Re: DOCKET NO. 452 - InSite Towers Development, LLC Certificate of Environmental Compatibility and Public Need for the construction, maintenance, and operation of a telecommunications facility located at Salisbury Tax Assessor Map 16 Lot 5, 250 Canaan Road, Salisbury, Connecticut
New Cingular Wireless PCS, LLC ("AT&T") Facility Installation

Dear Ms. Bachman:

This letter and enclosures are respectfully submitted on behalf of New Cingular Wireless PCS, LLC ("AT&T") in connection with the above-referenced facility in Salisbury, Connecticut. As you know, the Certificate holder, InSite Towers Development constructed the monopine approved in Docket No. 452. This submission details AT&T's wireless facility installation on the existing monopine, which includes some modifications to AT&T's facility depicted on the Development & Management Plan.

As shown in the Drawings included in Attachment 1 dated November 11, 2020, AT&T's installation includes (6) panel antennas in (3) sectors mounted at a centerline height of 146' above grade level ("AGL") on the 157' tall monopine. In each sector, behind the antennas, (3) remote radio head ("RRH") units will be installed on the mounting bracket for a total of (9) RRHs. Behind the antennas in the alpha and beta sectors, one surge arrestor will be installed on the mounting bracket. The mounting bracket is custom-made so that the distance from the monopine to the outer edge of the antennas does not exceed 8', so that the antennas, RRHs and surge arrestors are all located within the faux branches. Within the existing fenced equipment compound and AT&T's 12' x 24' lease area at grade, AT&T will install a 6'-8" x 6'-8" walk-in equipment cabinet on a concrete pad as well as a 20kW diesel-fueled emergency back-up generator, also installed on a concrete pad.

AT&T's original design included (12) panel antennas and RRHs at the same centerline height of 146' AGL and a proposed 11'-6" x 16' shelter with a diesel generator.

Included in Attachment 2 is structural analysis prepared by Bennett & Pless, Inc. confirming that the monopine can structurally accommodate AT&T's facility. Attachment 3 contains a mount analysis prepared by Hudson Design Group, which concludes that the monopine is capable of supporting AT&T's installation.

Thank you for your consideration of this information. Should you have any questions or need any additional information, please do not hesitate to contact me.

Very truly yours,

Lucia Chiocchio

Introduction

We have completed our structural analysis of the proposed equipment installation on the foregoing tower to determine its ability to support the new loads proposed by New Cingular. The objective of the analysis was to determine if the tower meets the current structural codes and standards with the proposed equipment installation.

Existing Structural Information

The following documents for the existing structure were made available for our structural analysis.

Tower Information	Sabre Tower Drawings, Job No. 130280, dated November 3, 2015
Foundation Information	Sabre Tower Drawings, Job No. 130280, dated November 3, 2015
Geotechnical Information	Terracon Geotechnical report Job No. J2155143 dated June 4, 2015.
Existing Equipment Information	Salisbury Volunteer Ambulance Service, Inc Colocation Application, dated January 8, 2018
Tower Reinforcement Information	Tower has not previously been reinforced.

Final Proposed Equipment Loading for New Cingular Wireless

The following proposed loading was obtained from the New Cingular colocation application, dated 8/12/20:

Note: All equipment shown above is proposed.
Note: (*) Denotes New Cingular Reserve Loading
Note: (**) Proposed Mount will be cut down to 8' from 12'.

Design Criteria

The tower was analyzed using tnxTower (Version 8.0.7.4) tower analysis software using the following design criteria.

State/County	Connecticut / Litchfield
State Building Code	Connecticut State Building Code (IBC 2015)
TIA/EIA Standard Code	TIA-222-H
Basic Wind Speed	113 MPH (V_{ult})
Basic Wind Speed w/ Ice	40 MPH/ 1.00" Ice
Steel Grade	65 ksi pole, A615-75 anchor bolts, 50 ksi Base Plate
Exposure Category	C
Topographic Category (height)	1 (0.0 ft)
Importance Factor	1.0
Base Elevation	930 ft.

Analysis Results

Based on the foregoing information, our structural analysis determined that the existing tower and foundation **are structurally capable of supporting the proposed equipment loads without modification.** A seismic analysis was performed on this tower and is not controlling.

Assumptions

The below assumptions are true, complete and accurate.

1. The existing tower has been maintained to manufacturer's specifications and is in good condition.
2. Foundations are considered to have been properly designed for the original design loads.
3. All member connections are considered to have been designed to meet the load carrying capacity of the connected member.
4. Antenna mount loads have been estimated based on generally accepted industry standards.
5. The mounts for the proposed antennas have been analyzed and designed by others.
6. See additional assumptions contained in the report attached.
7. Tower is within acceptable engineering tolerance at 105%.
8. Foundations are within acceptable engineering tolerance at 110%.

Conclusions

The existing tower and foundation described above **have sufficient capacity** to support the proposed loading based on the governing Building Code.

We appreciate the opportunity of providing our continuing professional services to you. If you have any questions or need further assistance please call us anytime at 605-540-4620.

Standard Conditions

All engineering services are performed on the basis that the information used is current and correct. This information may consist of, but not necessarily limited, to:

- Information supplied by the client regarding the structure itself, the antenna and transmission line loading on the structure and it components, or relevant information.

- Information from drawings in possession of Bennett & Pless, or generated by field inspections or measurements of the structure.

It is the responsibility of the client to ensure that the information provided to Bennett & Pless and used in the performance of our engineering services is correct and complete. In the absence of information contrary, we consider that all structures were constructed in accordance with the drawings and specifications and are in a un-corroded condition and have not deteriorated; and we, therefore consider that their capacity has not significantly changed from the original design condition.

All services will be performed to the codes and standards specified by the client, and we do not imply to meet any other code and standard requirements unless explicitly agreed to in writing. If wind and ice loads or other relevant parameters are to be different from the minimum values recommended by the codes and standards, the client shall specify the exact requirements. In the absence of information to the contrary, all work will be performed in accordance with the revision of ANSI/TIA/EIA-222 requested.

All services are performed, results obtained and recommendations made in accordance with the generally accepted engineering principles and practices. Bennett & Pless is not responsible for the conclusions, opinions and recommendations made by others based on the information we supply.

Ice thicknesses on structures in exposed locations at elevations higher than the surrounding terrain and in valleys and gorges may exceed the mapped values.

Values provided are equivalent radial ice thicknesses due to freezing rain with concurrent 3-second gust speeds, for a 500-year mean recurrence interval, and temperatures concurrent with ice thicknesses due to freezing rain. Thicknesses for ice accretions caused by other sources shall be obtained from local meteorological studies. Ice thicknesses in exposed locations at elevations higher than the surrounding terrain and in valleys and gorges may exceed the mapped values.

Tower Input Data

The tower is a monopole.
This tower is designed using the TIA-222-H standard.
The following design criteria apply:

Tower is located in Litchfield County, Connecticut.
Tower base elevation above sea level: 931.00 ft.
Basic wind speed of 113 mph.
Risk Category II.
Exposure Category C.
Simplified Topographic Factor Procedure for wind speed-up calculations is used.
Topographic Category: 1.
Crest Height: 0.00 ft.
Nominal ice thickness of 1.0000 in.
Ice thickness is considered to increase with height.
Ice density of 56 pcf.
A wind speed of 40 mph is used in combination with ice.
Temperature drop of 50 °F.
Deflections calculated using a wind speed of 60 mph.
Weld together tower sections have flange connections..
Connections use galvanized A325 bolts, nuts and locking devices. Installation per TIA/EIA-222 and AISC Specifications..
Tower members are "hot dipped" galvanized in accordance with ASTM A123 and ASTM A153 Standards..
Welds are fabricated with ER-70S-6 electrodes..
CCISeismic Note: Seismic loads generated by CCISeismic 3.2.3.
CCISeismic Note: Seismic calculations are in accordance with TIA-222-H.
A non-linear (P-delta) analysis was used.
Pressures are calculated at each section.
Stress ratio used in pole design is 1.
Local bending stresses due to climbing loads, feed line supports, and appurtenance mounts are not considered.

To Whom It May Concern:

Hudson Design Group LLC (HDG) has been authorized by SAI Communications to perform a mount analysis on the new AT&T antenna/RRH mounts to determine their capability of supporting the following additional loading:

- **(3) TPA65R-BU8DA Antennas (96.0"x20.7"x7.7" – Wt. = 87 lbs. /each)**
- **(3) DMP65R-BU8DA Antennas (96.0"x20.7"x7.7" – Wt. = 96 lbs. /each)**
- **(3) 4415 B30 RRH's (16.5"x13.4"x5.9" – Wt. = 46 lbs. /each)**
- **(3) B14 4478 RRH's (18.1"x13.4"x8.3" – Wt. = 60 lbs. /each)**
- **(3) B2/B66A 8843 RRH's (14.9"x13.2"x10.9" – Wt. = 72 lbs. /each)**
- **(3) B5/B12 4449 RRH's (17.9"x13.2"x9.4" – Wt. = 73 lbs. /each)**
- **(2) Squid Surge Arrestors (24.0"x9.7"Ø – Wt. = 33 lbs)**

*Proposed equipment shown in bold.

Mount fabrication drawings prepared by SitePro1 P/N RMV12-396, dated July 1, 2015 were used to perform this analysis.

Mount Analysis Methods:

- This analysis was conducted in accordance with EIA/TIA-222-H, Structural Standards for Steel Antenna Towers and Antenna Supporting Structures, the International Building Code 2015 with 2018 Connecticut State Building Code, and AT&T Mount Technical Directive – R13.
- HDG considers this mount to be asymmetrical and has applied wind loads in 30 degree increments all around the mount. Per TIA-222-H and Appendix N of the Connecticut State Building Code, the max basic wind speed for this site is equal to 115 mph with a max basic wind speed with ice of 40 mph and a max ice thickness of 1.0 in. An escalated ice thickness of 1.16 in was used for this analysis.
- HDG considers this site to be exposure category B; tower is located in an urban/suburban or wooded area with numerous closely spaced obstructions.
- HDG considers this site to be topographic category 1; tower is located on flat terrain or the bottom of a hill or ridge.
- HDG considers this site to have a spectral response acceleration parameter at short periods, S_S, of 0.173 and a spectral response acceleration parameter at a period of 1 second, S_1, of 0.065.
- AT&T policy forbids walking on or suspending below T-arm mounts. This analysis does not include live load conditions for this mount.

Based on our evaluation, we have determined that the New SitePro1 RMV12-396mounts **ARE CAPABLE** of supporting the proposed installation:

	Component	Controlling Load Case	Stress Ratio	Pass/Fail
New Mount Rating	6	LC7	70%	**PASS**

Reference Documents:

- Fabrication drawings prepared by SitePro1, P/N RMV12-396, dated July 1, 2015.

This determination was based on the following limitations and assumptions:

1. HDG is not responsible for any modifications completed prior to and hereafter which HDG was not directly involved.
2. All structural members and their connections are assumed to be in good condition and are free from defects with no deterioration to its member capacities.
3. All antennas, coax cables and waveguide cables are assumed to be properly installed and supported as per the manufacturer's requirements.
4. The proposed mount will be adequately secured to the tower structure per the mount manufacturer's specifications.
5. All components pertaining to AT&T's mounts must be tightened and re-plumbed prior to the installation of new appurtenances.
6. HDG performed a localized analysis on the mount itself and not on the supporting tower structure.

Please feel free to contact our office should you have any questions.
