June 7, 2017

Mr. Robert Stein, Chairman Connecticut Siting Council Ten Franklin Square New Britain, CT 06051

Re: Application for a Certificate of Environmental Compatibility and Public Need for the Construction of the Greater Hartford-Central Connecticut Reliability Project

Dear Chairman Stein:

Pursuant to Connecticut General Statutes ("CGS") § 15-50/(a), The Connecticut Light and Power Company doing business as Eversource Energy ("Eversource") hereby submits to the Connecticut Siting Council ("Council") an Application for a Certificate of Environmental Compatibility and Public Need ("Application") for the construction of the Greater Hartford-Central Connecticut Reliability Project ("Project"). The Project includes a new approximately 3.7-mile 115-kilovolt (kV) underground/overhead electric transmission line from Eversource's existing Newington Substation in the Town of Newington, through the eastern portion of the Town of West Hartford, to the existing Southwest Hartford Substation in the City of Hartford. Eversource also proposes to modify and slightly expand Newington Tap") to Newington Substation.

By this letter, Eversource submits to the Council an original and 15 paper copies of the Application, along with an electronic copy (compact disc) of the Application.

In accordance with CGS § 16-50/((b) and the Council's *Application Guide for an Electric and Fuel Transmission Line Facility* (February 2016), Eversource also encloses the following:

- Copies of cover letters sent with a copy of this Application to federal, state, and local government officials and agencies;
- Affidavits regarding:
 - Proof of service of the Application.
 - Publication of the legal notices of Eversource's intent to file the Application;
 - The notice that Eversource provided with a bill insert to customers in Newington, West Hartford, and Hartford;
 - The notice provided to substation abutters and the abutters list.
 - The notice provided to community organizations and water companies (pursuant to Section VIII of the Application Guide).

Chairman Stein June 7, 2017 Page 2

In addition, Eversource encloses the following:

- Bulk Filing #1, which consists of two copies and one compact disc containing the inland wetlands and planning and zoning regulations and Plans of Conservation and Development and zoning maps of the towns of Newington and West Hartford and the City of Hartford, along with the Project's Municipal Consultation Filing;
- A check for the Application filing fee in the amount of \$25,250; and
- A check for the municipal participation fee in the amount of \$25,000.

By June 21, 2017, Eversource will submit the following:

- Bulk Filing #2, which will consist of four copies of materials that Eversource provided at the open houses and materials provided to municipal leaders and agencies during the municipal consultation process; and
- Copies of written public comments received as part of the municipal consultation process (including from the public open houses) and Eversource's responses.

Should the Council require any additional material for the review of this Application or have any questions regarding the Application, please do not hesitate to contact me via e-mail at <u>kathleen.shanley@eversource.com</u> or telephone at (860) 728-4527.

Sincerely, Kathleen M. Shanley

Re: Application of The Connecticut Light and Power Company doing business as Eversource Energy to the Connecticut Siting Council for a Certificate of Environmental Compatibility and Public Need for the Construction of the Greater Hartford-Central Connecticut Reliability Project

Dear Municipal Leaders:

Enclosed are paper copies of an Application submitted by The Connecticut Light and Power Company doing business as Eversource Energy ("Eversource") to the Connecticut Siting Council ("Council") for a Certificate of Environmental Compatibility and Public Need for the construction of a new approximately 3.7-mile 115-kilovolt (kV) underground/overhead electric transmission line from Eversource's existing Newington Substation in the Town of Newington, through the eastern portion of the Town of West Hartford, to the existing Southwest Hartford Substation in the City of Hartford. Eversource also proposes to modify and slightly expand Newington and Southwest Hartford substations, and to reconfigure a 0.01-mile 115-kV line interconnection to Newington Substation.

Eversource is filing this Application on or about June 6, 2017.

Section 16-50n(a) of the Connecticut General Statutes provides that each person entitled to receive a copy of an application under § 16-50/ may become a party to the proceeding before the Council by giving the Council a notice of intent to be a party.

Respectfully submitted,

Don't 51 Drink & Drive

Notice of Application by The Connecticut Light and Power Company do-ing business as Eversource Energy for Approval of a New 115-KV Electric Transmission Line and Related Substation Modifications in the Municipalities of Newington, West Hartford, and Hartford, Connecticut

Pursuant to the provisions of Section 16-50l(b) of the General Statutes Pursuant to the provisions of Section 16-501(b) of the General Statutes of Connecticut, Section 16-501-(b) of the regulations of the Connecticut Siting Council, and the Application Guide for an Electric and Fuel Trans-mission Line Facility of the Connecticut Siting Council (adopted February 2016), notice is hereby given that The Connecticut Light and Power Com-pany doing business as Eversource Energy (Eversource) will on or about May 12, 2017, submit an Application to the Connecticut Siting Council seeking a Certificate of Environmental Compatibility and Public Need (Application) for the Greater Hartford – Central Connecticut Reliability Project (Project). Project (Project).

The Project includes construction of an approximately 3.7-mile 115-ki-lovolt (115-kV) electric transmission line between Eversource's exist-ing Newington Substation (located on Cherry Hill Drive in the Town of Newington), through the Town of West Hartford, to Eversource's existing Southwest Hartford Substation (located on New Park Avenue in the City of Hartford), related upgrades to Newington Substation and Southwest Hartford Substation, and modification of a short section of an existing overhead 115-kV transmission line in Newington (referred to as the New-ington Tap) that connects to Newington Substation. The proposed 115-kV transmission line would comprise both overhead and underground segments. It would be located on a combination of Eversource's existing property, within an existing Eversource right-of-way (ROW), along road ROWs, beneath paved parking lots, and along an existing Amtrak ROW (which includes the CTfastrak busway and two Amtrak rail lines).

The Project is needed to bring the electric supply system in Greater Hartford and Central Connecticut into compliance with national and re-gional reliability standards and criteria by eliminating potential thermal overloads and voltage violations identified in studies conducted by In-dependent System Operator-New England, the regional system planning authority. The Project also fulfills a need to improve the capability of the transmission system to move power across Connecticut from east to west when the system is under stress. west when the system is under stress.

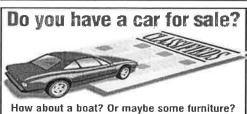

The transmission line will be constructed underground for slightly more than a mile in Newington from Newington Substation to the Amtrak ROW, where it will transition to an overhead line that will cross over the CTfas-trak busway and Amtrak railroad tracks, and then continue overhead, along the eastern side of the Amtrak ROW for approximately 2.4 miles through portions of Newington, West Hartford, and Hartford. Just south of Interstate 84, the transmission line will cross back over the railroad lines and CTfastrak busway, and then transition to an approximately 0.2-mile underground segment that will extend into Southwest Hartford Sub-station. station.

The Application will include a description of the Proposed Route, an all-underground alternate route and route variations considered for the new transmission line, along with an evaluation of the environmental, engi-neering, reliability, operability, and cost considerations associated with those routes. The Application will also describe the required modifica-tions to Newington and Southwest Hartford Substations. At the Newing-ton Substation, the Project requires the expansion of the existing fence line to the south and west (for a total of 0.3 acre), while remaining on Eversource property. At the Southwest Hartford Substation, the Project requires a 0.3-acre expansion of the existing fence line to the east, while remaining on Eversource property. These proposed modifications to the substations are required to connect the new 115-kV line to the existipt ransmission system. The Application will also include a description of the proposed 0.01-mile modification to the Newington Tap.

The structure types under consideration for the overhead portion of the line along the Amtrak ROW are steel monopoles. For the underground portions of the new transmission line, Eversource proposes to use cross-linked polyethylene (XLPE) cable installed in a concrete encased duct bank; several buried splice vaults also will be installed at intervals along the cable system. The majority of the cable system would be buried on Eversource property, within the Eversource distribution line ROW, or within or adjacent to state and local roads.

If approved by the Connecticut Siting Council, Project construction is ex-pected to begin in the third quarter of 2018. The new transmission line is proposed to be completed and in-service by the end of 2019. Copies of the Application will be available at the municipal offices of Newington, Weat the third and United and West Hartford, and Hartford.

outes. The Application will also describe the required modifications to Newington and Southwest Hartford Substations. At the Newington Substation, the Project requires the expansion of the existing fence line to the south and west (for a total of 0.3 acre), while remaining on Eversource property. At the Southwest Hartford Substation, the Project requires a 0.3-acre expansion of the existing fence line to the east, while remaining on Eversource property. These proposed modifications to the substations are required to connect the new 115-kV line to the existing transmission system. The Application will also include a description of the proposed 0.01-mile modification to the Newington Tap.

environmental, engineering, reliability, operability, and cost considerations associated with those

The structure types under consideration for the overhead portion of the line along the Amtrak ROW are steel monopoles. For the underground portions of the new transmission line, Eversource proposes to use cross-linked polyethylene (XLPE) cable installed in a concrete encased duct bank; several buried splice vaults also will be installed at intervals along the cable system. The majority of the cable system would be buried on Eversource property, within the Eversource distribution line ROW, or within or adjacent to state and local roads.

If approved by the Connecticut Siting Council, Project construction is expected to begin in the third quarter of 2018. The new transmission line is proposed to be completed and in-service by the end of 2019. Copies of the Application will be available at the municipal offices of Newington, West Hartford, and Hartford.

For further information about this Project, please visit www.eversource.com, call 1-800-793-2202, or email TransmissionInfo@eversource.com.

PROPERTY AUCTION

The tax collector of the Town of East Windsor has levied upon the following properties in East Windsor and slated them for public auction to satisfy delinquent taxes and charges under C.G.S. § 12-157. Volume and page numbers refer to the Town's land records. Unless paid, these properties will be auctioned in "as is" condition at 10:00 a.m. on June 29, 2017 at the East Windsor Town Hall at 11 Rye Street in Broad Brook.

9 Thompson Road (Volume 381 Page 776) owned by 9 Thompson Road, LLC, owing \$46,441.23. Central Metal Products, Inc.; Duval Capital, LLC; and Newsome Investments, LLC may have interests which will be extinguished by the sale.

29A Pasco Drive (Volume 376 Page 979) owned by 29A Pasco, LLC, owing \$11,646.44. Pasco Common Condominium Association, Inc. may have interests which will be extinguished by the sale.

178 Main Street (Volume 384 Page 872) owned by Selina Barnett, owing \$12,629.51. The Connecticut Water Company may have interests which will be extinguished by the sale

32 Julia Court 32 Julia Court Unit 216 and Garage Unit G-22 (Volume 379 Page 153) owned by Herminia Colon, owing \$9,841.21. Millbrook Owner's Association, Inc. may have interests which will be extinguished by the sale.

Mobile Home at 3 Bayberry Lane (Volume 204 Page 651) owned by the Estate of Joan R. Corbin, owing \$7,156.11. Webster Bank, N.A.; the United States Internal Revenue Service; the Connecticut Department of Revenue Services; and the surviving spouse and heirs of Joan R. Corbin may claim interests which will be extinguished by the sale

13 Spring Street (Volume 382 Page 582) owned by the Estate of Charlotte M. Foley, owing \$11,433.24. Bank of America, N.A.; Wells Fargo Bank, N.A. as successor to Norwest Mortgage, Inc.; the United States Internal Revenue Service; the Connecticut Department of Revenue Services; and the surviving spouse and heirs of Charlotte M. Foley may claim interests which will be extinguished by the sale

206 East Road, ±4.0 acres on East Road, and ±0.46 acres on East Road (Volume 171 Page 418; Volume 221 Page 485; Volume 226 Page 141) owned by Kenneth R. Hunt and Christine N. Hunt, owing \$2,186.59. KeyBank, N.A. as successor to The Savings Bank of Manchester and Florence A. Sabonis may have interests which will be extinguished by the sale

76 Depot Street (Volume 116 Page 958) owned by the Estate of Ronald J. Kapsia, owing \$108,308.79. Webster Bank, N.A. as successor to Savings Bank of Manchester; Saint Francis Hospital; Rose Lavalle; Helen Lavalle; Eva Hish a/k/a Eve Hish; James David Myers; Barbara Myers McCoy; the United States Internal Revenue Service; the Connecticut Department of ue Services; and the surviving spouse and heirs of Ronald J. Kapsia may claim interests which will be extinguished by the sale

 ± 0.34 acres on Wells Road (Volume 64 Page 75) owned by the Estate of Robert B. Macbeth, owing \$3,548.18. Barbara Jean Pinto; the United States Internal Revenue Service; the Connecticut Department of Revenue Services; the Connecticut Department of Social Services; and the surviving spouse and heirs of Robert B. Re: Notice to Owners of Property Abutting the Newington and Southwest Hartford Substations

Dear Neighbor,

Eversource Energy is continuing its efforts to improve the electric power delivery system in Northwest Connecticut. We will be seeking approval from the Connecticut Siting Council (Council) to construct a new 3.7-mile hybrid overhead and underground 115-kilovolt (kV) transmission line between the Newington Substation in Newington and Southwest Hartford Substation in Hartford, and make related improvements at both substations. The name of the proposed Project is the Greater Hartford – Central Connecticut Reliability Project.

The substation upgrades will be performed at Newington Substation at 185 Cherry Hill Road in Newington, Connecticut and Southwest Hartford Substation at 271 New Park Road in Hartford, Connecticut. Since one of the locations for the proposed substation upgrades abuts your property, we are committed to keeping you informed.

This letter is to provide notice of Eversource's intent to apply to the Council on or about June 6, 2017 for a Certificate of Environmental Compatibility and Public Need for this Project. The Council will undertake a thorough review of the proposed Project and consider input from interested stakeholders, including at a local public hearing (location to be set by the Council). If the Project is approved by the Council, we anticipate starting construction in the third quarter of 2018, with completion in 2019. This schedule is approximate and subject to change. Please note this work will not interrupt electric service to homes or businesses.

If you would like more information concerning proposed Project, please visit the Project website at www.Eversource.com and scroll down for the Transmission link. Or you may email us at TransmissionInfo@eversource.com or call the Transmission Information line at 1.800.793.2202.

Sincerely,

J. Patrick Holmes

NOTICE TO THE WATER COMPANY REGARDING THE GREATER HARTFORD-CENTRAL CONNECTICUT RELIABILITY PROJECT

The Connecticut Light and Power Company doing business as Eversource Energy ("Eversource") is providing notice to the water company within the watershed affected by the proposed facility of its intent to apply to the Connecticut Siting Council on or about June 6 for a Certificate of Environmental Compatibility and Public Need for the Greater Hartford-Central Connecticut Reliability Project ("Project").

Eversource is proposing to construct a 3.7-mile 115-kilovolt ("kV") hybrid underground/overhead electric transmission line from Eversource's existing Newington Substation in the Town of Newington, through an eastern portion of the Town of West Hartford, to Southwest Hartford Substation, located in the City of Hartford. Eversource also proposes to modify and slightly expand its existing Newington and Southwest Hartford substations, and to reconfigure a 0.01-mile section of a 115-kV line interconnection to Newington Substation.

This notice is provided pursuant to Section VIII of the Connecticut Siting Council's Application Guide for an Electric and Fuel Transmission Line Facility (adopted February 2016).

Details regarding the Project are set forth in the enclosed notice.

ORGANIZATION	ADDRESSEE	Address	CITY, STATE, ZIP
The Metropolitan District Hartford, Connecticut (MDC)	Scott W. Jellison, CEO	555 Main Street	Hartford, CT 06103

Notice of Application by The Connecticut Light and Power Company doing business as Eversource Energy for Approval of a New 115-kV Electric Transmission Line and Related Substation Modifications in the Municipalities of Newington, West Hartford, and Hartford, Connecticut

Pursuant to the provisions of Section 16-50*l*(b) of the General Statutes of Connecticut, Section 16-50*l*-1(e) of the regulations of the Connecticut Siting Council, and the Application Guide for an Electric and Fuel Transmission Line Facility of the Connecticut Siting Council (adopted February 2016), notice is hereby given that The Connecticut Light and Power Company doing business as Eversource Energy (Eversource) will on or about June 6, 2017, submit an Application to the Connecticut Siting Council seeking a Certificate of Environmental Compatibility and Public Need (Application) for the Greater Hartford – Central Connecticut Reliability Project (Project).

The Project includes construction of an approximately 3.7-mile 115-kilovolt (115-kV) electric transmission line between Eversource's existing Newington Substation (located on Cherry Hill Drive in the Town of Newington), through the Town of West Hartford, to Eversource's existing Southwest Hartford Substation (located on New Park Avenue in the City of Hartford), related upgrades to Newington Substation and Southwest Hartford Substation, and modification of a short section of an existing overhead 115-kV transmission line in Newington (referred to as the Newington Tap) that connects to Newington Substation. The proposed 115-kV transmission line would comprise both overhead and underground segments. It would be located on a combination of Eversource's existing property, within an existing Eversource right-of-way (ROW), along road ROWs, beneath paved parking lots, and along an existing Amtrak ROW (which includes the CT*fastrak* busway and two Amtrak rail lines).

The Project is needed to bring the electric supply system in Greater Hartford and Central Connecticut into compliance with national and regional reliability standards and criteria by eliminating potential thermal overloads and voltage violations identified in studies conducted by Independent System Operator-New England, the regional system planning authority. The Project also fulfills a need to improve the capability of the transmission system to move power across Connecticut from east to west when the system is under stress.

The transmission line will be constructed underground for slightly more than a mile in Newington from Newington Substation to the Amtrak ROW, where it will transition to an overhead line that will cross over the CT*fastrak* busway and Amtrak railroad tracks, and then continue overhead, along the eastern side of the Amtrak ROW for approximately 2.4 miles through portions of Newington, West Hartford, and Hartford. Just south of Interstate 84, the transmission line will cross back over the railroad lines and CT*fastrak* busway, and then transition to an approximately 0.2-mile underground segment that will extend into Southwest Hartford Substation.

The Application will include a description of the Proposed Route, an all-underground alternate route and route variations considered for the new transmission line, along with an evaluation of the environmental, engineering, reliability, operability, and cost considerations associated with

those routes. The Application will also describe the required modifications to Newington and Southwest Hartford Substations. At the Newington Substation, the Project requires the expansion of the existing fence line to the south and west (for a total of 0.3 acre), while remaining on Eversource property. At the Southwest Hartford Substation, the Project requires a 0.3-acre expansion of the existing fence line to the east, while remaining on Eversource property. These proposed modifications to the substations are required to connect the new 115-kV line to the existing transmission system. The Application will also include a description of the proposed 0.01-mile modification to the Newington Tap.

The structure types under consideration for the overhead portion of the line along the Amtrak ROW are steel monopoles. For the underground portions of the new transmission line, Eversource proposes to use cross-linked polyethylene (XLPE) cable installed in a concrete encased duct bank; several buried splice vaults also will be installed at intervals along the cable system. The majority of the cable system would be buried on Eversource property, within the Eversource distribution line ROW, or within or adjacent to state and local roads.

If approved by the Connecticut Siting Council, Project construction is expected to begin in the third quarter of 2018. The new transmission line is proposed to be completed and in-service by the end of 2019. Copies of the Application will be available at the municipal offices of Newington, West Hartford, and Hartford.

For further information about this Project, please visit <u>www.eversource.com</u>, call 1-800-793-2202, or email <u>TransmissionInfo@eversource.com</u>.

NOTICE TO COMMUNITY GROUPS REGARDING THE GREATER HARTFORD-CENTRAL CONNECTICUT RELIABILITY PROJECT

The Connecticut Light and Power Company doing business as Eversource Energy ("Eversource") is providing notice to community groups, including Chambers of Commerce, land trusts, environmental groups, trail organizations, historic preservation groups, and river protection organizations within the watershed affected by the proposed facility or that have been identified by a municipality where the facility is proposed to be located or those community groups that have registered with the Connecticut Siting Council to be provided notice, of its intent to apply to the Connecticut Siting Council on or about June 6 for a Certificate of Environmental Compatibility and Public Need for the Greater Hartford-Central Connecticut Reliability Project ("Project").

Eversource is proposing to construct a 3.7-mile 115-kilovolt ("kV") hybrid underground/overhead electric transmission line from Eversource's existing Newington Substation in the Town of Newington, through an eastern portion of the Town of West Hartford, to Southwest Hartford Substation, located in the City of Hartford. Eversource also proposes to modify and slightly expand its existing Newington and Southwest Hartford substations, and to reconfigure a 0.01-mile section of a 115-kV line interconnection to Newington Substation.

This notice is provided pursuant to Section VIII of the Connecticut Siting Council's Application Guide for an Electric and Fuel Transmission Line Facility (adopted February 2016).

Details regarding the Project are set forth in the enclosed notice.

THE CONNECTICUT LIGHT AND POWER COMPANY DOING BUSINESS AS EVERSOURCE ENERGY

Kenneth Roberts

Kenneth Roberts Lead Project Manager Greater Hartford-Central Connecticut Reliability Project

Notice of Application by The Connecticut Light and Power Company doing business as Eversource Energy for Approval of a New 115-kV Electric Transmission Line and Related Substation Modifications in the Municipalities of Newington, West Hartford, and Hartford, Connecticut

Pursuant to the provisions of Section 16-50*l*(b) of the General Statutes of Connecticut, Section 16-50*l*-1(e) of the regulations of the Connecticut Siting Council, and the Application Guide for an Electric and Fuel Transmission Line Facility of the Connecticut Siting Council (adopted February 2016), notice is hereby given that The Connecticut Light and Power Company doing business as Eversource Energy (Eversource) will on or about June 6, 2017, submit an Application to the Connecticut Siting Council seeking a Certificate of Environmental Compatibility and Public Need (Application) for the Greater Hartford – Central Connecticut Reliability Project (Project).

The Project includes construction of an approximately 3.7-mile 115-kilovolt (115-kV) electric transmission line between Eversource's existing Newington Substation (located on Cherry Hill Drive in the Town of Newington), through the Town of West Hartford, to Eversource's existing Southwest Hartford Substation (located on New Park Avenue in the City of Hartford), related upgrades to Newington Substation and Southwest Hartford Substation, and modification of a short section of an existing overhead 115-kV transmission line in Newington (referred to as the Newington Tap) that connects to Newington Substation. The proposed 115-kV transmission line would comprise both overhead and underground segments. It would be located on a combination of Eversource's existing property, within an existing Eversource right-of-way (ROW), along road ROWs, beneath paved parking lots, and along an existing Amtrak ROW (which includes the CT*fastrak* busway and two Amtrak rail lines).

The Project is needed to bring the electric supply system in Greater Hartford and Central Connecticut into compliance with national and regional reliability standards and criteria by eliminating potential thermal overloads and voltage violations identified in studies conducted by Independent System Operator-New England, the regional system planning authority. The Project also fulfills a need to improve the capability of the transmission system to move power across Connecticut from east to west when the system is under stress.

The transmission line will be constructed underground for slightly more than a mile in Newington from Newington Substation to the Amtrak ROW, where it will transition to an overhead line that will cross over the CT*fastrak* busway and Amtrak railroad tracks, and then continue overhead, along the eastern side of the Amtrak ROW for approximately 2.4 miles through portions of Newington, West Hartford, and Hartford. Just south of Interstate 84, the transmission line will cross back over the railroad lines and CT*fastrak* busway, and then transition to an approximately 0.2-mile underground segment that will extend into Southwest Hartford Substation.

The Application will include a description of the Proposed Route, an all-underground alternate route and route variations considered for the new transmission line, along with an evaluation of the environmental, engineering, reliability, operability, and cost considerations associated with

those routes. The Application will also describe the required modifications to Newington and Southwest Hartford Substations. At the Newington Substation, the Project requires the expansion of the existing fence line to the south and west (for a total of 0.3 acre), while remaining on Eversource property. At the Southwest Hartford Substation, the Project requires a 0.3-acre expansion of the existing fence line to the east, while remaining on Eversource property. These proposed modifications to the substations are required to connect the new 115-kV line to the existing transmission system. The Application will also include a description of the proposed 0.01-mile modification to the Newington Tap.

The structure types under consideration for the overhead portion of the line along the Amtrak ROW are steel monopoles. For the underground portions of the new transmission line, Eversource proposes to use cross-linked polyethylene (XLPE) cable installed in a concrete encased duct bank; several buried splice vaults also will be installed at intervals along the cable system. The majority of the cable system would be buried on Eversource property, within the Eversource distribution line ROW, or within or adjacent to state and local roads.

If approved by the Connecticut Siting Council, Project construction is expected to begin in the third quarter of 2018. The new transmission line is proposed to be completed and in-service by the end of 2019. Copies of the Application will be available at the municipal offices of Newington, West Hartford, and Hartford.

AFFIDAVIT REGARDING NOTICE PROVIDED TO CUSTOMERS OF THE CONNECTICUT LIGHT AND POWER COMPANY DOING BUSINESS AS EVERSOURCE ENERGY

STATE OF CONNECTICUT)) ss. Hartford COUNTY OF HARTFORD)

Pursuant to section 16-50*l*(b) of the Connecticut General Statutes, I hereby certify that I caused a copy of the attached "Notice Of Proposed Construction Of A High-Voltage Electric Transmission Line" to be included in one or more monthly bills to each customer of The Connecticut Light and Power Company doing business as Eversource Energy in the Towns of Newington, West Hartford and Hartford within sixty days prior to the filing of an Application with the Connecticut Siting Council for a Certificate of Environmental Compatibility and Public Need for the Greater Hartford – Central Connecticut Reliability Project.

nneth Roberts

Lead Broject Manager

On this the $\underline{7}$ day of June, 2017, before me, the undersigned officer, personally appeared, Kenneth Roberts, known to me (or satisfactorily proven) to be the person whose name is subscribed to the within instrument and acknowledged that she executed the same for the purposes therein contained.

In Witness Whereof, I hereunto set my hand and official seal.

Notary Public My Commission expires:

GINA M. LEO NOTARY PUBLIC MY COMMISSION EXPIRES FEB. 29, 2021

NOTICE OF PROPOSED CONSTRUCTION OF A HIGH-VOLTAGE ELECTRIC TRANSMISSION LINE

Eversource Plans Enhancements to Transmission System for Improved Reliability

Eversource is continuing to improve the electric system in the Greater Hartford region so customers will have reliable electric power to meet their energy needs. These proposed transmission system improvements are required to bring the electric supply system in Greater Hartford and Central Connecticut into compliance with regional reliability standards. One of these transmission system improvements is known as the Greater Hartford - Central Connecticut Reliability Project. This notice provides a summary of the project, as currently proposed.

Project Summary

To provide reliable, cost-effective, and environmentally sound improvements to the regional electric transmission system, Eversource proposes to construct a new 3.7-mile hybrid overhead and underground 115-kilovolt (kV) transmission line between its Newington Substation in Newington and its Southwest Hartford Substation in Hartford, and to make related improvements in both substations.

The new line would be located within Eversource's existing transmission and distribution line rightsof-way, under town streets, and along the existing Amtrak rights-of-way. In addition, new equipment will be installed at both the Newington and Southwest Hartford Substations. At the Newington Substation, the project requires the expansion of the existing fence line to the south and west, while remaining on Eversource property. At the Southwest Hartford Substation, the project requires expansion of the existing fence line to the east, while remaining on Eversource property. The proposed modifications to the substations are required to connect the new 115kV line to the existing transmission system.

Eversource plans to submit an application to the Connecticut Siting Council (Siting Council) within the next 60 days, seeking a "Certificate of Environmental Compatibility and Public Need" for the project. If approved by the Siting Council, construction of the project is expected to begin in the third quarter of 2018. The new transmission line and substation improvements are proposed to be completed and in service by the end of 2019.

Technical Description

The structure types under consideration for the overhead portion of the line are steel monopoles with heights ranging between 95 to 105 feet within the rights-of way for Amtrak and CTfastrak in Newington and West Hartford.

Eversource proposes to use cross-linked polyethylene (XLPE) cable installed in a concreteencased duct bank for the underground portions of the route. The majority of the cable system would be buried within or adjacent to state and local roads, on Eversource property, or within Eversource rights-of-way. Installation would involve excavating a continuous trench to a typical depth of 5 to 6 feet with a typical width of 4.5 feet. In addition to the trench, the project would include installation of concrete splice vaults, which are typically spaced at intervals of approximately 1,800 to 2,000 feet, depending upon cable construction and route characteristics. To install each concrete splice vault, an excavation area approximately 12 feet wide, 12 feet deep and 24 feet long would be required.

Eversource's application will provide additional siting and technical details, including information on how the specific design of the line impacts magnetic field levels and measures to minimize magnetic fields. The proposed new line will meet the requirements of the Siting Council's "Best Management Practices for Electric and Magnetic Fields," as amended.

The application will be available on the project's website at www.eversource.com, the Siting Council's website at www.ct.gov/csc or at the libraries in Newington, West Hartford, and Hartford. Additional information on electric and magnetic fields may be obtained by calling 1-800-793-2202 or contacting the Connecticut Department of Public Health at 860-509-7740.

Proposed Route Under Consideration

The preferred route would extend approximately 3.7 miles between the Newington Substation on Cherry Hill Drive, Newington, and the Southwest Hartford Substation on New Park Avenue, Hartford. The line would exit the Newington Substation underground heading east on Eversource's existing rights-of-way, crossing Avery Road and West Hartford Road in Newington; the line would turn north on Willard Avenue, and then turn east onto Shepard Drive. The line would transition to overhead at the Amtrak rights-of-way, and continue north on the Amtrak rights-of-way for approximately 2.3 miles, then transition back to underground, crossing New Park Avenue, and turn west into the Southwest Hartford Substation.

Greater Hartford - Central Connecticut Reliability Project Proposed Project Route Map

Southwest Hartford Substation

The map above shows the proposed route of the hybrid overhead and underground transmission line between Eversource substations in Newington and Hartford, as well as the substations where work will take place.

This notice is provided pursuant to §16-50*I*(b) of the Connecticut General Statutes.

NOTIFICACIÓN DE PROPUESTA DE **CONSTRUCCIÓN DE UNA LÍNEA DE** TRANSMISIÓN ELÉCTRICA DE ALTO VOLTAJE

Eversource Planifica Mejoras al Sistema de Transmisión Para Aumentar la Fiabilidad

Eversource continúa mejorando el sistema eléctrico de la región de Greater Hartford para que los clientes cuenten con un sistema eléctrico fiable que cubra sus necesidades energéticas. Estas propuestas de mejoras en el sistema de transmisión son necesarias para que el sistema de suministro eléctrico de la region de Greater Hartford - Central Connecticut cumpla con las normas de fiabilidad regionales. Una de estas mejoras del sistema de transmisión se denomina Proyecto de Fiabilidad de Greater Hartford - Central Connecticut. Este documento contiene un resumen del proyecto según la propuesta actual.

Resumen del Proyecto

Para ofrecer mejoras fiables, rentables y seguras para el medio ambiente en el sistema de transmisión eléctrica regional, Eversource propone construir una nueva línea de transmisión de 115-kilovoltios (KV) híbrida aerial y subterranea, a lo largo de 5.6 km (3.7 millas) entre la subestación de Newington en Newington y la subestación suroeste de Hartford en Hartford; esto para elaborar relacionadas mejoras en ambas subestaciones.

La nueva línea estaría ubicada dentro de la servidumbre de paso de la línea de transmisión existente de Eversource, por debajo de las calles urbanas, y a lo largo de la servidumbre de paso existente de Amtrak. Asimismo, se instalará nuevo equipamiento en las subestaciones de Newington y de Southwest Hartford. En la subestación Newington, el proyecto requiere la expansión de la actual línea del vallado hacia el sur y el oeste, siempre dentro de la propiedad de Eversource. En la subestación Southwest Hartford, el proyecto requiere la expansión de la actual línea del vallado hacia el este, siempre dentro de la propiedad de Eversource. Las modificaciones propuestas en las subestaciones se requieren para conectar la nueva línea de 115-kV al actual sistema de transmisión.

Eversource planea presentar una solicitud al Consejo de Emplazamiento de Connecticut dentro de los próximos 60 días, para obtener un "Certificado de Compatibilidad Ambiental y Necesidad Pública" para el proyecto. Si es aprobado por el Consejo de Emplazamiento, la construcción del proyecto está pautada para comenzar el tercer trimestre del 2018. Las mejoras de la nueva línea de transmisión y la subestación están planeadas para finalizarse y entrar en funcionamiento a fines del 2019.

Descripción Técnica

Los tipos de estructuras en evaluación para la parte aérea de la línea son monopostes de acero con alturas que varían entre los 29 y 32 metros (95 a 105 pies) dentro de la servidumbre de paso de Amtrak y CTfastrak en Newington y West Hartford.

Eversource propone usar cableado de polietileno reticulado (XLPE) dentro de un banco de ductos con revestimiento de hormigón para las partes subterráneas de la ruta. La mayoría del sistema de cableado correría bajo tierra por debajo de caminos locales o estatales o de manera adyacente a estos, en propiedad de Eversource, o dentro de la servidumbre de paso de Eversource. La instalación implicaría la excavación de una zanja continua con una profundidad típica de 5 a 6 pies y un ancho típico de 4.5 pies. Además de la zanja, el proyecto incluye la instalación de bóvedas de hormigón de empalme, que se colocan típicamente a intervalos de aproximadamente 1,800 a 2,000 pies de distancia, según la construcción del cable y las características de la ruta. Para instalar cada bóveda de hormigón de empalme, se requerirá un área de excavación de aproximadamente 12 pies de ancho, por 12 pies de profundidad y 24 pies de largo.

La solicitud de Eversource incluirá otros detalles técnicos y de emplazamiento, tales como datos sobre cómo el diseño específico de la línea afectará los niveles y medidas de campos magnéticos para minimizar los campos magnéticos. La línea nueva propuesta cumplirá con los requisitos del Consejo de Emplazamiento respecto de las "Buenas Prácticas de Manejo de Campos Magnéticos y Eléctricos," según lo enmendado.

La solicitud estará disponible en el sitio web del proyecto en www.eversource.com, el sitio web del Consejo de Emplazamiento en www.ct.gov/csc, o en las bibliotecas de Newington, West Hartford y Hartford. Puede obtenerse más información sobre campos magnéticos y eléctricos llamando al 1-800-793-2202 o comunicándose con el Departamento de Salud Pública de Connecticut al 860-509-7740.

Ruta Propuesta en Consideración

La ruta propuesta se extendería aproximadamente a lo largo de 3.7 millas entre la subestación Newington en Cherry Hill Drive, Newington, y la subestación Southwest Hartford en New Park Avenue, Hartford. La línea partiría desde la subestación Newington bajo tierra hacia el este por la servidumbre de paso actual de Eversource; cruza Avery Road y West Hartford Road en Newington. Luego, la línea gira en dirección norte por Willard Avenue y luego al este por Shepard Drive. La línea pasa a modalidad aérea en la servidumbre de paso de Amtrak y continúa al norte por la servidumbre de paso de Amtrak a lo largo de 2.3 millas y luego se vuelve subterránea nuevamente, cruza New Park Avenue para girar en dirección oeste hacia la subestación de Southwest Hartford.
