Melanie A. Bachman
Executive Director
Connecticut Siting Council
10 Franklin Square
New Britain, CT 06051
RE: Notice of Exempt Modification for T-Mobile:
876390 - T-Mobile Site ID: CT11511A
116 Grant Hill Road, Brooklyn, CT 06234

Dear Ms. Bachman:
T-Mobile currently maintains six (6) antennas at the 137 -foot mount on the existing 150 -foot Monopole Tower, located at 116 Grant Hill Road, Brooklyn, CT. The tower is owned by Crown Castle and the property is owned by Mr. and Mrs. Bernier. T-Mobile now intends to replace six (6) existing antennas with three (3) new 1900 MHz antennas and three (3) new $600 / 700 \mathrm{MHz}$ antennas. The new antennas will be installed at the $137-\mathrm{ft}$ level of the tower and some will be capable of providing 5 G services. T-Mobile is also proposing tower mount modification as shown on the enclosed Mount Analysis Report.

## Planned Modifications:

Tower:
Remove:
(6) $15 / 8$ " Coax

Remove and Replace:
(3) LNX 6515DS-A1M Antenna (REMOVE) - (3) RFS-APXVAARR24_43-U-NA20 Antenna 600/700 MHz (REPLACE)
(3) EMS RR90-17-02DP Antenna (REMOVE) - (3) RFS-APX16DWV-S-E-A20 Antenna 1900 MHz (REPLACE)

Install New:
(1) $15 / 8^{\prime \prime}$ Hybrid Fiber Line
(3) Radio 4449 B71/B12

Existing to Remain:
(6) $15 / 8$ " Coax
(3) TMA

## Ground:

Upgrade to existing ground cabinet. (Internally)

The facility was approved by the Town of Brooklyn, though original zoning documents have not been located despite diligent inquiry and efforts. The original building permit, permit number 5802, issued on April 14,2000 by the Town of Brooklyn Building Department permitting the construction of a 150 ' monopole tower. No conditions of approval are known. T-Mobile's was approved for tower sharing at this facility by the Council on July 8, 2003.

Please accept this letter as notification pursuant to Regulations of Connecticut State Agencies §16-50j-73, for construction that constitutes an exempt modification pursuant to R.C.S.A. § 16-50j-72(b)(2). In accordance with R.C.S.A. § $16-50 \mathrm{j}-73$, a copy of this letter is being sent to Richard Ives, First Selectman for the Town of Brooklyn, Jana Butts Roberson, AICP, Town Planner, Crown Castle as the tower owner, and Mr. and Mrs. Bernier as the property owners.

1. The proposed modifications will not result in an increase in the height of the existing tower.
2. The proposed modifications will not require the extension of the site boundary.
3. The proposed modification will not increase noise levels at the facility by six decibels or more, or to levels that exceed state and local criteria.
4. The operation of the replacement antennas will not increase radio frequency emissions at the facility to a level at or above the Federal Communication Commission safety standard.
5. The proposed modifications will not cause a change or alteration in the physical or environmental characteristics of the site.
6. The existing structure and its foundation can support the proposed loading.

For the foregoing reasons, T-Mobile respectfully submits that the proposed modifications to the abovereference telecommunications facility constitutes an exempt modification under R.C.S.A. § 16-50j-72(b)(2). Please send approval/rejection letter to Attn: Anne Marie Zsamba.

Sincerely,
Anne Marie Zsamba

To The Bernier's, as Property Owners:

Attached please find T-Mobile's exempt modification application that is being submitted to the Connecticut Siting Council today, January 7, 2021.

In light of the present circumstances with Covid-19, The Council has advised that electronic notification of this filing is acceptable. If you could kindly confirm receipt. Thank you.

Best,
Anne Marie Zsamba

Stephen J. Humes
LeBoeuf, Lamb, Greene \& MacRae
Goodwin Square
225 Asylum Street
Hartford, CT 06103
RE: TS-T-MOBILE-019-030617- Omnipoint Communications, Inc. request for an order to approve tower sharing at an existing telecommunications facility located at 116 Grant Hill Road, Brooklyn, Connecticut.

Dear Attorney Humes:
At a public meeting held July 8, 2003, the Connecticut Siting Council (Council) ruled that the shared use of this existing tower site is technically, legally, environmentally, and economically feasible and meets public safety concerns, and therefore, in compliance with General Statutes § 16-50aa, the Council has ordered the shared use of this facility to avoid the unnecessary proliferation of tower structures. This facility has also been carefully modeled to ensure that radio frequency emissions are conservatively below State and federal standards applicable to the frequencies now used on this tower.

This decision is under the exclusive jurisdiction of the Council. Any additional change to this facility may require an explicit request to this agency pursuant to General Statutes § 16-50aa or notice pursuant to Regulations of Connecticut State Agencies Section 16-50j-73, as applicable. Such request or notice shall include all relevant information regarding the proposed change with cumulative worst-case modeling of radio frequency exposure at the closest point uncontrolled access to the tower base, consistent with Federal Communications Commission, Office of Engineering and Technology, Bulletin 65. Any deviation from this format may result in the Council implementing enforcement proceedings pursuant to General Statutes § 16-50u including, without limitation, imposition of expenses resulting from such failure and of civil penalties in an amount not less than one thousand dollars per day for each day of construction or operation in material violation.

This decision applies only to this request for tower sharing and is not applicable to any other request or construction.

The proposed shared use is to be implemented as specified in your letter dated June 17, 2003.
Thank you for your attention and cooperation.
Very truly yours,

Chairman
PBK/laf

Dear Heather Simeone,
Tower Engineering Professionals is pleased to submit this "Structural Analysis Report" to determine the structural integrity of the above-mentioned tower.

The purpose of the analysis is to determine acceptability of the tower stress level. Based on our analysis we have determined the tower stress level for the structure and foundation, under the following load case, to be:

LC7: Proposed Equipment Configuration
Sufficient Capacity - 94.9\%
This analysis utilizes an ultimate 3-second gust wind speed of 130 mph as required by the 2018 Connecticut State Building Code. Applicable Standard references and design criteria are listed in Section 2 - Analysis Criteria.

Structural analysis prepared by: Matthew Fry, E.I.T. / CJB
Respectfully submitted by:

William H. Martin, P.E., S.E.

## 3) ANALYSIS PROCEDURE

Table 3 - Documents Provided

| Document | Remarks | Reference | Source |
| :---: | :---: | :---: | :---: |
| Geotechnical Report | Criscuolo Shepard Associates, PC | 1615347 | CCISites |
| Tower Foundation Drawings | Engineered Endeavors, Inc. | 1615410 | CCISites |
| Tower Manufacturer Drawings | Engineered Endeavors, Inc. | 1533003 | CCISites |
| Tower Reinforcement Drawings | Tower Engineering Professionals | 2255030 | CCISites |
| Post Modification Inspection | Tower Engineering Professionals | 2383064 | CCISites |

## 3.1) Analysis Method

tnxTower (version 8.0.5.0), a commercially available analysis software package, was used to create a three-dimensional model of the tower and calculate member stresses for various loading cases. Selected output from the analysis is included in Appendix A.

## 3.2) Assumptions

1) The tower and foundation were built and maintained in accordance with the manufacturer's specification.
2) The configuration of antennas, transmission cables, mounts and other appurtenances are as specified in Tables 1 and 2, and the referenced drawings.
3) All tower components are in sufficient condition to carry their full design capacity.
4) Serviceability with respect to antenna twist, tilt, roll, or lateral translation, is not checked and is left to the carrier or tower owner to ensure conformance.
5) All antenna mounts and mounting hardware are structurally sufficient to carry the full design capacity requirements of appurtenance wind area and weight as provided by the original manufacturer specifications. It is the carrier's responsibility to ensure compliance to the structural limitations of the existing and/or proposed antenna mounts. TEP did not perform a site visit to verify the size, condition or capacity of the antenna mounts and did not analyze antennas supporting mounts as part of this structural analysis report.
6) When applicable, the effective projected area (EPA) of appurtenances was determined by computation fluid dynamics (CFD) testing performed by Crown Castle. TEP assumes the means and methods used to determine the EPA's yields results that follow the intent of TIA-222-H and are accurate and complete.
7) TEP assumes that the anchor bolts are effective pier reinforcement and are properly terminated into the mat as mechanically anchored deformed reinforcement per ACI 318 Section 25.4.4.

This analysis may be affected if any assumptions are not valid or have been made in error. Tower Engineering Professionals should be notified to determine the effect on the structural integrity of the tower.

## 4) ANALYSIS RESULTS

[^0]
## 4.1) Recommendations

1) If the load differs from that described in Tables 1 and 2 of this report, the referenced drawings, or the provisions of this analysis are found to be invalid, another structural analysis should be performed.
2) The tower and its foundation have sufficient capacity to carry the proposed load configuration. No modifications are required at this time.

## TOWER DESIGN NOTES

1. Tower is located in Windham County, Connecticut.
2. Tower designed for Exposure B to the TIA-222-H Standard.
3. Tower designed for a 130 mph basic wind in accordance with the TIA-222-H Standard.
4. Tower is also designed for a 50 mph basic wind with 1.50 in ice. Ice is considered to increase in thickness with height.
5. Deflections are based upon a 60 mph wind.
6. Tower Risk Category II.
7. Topographic Category 5 with Crest Height of 110.00 ft
8. TOWER RATING: $94.9 \%$

## Tower Input Data

The tower is a monopole.
This tower is designed using the TIA-222-H standard.
The following design criteria apply:
Tower is located in Windham County, Connecticut.
Tower base elevation above sea level: 715.00 ft .
Basic wind speed of 130 mph .
Risk Category II.
Exposure Category B.
Crest Height: 110.00 ft .
Rigorous Topographic Factor Procedure for wind speed-up calculations is used.
Topographic Feature: Continuous Ridge.
Slope Distance L: 920.00 ft .
Distance from Crest x: 0.00 ft .
Horizontal Distance Downwind: No.
Nominal ice thickness of 1.5000 in.
Ice thickness is considered to increase with height.
Ice density of 56 pcf .
A wind speed of 50 mph is used in combination with ice.
Temperature drop of $50^{\circ} \mathrm{F}$.
Deflections calculated using a wind speed of 60 mph .
A non-linear (P-delta) analysis was used.
Pressures are calculated at each section.
Stress ratio used in pole design is 1.05 .
Tower analysis based on target reliabilities in accordance with Annex S.
Load Modification Factors used: $\mathrm{K}_{\text {es }}\left(\mathrm{F}_{\mathrm{w}}\right)=0.95, \mathrm{~K}_{\text {es }}\left(\mathrm{t}_{\mathrm{i}}\right)=0.85$.
Local bending stresses due to climbing loads, feed line supports, and appurtenance mounts are not considered.

## Options

## Consider Moments - Legs

Consider Moments - Horizontals
Consider Moments - Diagonals
Use Moment Magnification
Use Code Stress Ratios
$\sqrt{ }$ Use Code Safety Factors - Guys
Escalate Ice
Always Use Max Kz
Use Special Wind Profile
Include Bolts In Member Capacity
Leg Bolts Are At Top Of Section
Secondary Horizontal Braces Leg
Use Diamond Inner Bracing (4 Sided)
SR Members Have Cut Ends
SR Members Are Concentric

Distribute Leg Loads As Uniform Assume Legs Pinned
$\sqrt{ }$ Assume Rigid Index Plate
$\sqrt{ }$ Use Clear Spans For Wind Area Use Clear Spans For KL/r Retension Guys To Initial Tension
$\sqrt{ }$ Bypass Mast Stability Checks
$\sqrt{ }$ Use Azimuth Dish Coefficients
$\sqrt{ }$ Project Wind Area of Appurt. Autocalc Torque Arm Areas Add IBC .6D+W Combination
$\sqrt{ }$ Sort Capacity Reports By Component Triangulate Diamond Inner Bracing Treat Feed Line Bundles As Cylinder Ignore KL/ry For 60 Deg. Angle Legs

Use ASCE 10 X-Brace Ly Rules
Calculate Redundant Bracing Forces
Ignore Redundant Members in FEA
SR Leg Bolts Resist Compression
All Leg Panels Have Same Allowable
Offset Girt At Foundation
$\sqrt{ }$ Consider Feed Line Torque
Include Angle Block Shear Check
Use TIA-222-H Bracing Resist. Exemption
Use TIA-222-H Tension Splice Exemption Poles
$\sqrt{ }$ Include Shear-Torsion Interaction
Always Use Sub-Critical Flow
Use Top Mounted Sockets
Pole Without Linear Attachments
Pole With Shroud Or No Appurtenances
Outside and Inside Corner Radii Are
Known

ASCE/SEI 7-10, Fig. 26.5-1A and Figs. CC-1-CC-4, incorporating errata of March 12, 2014

Wed Mar 062019

## Date Accessed:

Value provided is 3 -second gust wind speeds at 33 ft above ground for Exposure C Category, based on linear interpolation between contours. Wind speeds are interpolated in accordance with the 7-10 Standard. Wind speeds correspond to approximately a $7 \%$ probability of exceedance in 50 years (annual exceedance probability $=$ $0.00143, \mathrm{MRI}=700$ years).

Site is in a hurricane-prone region as defined in ASCE/SEI 7-10 Section 26.2. Glazed openings need not be protected against wind-borne debris.

Mountainous terrain, gorges, ocean promontories, and special wind regions should be examined for unusual wind conditions.

Ice thicknesses on structures in exposed locations at elevations higher than the surrounding terrain and in valleys and gorges may exceed the mapped values.
Values provided are equivalent radial ice thicknesses due to freezing rain with concurrent 3 -second gust speeds, for a 50 -year mean recurrence interval, and temperatures concurrent with ice thicknesses due to freezing rain. Thicknesses for ice accretions caused by other sources shall be obtained from local meteorological studies. Ice thicknesses in exposed locations at elevations higher than the surrounding terrain and in valleys and gorges may exceed the mapped values.

150 ft . Monopole
137 ft .
14 ft . Platform Mount

Dear Mr. Morrow,
$B+T$ Group is pleased to submit this "Mount Modification Report" to determine the structural integrity of $T$ Mobile's antenna mounting system with the proposed appurtenance and equipment addition on the abovementioned supporting tower structure. Analysis of the existing supporting tower structure is to be completed by others and therefore is not part of this analysis. Analysis of the antenna mounting system as a tieoff point for fall protection or rigging is not part of this document.

The purpose of the analysis is to determine acceptability of the mount's stress level. Based on our analysis we have determined the stress level to be:

Platform Mount
Sufficient
*Sufficient upon completion of the changes listed in the 'Recommendations' section of this report.
This analysis utilizes an ultimate 3-second gust wind speed of 130 mph as required by the 2018 Connecticut State Building Code. Applicable Standard references and design criteria are listed in Section 2 - Analysis Criteria.

Mount structural analysis prepared by: Joseph Variamparampil
Respectfully submitted by: B\&T Engineering, Inc. COA: PEC. 0001564 Expires: 02/10/2020

## 3.1) Analysis Method

RISA-3D (Version 17.0.2), a commercially available analysis software package, was used to create a three-dimensional model of the antenna mounting system and calculate member stresses for various loading cases.

A tool internally developed by $\mathrm{B}+\mathrm{T}$ Group, was used to calculate wind loading on all appurtenances, dishes and mount members for various loading cases. Selected output from the analysis is included in Appendix B.

This analysis was performed in accordance with Crown Castle's ENG-SOW-10208 Tower Mount Analysis (Revision C).

## 3.2) Assumptions

1. The mount was properly fabricated and installed in accordance with its original design and manufacturer's specifications.
2. The mount has been maintained in accordance with the manufacturer's specifications and is free of damage.
3. The configuration of antennas, mounts, and other appurtenances are as specified in Table-1.
4. All mount components have been assumed to be in sufficient condition to carry their full design capacity for the analysis.
5. Mount areas and weights are determined from field measurements, standard material properties, and/or manufacturer product data.
6. Serviceability with respect to antenna twist, tilt, roll or lateral translation is not checked and is left to the carrier or tower owner to ensure conformance.
7. All prior structural modifications, if any are assumed to be correctly installed and fully effective.
8. All member connections are assumed to have been designed to meet or exceed the load carrying capacity of the connected member unless otherwise specified in this report.
9. The analysis will be required to be revised if the existing conditions in the field differ from those shown in the above-referenced documents or assumed in this analysis. No allowance was made for any damaged, missing, or rusted members.
10. The following material grades were assumed (Unless Noted Otherwise):

| (a) Connection Bolts | : ASTM A325 |
| :--- | :--- |
| (b) Steel Pipe | ASTM A53 (GR. 35) |
| (c) HSS (Round) | : ASTM 500 (GR. B-42) |
| (d) HSS (Rectangular) | : ASTM 500 (GR. B-46) |
| (e) Channel | ASTM A36 (GR. 36) |
| (f) Steel Solid Rod | : ASTM A36 (GR. 36) |
| (g) Steel Plate | : ASTM A36 (GR. 36) |
| (h) Steel Angle | : ASTM A36 (GR. 36) |
| (i) UNISTRUT | : ASTM A570 (GR. 33) |

This analysis may be affected if any assumptions are not valid or have been made in error. $\mathrm{B}+\mathrm{T}$ Group should be notified to determine the effect on the structural integrity of the antenna mounting system.

## 4) ANALYSIS RESULTS

Table 3 - Mount Component Stresses vs. Capacity (Platform Mount)

| Notes | Component | Critical <br> Member | Centerline <br> (ft.) | \% Capacity | Pass / Fail |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Main Horizontals | M1 | 137 | 60.7 | Pass |
|  | Support Angles | M8 | 137 | 39.3 | Pass |
|  | Support Tubes | M39A | 137 | 31.3 | Pass |
|  | Mount Pipes | M39 | 137 | 67.9 | Pass |
| $1,2,3$ | Handrail Pipes | M55 | 137 | 59.2 | Pass |
|  | Handrail Connection Angles | M68 | 137 | 75.5 | Pass |
|  | Reinforcement Angles | M72 | 137 | 45.9 | Pass |

| Structure Rating (max from all components) $=$ | $75.5 \%$ |
| :--- | :--- |
| Notes: |  |

[^1]
## 4.1) RECOMMENDATIONS

The mount has sufficient capacity to carry the proposed loading configuration. In order for the results of the analysis to be considered valid, the structural modifications listed below must be completed.

1. Installation of (2) Handrail Kits, SitePro1 Part\# HRK14
2. Installation of (1) Reinforcement Kit, SitePro1 Part\# PRK-SFS-L

Engineering detail drawings have been provided in Appendix C - Mount Modification Design Drawings.

Emissions Analysis for Site: CT11511A - Sprint - Brooklyn

Transcom Engineering, Inc ("Transcom") was directed to analyze the proposed upgrades to the T-MOBILE facility located at $\mathbf{1 1 6}$ Grant Hill Road, Brooklyn, CT, for the purpose of determining whether the emissions from the Proposed T-MOBILE Antenna Installation located on this property are within specified federal limits.

All information used in this report was analyzed as a percentage of current Maximum Permissible Exposure (\% MPE) as listed in the FCC OET Bulletin 65 Edition 97-01and ANSI/IEEE Std C95.1. The FCC regulates Maximum Permissible Exposure in units of microwatts per square centimeter ( $\mu \mathrm{W} / \mathrm{cm} 2$ ). The number of $\mu \mathrm{W} / \mathrm{cm}^{2}$ calculated at each sample point is called the power density. The exposure limit for power density varies depending upon the frequencies being utilized. Wireless Carriers and Paging Services use different frequency bands each with different exposure limits, therefore it is necessary to report results and limits in terms of percent MPE rather than power density.

All results were compared to the FCC (Federal Communications Commission) radio frequency exposure rules, 47 CFR $1.1307(\mathrm{~b})(1)-(\mathrm{b})(3)$, to determine compliance with the Maximum Permissible Exposure (MPE) limits for General Population/Uncontrolled environments as defined below.

General population/uncontrolled exposure limits apply to situations in which the general population may be exposed or in which persons who are exposed as a consequence of their employment may not be made fully aware of the potential for exposure or cannot exercise control over their exposure. Therefore, members of the general population would always be considered under this category when exposure is not employment related, for example, in the case of a telecommunications tower that exposes persons in a nearby residential area.

Population exposure to radio frequencies is regulated and enforced in units of microwatts per square centimeter $\left(\mu \mathrm{W} / \mathrm{cm}^{2}\right)$. The general population exposure limits for the $600 \& 700 \mathrm{MHz}$ bands are approximately $400 \mu \mathrm{~W} / \mathrm{cm}^{2}$ and $467 \mu \mathrm{~W} / \mathrm{cm}^{2}$ respectively. The general population exposure limit for the 1900 MHz (PCS) and 2100 MHz (AWS) bands is $1000 \mu \mathrm{~W} / \mathrm{cm}^{2}$. Because each carrier will be using different frequency bands, and each frequency band has different exposure limits, it is necessary to report percent of MPE rather than power density.

## Transcom Engineering, Inc.

Occupational/controlled exposure limits apply to situations in which persons are exposed as a consequence of their employment and in which those persons who are exposed have been made fully aware of the potential for exposure and can exercise control over their exposure. Occupational/controlled exposure limits also apply where exposure is of a transient nature as a result of incidental passage through a location where exposure levels may be above general population/uncontrolled limits (see below), as long as the exposed person has been made fully aware of the potential for exposure and can exercise control over his or her exposure by leaving the area or by some other appropriate means.

Additional details can be found in FCC OET 65.

## Transcom Engineering, Inc.

## CALCULATIONS

Calculations were performed for the proposed upgrades to the T-MOBILE antenna facility located at $\mathbf{1 1 6}$
Grant Hill Road, Brooklyn, CT, using the equipment information listed below. All calculations were performed per the specifications under FCC OET 65 . Since T-MOBILE is proposing highly focused directional panel antennas, which project most of the emitted energy out toward the horizon, all calculations were performed assuming a lobe representing the maximum gain of the antenna per the antenna manufactures supplied specifications, minus 10 dB for directional panel antennas, was focused at the base of the tower. For this report the sample point is the top of a 6 -foot person standing at the base of the tower.

Per FCC OET Bulletin No. 65 - Edition 97-01 recommendations to achieve the maximum anticipated value at each sample point, all power levels emitting from the proposed antenna installation are increased by a factor of 2.56 to account for possible in-phase reflections from the surrounding environment. All power values expressed and analyzed are maximum power levels expected to be used on all radios.

All emissions values for additional carriers were taken from the Connecticut Siting Council (CSC) active MPE database. Values in this database are provided by the individual carriers themselves

For each sector the following channel counts, frequency bands and power levels were utilized as shown in Table 1:

| Technology | Frequency Band | Channel Count | Transmit Power per <br> Channel (W) |
| :---: | :---: | :---: | :---: |
| LTE | 1900 MHz (PCS) | 4 | 40 |
| GSM | $1900 \mathrm{MHz}($ PCS $)$ | 1 | 15 |
| LTE $/ 5 \mathrm{G} \mathrm{NR}$ | 600 MHz | 2 | 40 |
| LTE | 700 MHz | 2 | 20 |

Table 1: Channel Data Table

## Transcom Engineering, Inc.

The following antennas listed in Table 2 were used in the modeling for transmission in the $600,700 \mathrm{MHz}$, 1900 MHz (PCS) and 2100 MHz (AWS) frequency bands. This is based on feedback from the carrier with regards to anticipated antenna selection. Maximum gain values for all antennas are listed in the Inventory and Power Data table below. The maximum gain of the antenna per the antenna manufactures supplied specifications, minus 10 dB for directional panel antennas, was used for all calculations. This value is a very conservative estimate as gain reductions for these particular antennas are typically much higher in this direction.

| Sector | Antenna <br> Number | Antenna Make / Model | Antenna <br> Centerline <br> $(\mathrm{ft})$ |
| :---: | :---: | :---: | :---: |
| A | 1 | RFS APX16DWV-16DWV-S-E-ACU | 137 |
| A | 2 | RFS APXVAARR24_43-U-NA20 | 137 |
| B | 1 | RFS APX16DWV-16DWV-S-E-ACU | 137 |
| B | 2 | RFS APXVAARR24_43-U-NA20 | 137 |
| C | 1 | RFS APX16DWV-16DWV-S-E-ACU | 137 |
| C | 2 | RFS APXVAARR24_43-U-NA20 | 137 |

Table 2: Antenna Data

All calculations were done with respect to uncontrolled / general population threshold limits.

Cable losses were factored in the calculations for this site. Since all $1900 \mathbf{M H z}(\mathbf{P C S})$ radios are ground mounted the following cable loss values were used. For each ground mounted $\mathbf{1 9 0 0} \mathbf{~ M H z}$ (PCS) radio there was $\mathbf{1 . 6 5} \mathbf{~ d B}$ of cable loss calculated into the system gains / losses for this site. These values were calculated based upon the manufacturers specifications for $\mathbf{1 6 0}$ feet of $\mathbf{1 - 5 / 8}$ " coax.

## Transcom Engineering, Inc.

## RESULTS

Per the calculations completed for the proposed T-MOBILE configurations Table 3 shows resulting emissions power levels and percentages of the FCC's allowable general population limit.

| Antenna ID | Antenna Make / Model | Frequency Bands | Antenna <br> Gain (dBd) | Channel Count | Total TX Power (W) | ERP (W) | MPE \% |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Antenna A1 | RFS APX16DWV-16DWV-S-E-ACU | 1900 MHz (PCS) | 15.9 | 5 | 175 | 4,656.27 | 0.97 |

| Sector C Composite MPE\% |  |  |  |  |  |  | 2.19 |

Table 3: T-MOBILE Emissions Levels

## Transcom Engineering, Inc.

The Following table (table 4) shows all additional carriers on site and their MPE\% as recorded in the CSC active MPE database for this facility along with the newly calculated maximum T-MOBILE MPE contributions per this report. FCC OET 65 specifies that for carriers utilizing directional antennas that the highest recorded sector value be used for composite site MPE values due to their greatly reduced emissions contributions in the directions of the adjacent sectors. For this site, all three sectors have the same configuration yielding the same results on all three sectors. Table 5 below shows a summary for each T-MOBILE Sector as well as the composite MPE value for the site.

| Site Composite MPE \% |  |
| :---: | :---: |
| Carrier | MPE \% |
| T-MOBILE - Max Per Sector Value | $\mathbf{2 . 1 9 \%}$ |
| Sprint | $2.62 \%$ |
| AT\&T | $2.35 \%$ |
| Verizon Wireless | $2.79 \%$ |
| CL\&P | $0.31 \%$ |
| Site Total MPE \%: | $\mathbf{1 0 . 2 6} \%$ |

Table 4: All Carrier MPE Contributions

| T-MOBILE Sector A Total: | $2.19 \%$ |
| ---: | :---: |
| T-MOBILE Sector B Total: | $2.19 \%$ |
| T-MOBILE Sector C Total: | $2.19 \%$ |
| Site Total: |  |

Table 5: Site MPE Summary

## Transcom Engineering, Inc.

FCC OET 65 specifies that for carriers utilizing directional antennas that the highest recorded sector value be used for composite site MPE values due to their greatly reduced emissions contributions in the directions of the adjacent sectors. Table 6 below details a breakdown by frequency band and technology for the MPE power values for the maximum calculated T-MOBILE sector(s). For this site, all three sectors have the same configuration yielding the same results on all three sectors.

| T-MOBILE _ Frequency Band/ Technology <br> Max Power Values (Per Sector) | \# <br> Channels | Watts ERP (Per Channel) | Height (feet) | Total Power Density ( $\mu \mathrm{W} / \mathrm{cm}^{2}$ ) | Frequency (MHz) | Allowable MPE <br> $\left(\mu \mathrm{W} / \mathrm{cm}^{2}\right)$ | Calculated \% MPE |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| T-Mobile 1900 MHz (PCS) LTE | 4 | 1,064.29 | 137 | 8.92 | 1900 MHz (PCS) | 1000 | 0.89\% |
| T-Mobile 1900 MHz (PCS) GSM | 1 | 399.11 | 137 | 0.84 | 1900 MHz (PCS) | 1000 | 0.08\% |
| T-Mobile 600 MHz LTE / 5G NR | 2 | 788.97 | 137 | 3.31 | 600 MHz | 400 | 0.83\% |
| T-Mobile 700 MHz LTE | 2 | 432.54 | 137 | 1.81 | 700 MHz | 467 | 0.39\% |
|  |  |  |  |  |  | Total: | 2.19\% |

Table 6: T-MOBILE Maximum Sector MPE Power Values

## Transcom Engineering, Inc.

## Summary

All calculations performed for this analysis yielded results that were within the allowable limits for general population exposure to RF Emissions.

The anticipated maximum composite contributions from the T-MOBILE facility as well as the site composite emissions value with regards to compliance with FCC's allowable limits for general population exposure to RF Emissions are shown here:

| T-MOBILE Sector | Power Density Value (\%) |
| ---: | :--- |
| Sector A: | $2.19 \%$ |
| Sector B: | $2.19 \%$ |
| Sector C: | $2.19 \%$ |
| T-MOBILE Maximum | $2.19 \%$ |
| Total (per sector): |  |
| Site Total: | $10.26 \%$ |
|  |  |
| Site Compliance Status: | COMPLIANT |

The anticipated composite MPE value for this site assuming all carriers present is $\mathbf{1 0 . 2 6} \%$ of the allowable FCC established general population limit sampled at the ground level. This is based upon values listed in the Connecticut Siting Council database for existing carrier emissions.

FCC guidelines state that if a site is found to be out of compliance (over allowable thresholds), that carriers over a $5 \%$ contribution to the composite value will require measures to bring the site into compliance. For this facility, the composite values calculated were well within the allowable $100 \%$ threshold standard per the federal government.
