Danbury, CT 06811

RE: **EM-SPRINT-007-121203** – Sprint Spectrum, L.P. notice of intent to modify an existing telecommunications facility located at 1657 Wilbur Cross Highway, Berlin, Connecticut.

Dear Ms. Gaudet:

The Connecticut Siting Council (Council) hereby acknowledges your notice to modify this existing telecommunications facility, pursuant to Section 16-50j-73 of the Regulations of Connecticut State Agencies with the following conditions:

- Subsequent to the installation of the proposed antennas, Sprint shall cause a tower climb to be conducted to verify the placement of this tower's existing antennas and equipment and shall inform the Council of the results of this tower climb.
- Any deviation from the proposed modification as specified in this notice and supporting materials with Council shall render this acknowledgement invalid;
- Any material changes to this modification as proposed shall require the filing of a new notice with the Council;
- Not more than 45 days after completion of construction, the Council shall be notified in writing that construction has been completed;
- The validity of this action shall expire one year from the date of this letter; and
- The applicant may file a request for an extension of time beyond the one year deadline provided that such request is submitted to the Council not less than 60 days prior to the expiration;

The proposed modifications including the placement of all necessary equipment and shelters within the tower compound are to be implemented as specified here and in your notice dated November 30, 2012. The modifications are in compliance with the exception criteria in Section 16-50j-72 (b) of the Regulations of Connecticut State Agencies as changes to an existing facility site that would not increase tower height, extend the boundaries of the tower site, increase noise levels at the tower site boundary by six decibels, and increase the total radio frequencies electromagnetic radiation power density measured at the tower site boundary to or above the standard adopted by the State Department of Environmental Protection pursuant to General Statutes § 22a-162. This facility has also been carefully modeled to ensure that radio frequency emissions are conservatively below State and federal standards applicable to the frequencies now used on this tower.

This decision is under the exclusive jurisdiction of the Council. Please be advised that the validity of this action shall expire one year from the date of this letter. Any additional change to this facility will require explicit notice to this agency pursuant to Regulations of Connecticut State Agencies Section 16-50j-73. Such notice shall include all relevant information regarding the proposed change with cumulative worst-case modeling of radio frequency exposure at the

closest point of uncontrolled access to the tower base, consistent with Federal Communications Commission, Office of Engineering and Technology, Bulletin 65. Thank you for your attention and cooperation.

Very truly yours,

Linda Roberts  
Executive Director

RE: **EM-SPRINT-007-121203** – Sprint Spectrum, L.P. notice of intent to modify an existing telecommunications facility located at 1657 Wilbur Cross Highway, Berlin, Connecticut.

Dear Mayor Salina:

The Connecticut Siting Council (Council) received a request to modify an existing telecommunications facility, pursuant to Regulations of Connecticut State Agencies Section 16-50j-72, a copy of which has already been provided to you.

If you have any questions or comments regarding the proposal, please call me or inform the Council by December 17, 2012.

Thank you for your cooperation and consideration.

Very truly yours,

  
Linda Roberts  
Executive Director

CONNECTICUT  
SITING COUNCIL

VIA OVERNIGHT COURIER

Connecticut Siting Council  
10 Franklin Square  
New Britain, Connecticut 06051  
Attn: Ms. Linda Roberts, Executive Director

Re: Sprint Spectrum, L.P. – exempt modification  
1657 Wilbur Cross Highway, Berlin, Connecticut

Dear Ms. Roberts:

This letter and attachments are submitted on behalf of Sprint Spectrum, L.P. (“Sprint”). Sprint is undertaking modifications to certain existing sites in its Connecticut system in order to implement updated technology. Please accept this letter and attachments as notification, pursuant to R.C.S.A. Section 16-50j-73, of construction that constitutes an exempt modification pursuant to R.C.S.A. Section 16-50j-72(b)(2). In compliance with R.C.S.A. Section 16-50j-73, a copy of this letter and attachments is being sent to the Mayor of the Town of Berlin.

Sprint plans to modify the existing wireless communications facility owned by the Berlin Volunteer Fire Department, Inc. and located at 1657 Wilbur Cross Highway in the Town of Berlin (coordinates 41°-36'-22.38", 72°-44'-58.87"). Attached are a compound plan and elevation depicting the planned changes, and documentation of the structural sufficiency of the structure to accommodate the revised antenna configuration. Also included is a power density report reflecting the modification to Sprint’s operations at the site.

The changes to the facility do not constitute a modification as defined in Connecticut General Statutes (“C.G.S.”) Section 16-50i(d) because the general physical characteristics of the facility will not be significantly changed. Rather, the planned changes to the facility fall squarely within those activities explicitly provided for in R.C.S.A. Section 16-50j-72(b)(2).

1. Sprint will add three (3) dual-band panel antennas to the existing platform at a center line of approximately 150'. Six (6) RRHs (remote radio heads) and three (3) notch

filters will be mounted behind the antennas. The existing GPS antenna will be removed from the tower. During an interim period of up to one year, the six (6) existing CDMA antennas will remain. Sprint will also install three (3) hybriflex cables along the existing coaxial cable run, and will remove the coaxial cable at the end of the interim period. The proposed modifications will not extend the height of the approximately 175' structure.

2. The proposed changes will not extend the site boundaries. Sprint will, in two stages, replace two (2) existing cabinets with two (2) new cabinets, will install a new GPS antenna, and will mount a fiber distribution box on a new H-frame placed on the existing steel frame. These changes will have no effect on the site boundaries.
3. The proposed changes will not increase the noise level at the existing facility by six decibels or more. The incremental effect of the proposed changes will be negligible.
4. The changes to the facility will not increase the calculated "worst case" power density for the combined operations at the site to a level at or above the applicable standard for uncontrolled environments as calculated for a mixed frequency site. As indicated on the attached report prepared by EBI Consulting, Sprint's operations at the site will result in a power density of approximately 14.398%; the combined site operations will result in a total power density of approximately 64.908%.

Please feel free to contact me by phone at (860) 798-7454 or by e-mail at [jgaudet@hpcwireless.com](mailto:jgaudet@hpcwireless.com) with questions concerning this matter. Thank you for your consideration.

Respectfully yours,

Jennifer Young Gaudet

STRUCTURAL ANALYSIS SUMMARY REPORT (CONT.)

W.O.	6318.43-846	Report Date:	11/16/2012
Client:	Sprint	Revision:	0
Site Name:	Berlin / Rt. 15 / Fire Dept.		

**Proposed Upgrade**

Sprint is proposing to upgrade its existing installation in two stages. In the initial stage, Sprint is proposing to add three (3) panel antennas, one (1) antenna per sector on the existing low profile platform. In addition, the following appurtenances will also be added. The configuration during the interim stage is as follows:

**Stage 1: Interim Configuration****Antennas:**

Height (ft.)	Carrier	Qty	Manufacturer	Model	Mount
153	Sprint	2	Andrew	VHLP2.5 Dish	(1) 12' Low-Profile Platform
		3	Unknown	3' Dish	
		3	Kathrein	840 10054	
		6	DAPA	48000	
		3	Samsung	RRH	
		3	RFS	APXVSP18-C-A20	
		3	Alcatel Lucent	800 MHz RRH	
		3	Alcatel Lucent	1900 MHz RRH	

**Cables:**

Height (ft.)	Qty	Nom. Size	Location / Support
153	4	1/2" dia	Existing to remain
150	12	1-5/8" dia	Existing to remain
150	6	CAT 5 cables	Existing to remain
150	3	1-1/4" Hybriflex	Along the interior of the pole

**Stage 2: Final Configuration**

Sprint is proposing to subsequently remove six (6) existing panel antennas in the second stage of its upgrade. The final Sprint configuration upon upgrade will be as follows:

**Antennas:**

Height (ft.)	Carrier	Qty	Manufacturer	Model	Mount
153	Sprint	2	Andrew	VHLP2.5 Dish	(1) 12' Low-Profile Platform
		3	Unknown	3' Dish	
		3	Kathrein	840 10054	
		3	Samsung	RRH	
		3	RFS	APXVSP18-C-A20	
		3	Alcatel Lucent	800 MHz RRH	
		3	Alcatel Lucent	1900 MHz RRH	

**Cables:**

Height (ft.)	Qty	Nom. Size	Location / Support
153	4	1/2" dia	Existing to remain
150	12	1-5/8" dia	Existing to remain
150	6	CAT 5 cables	Existing to remain
150	3	1-1/4" Hybriflex	Along the interior of the pole

**Analysis Criteria**

Design Standard: TIA/EIA-222-F-1996  
 Building Code: 2003 International Building Code with 2005 Connecticut Supplement

	Capacity (no ice)	Capacity w/ ice
Wind Speed:	85 mph	74 mph
Basic Ice Thickness:	0 inch	0.5 inch

Assumptions:

1. The monopole was designed and constructed in accordance with the applicable codes and standards.
2. The foundation was designed and constructed based on site-specific geotechnical information.
3. The slip jointed splices were assembled in accordance with the manufacturer's specifications.
4. The yield stress for the pole shaft is 65 ksi.
5. Anchor bolts are ASTM A615 Grade 75.
6. Some appurtenance and mounting frame sizes have been estimated.
7. Pole properties and appurtenances are based on the previous analysis report referenced above and information provided by the client.

STRUCTURAL ANALYSIS SUMMARY REPORT (CONT.)

W.O.	6318.43-846	Report Date:	11/16/2012
Client:	Sprint	Revision:	0
Site Name:	Berlin / Rt.15 / Fire Dept.		

**Analysis Results**

The analysis results listed below are for the interim configuration (Stage 1). The total wind area of the appurtenances after the final upgrade will be less than the interim installation. Therefore we can safely conclude that the stresses in the pole shaft, anchor bolts and foundation will be less than the values listed below.

## Pole Shaft:

Section	Maximum Usage (%)
1	55
2	90
3	98
4 (Base)	96

## Foundation Reactions (Envelope):

Pole Base    Current Analysis

Vertical	62.1	kips
Shear	46.7	kips
Moment	5169.0	kip-ft

Anchor bolts:    99 % of capacity

**Conclusions**

Based on our analysis, the existing pole has adequate capacity to support the proposed Sprint antenna upgrade as described herein in accordance with current code requirements.

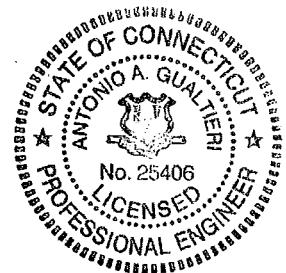

Based on a review of the foundation information, the existing foundation also has adequate capacity to support the proposed Sprint upgrade.

This report and the structural analysis performed are based on a limited visual inspection from the base of the tower and the information provided by Sprint. If the existing conditions are not as represented in this report, the design engineer should be immediately notified prior to installation of new appurtenances.

## **SUMMARY RESULTS**

Project Name : 6318.43-846 Berlin/RT 15/Fire Dept  
Project Notes: 175' Monopole, Hartford County CT  
Project File : G:\Newburgh\Projects\6318-HPC-NY&CT (TN)\43-846\structural\6318.43-846 analysis.pol  
Date run : 3:08:54 PM Friday, November 16, 2012  
by : PLS-POLE Version 12.10  
Licensed to : Tectonic Engineering

Successfully performed nonlinear analysis

The model has 0 warnings.

Loads from file: g:\newburgh\projects\6318-hpc-ny&ct (tn)\43-846\structural\pole loads rev f.eia

\*\*\* Analysis Results:

Maximum element usage is 98.00% for Steel Pole "PoleA" in load case "DL + WL"

#### Summary of Joint Support Reactions For All Load Cases:

Load Case	Joint Label	Long. Force (kips)	Tran. Force (kips)	Vert. Force (kips)	Shear Moment (kip ft)	Tran. Moment (kip ft)	Long. Moment (kip ft)	Vert. Moment (kip ft)	Bending Moment (kip ft-k)	Found. %
DL + WL	PoleA:g	-46.71	0.00	47.84	46.71	0.00	-5169.03	0.00	5169.03	0.00
DLi + WLi	PoleA:g	-35.42	0.00	62.07	35.42	0.00	-3934.18	0.00	3934.18	0.00

#### Summary of Tip Deflections For All Load Cases:

Note: positive tip load results in positive deflection

Load Case	Joint Label	Long. Defl. (in)	Tran. Defl. (in)	Vert. Defl. (in)	Resultant Defl. (in)	Long. Rot. (deg)	Tran. Rot. (deg)	Twist Rot. (deg)
DL + WL	PoleA:t	140.22	0.00	-6.31	140.36	6.91	-0.00	-0.00
DLi + WLi	PoleA:t	107.87	0.00	-3.78	107.93	5.38	-0.00	-0.00

#### Tubes Summary:

Pole Label	Tube Num.	Weight	Load Case	Maximum Usage %	Resultant Moment (ft-k)
		(lbs)			
PoleA	1	3197	DL + WL	54.66	431.14
PoleA	2	5923	DL + WL	90.10	1548.54
PoleA	3	8966	DL + WL	98.00	3056.16
PoleA	4	12599	DL + WL	95.77	5169.03

\*\*\* Overall summary for all load cases - Usage = Maximum Stress / Allowable Stress

#### Summary of Steel Pole Usages:

Steel Pole Label	Maximum Load Case Usage %	Segment Number	Weight (lbs)
PoleA	98.00	DL + WL	41 30685.1

\*\*\* Maximum Stress Summary for Each Load Case

#### Summary of Maximum Usages by Load Case:

Load Case	Maximum Element Usage %	Element Label	Type
DL + WL	98.00	PoleA	Steel Pole
DLi + WLi	75.43	PoleA	Steel Pole

#### Summary of Steel Pole Usages by Load Case:

Load Case	Maximum Steel Pole Segment Usage %	Segment Label	Number
DL + WL	98.00	PoleA	41
DLi + WLi	75.43	PoleA	41

\*\*\* Weight of structure (lbs) :  
Weight of Steel Poles: 30685.1  
Weight of Equipment: 340.0  
Total: 31025.1

\*\*\* End of Report

Project Name : 6318.43-846 Berlin/RN 15/Fire Dept  
 Project Notes: 175' Monopole, Hartford County CT  
 Project File : G:\Newburgh\Projects\6318-HPC-NY&CT (TN)\43-846\Structural\6318.43-846 analysis.pol  
 Date run : 3:08:54 PM Friday November 16, 2012  
 by : PLS-POLE Version 12.10  
 Licensed to : Tectonic Engineering

Successfully performed nonlinear analysis

The model has 0 warnings.

Modelling options:

- Offset Arms from Pole/Mast: Yes
- Offset Braces from Pole/Mast: Yes
- Offset Guys from Pole/Mast: Yes
- Offset Posts from Pole/Mast: Yes
- Offset Strains from Pole/Mast: Yes
- Use Alternate Convergence Process: Yes
- Steel Poles Checked with ANSI/TIA 222-F

Default Modulus of Elasticity for Steel = 29000.00 (ksi)  
 Default Weight Density for Steel = 490.00 (lbs/ft<sup>-3</sup>)

#### Steel Pole Properties:

Steel Pole Property Label	Stock Number	Length (ft)	Default Embedded Plate Length (ft)	Base Shape	Tip Diameter (in)	Base Diameter (in)	Taper Coef.	Default Drag Coef.	Tubes	Modulus of Elasticity (ksi)	Weight (lbs/ft <sup>3</sup> )	Shape At Base	Strength Check	Distance From Trans. Tip (ft)	Ultimate Load (kip)	Ultimate Long. Load (kip)

#### EIA Load Case Information for "DLI + Wind":

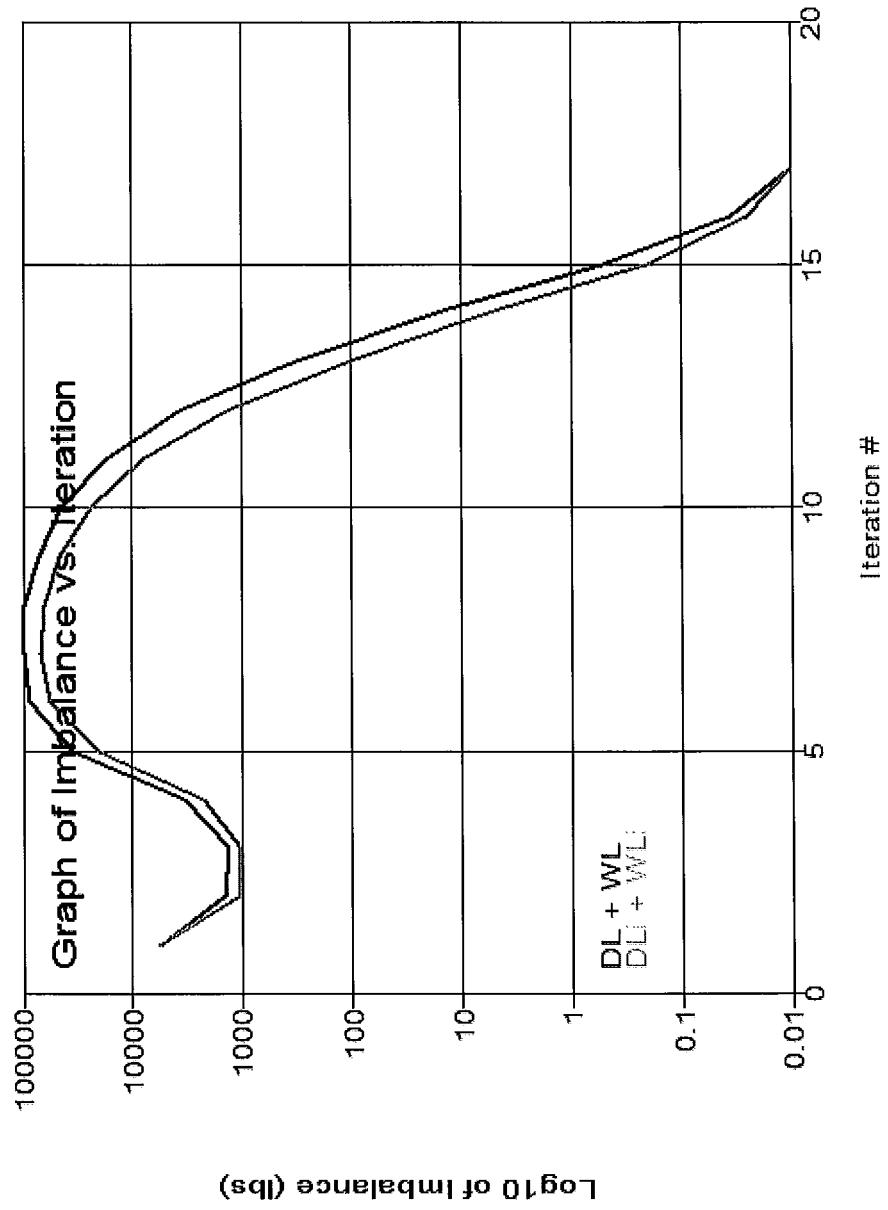

Note: Totals include load on pole and appurtenances, but not user entered loads or loads from equipment.  
Adjusted Wind Pressure Includes: Velocity Pressure Coefficient (Kz), Gust Effect Factor (Gh) and Wind Load Factor (from Loads/EIA Loads)

Mahwah, NJ 07495

Re: Emissions Values for Site: **CT43XC846 – Berlin FD - Route 15**

EBI Consulting was directed to analyze the proposed upgrades to the existing Sprint facility located at 1657 Wilbur Cross, Berlin, CT, for the purpose of determining whether the emissions from the proposed Sprint equipment upgrades on this property are within specified federal limits.

All information used in this report was analyzed as a percentage of current Maximum Permissible Exposure (% MPE) as listed in the FCC OET Bulletin 65 Edition 97-01 and ANSI/IEEE Std C95.1. The FCC regulates Maximum Permissible Exposure in units of microwatts per square centimeter ( $\mu\text{W}/\text{cm}^2$ ). The number of  $\mu\text{W}/\text{cm}^2$  calculated at each sample point is called the power density. The exposure limit for power density varies depending upon the frequencies being utilized. Wireless Carriers and Paging Services use different frequency bands each with different exposure limits, therefore it is necessary to report results and limits in terms of percent MPE rather than power density.

All results were compared to the FCC (Federal Communications Commission) radio frequency exposure rules, 47 CFR 1.1307(b)(1) – (b)(3), to determine compliance with the Maximum Permissible Exposure (MPE) limits for General Population/Uncontrolled environments as defined below.

General population/uncontrolled exposure limits apply to situations in which the general public may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Therefore, members of the general public would always be considered under this category when exposure is not employment related, for example, in the case of a telecommunications tower that exposes persons in a nearby residential area.

Public exposure to radio frequencies is regulated and enforced in units of microwatts per square centimeter ( $\mu\text{W}/\text{cm}^2$ ). The general population exposure limit for the cellular band is approximately 567  $\mu\text{W}/\text{cm}^2$ , and the general population exposure limit for the PCS band is 1000  $\mu\text{W}/\text{cm}^2$ . Because each carrier will be using different frequency bands, and each frequency band has different exposure limits, it is necessary to report percent of MPE rather than power density.

Occupational/controlled exposure limits apply to situations in which persons are exposed as a consequence of their employment and in which those persons who are exposed have been made fully aware of the potential for exposure and can exercise control over their exposure. Occupational/controlled exposure limits also apply where exposure is of a transient nature as a result of incidental passage through a location where exposure levels may be above general population/uncontrolled limits (see below), as long as the exposed person has been made fully aware of the potential for exposure and can exercise control over his or her exposure by leaving the area or by some other appropriate means.

Additional details can be found in FCC OET 65.

## CALCULATIONS

Calculations were done for the proposed upgrades to the existing Sprint Wireless antenna facility located at 1657 Wilbur Cross, Berlin, CT, using the equipment information listed below. All calculations were performed per the specifications under FCC OET 65. All calculations were performed assuming the main lobe of the antenna was focused at the base of the tower to present a worst case scenario. Actual values seen from this site will be dramatically less than those shown in this report. For this report the sample point is the top of a 6 foot person standing at the base of the tower.

For all calculations, all emissions were calculated using the following assumptions:

- 1) 3 CDMA Carriers (1900 MHz) were considered for each sector of the proposed installation.
- 2) 1 CDMA Carrier (850 MHz) was considered for each sector of the proposed installation
- 3) All radios at the proposed installation were considered to be running at full power and were uncombined in their RF transmissions paths per carrier prescribed configuration. Per FCC OET Bulletin No. 65 - Edition 97-01 recommendations to achieve the maximum anticipated value at each sample point, all power levels emitting from the proposed antenna installation are increased by a factor of 2.56 to account for possible in-phase reflections from the surrounding environment. This is rarely the case, and if so, is never continuous.
- 4) For the following calculations the sample point was the top of a six foot person standing at the base of the tower. The actual gain in this direction was used per the manufacturers supplied specifications.
- 5) The antenna used in this modeling is the APXVSPP18-C-A20. This is based on feedback from the carrier with regards to anticipated antenna selection. This antenna has a 15.9 dBd gain value at its main lobe at 1900 MHz and 13.4 dBd at its main lobe for 850 MHz. All calculations were performed assuming the main lobe of the antenna was focused at the base of the tower to present a worst case scenario.

- 
- 6) The antenna mounting height centerline of the proposed antennas is **150 feet** above ground level (AGL)
  - 7) Emissions values for additional carriers were taken from the Connecticut Siting Council active database. Values in this database are provided by the individual carriers themselves.

All calculation were done with respect to uncontrolled / general public threshold limits

## Summary

All calculations performed for this analysis yielded results that were well within the allowable limits for general public exposure to RF Emissions.

The anticipated Maximum Composite contributions from the Sprint facility are **14.398% (4.799% from each sector)** of the allowable FCC established general public limit considering all three sectors simultaneously sampled at the ground level.

The anticipated composite MPE value for this site assuming all carriers present is **64.908%** of the allowable FCC established general public limit sampled at the ground level. This is based upon values listed in the Connecticut Siting Council database for existing carrier emissions

FCC guidelines state that if a site is found to be out of compliance (over allowable thresholds), that carriers over a 5% contribution to the composite value will require measures to bring the site into compliance. For this facility, the composite values calculated were well within the allowable 100% threshold standard per the federal government
