located on the Switchyard Site will not be disturbed

Discussion and Questions

**Killingly
Energy Center**

an NTE Energy Project

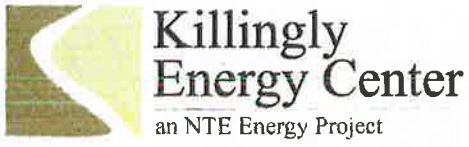

KEC | What's Next?

- Attend the Special Joint Meeting with the Killingly Planning & Zoning Commission and Inland Wetlands & Watercourses Commission meeting on July 19, 2016 at 7:00pm at the Killingly High School
- Add your contact information to the project e-mail list
- Regularly visit the project web site www.killinglyenergycenter.com
- CSC Application to be filed late July/early August
- Continue to participate in the permitting process

Reliable, efficient power for a cleaner America

**Appendix T: Proposed Community Financial Benefits
Presentation to Town Council, 10/11/2016**

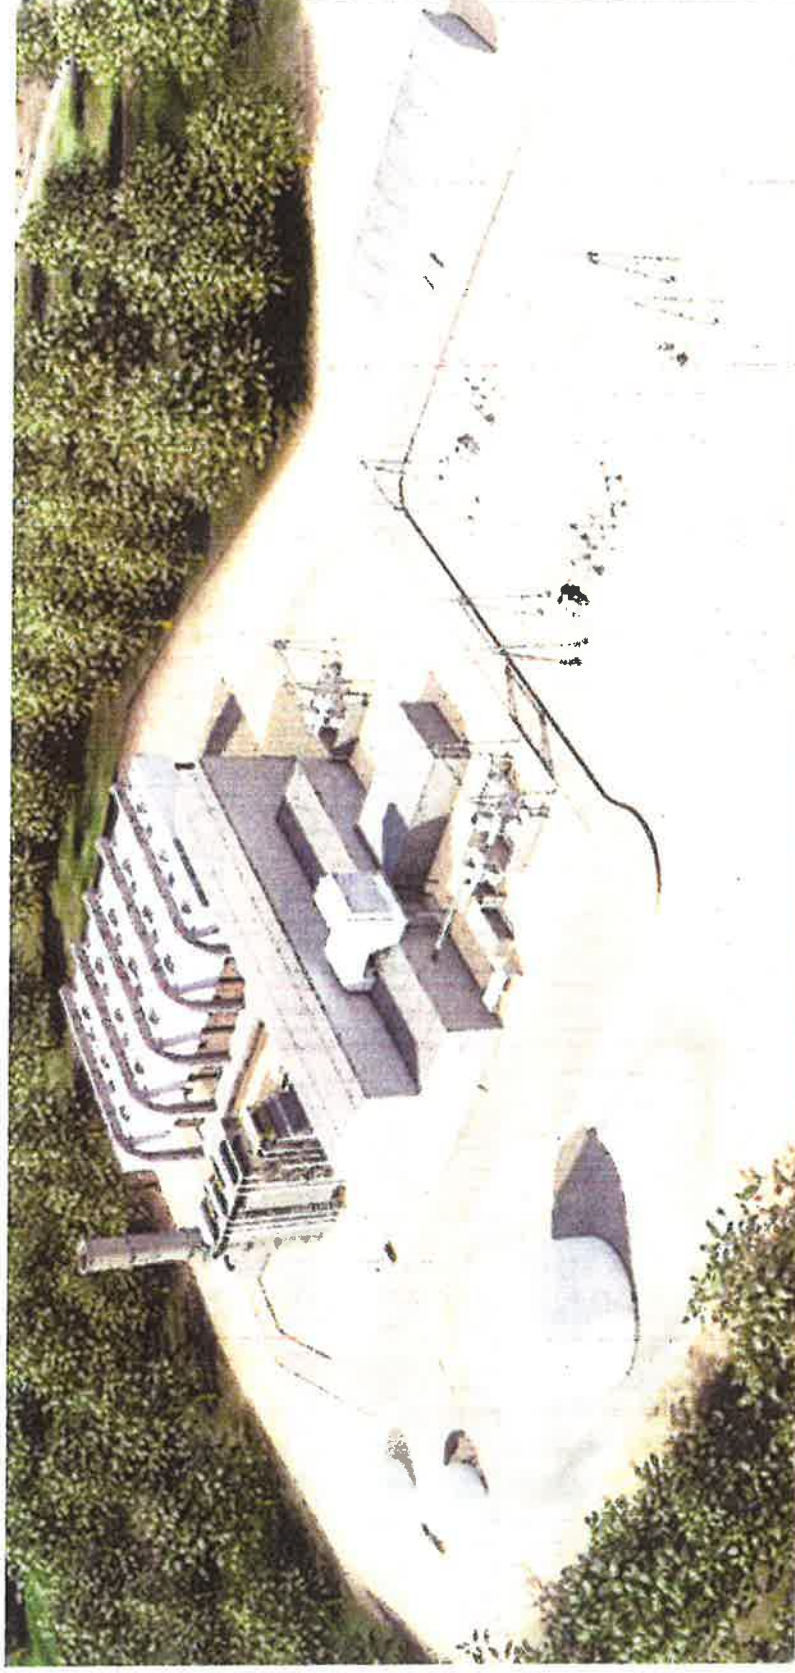

**Killingly
Energy Center**
an NTE Energy Project

Proposed Community Financial Benefits

Presentation Overview

- Killingly Energy Center (“KEC”) Project Overview
- Community Benefits
- Financial Benefits Package
- Economic Benefits

Project Overview

Type of Facility:

- State-of-the-art 550-MW 1 x 1 combined-cycle, electric generating facility
- One of the cleanest, most efficient natural gas power generation facilities in North America
- Advanced air cooling technology, reducing water needs by 95%

KEC Capital Cost Estimate: \$500,000,000

Community Benefits

Tangible Community Benefits (exclusive of property taxes) include:

- \$2,000,000 paid to Killingly under a CEBA Agreement (Community Environmental Benefits Agreement) to fund community projects
- Creation of conservation easement
- Water infrastructure Improvements:
 - Connecting CT Water Killingly and Plainfield systems *OR* Connecting to Killingly WWTP
 - Local Connections to CT Water System and Killingly Sewer System
- Improvements to Lake Road
- Wetlands reconstruction and invasive species removal
- Gas infrastructure modernization and expansion

Total Benefits Package:

Approx. \$24,150,000

(\$3.45MM annually over first Seven years of operations)

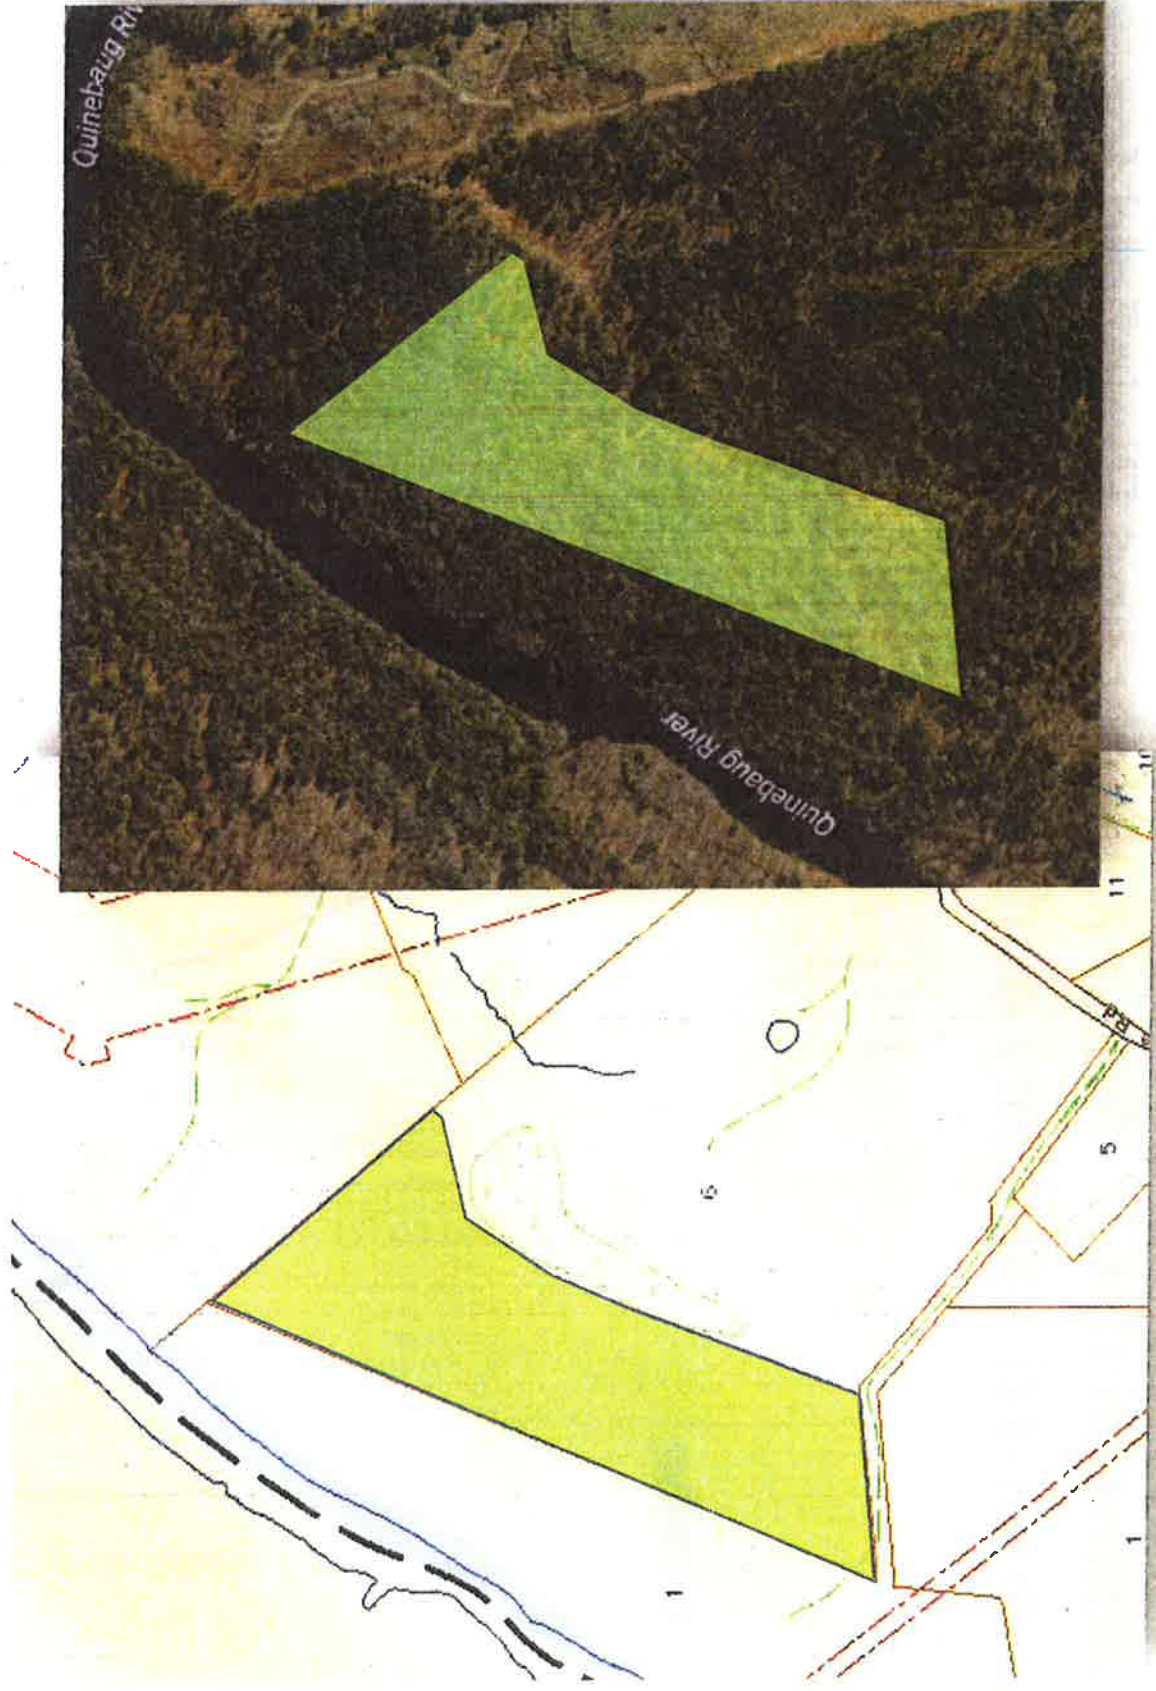

CEBA Agreement

- Killingly decides how to best use funds for community benefit
- Example: Improvements to Killingly Community Center

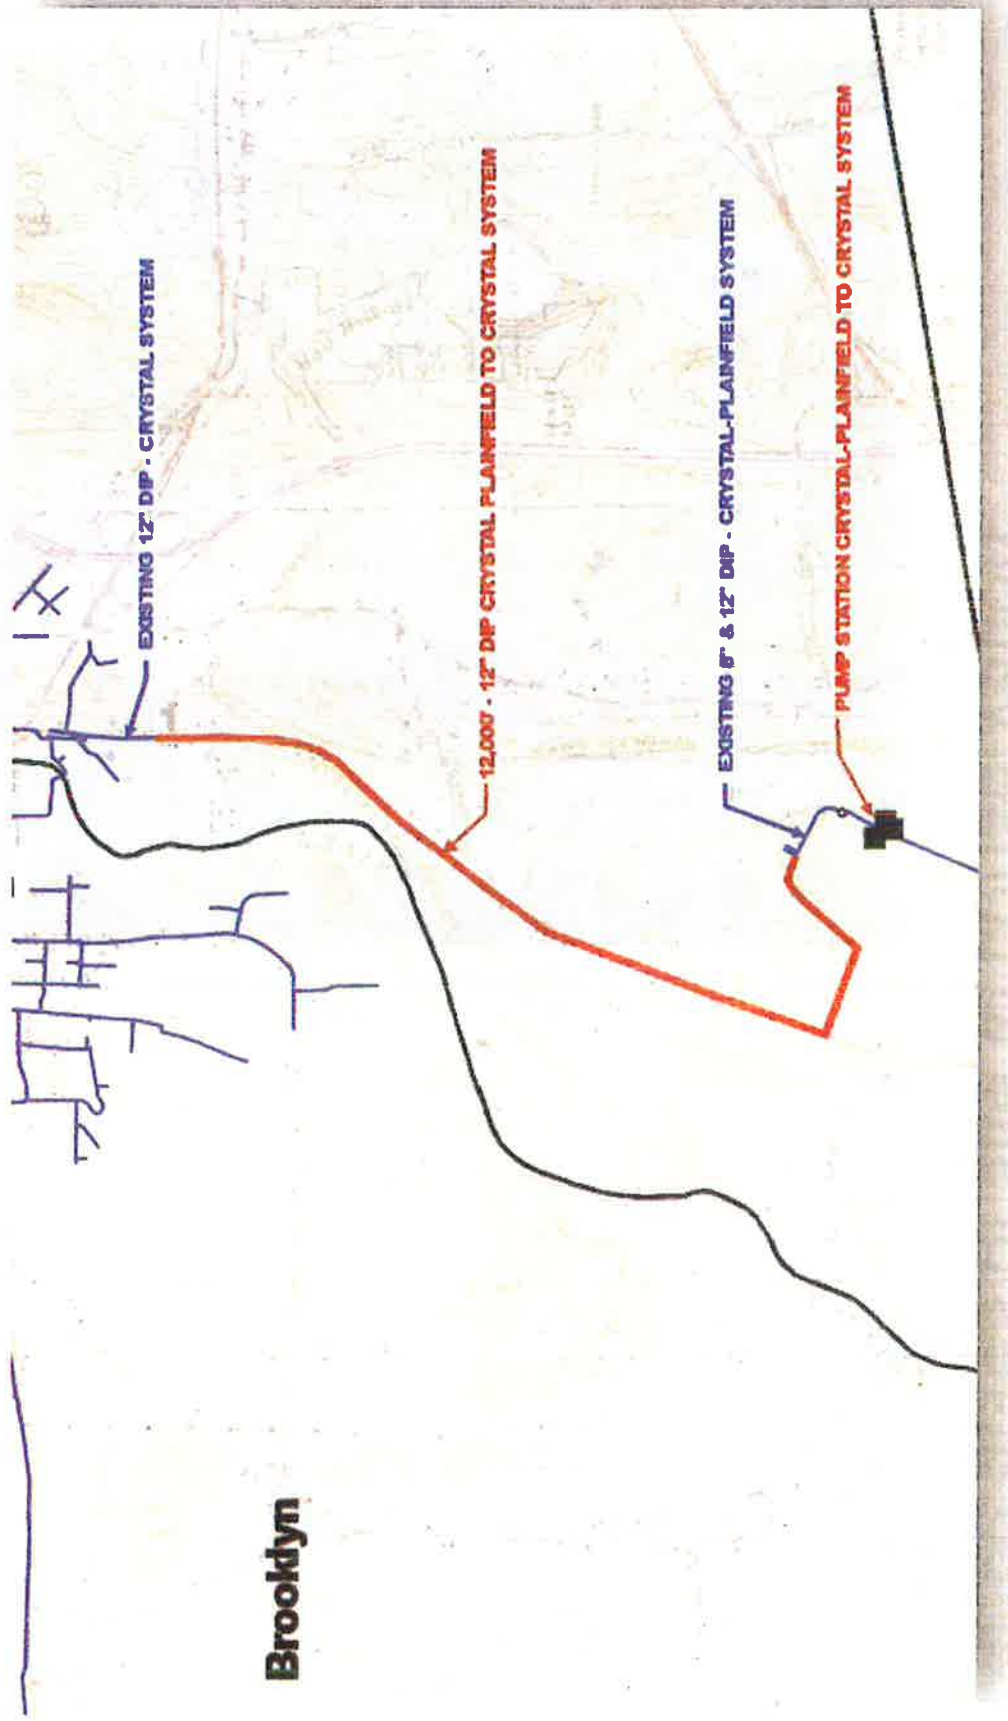

Creation of Conservation Easement

- Over 20 acres of site to conservation

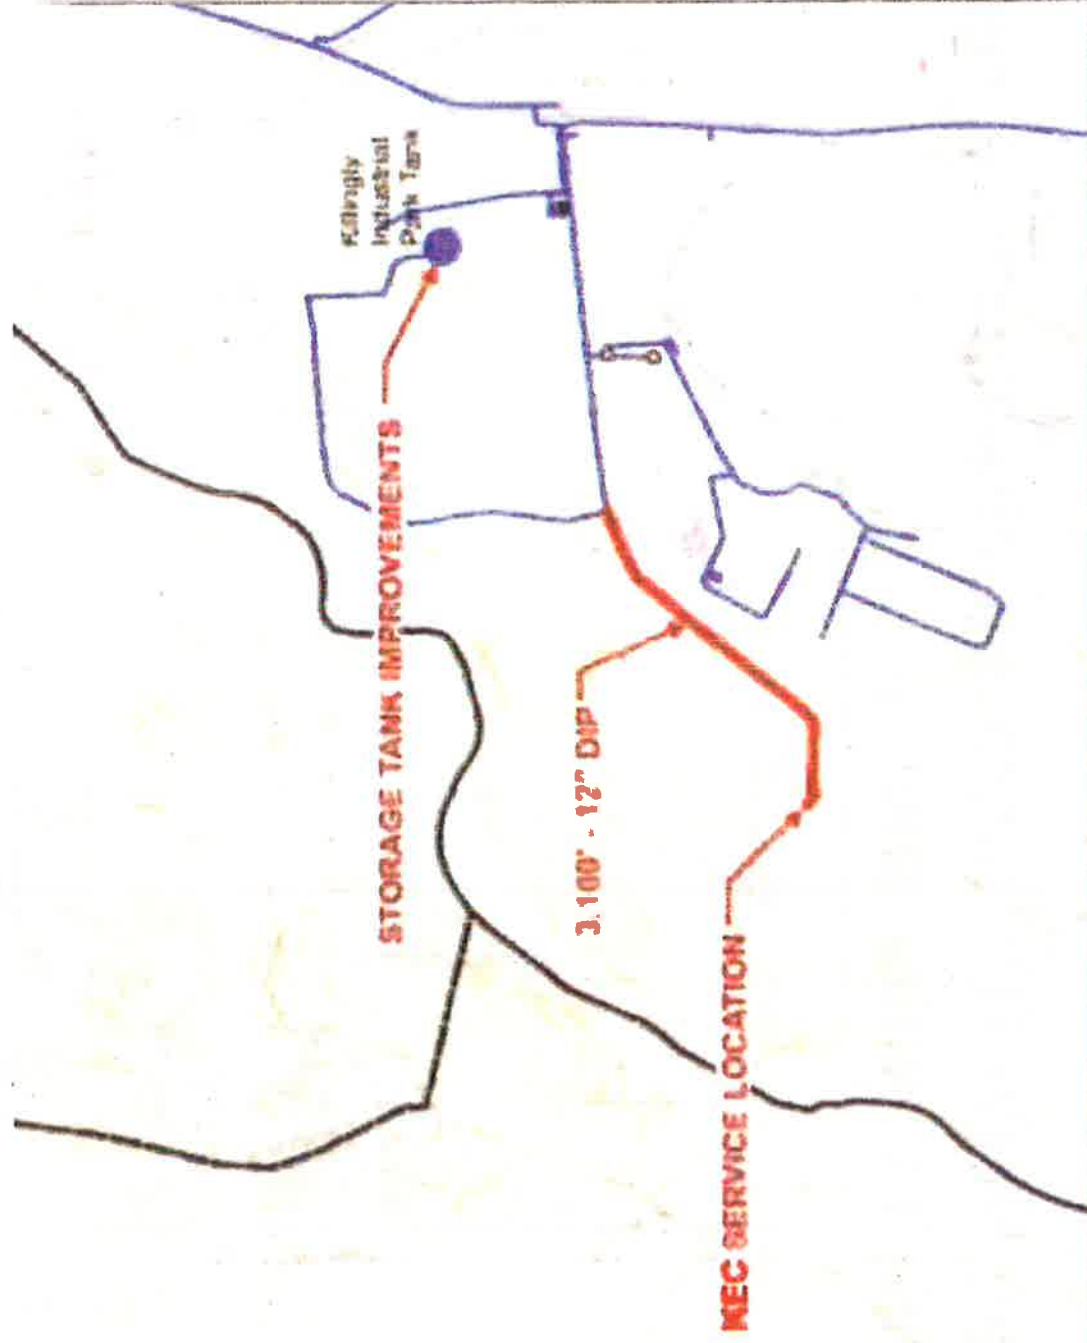

Water Infrastructure Improvements

- Connecting CT Water Killingly and Plainfield for increased reliability and greater supply

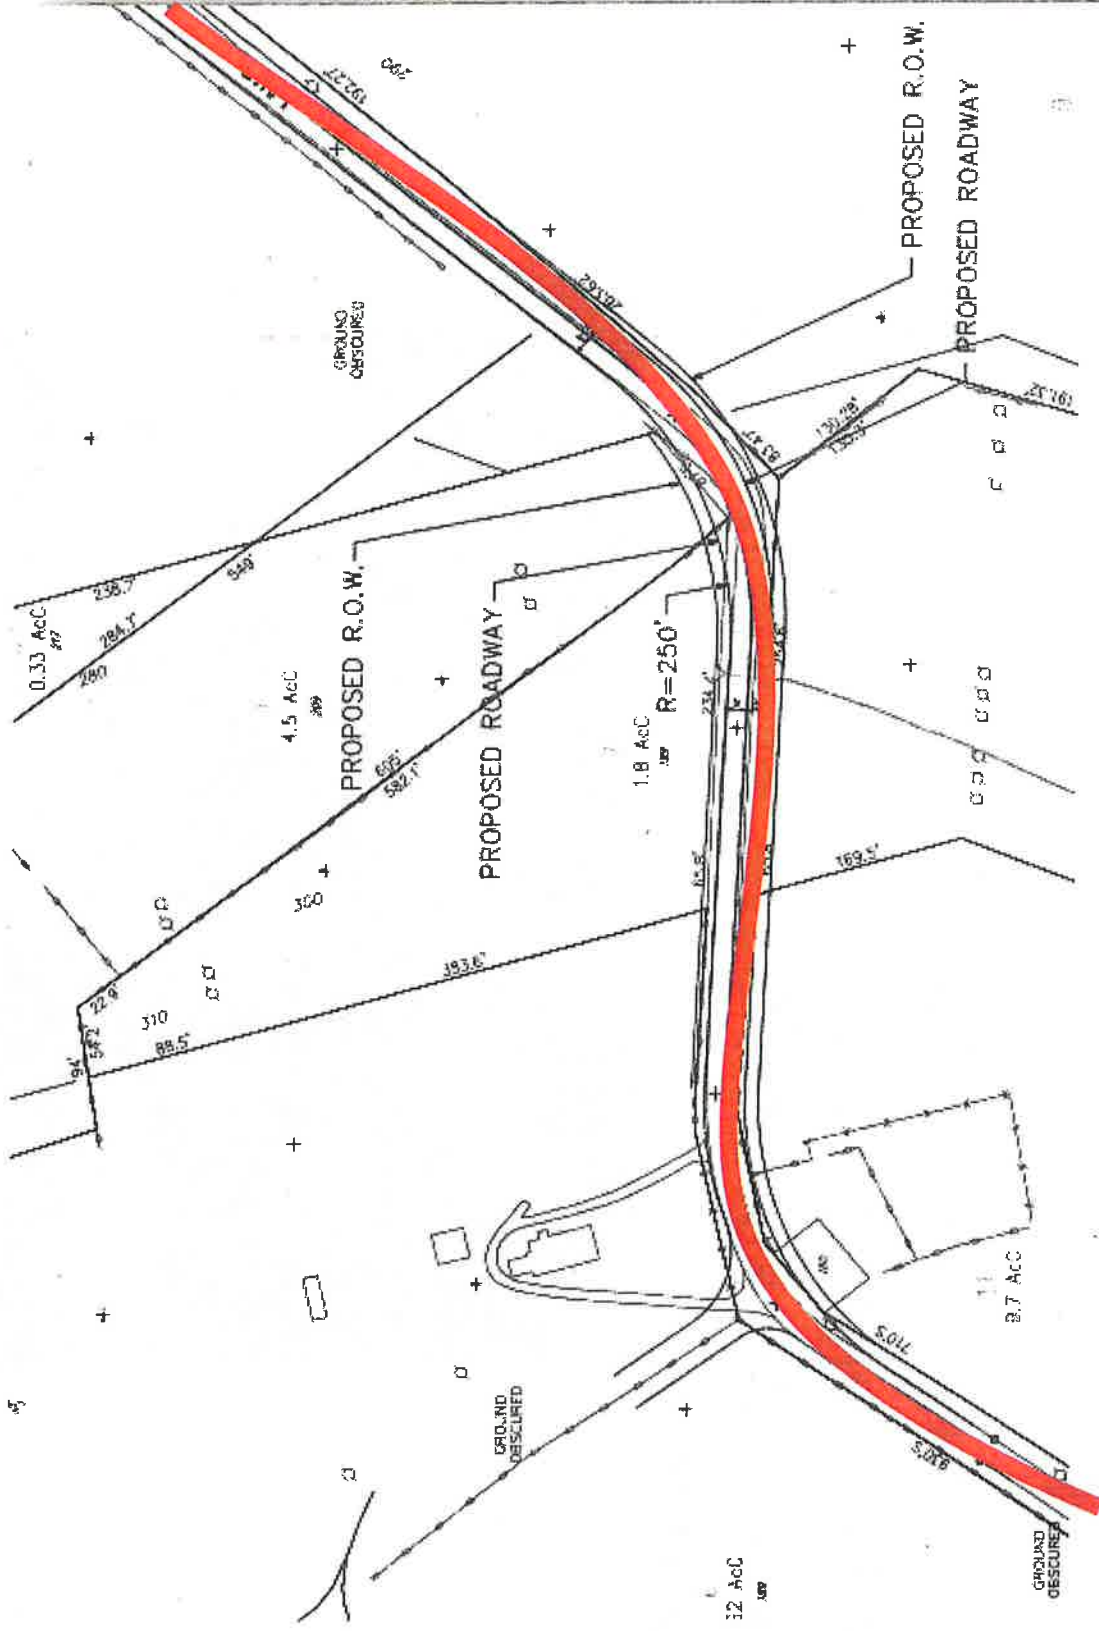

Local Connections to CT Water System and Killingly Sewer System

- Local connections to water and sewer

Enhancements to Lake Rd.

- Widen road and curve south of Forbes Rd.

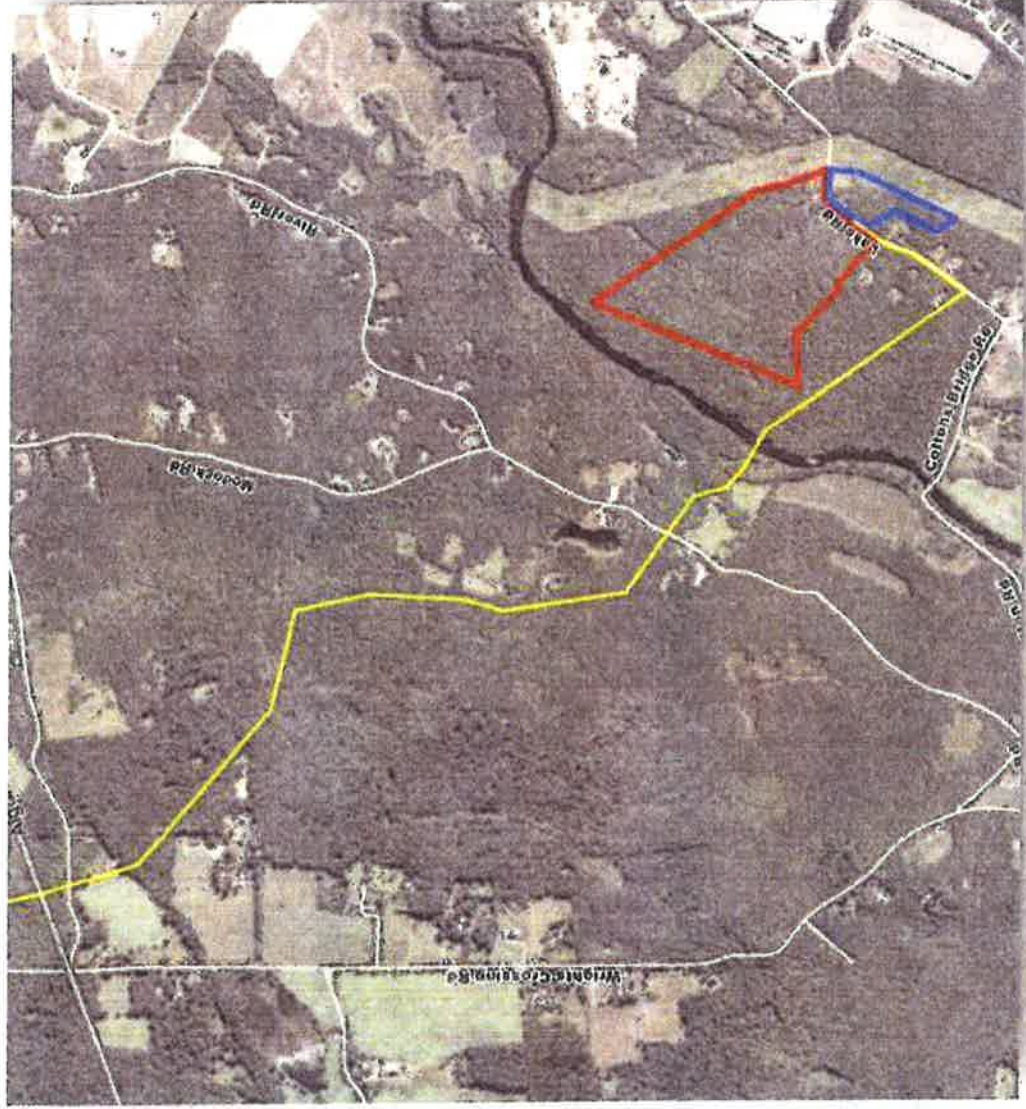

Wetland Reconstruction and Invasive Species Removal

- Creation of new wetland
- Wetland enhancements through the removal of invasive species like Autumn Olive, Multiflora Rose, Glossy Buckthorn

Natural Gas Infrastructure Modernization and Expansion

- Upgraded pipeline lateral; new, larger pipe, providing greater capacity and reliability for industrial park

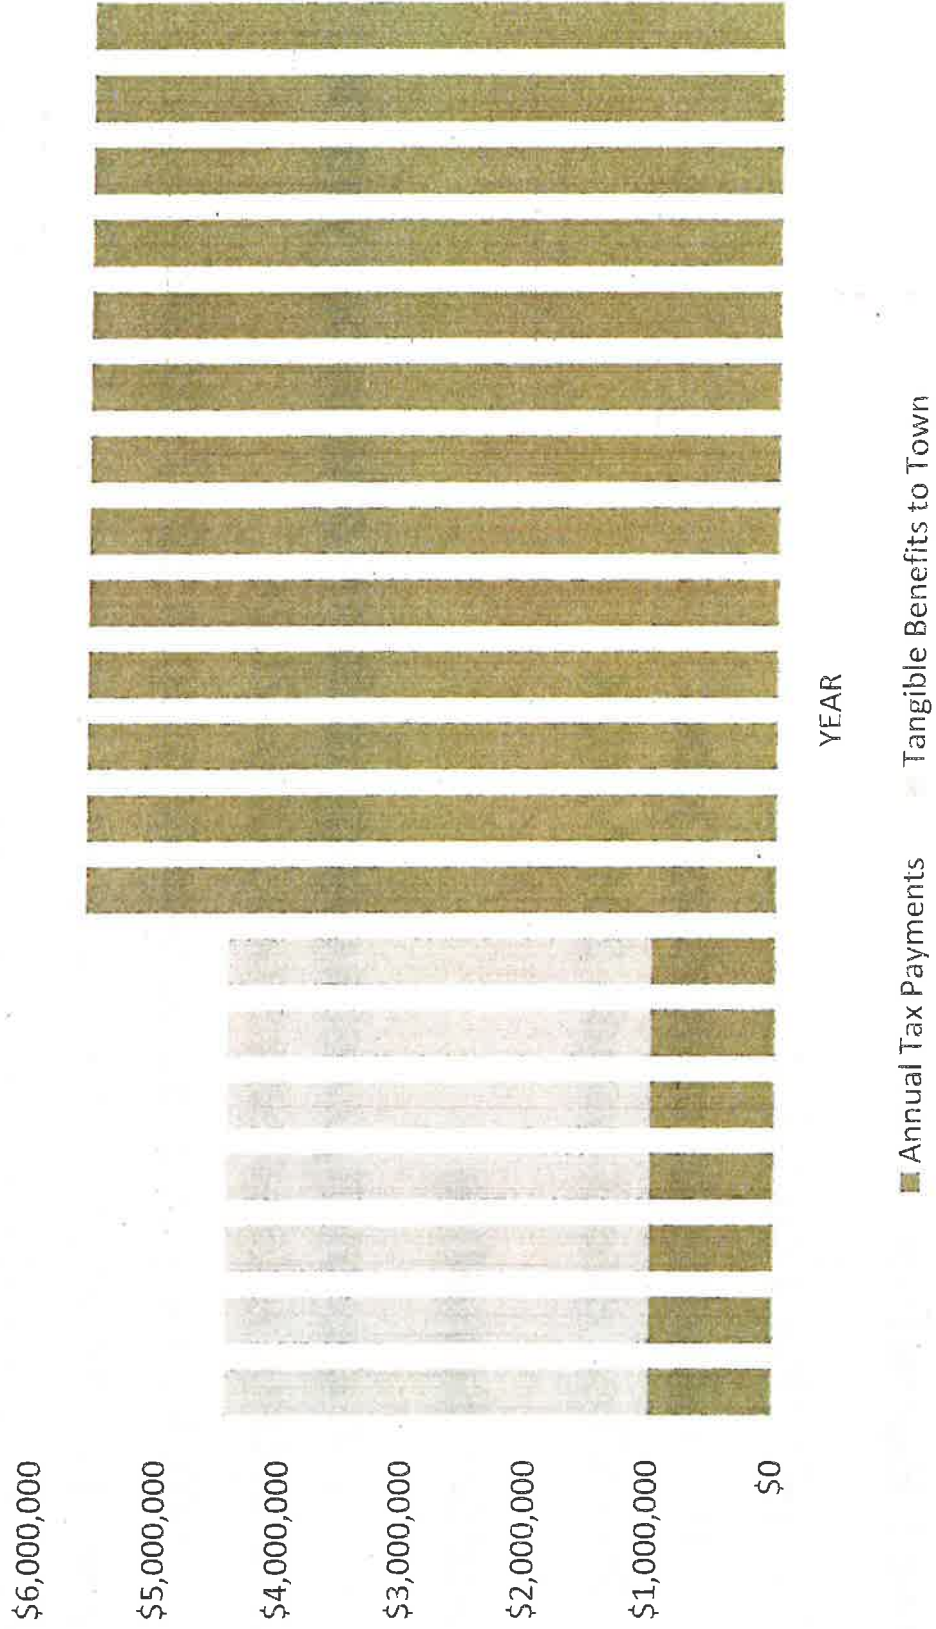

Financial Benefits to Killingly

- KEC proposes to enter into a 22-year tax agreement:
 - 2 years of construction
 - 20 years of operation
 - Consistent and reliable cash flow
- **Total Proposed Tax Payments: \$80,800,000**
 - Pre-operation (2018, 2019) - \$1M total
 - Years 1-7 (2020-2026): \$1M per year
 - Years 8-20 (2027-2039): \$5.6M per year
 - Average annual tax payment represents 10% of Town's annual budget - one of the Town's largest tax payers
- **Total Community Benefits: \$24,150,000**
 - Paid during construction
 - Amortized \$3,450,000/yr over first 7 years of operation
- **Total Benefits to Killingly: \$105,000,000**

Financial Benefits to Killingly

KEC Proposed Development Agreement
from Commercial Operation

Note: Tangible Benefits amortized over 7 years for illustrative purposes

Economic Benefits

Direct Benefits

- 250-350 direct construction jobs
- 25-30 direct on-site operations jobs
- \$125 million direct wages 2017-2024

Induced Benefits

- Expected electricity cost savings of \$215 million per year to Connecticut ratepayers from 2020–2024
- \$535 million in total wage creation from 2017–2024
- \$235M in economic output during construction from 2017-2020
- More than \$1 billion in total economic output from 2017-2024
- \$80 million from KEC operations from 2020-2024

Limited use of tax-payer funded services

Next Steps

- Prepare CEBA Agreement
 - Target first draft by 10/31/16
- Prepare Tax Agreement
 - Target first draft by 10/31/16

Killingly Energy Center

an NTE Energy Project

NTE ENERGY

RELIABLE, EFFICIENT POWER FOR A
CLEANER AMERICA

NTE ENERGY

Electric Generating Facility

- *Capacity* 550 Megawatts (enough to power over 500,000 homes)
- *Fuel* Clean-burning natural gas; ULSD for backup fuel
- *Arrangement* Air cooled combined-cycle configuration with supplemental firing

Responsible Development

- *Land Use* Project site is designated for industrial development in Killingly's Plan of Conservation and Development (POCD)
- *Efficiency* The combined-cycle configuration utilizes advanced gas turbine technology and utilizes waste heat to maximize efficiency
- *Air Quality* This project will release significantly less emissions in comparison to older, less efficient forms of generation
- *Water Use* Air cooling significantly reduces the need for water up to 95% compared to wet cooled combined-cycle generation

Major Permitting

The Connecticut Siting Council

Carefully balances the need for adequate and reliable public utility services at the lowest reasonable cost to consumers, while protecting the environment:

- ✓ Local input to the siting and assessment process, and opportunities for public participation
- ✓ Detailed evaluations of environmental and community issues (for example; air quality, noise, natural resources, visibility, traffic, water resources)
- ✓ Stringent standards imposed for the welfare and protection of the people of Connecticut

Connecticut Department of Energy & Environmental Protection

All review processes:

- ✓ Ensure proposed activities do not harm public health or cause significant degradation of environmental conditions
- ✓ Establish stringent requirements for emission controls and other best management practices to reduce potential impacts to the greatest possible extent
- ✓ Affirm compliance with established environmental standards and requirements that protect the public health and welfare prior to issuing project approvals

Temporary Public Sign Notices

December 9, 2016

Ms. Edith Pestana
Administrator, Environmental Justice Program
Office of Commissioner
Connecticut Department of Energy and Environmental Protection
79 Elm Street
Hartford, Connecticut 06106

Dear Ms. Pestana:

It was my pleasure meeting with you yesterday to submit and review NTE Connecticut, LLC's EJ Final Report. After the review of our Final Report, and as we discussed, NTE is hereby providing the additional information you requested to assist in your independent review of our Final Report. The following supplemental Appendices are attached:

1. Appendix Y - Copies of notices from the newspaper notifications documenting compliance with relevant obligations.
2. Appendix Z
 - Z-1. Copies of meeting sign-in sheets from the three public meetings;
 - Z-2. Copies of the return receipts for the letters sent to the abutting landowners as part of the Connecticut Siting Council Process; and
 - Z-3. Correspondence with community residents.

Note: As we discussed, the information being provided in this Appendix Z includes many personal email addresses. We have noted that this information is sensitive and we have not posted or submitted this as we did not wish to risk making this personal information publicly available.

We understand that upon your review of our EJ Final Report and the supplemental information being provided with this letter, you will send us a brief communication confirming that NTE Connecticut, LLC has fully complied with all of its obligations under Connecticut's EJ program and policy and CGS, Section 22a-20a, et seq., and as amended.

While we are concluding our formal efforts relative to the Connecticut Environmental Justice program, our team will continue to communicate and interface with the residents of Killingly through the DEEP permitting process, the Siting Council process, and throughout its operational life.

Thank you again for helping to make this EJ process successful.

Sincerely,

A handwritten signature in black ink that reads "Tim Eves".

Tim Eves, SVP, Development

PUBLIC INFORMATIONAL MEETING ANNOUNCEMENT

Held by NTE Connecticut, LLC

OPEN TO THE GENERAL PUBLIC,
AN INFORMATIONAL MEETING
REGARDING:
Killingly Energy Center
Will be held at:
Golden Eagle:
8 Tracy Road,
Dayville, CT 06241
ON:
Wednesday, May 4, 2016 at 6:00 p.m.

PRIOR TO THE MEETING, INTERESTED PARTIES MAY RSVP ON WEEKDAYS, WITH RESPECT TO ATTENDANCE, TO:

David Groleau
dgroleau@nteenergy.com
904-687-1857

THE AGENDA FOR THE INFORMATIONAL MEETING WILL INCLUDE A PRESENTATION ABOUT THE PROJECT AND PROVIDE INFORMATION BOARDS ALLOWING FOR INDIVIDUAL DISCUSSION.

NOTICE OF AVAILABILITY OF PROJECT INFORMATION
Project No. 170-3346
STATEWIDE ROADWAY WEATHER INFORMATION SYSTEM IMPLEMENTATION - 25 NEW SITES

The Connecticut Department of Transportation (CTDOT) is currently developing plans for installation of twenty-five Road Weather Information System Sites (RWIS) across the State. These sites, as listed below, will provide real time weather information for CTDOT to manage winter maintenance and weather related activities.

Cheshire - On 144 WB @ Route 7
Hartford - On 191 SB @ Elm St
Fairfield - On 145 SB @ Mill Plain Rd
Greenwich - CTDOT Facility on Route 15 SB
Haddam - On Route 178 @ Beaver Meadow Rd
Maddox - On 141 SB @ Hamamogant Cms
Middletown - On Route 1 WB @ Mansfield City Rd
Middletown - On Route 1 SB @ Elm St
Meriden - On 1491 EB @ N Broad St
Middletown - On 144 WB @ South St
New Milford - On Route 7 @ Wilson Rd
Newington - CTDOT Headquarters on Berlin Temple
Norfolk - On Route 44 @ Laurel Way
North Haven - Route 66 @ Route 130B
North Stratford - On 193 SB @ Clark Falls Rd
Norwalk - On 1305 SB @ Yaleville - Ocean Rd
Old Saybrook - On 153 SB @ Ferry Rd
Plainfield - Route 66 @ Elm St
Plainville - On 144 EB @ Woodland Ave
Stamford - On 144 WB @ North Valley Rd
Tolland - On 144 WB @ Old Cabells Rd
Trombly - On Route 12 @ Wilbury Ave
Union - On 144 WB @ Old Cabells Rd
Wallingford - On 141 SB @ Popponesset Ave
Wolcott - CTDOT Facility on Walnut Rd

Two of the sites are located in proximity to resources listed on the National Register of Historic Places (NRHP). On Connecticut's historic trail, the Housatonic Parkway, and the Sharrow houses, situated within the Sharrow Valley NRHP Historic District. Visual resources at both sites is expected to be maintained, and CTDOT anticipates an effort to minimize any adverse resources in accord with terms of the National Historic Preservation Act.

Residents, business owners, commuters, and other interested individuals are encouraged to take advantage of this opportunity to review the proposed project.

The project information is available at CTDOT's Office of Highway Operations, 2000 Berlin Temple, Newington, Connecticut Monday through Friday between the hours of 9:30 a.m. and 4:00 p.m., including holidays. Project information is also available on www.ctdot.gov/RTWIS. Anytime wishing to discuss the project may contact John Bonta at (860) 594-3459 or by email at John.Bonta@ctdot.gov. Please include any comment to Mr. Bonta by May 2, 2016.

CTDOT is ADA accessible. If language assistance is needed, please contact the Department of Transportation's Office of Communications at (860) 298-7962 at least five (5) business days prior to review.

STATE OF CONNECTICUT
DEPARTMENT OF TRANSPORTATION

Fun and Games

HOROSCOPE
ARIES (March 21-April 19): Strive for accuracy in your professional responsibilities. The way you handle your work will determine your ability to earn merit. A commitment to a personal or professional career track looks promising. A physical change will add to your appeal. 3 stars
TAURUS (April 20-May 20): Get out into the mainstream. Being a participant will be educational and make you more aware of options available to you. Gather information and put your strategy together. Show appreciation to someone you love. 5 stars
GEMINI (May 21-June 20): Offer to help others, but don't let anyone take you for granted. Make sure you get what you want by making your expectations clear to others. Update your image and you will be motivated to upgrade your skills as well. 2 stars
CANCER (June 21-July 21): Explore a new interest or sign up for an event that catches your eye. You will have clear vision and the drive to turn your ideas into a reality. Push for excellence and you will find ways to change your life and enhance your reputation. 4 stars
SAGITTARIUS (Nov. 22-Dec. 21): Concentrate on what you can do to make your domestic life better. Don't be swayed by someone who is trying to push you toward extravagance. Love is on the rise, but being with the right partner will help improve your well-being. 2 stars
CAPRICORN (Dec. 22-Jan. 19): You are ready to make a strategic move, so stop waiting and take action. Don't let unexpected pitfalls slow you down. Size up your situation and outmaneuver any obstacles you encounter. Produce, present and execute your plans. 5 stars
AQUARIUS (Jan. 20-Feb. 18): Taking care of personal needs will prepare you to turn your dreams into something tangible. Use it what you make it, and with a positive attitude and a simple plan, you will get positive results. 3 stars
PISCES (Feb. 19-March 20): Strive to make your investments grow. Whether life through personal self-improvements, educational pursuits or searching for an opportunity to put your ideas to good use, success is within your reach. Believe in your ability to upstage anyone who sets in your way. 5 stars

Notice of Permit Application Town of Killingly

Notice is hereby given that NTE Connecticut, LLC (the applicant) of 24 Cathedral Place, St. Augustine, FL 32084 will submit to the Department of Energy and Environmental Protection an application under Section 22a-174 of the Connecticut General Statutes to construct, install, enlarge or establish an air contaminant source and to operate such air contaminant source regulated under the federal Clean Air Act.

Specifically, the applicant proposes to construct and operate an approximately 650-megawatt electric generating facility. The proposed facility will be located on an approximately 70-acre parcel at 189 Lake Road, Killingly, Connecticut.

The proposed activity will potentially affect air resources. Interested persons may obtain copies of the application from Lynn Groves, Tetra Tech, 2 Lan Drive, Suite 210, Westford, MA 01886 or (978) 293-5352.

The application will also be available for inspection at the Department of Energy and Environmental Protection, Bureau of Air Management, Engineering and Environmental Division, 79 Elm Street, Hartford, CT 06108-0127, (860) 424-4152, from 8:30 to 4:30, Monday through Friday. Please call in advance to schedule review of the application.

INVITATION TO BID

The Thames Valley Council for Community Action, Inc. (TVCCA) will receive sealed bids in Lieu of Wincham Child Care Center in duplicate on or before May 6, 2016 at 2:00 PM at their office at 401 West Thames Street - Unit 201, Norwich CT 06380 Attention: Stephen Einhalig said bids will be opened and recorded. The contract consists of work being performed at the Wincham Child Care Center located at 478 Valley Street Willimantic, Ct. 06226. The specifications of the work to be performed can be obtained by contacting Stephen Einhalig at TVCCA phone 860-425-6055 or steinhalig@tvcca.org

The project will consist of replacing exterior windows and the replacement of concrete ledges that they sit on top of, as well as bids for window laminating after the new window are installed. Project will commence on or around May 23, 2016 and will need to be completed by June 30, 2016. There will be a bid conference at the site located at 478 Valley Street on Monday April 25, 2016 at 10 am for all work conducted at the site.

All bids exceeding \$25,000 will require having a performance bond. The contractor awarded the work will need to have a certificate of insurance and proof of performance bond at the time of the contract signing. Wincham Childcare center reserves the right to reject any or all bids, in whole or in part, to award and item, group of items or total bid, and waive any information in the bids received if it deems it to be in the best interest of the project to do so. All bids must be complete when the bids are submitted. No bidder may withdraw their bid within thirty days after the actual date of bid opening. The Wincham Child Care Center is an affirmative action, equal opportunity employer. Minority/Woman's Business Enterprises

Fun and Games

HOROSCOPE

ARIES (March 21-April 19): Work to improve your relationships. Strive to hold a healthy, happy future that will offer stability and satisfaction. Interviews, sharing your ideas and working alongside someone you love will lead to contentment. Embrace love and strive for equality. 4 stars

TAURUS (April 20-May 20): Be progressive. Make a move or take on a challenge. Show courage and stand behind your beliefs. Strive to be noticed for what you do to help those less fortunate than you. Network and mingle with people who can offer valuable information. 3 stars

GEMINI (May 21-June 20): Check your emotions at the door or you will end up in a regretful spot. A secretive approach will help you buy time in order to figure out the most strategic moves. Don't put yourself in a poor financial position. 3 stars

CANCER (June 21-July 22): Be a self-starter. Don't let anyone bamboozle you into a situation that can upset your reputation or current position. Protect your rights by taking action before someone else does. 3 stars

LEO (July 23-Aug. 22): Don't allow stubbornness to be your downfall. Be open to new ideas and say, and you will learn to share and find a way to enhance what you want to do. Romance will help to stabilize your personal life. 4 stars

VRGO (Aug. 23-Sept. 22): Separate business and personal matters. Your concerns should be with maintaining balance and productivity. An emotional situation must not be allowed to interfere with responsibilities that can affect your income. Be factual in your convictions and don't indulge. 2 stars

LIBRA (Sept. 23-Oct. 22): Take an interest in the things your children, friends or romantic partner are into. Being versatile and playful will help you attract interest in your life, projects and hobbies. Romance will encourage a better relationship and future. 5 stars

SCORPIO (Oct. 23-Nov. 21): Don't wait until it is too late. Ask for advice and discuss financial options with an expert. Take control and make the necessary adjustments to ensure you have enough to enjoy life and maintain your standard of living. 3 stars

SAGITTARIUS (Nov. 22-Dec. 21): Ask questions and do your own research. You are advised to stay informed and be aware that other circumstances can alter the outcome of a deal or project you want to pursue. Proceed with caution. Make physical activity and romance a priority. 3 stars

CAPRICORN (Dec. 22-Jan. 19): Don't feel too eager to bring about change. Watch and see what others do and rely on your own strategy to win. Avoid taking physical or financial risks. Share your thoughts. Don't force your will. 3 stars

AQUARIUS (Jan. 20-Feb. 18): You can make a difference to someone in need. Your sensitivity to a situation that affects your household will lead to workable solutions. Offer suggestions and physical assistance to others in need of cash. An affectionate gesture could lead to romance. 5 stars

PISCES (Feb. 19-March 20): Stay in the loop. Listen to what's being said and don't connect or make assumptions. Be aware of what's happening and control your emotions to avoid a costly mistake. Don't offer anything you don't want to part with. 2 stars

JUMBLE

Unscramble these four Jumbles. One letter to each square, to form four ordinary words.

**Notice of Permit Application
Town: Killingly**

It is given that NTE Connecticut, LLC (the applicant) of 1000 Main Street, St. Augustine, FL 32084 will submit to the Department of Energy and Environmental Protection an application for Section 22a-174 of the Connecticut General Statutes for a permit to construct, install, enlarge or establish an air conditioning unit source and to operate such air conditioning unit under the federal Clean Air Act.

The applicant proposes to construct and operate an approximately 550-megawatt electric generating facility. The facility will be located on an approximately 70-acre site on Lake Road, Killingly, Connecticut.

The activity will potentially affect air resources.

Persons may obtain copies of the application from Lynn M. Tech, 2 Lan Drive, Suite 210, Westford, MA 01886, 978-352-352.

The application will also be available for inspection at the Department of Energy and Environmental Protection, Bureau of Air Quality Management, Engineering and Enforcement Division, 79 Elm Street, Hartford, CT 06106-5127 (860) 424-4152, from 8:30 to 4:30 p.m. through Friday. Please call in advance to schedule inspection.

LEGAL NOTICE

Notice is hereby given, pursuant to Section 16-50i(b) of the Connecticut General Statutes and Regulations pertaining thereto, of an Application to be submitted to the Connecticut Siting Council ("Council") on or about August 17, 2016 by NTE Connecticut, LLC ("NTE" or the "Applicant"). NTE is proposing to develop the Killingly Energy Center ("KEC"), an approximately 550 Mega Watt ("MW") air-cooled electric generating facility and related electric interconnection switchyard on a total of approximately 73 acres of land off Lake Road in Killingly, Connecticut. A 63-acre parcel north and west of Lake Road would support the power generating facility, including a 150-foot tall exhaust stack. The electric switchyard would be constructed on a separate 10-acre parcel south and east of Lake Road, adjacent to an existing Eversource electric transmission line right of way. The primary source of fuel for the KEC facility will be natural gas. Natural gas service to the KEC facility will require an approximately 2.5 mile gas line lateral extension constructed within an existing gas line right of way. During times of natural gas curtailment or service interruption, the KEC facility would operate on Ultra Low Sulfur Distillate ("ULSD") as a backup fuel.

The location, layout and design of certain elements and features of the proposed KEC facility are subject to change under provisions of Conn. Gen. Stat. § 16-50g et seq.

On the day of the Siting Council public hearing on this proposal, NTE will fly a balloon at a height of 150 feet, representing the tallest structure (the stack) at the KEC facility. Interested parties and residents are invited to review the Application at any of the following offices:

Connecticut Siting Council

**Killingly
Energy Center**
an NTE Energy Project

Appendix Z-3

Correspondence with Community Residents

8/30/2016

Dear Mr. and Mrs. Ross:

I represent NTE Energy and we are in the process of developing the Killingly Energy Center, a clean, efficient and state-of-the-art combined cycle power plant just down Lake Road from you. As one of our closer neighbors, I wanted to reach out and offer to meet with you to answer any questions you might have and to discuss what a neighbor of our facility might expect.

If you are interested in meeting, please contact me and we'll set up a mutually convenient time. I am in Killingly frequently and will be there next week, 9/7 – 9/9. If those dates do not work for you, I would be happy to find another opportunity that best meets your needs.

Sincerely

A handwritten signature in black ink that reads "Tim Eves". The signature is written in a cursive, flowing style.

Subject: Re: NTE Killingly Energy Center

Jason - thanks for your email. We'll check out the monitors today.

Our offer is always open - we would be pleased to meet with you/address any of your questions at any time.

Regards
Tim

On Jun 2, 2016, at 12:29 AM, jason anderson [REDACTED] wrote:

Tim, thank you for this information. I want to make you aware of one issue. The traffic monitoring device that was installed on Lake Rd. appears to be non functional. Both tubes running perpendicular to the roadway have been ripped out of the locations they were installed in. Living only six hundred feet away from the proposed plant location I drive / walk / ride through that portion of Lake Rd. at least several times each day. I can tell you the tubes running across the road were not in their originally installed locations for more than one day. Where the device and tubes were installed is far from an ideal location. Due to the steep gradient of the roadway and the proximity to the sharp curve at the base of the gradient another location should be used for traffic monitoring. I can say with quite a bit of certainty that the location greatly contributed to the demise of the tubes and would most likely happen again if reinstalled in the same location. Also please take into consideration that the location they were installed could create a possible traffic hazard during heavy rain (water building up above the tubes on the incline and also the tubes themselves can create unsafe conditions for vehicles braking while descending the grade).

Subject: RE: NTE Killingly Energy Center

Jay – Edith Pestana forwarded your e-mail to me and asked me to respond directly to you. Thanks for your inquiry. Please feel free to reach out to me directly with any additional questions.

The sufficiency letter that we received last week from DEEP confirms that we have provided the DEEP with sufficient information for it to process our air permit application. We expect that DEEP will require a number of months to review and process our permit application.

Regarding the clearing of the project site for construction of the proposed power generating facility, we will not and cannot commence until the facility is approved by the Connecticut Siting Council. We expect the processing of our Siting Council application to take a number of months following submission of the application. Some very limited tree clearing may be necessary to support some of our site due diligence activities.

With regard to the on-going due diligence activities on site:

- i. We are currently on-site completing the geotechnical survey. We expect the field work to be completed this week.
- ii. We expect to be on-site later this week to commence the ecological field survey. This survey, as with all of our field studies, will include both parcels.
- iii. Traffic monitoring, necessary for the traffic study, is in place and on-going.

As we mentioned at the May 4, 2016 public information meeting, we will make the studies and reports available for review as soon as they are completed. All information will be available at Killingly Town Hall and on the KEC Project Web Site at www.killinglyenergycenter.com

We would welcome the opportunity to meet with you if you would like to discuss any of this information in greater detail.

Sincerely
Tim

Hi Tim- please respond to Jason Anderson – regarding the current activities on the site-

From: jason anderson [REDACTED]
Sent: Wednesday, June 1, 2016 12:54 PM
To: Pestana, Edith [REDACTED]
Subject: Re: NTE Killingly Energy Center

Edith, thank you for passing along this information. I had previously reviewed the Ambient Air Quality Analysis report. I do have a question regarding the Deep Air Permit Sufficiency Letter. Are they currently allowed to start clearing either parcel? Do they have to wait until the Environmental Justice process is concluded before they can proceed with land clearing? Also, do they have to wait for results from the surveys regarding the wildlife species listed in Section 4.3 WILDLIFE AND SPECIES EVALUATION in the Killingly Energy Center Technical Report? And, do you know if those surveys will include both parcels since they only included NDDDB information from one parcel in the Technical Report? Will we be notified once those surveys are completed, and / or before they start clearing the parcels? On another note, thank you for requesting the Connecticut Water / Crystal Water Company Annual Report information I was looking for. Did you receive any information back on that yet?

RE: Killingly Energy Center

Dear Mr. Eves,

Thank you for taking the time to reach out regarding the proposed Killingly Energy Center in Killingly, CT with an offer to meet. The last presentations by your company on March 22nd and on May 4th really lacked any substantial information about your project. As you may have heard from your colleagues at NTE, I expressed this concern at both meetings and to the Killingly town officials in a follow up meeting on May 5th. I find your strategy for sharing information somewhat disingenuous and in conflict with the Killingly Energy Center Environmental Justice Plan updated April 14, 2016 ("EJ Plan").

I have reviewed your website regularly for updates on any information regarding the environmental impacts of your project. I checked following the May 4th meeting as Mark Mirabito noted the Technical Report dated May 3rd had appeared on the website and was submitted to the Towns of Killingly, Pomfret and Putnam on the same day as your public presentation. Do you really think same day submission is adequate time to review information so that we can have a meaningful dialogue about how this project will impact our community? You list under Plan Goals and Objectives of the EJ Plan that you "encourage stakeholders to participate at the earliest opportunity in the review of the proposed Project so their input can be considered." This input, it seems to us stakeholders, is a one-way conversation – you listen to our concerns, and then alter your project to address one concern without an understanding of the implications of this modification. For example, your team heard early on that visual impact from Alexander's Lake is a concern – therefore in Ambient Air Quality Analysis (Attachment L) Killingly Energy Center dated May 2016 you note "in order to minimize the visual impact, the HRSG stack height for the Project will be limited to 150 feet." What are the implications of a shorter stack height on pollutant levels within our Significant Impact Area and more importantly – who are you to make this determination? Your attempt to fragment the information and effectively spoon feed it to us is insulting.

I understand from Killingly Town Officials that you are planning two upcoming meetings on July 11th and July 19th. Do you intend to follow this same pattern of dropping information on us on the same day of the meeting? Do you think that one week in the middle of the peak summer

vacation period will be adequate time to review reports, understand the information and be able to ask intelligent questions? At this time, we have yet to receive any documents that were requested at the May 4th meeting and by Edith Pestana, the EJ administrator at DEEP via email to David Groleau dated May 12, 2016 in which she states:

As part of the EJ public outreach process- the applicant is required to provide 'meaningful public participation'. There were many questions left unanswered at the May 4, 2016 meeting. Relevant information including facts that are specific to the plant and its operations were not answered such as water use and water discharge, projected air emissions, noise mitigation, traffic patterns, hours of operation, the specific technology to be installed including BACT- All these questions need to answered at the next meeting.

Although you were not at that meeting, I assume you were properly briefed by your team as to the primary issues of concern for our community. I appreciate you contacting me (although not several times) with an offer to meet however my time is valuable and I really do not need to hear again how NTE is a great 'family company' simply because the name of the entity is based on the CEO's children's initials. The canned presentation materials to date simply do not provide us with enough information to understand the effects of this enormous project. This will loom over me and my neighbors and have a significant impact on my health and the enjoyment of my home. Please treat us with the level of respect we deserve as we will have to deal with the consequences of this plant while NTE is off to another community spreading your gift of clean energy.

I hope you take these comments under consideration and please be fair to us in this process. Your company has clearly been considering this location for at least 6 months, more likely much longer. You have at your disposal a very good consulting firm and clearly a tremendous amount of capital to support this project. We have only our own initiative to review this information and understand it. We are hopeful to have support from our Killingly Town officials but we are facing an uphill battle simply due to the promised tax revenue of such a project. This is a great example of why Connecticut needs a strong Environmental Equity Policy and we are grateful to have this mechanism and the support of dedicated public officials like Edith Pestana.

Regards,

Karen Johnson

Sounds good, [REDACTED] I can drop copies off tomorrow or Thursday at the Historical Society. I'll plan on leaving them there if I don't catch you.

Thanks,

-Dave

I hope you're well. We have completed several other reports/analyses, and I have printed hard copies to provide to you. I'll be in Killingly this week – perhaps I could drop them off to you? If not, I'm happy to mail them if it's more convenient.

Thanks again,

-Dave

Good seeing you yesterday. I really enjoyed the Historical Society's museum – next time, I will have to make more time so I can dive deeper into some of the many artifacts. I wanted to let you know we mailed out the Geotechnical Engineering Report to you and you should be receiving a hard copy today.

Thanks again,

-Dave

Thank you again for meeting with Mark and I this week about our proposed energy project. We really appreciate your questions and concerns and look forward to the continued dialogue. We're also actively following up on the specific water-related questions that came out of the meeting – hope to have some answers by next week.

Thank you again!

[REDACTED]

Thank you again for meeting with Mark and I this week. We really appreciated your thoughtful questions and look forward to the continued dialogue. As a follow up, we mentioned we'd look into supplementing water needs with grey water, as well as identify the prospective source(s) the facility would be supplied from. We're actively following up on these questions and hope to have some more specific answers next week.

Thanks again!

Thanks for reaching out us – we really appreciate your feedback.

We have a great FAQ on our website that helps answer questions we've received throughout the community, and particularly questions regarding taxes, air quality and water as you have mentioned - <http://killinglyenergycenter.com/frequently-asked-questions/>. I would also be happy to talk with you about the questions/concerns you have – feel free to contact me through my contact information below.

Thanks again for reaching out to us.

Comment: The added tax revenue will be great, but does that mean my taxes will go down? Probably not, the town will just find a way to spend the additional revenue. I'm concerned about air pollution for those in a 5 mile radius. I'm concerned about the over use of water for cooling.

Thanks for taking the time to respond to us – we really appreciate your questions. We’ve recently put a ‘Benefits’ webpage together to help show how Killingly is directly benefited by the project. Feel free to check it out here: <http://killinglyenergycenter.com/benefits/>

In regards to where the energy from the Killingly Energy Center would go, like all New England power generation facilities, KEC’s electricity will be delivered to the regional grid for use across the six state region. The regional grid operator, ISO New England, determines how and where electrons flow across the electric grid. All of New England (including Killingly) benefits from the cleaner, more efficient, and less costly energy added to the regional grid.

I would be happy to talk through any other questions you have – feel free to contact me through the information below. Additionally, we have a great FAQ on our website that helps answer questions we’ve received throughout the community - <http://killinglyenergycenter.com/frequently-asked-questions/>.

Thanks again for reaching out to us.

John,

Thanks again for reaching out to me yesterday. I spoke with Chris Rega, our SVP of Engineering and Construction, and we would be happy to meet with you on Thursday (5th) morning if that works with your schedule. Unfortunately, Tues will not work for us. We're happy to meet wherever is most convenient.

Thanks,

-Dave
