

Optional Tower Preference Matrix

Party	Stealth Tree Configuration	Brown Monopole with Flush Mounted Antennas	Stealth Flagpole with Antennas Internally mounted	Steeple Configurations
AT&T/Church	Despite cost, this is AT&T preferred option in light of the surrounding on-site white pines and that use of this option would permit full platforms for AT&T's antennas, co-locators and Town emergency communications use.	A brown monopole with externally mounted antennas flush mounted would require AT&T to occupy the top two (2) heights on a 100' monopole which would potentially allow only one other carrier in the future. This configuration is the same as a monopole directly south of the proposed site at 82 Lovely Street. This configuration would permit the installation of antennas for the Town's emergency services.	Similar to the brown monopole configuration, this configuration would require AT&T to utilize the top two heights available on a 100' tower, again limiting collocation opportunities to one carrier. Additionally, this configuration <u>does not</u> allow for the installation of antennas for the Town's emergency services and Verizon has more recently objected to use of flagpole type facilities.	AT&T and the Church have rejected existing, new or faux steeples. See report from Hudson Design group and response to interrogatories.
Stated Town Preferences	Town has not commented on or stated a preference regarding this particular tower option.	Town has not commented on or stated a preference regarding this particular tower option	The Town has indicated to the Council that this configuration would be acceptable should another configuration using the existing or a new steeple not be feasible.	Use of the existing steeple, a new steeple or a new "self-standing steeple" are the Town's newly stated preferences.
